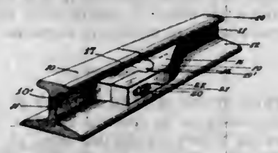
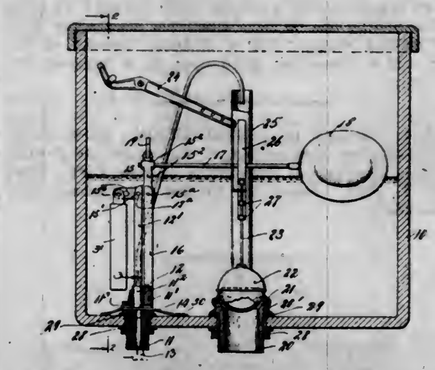
1. The combination with a tire machine having a reversible drive for the tire core, of automatically selected means for driving the stitcher carriage always in the same direction by the driving means of the core.

1,620,500. AWNING STRUCTURE. WILLIAM R. TORBERT, Kansas City, Mo. Filed Nov. 5, 1926. Serial No. 146,407. 7 Claims. (Cl. 156—15.)



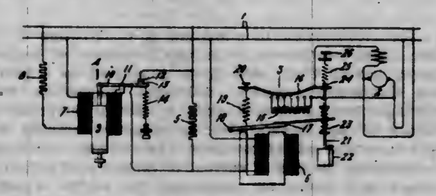
1. An awning structure comprising a pair of fittings adapted to engage the sides of a window frame, tubular portions formed on said fittings, a rod having its ends screw threaded and received in said tubular portions, nuts on said screw threaded portions of the rod for engaging the ends of said tubular portions of the fittings, supporting flanges on said fittings and an awning carried by said supporting flanges.

1,620,501. CONCRETE-REENFORCING-ROD CHAIR. REINHOLD VOGEL, South Wilton, Conn. Filed Sept. 15, 1926. Serial No. 135,525. 7 Claims. (Cl. 94—8.)



1. A chair for supporting reenforcing rods comprising upright side members one of which is provided with a loop to support a transversely extending reenforcing rod, a top member connecting the side members and provided with spaced downwardly curved portions to form seats for reenforcing rods, and laterally extending feet at the lower ends of the side members.

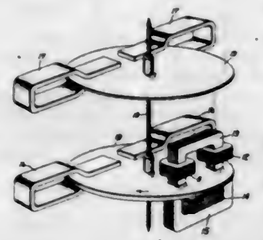
1,620,502. RAIL JOINT. WACLAW WASKEWICZ, Ludlow, Vt. Filed June 16, 1926. Serial No. 116,282. 3 Claims. (Cl. 238—235.)



1. A rail joint comprising a tongue formed at the side of the web of a rail, and flush with the extremity of the said rail, said tongue provided with a curved extremity and engaging a recess formed in an engaging member extending from the side of a web of a second rail, said tongue and said engaging member below the edge of the upper flange of the said rail and the said second rail, a bolt with a nut located in an elongated aperture formed in the said tongue and in the said engaging member, as a means of holding the said rail and the said second rail in position.

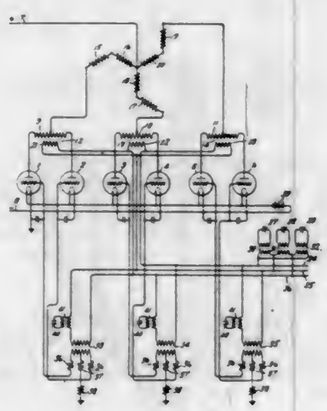
1,620,503. FLUSH BOX. JOSEPH WERNER, Perth Amboy, N. J. Filed June 26, 1926. Serial No. 118,730. 7 Claims. (Cl. 137—104.)

3. In a flush tank, a stop valve comprising a pipe section fixed in said tank, a tubular glass seat adjustably mounted in said pipe section, a plunger like valve body and a comparatively long flexible strip of water-proof material adjustable and displaceably mounted between said valve body and seat and serving as a washer.



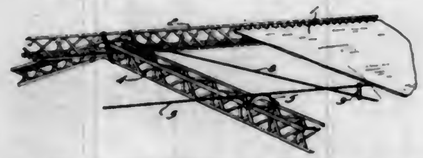
1,620,504. REGULATING APPARATUS. FRED H. WINTER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 15, 1924. Serial No. 737,718. 5 Claims. (Cl. 171—229.)

1. A regulating apparatus comprising a resistor having a plurality of contacts and a contact member adapted to engage said contacts, retarding means having a movable



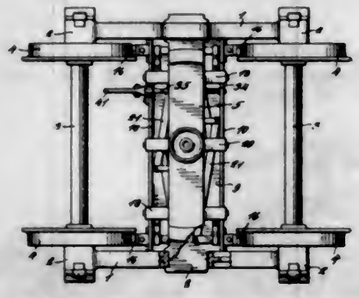
member arranged to cooperate with said contact member, electroresponsive means including an armature pivoted at one end and resiliently connected to said movable member at its other end, and means for biasing said contact member to a position in which it exerts upon said movable member a force tending to move said armature to its open position.

1,620,505. INDUCTION METER. HARRY M. WITHEROW, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 11, 1924. Serial No. 705,902. 7 Claims. (Cl. 171—34.)



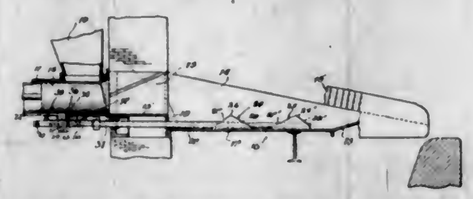
5. An induction disc watthour meter having a rotating part comprising one or more aluminum discs acted upon by a driving element and a damping element of the meter, and a brass disc acted upon by a damping element only.

1,620,506. SYSTEM OF DISTRIBUTION. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 1, 1924. Serial No. 747,394. 3 Claims. (Cl. 175—363.)



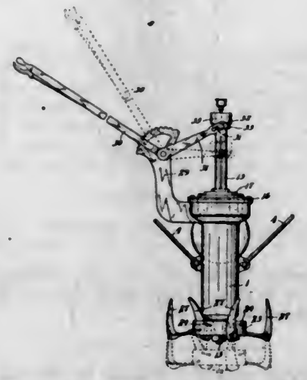
1. The combination in a system of distribution of a source of direct current, a polyphase system of transformers, having their secondaries connected to a polyphase distribution system, individual connections for supplying current from said source to each of the primary windings of said transformers, an inductive winding included in each of said connections, a pair of electric valves for controlling the flow of current to each of said primary windings, and means for controlling the action of said valves in such a way that when current is permitted to start in one of each pair of said valves the potential applied to the other valve of the pair will be momentarily reversed.

1,620,507. HULL CONSTRUCTION OF RIGID AIRSHIPS. KARL ARNSTEIN, Friedrichshafen, Germany, assignor to Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed Sept. 13, 1924, Serial No. 737,595, and in Germany Oct. 4, 1923. 5 Claims. (Cl. 244—3.)



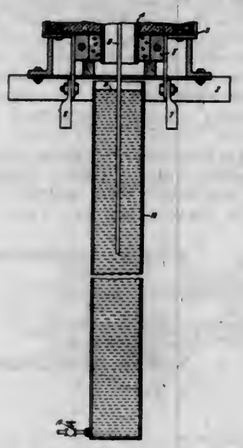
1. A rigid airship comprising a hull made up of longitudinal and cross members connected by diagonal bracing, longitudinal wires intermediate said longitudinal girders and an outer cover to said hull fastened to said longitudinal members and steadied by said longitudinal wires.

1,620,508. RAILROAD-BRAKE MECHANISM. JOSEPH S. BALL, Denver, Colo., assignor of one-half to Joseph N. Miller, Denver, Colo. Filed July 6, 1926. Serial No. 120,610. 3 Claims. (Cl. 188—52.)



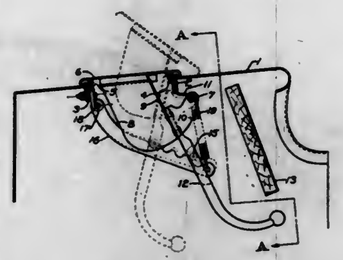
1. A brake mechanism adapted to be attached to a railway car truck, comprising, in combination, a spring plank having a flat central portion and parallel spaced flanges extending perpendicularly to the plane of the central portion, each flange having an opening near each end, a brake bar extending through each opening, a lever having its outer end pivotally connected with the inner end of each brake bar, a stationary pivot which serves as a fulcrum for each lever and means for simultaneously moving said levers about their fulcrums whereby the brake bars will be reciprocated in the openings.

1,620,509. FUEL-DISTRIBUTING MEANS FOR UNDERFEED STOKERS. ROYCE L. BEERS, Detroit, Mich., assignor, by mesne assignments, to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed June 3, 1922. Serial No. 565,543. 9 Claims. (Cl. 110—44.)



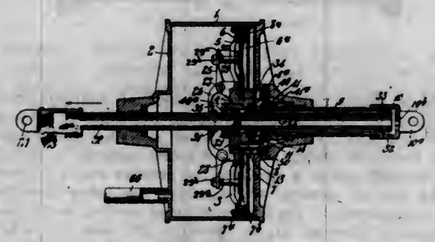
1. In an underfeed stoker, a fuel distributor comprising a plurality of independently movable elements arranged directly in tandem for reciprocation in a common line, respective operating stems for said elements tightly attached thereto and extending parallel with the line of reciprocation, and means for operating all of said stems together in the same directions of reciprocation, said means having provision to vary the relative throw of said stems.

1,620,510. CULTIVATOR FOR ELIMINATING QUACK GRASS. LEONARD L. BEISE and RICHARD J. BEISE, Pine Island, Minn. Filed Oct. 19, 1922. Serial No. 595,556. 3 Claims. (Cl. 97—212.)



1. A cultivating device for eliminating quack or other grass comprising, a member adapted to rotate about a vertical axis, and a plurality of radially extending blade members projecting therefrom, said members extending outwardly and downwardly from said rotating member and having sharpened portions at their outer ends bent to extend upwardly and slightly inwardly, said first mentioned member terminating above the lowest point of said blade members.

1,620,511. QUARTZ WORKING. EDWARD R. BERRY, Malden, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 18, 1923. Serial No. 633,017. 1 Claim. (Cl. 49—78.1.)



The process of shaping plastic silica which consists in projecting the same in an elongated form into a liquid having approximately the same specific gravity as silica.

1,620,512. VENTILATOR. JOSEPH H. BOURGON, Detroit, Mich., assignor to The Studebaker Corporation, a Corporation of New Jersey. Filed Jan. 20, 1923. Serial No. 613,923. 10 Claims. (Cl. 98—2.)

3. In an automobile, a cowl having an opening therein, a cover for said opening, a member secured to and depending from said cover, a pintle mounted within said cowl, means on said member for pivotally mounting said cover on said pintle, an operating handle rigidly mounted on said member for operating said cover, and means cooperating with said operating handle for holding said cover in closed position and a plurality of open positions.

1,620,513. POWER ACTUATOR. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed Aug. 14, 1926. Serial No. 129,174. 23 Claims. (Cl. 121—41.)

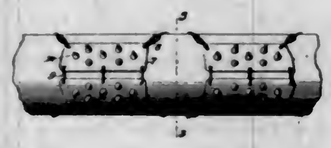
23. In a power actuator, the combination with a cylinder, a piston movable therein, means for connecting the piston with a part to be actuated, means for establishing differential pressures on opposite faces of the piston including controlling valve mechanism, and means for connecting said valve mechanism with sources of lower and higher pressures, an operator operated part, and operative connections between said part and the valve mechanism, said piston being provided with apertures therein, flexible diaphragm portions closing said apertures, and operative connections between said flexible diaphragm portions of the piston and the operator operated part for transmitting a portion of the pressure exerted on the piston by the higher pressure fluid during a power stroke of the piston to the operator operated part, said operator operated part being movable with respect to the piston, and means for limiting the relative movement of the operator operated part with respect to the piston, to protect the diaphragm portions from injury and to enable the operator by taking up the lost motion so provided, to apply his physical force directly to the piston in addition to that of the actuator, or upon failure of power.

1,620,514. ART OF MOLDING CONCRETE OR CEMENTITIOUS STRUCTURES. CHRISTIAN BRYNOLDT, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed Jan. 29, 1923. Serial No. 615,480. 11 Claims. (Cl. 25—131.)

1. The herein described method of constructing supporting devices for forms, molding means and the like for concrete structures which consists in utilizing standard structural trusses and detachably uniting the same in edgewise abutment in a knock-down but rigid supporting unit.

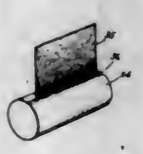
1,620,515. SHADE-ROLLER SUPPORT. HENRY FRANK BUCHHEIT, Milwaukee, Wis. Filed Nov. 7, 1924. Serial No. 748,348. 1 Claim. (Cl. 156—23.)

In a shade roller support, a set of brackets each provided on one side with a shade roller socket, one of said brackets having a threaded spreader rod socket and the other having a tapered socket adapted to receive the pointed end of a spreader rod member and a co-operating pair of spreader rod members, one being threaded for engagement in the first mentioned bracket socket and internally threaded at its opposite end, and the other spreader member being tapered at one end and threaded at the other for engagement in the threaded socket of the first mentioned spreader member, said tapered end portion being provided with a poly-sided operating piece and a tube connected therewith and covering its threaded portion, said tube being adapted to telescope over the first mentioned spreader member to conceal the screw threads and the joints, and said spreader members being adapted to be assembled with the bracket having the threaded socket end positioned on a window casing preparatory to expansion of said tapered end into pressure contact in the socket of the other bracket by rotating said poly-sided member after the parts have been placed.



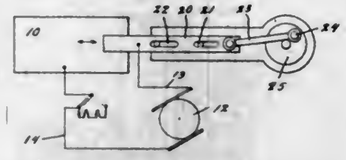
1,620,516. LAMP HANGER. CLIFTON L. BUNDY, Philadelphia, Pa., assignor to Philadelphia Electrical & Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 24, 1922. Serial No. 563,289. 7 Claims. (Cl. 248—25.)

1. The combination in a lamp hanger, of a supporting structure; a lamp carrying member; means for raising and lowering said member; a dog horizontally pivoted to the lamp carrying member and having two similar arms extending in opposite directions from the pivotal axis; and shoulders on said supporting structure for engaging the extremities of said arms when the latter



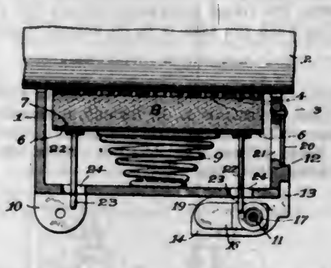
are substantially horizontal, the said shoulders permitting the dog to pass between them when the arms are vertical or approximately so.

1,620,517. TIRE CHAIN. EDWARD W. BUNGER, Cedar Rapids, Iowa. Filed Mar. 24, 1924. Serial No. 701,420. 1 Claim. (Cl. 152—14.)



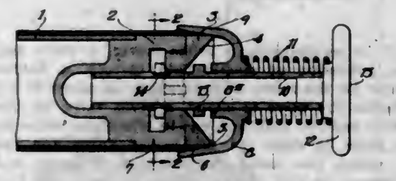
A tire-chain, comprising a pair of side-chains, pairs of circumferentially disposed tread-plates closely linked together crosswise of the tire, and provided with traction spurs progressively increasing in length outwardly from the linked sides with points disposed out of a straight line across the tread, and diagonal chains connecting said plates with the side-chains.

1,620,518. FILM CUT-OUT. HENRY E. BUTLER, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 31, 1926. Serial No. 98,888. 4 Claims. (Cl. 200—118.)



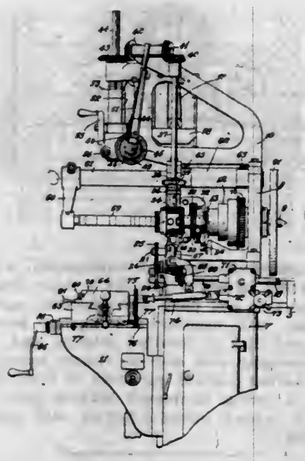
1. An insulating member for use in film cutouts, said member comprising a strip of insulating material having an abrasive substance on its surfaces.

1,620,519. ELECTRICAL ABRASION PROCESS. MONROE S. CLAWSON, Upper Montclair, N. J. Filed Apr. 18, 1922. Serial No. 554,558. 1 Claim. (Cl. 219—1.)



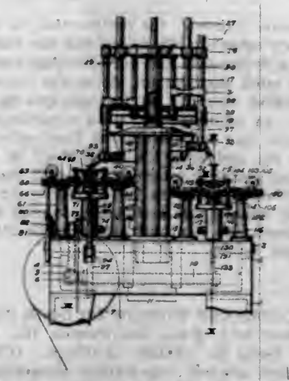
The method of abrading comprising engaging a rapidly reciprocating conductor upon the work, the work being also a conductor, and simultaneously passing an alternating current through the reciprocating conductor and the work, the moving conductor being reciprocated a greater number of times per second than the number of cycles of the current per second.

1,620,520. DEVICE FOR LUBRICATING LOCOMOTIVE-AXLE JOURNALS. WALTER J. COX, Bridgeport, Conn., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed Nov. 17, 1923. Serial No. 675,282. 6 Claims. (Cl. 308—83.)



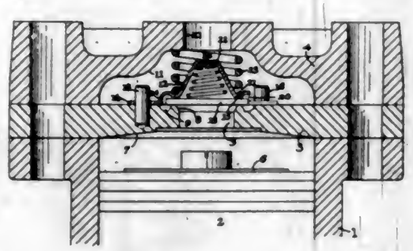
4. The combination with a cellar box of a door having a lug pivotally and slidably connected with the box, said lug engaging the box when the door is in closed position whereby said door is prevented from swinging, and means for locking said lug into engagement with the box.

1,620,521. APPARATUS FOR THE MANUFACTURE OF RUBBER OR THE LIKE TUBES. JOHN DALGLISH, Birmingham, England, assignor to Dunlop Tire and Rubber Corporation of America, Buffalo, N. Y., a Corporation of New York. Filed July 17, 1926, Serial No. 123,215, and in Great Britain July 18, 1925. 5 Claims. (Cl. 18—43.)



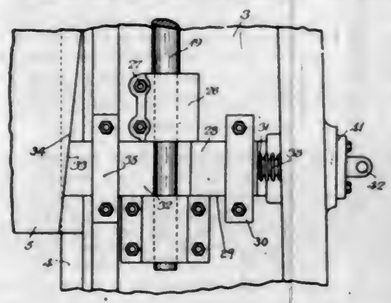
1. An apparatus for use in manufacturing rubber tubes including a mandrel adapted to support the end of the tube, an annular knife having a beveled cutting edge carried by said mandrel, an annular member adapted to coact with said knife, means secured to the mandrel for slidingly supporting said annular member.

1,620,522. COMBINED LATHE, DRILLING AND MILLING MACHINE. HUBERT DALTON, New York, N. Y. Filed June 10, 1921. Serial No. 476,393. 9 Claims. (Cl. 29—27.)



1. In a metal working machine of the character described, a correlated drilling mechanism, a lathe mechanism and milling mechanism, including a spindle, a step driven pulley mounted on said spindle, a driving gear mounted in said spindle for operating the drilling, lathe and milling mechanisms, two gears mounted on said spindle, a shaft adjacent the spindle and speed varying gears keyed on the shaft and adapted to mesh with the gears on the spindle.

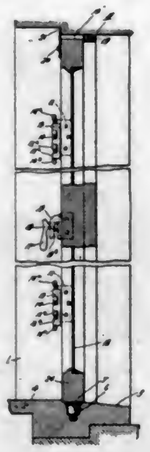
1,620,523. HOOK FORMING AND INSERTING MACHINE. HENDRIK DE JONG and WILLEM KONING, Eindhoven, Netherlands, assignors to General Electric Company, a Corporation of New York. Filed Sept. 22, 1924, Serial No. 739,002, and in the Netherlands Dec. 5, 1923. 12 Claims. (Cl. 176—3.)



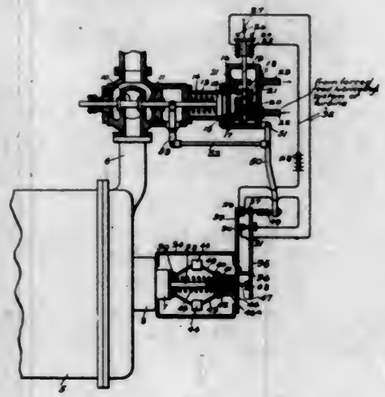
1. In a hook-inserting machine, the combination of a pair of coaxial annular wire cutting and bending dies relatively movable along their axis to make hooks from wires extending between said dies, and means for positioning a glass rod having imbedded in it a plurality of spaced radially extending wires to bring said wires between said dies.

1,620,524. COMPRESSOR VALVE. EDWARD R. DE LUIZ, Flint, Mich., assignor to Copeland Products, Inc., Flint, Mich., a Corporation of Michigan. Filed Apr. 30, 1924. Serial No. 710,135. 5 Claims. Cl. 230—34.)

1. In a gas compressor, the combination, with a fixed member having an outlet port, of a valve disk for closing said port, a one piece pressed-metal cage movably seated upon said member and having portions surrounding said disk in locating relation and other portions overhanging said disk in closely spaced relation, said cage having portions cut away to form lateral outlet ports, a spring interposed between said cage and disk and a second spring pressing said cage against said member.



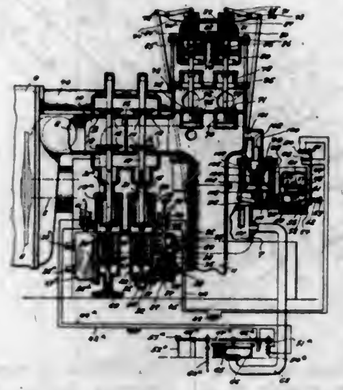
1,620,625. POWER HAMMER. FRANK H. DERBY, Erie, Pa., assignor to Erie Foundry Company, Erie, Pa., a Corporation of Pennsylvania. Filed Oct. 26, 1922. Serial No. 597,087. 2 Claims. (Cl. 78—29.)



1. In a power hammer, the combination of a hammer head; a power-actuated lift device for the head; means throwing said device into and out of lifting relation with the head; a latch shoulder on the means; a latch comprising a sliding cam bar having one end in the path of the head; an adjusting screw; a connection between the screw and bar maintaining a fixed axial relation between the bar and screw; a latch block on the screw in overlapping latching relation with said shoulder and adjustable relatively thereto by the screw to vary the timing of the means; and a stop maintaining a constant relation between the bar and head as the block is adjusted by the screw.

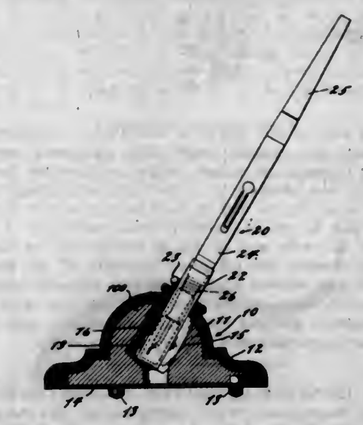
1,620,526. CASEMENT WINDOW OR DOOR CONSTRUCTION. EDMUND J. EMIG, Des Plaines, Ill. Filed Oct. 21, 1926. Serial No. 143,080. 5 Claims. (Cl. 20—53.)

1. A casement window construction, comprising a frame having its stool extending above its sill, a sash normally disposed above the sill with the rear face of the lower sash portion adjacent to the forward face of the upwardly extending portion of the stool; spring means mounted on the sill and of such a strength as to raise the sash to have the bottom of the sash clear the stool; hinges interposed between a side of the frame and the sash upon which hinges the sash is adapted to swing inwardly, the hinges being constructed to permit vertical movement of the sash with respect to the frame; and releasable means interposed between the sash and the frame for forcing the frame downward against the pressure of the spring when the sash is in its normal position.



1,620,527. GOVERNING MECHANISM FOR PRIME MOVERS. WILLIAM L. R. EMMET, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 8, 1923. Serial No. 637,563. 16 Claims. (Cl. 121—42.)

6. In combination, a prime mover, a valve controlling the admission of elastic fluid thereto, a fluid-actuated motor for the valve, means biasing the motor to a position wherein the valve is closed, a pivot valve for the motor which has two positions, one in which the motor is caused to move to open the first-named valve and the other in which the motor is permitted to move under the influence of said biasing means to close the first-named valve, electrically-operated means for effecting movement of the pilot valve from one position to the other, an electric circuit in which it is included, separable contacts in said circuit, a lever to which one of said contacts is connected, means responsve to the speed of the prime mover for moving said lever to open and close said contacts, and a holding magnet in said circuit for said lever.

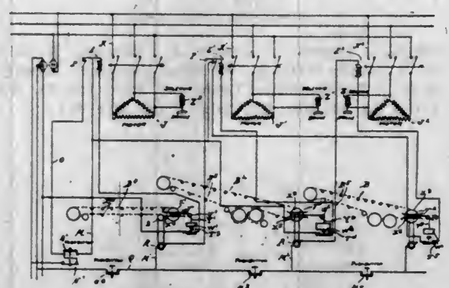


1,620,528. GOVERNING MECHANISM FOR ELASTIC-FLUID TURBINES. WILLIAM L. R. EMMET, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 8, 1923. Serial No. 637,564. 5 Claims. (Cl. 290—52.)

1. In combination, an elastic fluid turbine, a conduit for suplying elastic fluid thereto, a plurality of control valves in said conduit arranged in series with each other, a separate fluid-actuated motor for each valve, and separate speed-responsive means for controlling each motor.

3. In a turbo-generator set, the combination of a turbine, a generator driven thereby, a ventilating impeller for the generator, a valve controlling the admission of elastic fluid to the turbine, a motor for operating said valve, a reversible controlling means for said motor, and means responsive to the pressure created by said ventilating fan for periodically reversing said controlling means.

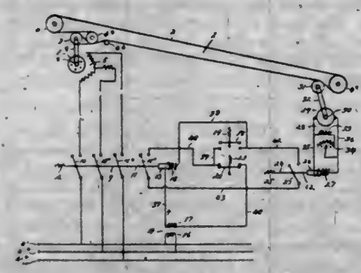
1,620,529. FOUNTAIN PEN AND STAND THEREFOR. WILLIAM I. FERRIS, Westfield, N. J., assignor to L. E. Waterman Company, New York, N. Y., a Corporation of New York. Filed May 27, 1926. Serial No. 111,961. 8 Claims. (Cl. 120—108.)



1. A stand for a fountain pen comprising a recess adapted to receive an end of a fountain pen, the wall of said recess being formed with a groove adapted to receive the pen clip.

1,620,530. CONSOLIDATED METALLIC FIBER ARTICLE. CROSBY FIELD, Brooklyn, N. Y., assignor to Gray Products, Inc., a Corporation of New York. Filed June 7, 1924. Serial No. 718,476. 9 Claims. (Cl. 308—242.)

1. As an article of manufacture, a material including as an essential a fibrous mass of springy metal wool composed of resilient fibers retaining their resilience under stress compressed and having its fibers set to maintain solid form.

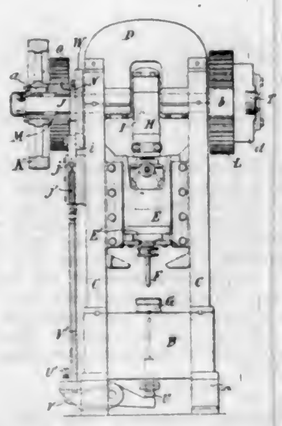


1,620,531. APPARATUS FOR LOADING AND UNLOADING MATERIALS. CHARLES R. FISHER, Rogers City, Mich. Filed Mar. 26, 1920. Serial No. 368,999. 17 Claims. (Cl. 198—92.)

1. The combination of a plurality of endless belt conveyors for progressively advancing a load, means for independently driving said conveyors, and means dependent upon the operation of each conveyor to which a load is delivered for maintaining the operation of the conveyor delivering the load thereto said last mentioned means being independent of the operation of the conveyors at the supply end thereof.

10. The combination with a conveyor and means for driving said conveyor, of a generator driven by said conveyor, and a relay controlled by the voltage produced by said generator.

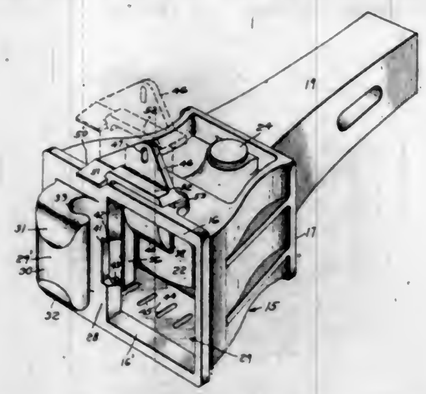
1,620,532. CONTROL SYSTEM FOR ENDLESS-BELT CONVEYERS. CHARLES R. FISHER, Rogers City, Mich. Filed Feb. 27, 1922. Serial No. 539,558. 9 Claims. (Cl. 198—232.)



1. The combination with an endless belt conveyer and means for driving the same, of means for producing a voltage dependent upon the speed of said conveyer belt, and means controlled by said voltage for stopping said driving means.

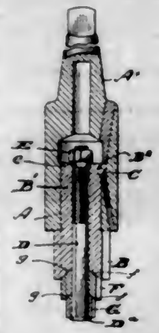
1,620,533. DISPLAY DEVICE. FRANK G. FULLGRAFF, New York, N. Y. Filed Aug. 11, 1923. Serial No. 656,948. 3 Claims. (Cl. 40—147.)

1. A display device, comprising a sign having light transmitting portions forming the matter to be displayed, a reflector hinged at its lower edge to the back of said sign, and flaps of stiff sheet material hinged to the back of said sign at its ends, said reflector and said flaps being provided with cooperating engaging means and being adapted to fold flat against the sign.



1,620,534. PRESS. CHARLES R. GABRIEL, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of Delaware. Filed Apr. 14, 1926. Serial No. 102,008. 18 Claims. (Cl. 207—9.)

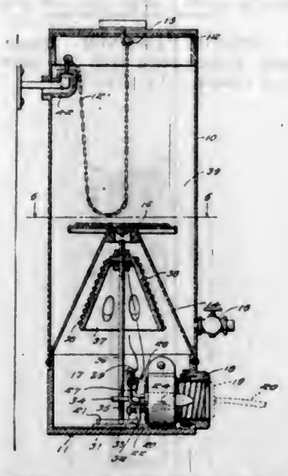
1. A power press comprising a reciprocating head, and mechanical means for operating it, said means adapted to drive the head at relatively high speed during the idle part of its working stroke, and means for imparting the effective part of its stroke at an increased power ratio.



1,620,535. CAR COUPLER. CHARLES H. GAGE, Washington, D. C., assignor to Linn W. Searles and William D. Riter, both of Washington, D. C., and William D. Faison, Chester, Pa., trustees. Filed June 18, 1926. Serial No. 116,900. 9 Claims. (Cl. 213—88.)

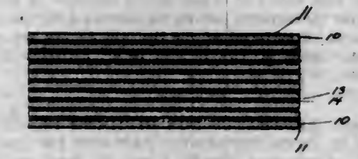
1. In a car coupler, a support, a coupler head, means for pivotally mounting the coupler head upon the support in a manner to permit of permanent unrestricted horizontal swinging movement of said coupler head with relation to said support, said coupler head having means to positively limit such relative horizontal swinging movements of said coupler head beyond the coupling limits, the outer end of the coupler head being adapted to contact with the outer end of the coupler head of a companion coupler for automatic adjustment of the two coupler heads, a knuckle secured to the outer end of the coupler head, and a gravity operated pin carried by the

coupler head and having a beveled portion for engagement with the knuckle of the companion coupler, the last named knuckle being adapted to engage behind said pin.



1,620,536. INTERCHANGEABLE BORING AND COUNTERBORING TOOL. EMIL GAIRING, Detroit, Mich., assignor to Gairing Tool Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 29, 1926. Serial No. 98,107. 2 Claims. (Cl. 77—58.)

1. In a tool of the character described; a plurality of cutters having a central longitudinal polygonal opening extending through the cutters, each of said cutters having a tapering end adapted to project into a corresponding tapering socket in the end of the adjoining cutter, whereby they may be nested together when assembled; a bolt polygonal in cross section for a portion of its length extending through the polygonal openings of the several cutters; a nut screwed upon the end of said bolt adapted when adjusted to draw the several cutters into impinging nested relation, whereby they may operate as a unit; and means for supporting said unitary cutting device.

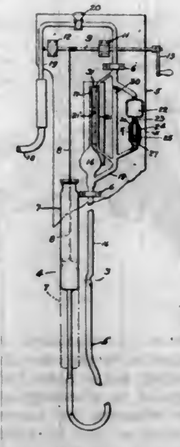


1,620,537. ELECTRICAL HEATER. CHARLES CORNELIOUS GAREY, Bremerton, Wash., assignor of one-third to Thomas L. Smith, Bremerton, Wash. Filed May 15, 1926. Serial No. 109,340. 2 Claims. (Cl. 219—19.)

1. In a heater of the type described, a casing in the form of a cylinder having adjacent its lower end a conical bottom wall providing in the upper end of the cylinder a water chamber, a cap engaged with the lower end of the cylinder, a conical electrical heating element supported from the cap to maintain its heating area in

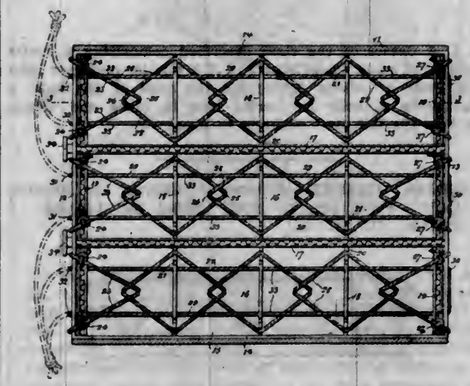
approximate parallel relation to said conical wall and a perforated disk supported from the upper end of said conical wall.

1,620,538. METHOD OF MAKING COMPOSITION ARTICLES. WILLIAM JOSEPH GAVEN, Wilkes-Barre, Pa., assignor of one-half to Mary Ellen Gaven, Wilkes-Barre, Pa.; Mary E. Gaven administratrix of the said William J. Gaven, deceased. Filed May 18, 1923. Serial No. 639,743. 1 Claim. (Cl. 154—2.)



That method of making a composition article which consists in treating a layer of paper with a coating of powdered composition matter possessing ornamental and adhesive qualities, subjecting the layer of paper and the coating of composition matter to heat for uniting the two, superposing a plurality of such coated layers of paper, and subjecting the superposed coated layers to heat and pressure for molding the same to the configuration of the article desired.

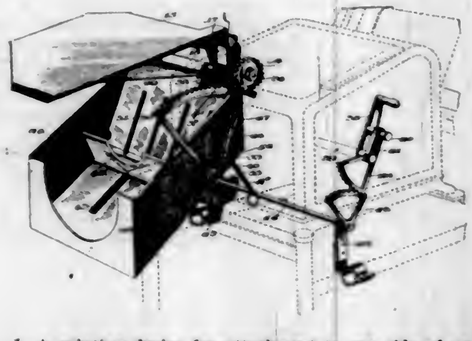
1,620,539. DEPILATOR. HUGO GERNSBACK, New York, N. Y. Filed Apr. 1, 1926. Serial No. 98,958. 1 Claim. (Cl. 128—355.)



A depilator for removing the hair from either large or small areas of the skin, comprising a bandage in the form of a flat strip of fabric of appreciable length and layers of softenable self-hardening hair extracting material covering both faces of said fabric and penetrating the same so that said layers are interlocked and secured together through the fabric, whereby neither can pull loose from the fabric in the act of removing the hairs, said layers being of sufficient depth to receive and entrap hairs projecting from the skin over which the bandage is applied, the ends of the fabric strip being exposed to serve as finger-holds and the balance of the strip between said finger-holds being covered by the material as described.

1,620,540. REGULATOR FOR MERCURY GAUGES. ARTHUR ANDREW GIBSON, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Nov. 1, 1923. Serial No. 672,228. 7 Claims. (Cl. 73—31.)

1. A U-tube vacuum gauge one leg of which has a capillary by-pass, a compression chamber, means for moving mercury upwardly in said gauge to a predetermined level, a chamber in communication with said by-pass to receive an over-flow of said mercury for maintaining said mercury at said level for an appreciable time interval.

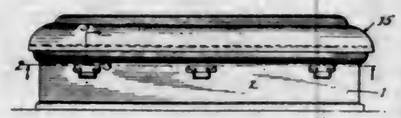


1,620,541. EGG-SHIPPING BOX. MARCUS O. GINSBURG, Corona, N. Y., assignor of one-third to Joseph E. Sloe and one-third to Harry I. Garfunkel, both of New York, N. Y. Filed June 26, 1926. Serial No. 118,806. 2 Claims. (Cl. 217—25.)

1. An egg carrier comprising a tray subdivided into compartments by transverse and longitudinal partitions, and egg holding means formed in each compartment con-

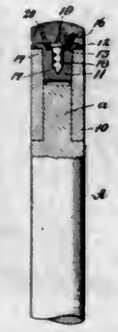
sisting of cords or like flexible elements extending through the ends walls of the tray, extending in slots in the transverse partitions and extending through the bottom of the tray to provide groups of diverging leads, and cords or like flexible elements extending through the opposite end walls of the tray and extending through the transverse partitions to provide spaced parallel portions which coact with the diverging leads aforesaid to hold the eggs.

1,620,542. CHECK-INDORSING ATTACHMENT FOR ADDING MACHINES. RUDOLPH HENRY GLADWILL, Ada, and GEORGE MONROE RAMSEY, Altus, Okla. Filed Oct. 20, 1925. Serial No. 63,622. 5 Claims. (Cl. 101—240.)



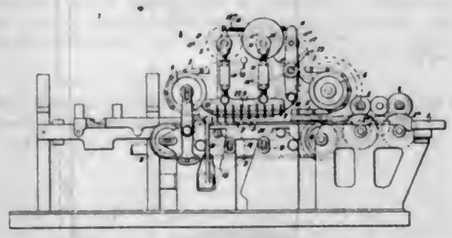
1. A printing device for attachment to one side of an adding machine opposite to the operating lever of such machine and actuating connections for such device including a shaft adapted to extending beneath an adding machine, and gear members for connecting said shaft with the adding machine, one of which gear members has means adapting the same for detachable connection with the operating lever of an adding machine.

1,620,543. HAIR CURLER. SAMUEL GOLDBERG, Dorchester, Mass. Filed Jan. 2, 1926. Serial No. 78,975. 3 Claims. (Cl. 132—41.)



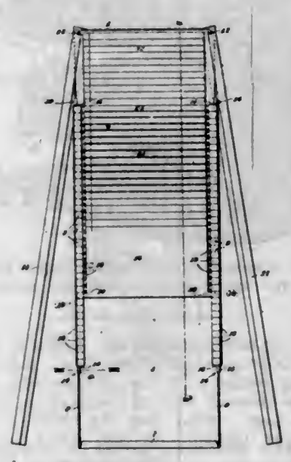
1. A device of the class described comprising a curler formed of a rod whose centre is of a smaller diameter than the ends, a locking device for the ends of the hair, a flat plate to hold the curled hair in place and means to hold the flat plate securely in place.

1,620,544. CASKET. EDMUND J. GREIVE, Los Angeles, Calif. Filed Oct. 5, 1926. Serial No. 139,604. 3 Claims. (Cl. 27—6.)



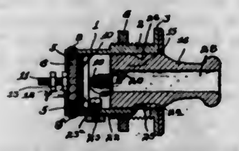
1. A casket having a base with a flat rim, a series of plates having keyhole slots secured to the base adjacent the rim, a cover having a flat lower section, a series of screws secured to the cover through said section, said screws registering with the keyhole slots, and an apron extending downwardly from the cover below the screws.

1,620,545. CUE-TIP FASTENER. HENRY J. GRENIER, Bridgeport, Conn. Filed Mar. 10, 1926. Serial No. 93,686. 2 Claims. (Cl. 273—70.)



1. A cue tip fastening means including a plug adapted to be driven in the usual ferrule of a cue, a lateral annular flange on said tip adapted to seat on the front end of said ferrule, said plug having a concave countersink, a cue tip fastening element having a hole through the bottom thereof and formed with a flaring series of fingers disposed about the edge thereof, a securing brad passing through said hole and engaging the material of said plug, and a cue tip disposed jointly against said flange and ferrule, in which material of the tip said fingers are entered, the outer ends of the fingers being deflected laterally outward.

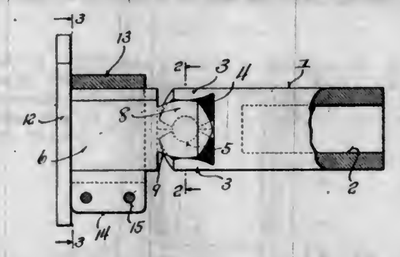
1,620,546. APPARATUS FOR DIVIDING PLASTIC MATERIAL INTO SEPARATE TABLETS OF UNIFORM SIZE. FREDERICK GROVER, Leeds, England, assignor to The Forgrove Machinery Company Limited, Leeds, England. Filed Apr. 27, 1926, Serial No. 104,956, and in Great Britain May 2, 1925. 8 Claims. (Cl. 107—21.)



1. Apparatus for dividing plastic material into separate tablets of uniform size, comprising in combination a multiple blade holder, equidistant blades projecting from the blade holder to progressively different depths, means for lowering and raising the blade holder, means for horizontally reciprocating the said blade holder, a bed for supporting and carrying the plastic material below the aforesaid blades, and means for advancing the bed carrying the plastic material while the blades are lowered.

1,620,547. VISIBLE CARD RECORD. HERBERT HAID, Salem, Oreg., assignor, by mesne assignments, to Pressteel Engineering Corporation, a Corporation of New York. Filed Mar. 28, 1924. Serial No. 702,671. 25 Claims. (Cl. 129—16.)

1. In a device of the type described, a portable support, a multiplicity of record cards, a pair of journals formed integrally with each of said cards, and means removably carried by said support for receiving said journals to permit pivoting of said cards.

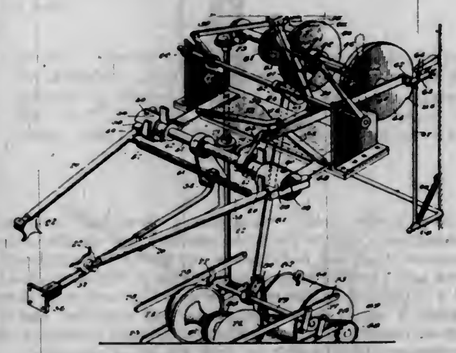


1,620,548. LIGHTER FOR CIGARS AND THE LIKE. ROBERT O. HAMMOND, Rochester, N. Y., assignor, by direct and mesne assignments, of one-half to Charles H. Ogden and one-half to Harold H. Simms, both of Rochester, N. Y. Filed Jan. 12, 1922. Serial No. 528,820. 10 Claims. (Cl. 219—32.)

10. A lighter for cigars and the like comprising, a socket member provided with two terminals, a plug member provided with two terminals and also with an annular groove, an incandescing device connecting the terminals of the plug member, and yielding means cooperating with the walls of the annular groove to hold the plug member so that the terminals thereof are out of contact with the terminals of the socket member, said means yielding to permit such contact and through cooperation with the walls of the groove to move the plug upon the release of the latter, so that the terminals of such plug will lie out of contact with the terminals of the socket member.

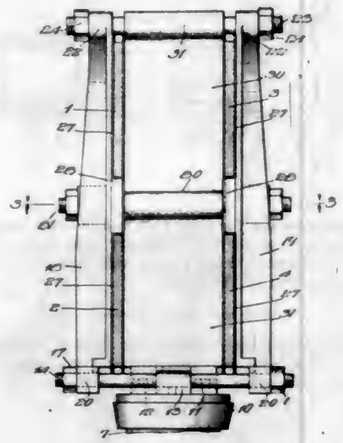
1,620,549. UNIVERSAL JOINT. LE ROY HARPER, Kenosha, Wis. Filed Oct. 9, 1925. Serial No. 61,478. 2 Claims. (Cl. 64—91.)

1. A universal joint comprising two main units each having fingers provided with curved surfaces with the surface of one set of fingers contacting with the surface of the other set of fingers, the inner portion of each of the fingers being recessed, a ball positioned within the recess and retaining the units against longitudinal separation, one of said units being split longitudinally, and



a collar surrounding the split unit and holding its parts in correct position to provide a unitary unit, said collar being slidable from said split unit onto the other unit to permit separation of the units.

1,620,550. NEEDLE. RALPH A. HOWE, Washington, D. C. Filed Apr. 28, 1926. Serial No. 105,247. 11 Claims. (Cl. 66—117.)



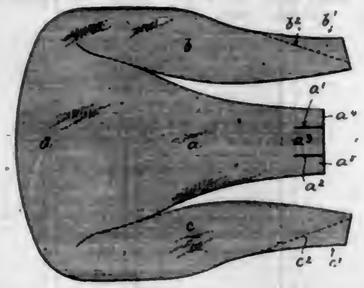
1. A needle for repairing fabrics comprising a hook member, a latch member, and a hump on one of said members projecting toward the other member and engageable by a thread to open the latch before the free end of the latch engages the fabric.

1,620,551. FRUIT-JUICE-EXTRACTING MACHINE. GUY N. HUGHES, Atlanta, Ga. Filed Aug. 3, 1925. Serial No. 47,899. 29 Claims. (Cl. 146—3.)

1. A juice extracting machine comprising a fruit hopper, a juice extractor having grinding heads, means gripping a whole fruit at the hopper and transporting it to said extractor, means for cutting the fruit in half and separating the halves during transportation, means temporarily positioned in front of said grinding heads to receive said halves upon arrival at the juice extractor, and means acting on the transporting means to urge the halves onto the grinding heads upon displacement of said temporarily positioned means thereby to remove the pulp.

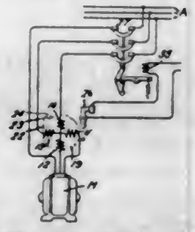
1,620,552. ELECTRIC-TRANSMISSION SYSTEM. ERNEST H. JACOBS and CHARLES FREDERIC SCHOONMAKER, Chicago, Ill. Filed July 23, 1920. Serial No. 398,532. 10 Claims. (Cl. 173—13.)

1. In combination an alternating current conductor of high current carrying capacity, comprising a plurality of air cooled, flat, copper bars, disposed in parallel relation, the bars being placed at the corners of a polygon with their flat sides vertical, said bars being of the same phase and being arranged in sections, and transposing connections for connecting the sections.



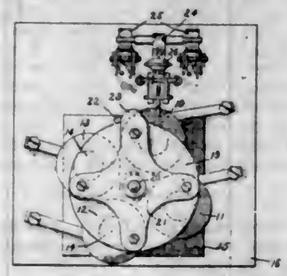
1,620,553. NECKTIE HOLDER. ABE JAFFE, Philadelphia, Pa. Filed Dec. 15, 1926. Serial No. 154,995. 4 Claims. (Cl. 24—57.)

1. A necktie holder comprising a sheet body portion, containing a button receiving aperture, an upright slide mounted upon said body, below and in vertical alignment with said aperture and adapted to engage behind the head of a collar button inserted into said aperture, said body having a spring anchorage above said aperture, and a helical tension spring operatively interposed between said anchorage and said slide to draw the latter upwardly.



1,620,554. MANUFACTURE OF CYCLE AND LIKE SADDLES. HENRY JELLEY, Birmingham, and JAMES JELLEY, Coventry, England. Filed Sept. 27, 1923, Serial No. 665,127, and in Great Britain Nov. 2, 1922. 3 Claims. (Cl. 18—56.)

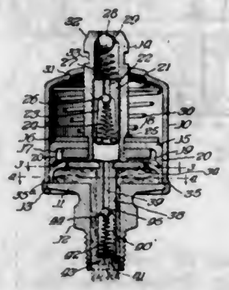
1. Method of producing and shaping a carcass or canvas interlayer for saddle tops of the kind referred to, involving the use of a blank which, when in the flat, the weft threads in the cantle, middle and wing portions are parallel or substantially parallel, whereas during the shaping of the carcass, the weft threads of the wing portions for reinforcing the flaps or skirts of



the top are disposed at converging angles to the weft threads of the middle portion, for the purpose herein set forth.

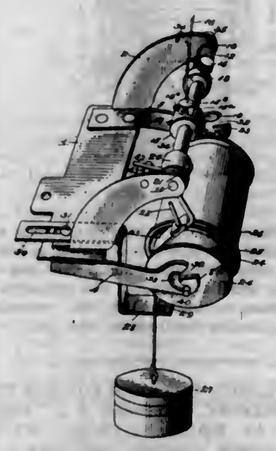
1,620,555. ELECTROMAGNETIC DEVICE FOR ALTERNATING-CURRENT CIRCUITS. BENJAMIN W. JONES and NOBLE A. WOLFE, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Nov. 12, 1921. Serial No. 514,568. 15 Claims. (Cl. 175—338.)

14. An electromagnetic device comprising windings arranged to be energized from a single phase source, a magnetic structure energized by said windings, the said structure having a plurality of definite poles, a rotatable member under the influence of the magnetic field set up by said windings, and a magnetic element cooperating with said member for causing a torque to be set up in the member by said magnetic field, the said element being adjustable with reference to said poles independently of said member to effect rotation of the member in either direction.



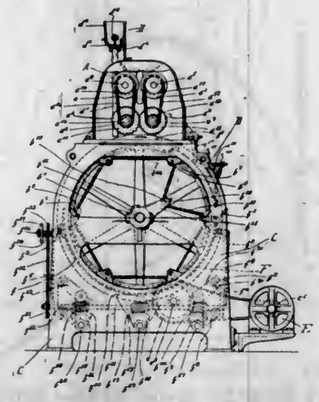
1,620,556. ELECTROMAGNETIC DEVICE. BENJAMIN W. JONES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 12, 1921. Serial No. 514,569. 10 Claims. (Cl. 175—294.)

2. A device for opening a polyphase circuit upon the opening of one of its phases comprising a plurality of windings energized by said circuit, a member operated



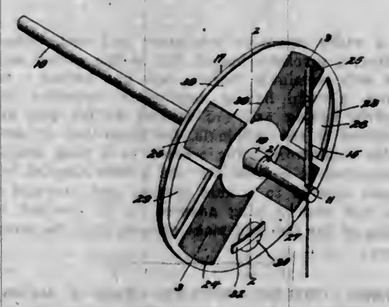
by the rotating field set up by said windings, and a magnetic element movable with reference to said windings and arranged to cause a different operation of said member upon less than normal phase excitation of the windings.

1,620,557. LUBRICANT CUP. PETER J. JORGENSEN and CLARENCE H. JORGENSEN, Chicago, Ill. Filed Nov. 24, 1922. Serial No. 602,940. 8 Claims. (Cl. 184—45.)



1. A lubricant cup having a discharge conduit leading therefrom, a perforate baffle plate separating the said cup into an upper and lower chamber, an absorbent in the said lower chamber extending into the said discharge conduit, a movable diaphragm in the upper chamber of said cup, a feeding conduit secured to said diaphragm and a spring positioned between said diaphragm and seated against the upper part of said oil cup whereby a constant pressure is maintained on the contents of the said oil cup in the upper chamber thereof.

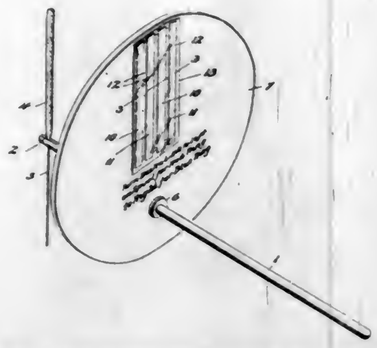
1,620,558. UNWINDING DEVICE. JAMES DANIEL JOYCE, Philadelphia, Pa. Filed Mar. 22, 1926, Serial No. 96,581. Renewed Jan. 27, 1927. 12 Claims. (Cl. 242—156.)



1. In combination, in an unwinding device, a rotatable spool holder, a brake drum on said spool holder and rotatable therewith, a movable compensator arm operated by the draft of the thread being delivered from said spool, a brake band frictionally engaging said brake drum throughout a portion of the length of said band, means for adjusting the effective length of said brake band to be engaged by said brake drum, and means operable by the movement of the compensator arm to vary the extent of engagement of said band with said drum.

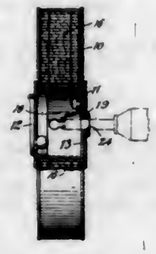
1,620,559. DOUGH MOLDER. WILLIAM G. KIRCHHOFF, Cincinnati, Ohio, assignor to The J. H. Day Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 21, 1922. Serial No. 538,308. 24 Claims. (Cl. 107—9.)

10. A drum of the class described comprising a cylindrical body, slotted lugs disposed in pairs on the ends of the body extending radially centerward of the body, end caps extending over the ends of the body and slidable over the peripheral surface of the body, flanges on the caps extending radially outward from the opposed ends of the caps, screw bars mounted on the caps disposed in substantial parallelism with the axis of the drum and extending reciprocally thru the slots in the lugs, threaded sleeves between the pairs of lugs and engaging the screw bars, and means to revolubly actuate the sleeves, whereby the caps may be reciprocated over the body.



1,620,560. COLOR CHANGER FOR SPARKLERS AND ANALOGOUS LIGHTS. KOBY KOHN, New York, N. Y., assignor to Victory Sparkler & Specialty Co., Elkton, Md., a Corporation of Delaware. Filed Aug. 2, 1923. Serial No. 655,348. 12 Claims. (Cl. 46—14.)

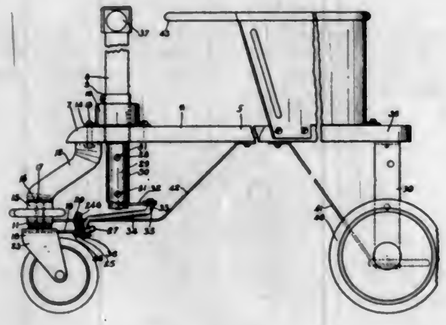
1. A device for rapidly and repeatedly changing the color of light produced by an element carried by said device comprising in combination, a rod, means at one end of said rod for supporting a freely combustible light



producer in fixed relation thereto and holding it projecting rigidly therefrom, a circular disk concentrically mounted on said rod between its ends having translucent differently colored sections, and means for causing relative rotation of said disk and rod.

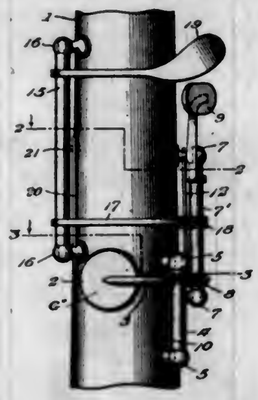
1,620,561. AMUSEMENT AND PROTECTIVE DEVICE. KOBY KOHN, New York, N. Y., assignor to Victory Sparkler & Specialty Co., Elkton, Md., a Corporation of Delaware. Filed Dec. 27, 1923. Serial No. 683,065. 14 Claims. (Cl. 102—20.)

12. In a device for viewing sparklers and the like, a rod, means to support a sparkler at one end thereof and an apertured disc intermediate the ends of said rod.



1,620,562. RADIO EXTENSION CONDUCTOR AND REEL. WILLIAM I. LICHT, Brooklyn, N. Y. Filed Aug. 31, 1925. Serial No. 53,707. 2 Claims. (Cl. 173—367.)

1. A radio extension conductor and reel, comprising a casing, a revoluble hollow hub in the casing and provided with terminals therein, said hub having a central opening, a strip having conductors embedded therein, the strip having one end secured to the hub and its conductors to the terminals, the other end of the strip and its conductors being secured to a plug adapted to be connected to a radio set, and a cord adapted to have one end secured to a loud speaker and provided at its other end with a plug adapted to be inserted in the opening of the hub and make contact with the terminals.

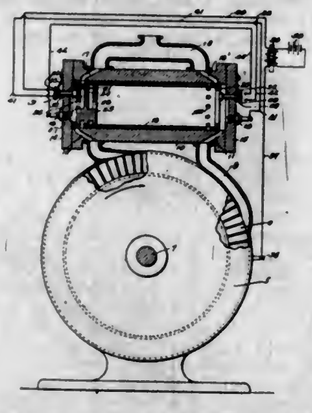


1,620,563. CHILD'S VEHICLE. EMIL M. MAYER, Cincinnati, Ohio. Filed Oct. 3, 1925. Serial No. 60,354. 6 Claims. (Cl. 208—114.)

1. In a child's vehicle the combination with a saddle, of a steering post journaled in the forward end of the saddle, a cross bar carried by said end of the saddle and disposed forwardly thereof, wheel brackets journaled at opposite ends of the cross bar, perforate lugs on the brackets, a tie-rod having its opposite ends ex-

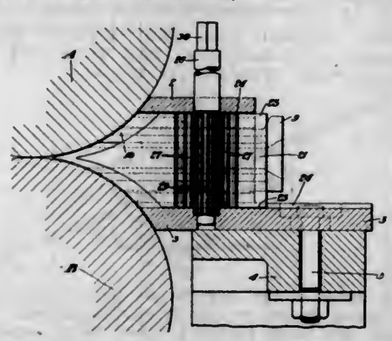
tending through the perforations in the lugs, an arm carried by the steering post, and a link connecting the arm and the tie-rod.

1,620,564. ATTACHMENT FOR SAXOPHONES. CHARLES W. MCELROY, Philadelphia, Pa. Filed Mar. 12, 1925. Serial No. 15,097. 5 Claims. (Cl. 84—385.)



1. In a saxophone having a pivoted G-sharp vent pad, a pivoted actuating key therefor, a spring to hold it normally in engagement with the G-sharp vent pad and hold it closed, and an auxiliary pivoted key arranged opposite the first-mentioned actuating key and communicating therewith for actuating the G-sharp vent pad.

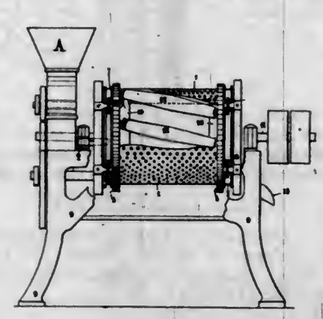
1,620,565. EXPLOSIVE CHAMBER FOR GAS ENGINES. JOSEPH B. MCKEOWN, Grantwood, N. J. Filed Oct. 1, 1923. Serial No. 665,922. 2 Claims. (Cl. 60—41.)



1. A power impulse generator comprising a cylinder having an inlet and an outlet port at each end thereof, a sleeve movable within said cylinder, and said sleeve having a plurality of openings passing through its side wall at a point near each end of the sleeve, a piston freely movable within the sleeve and serving to reciprocate said sleeve in response to the pressure of each fuel charge entering said cylinder, said piston having a plurality of passages adapted to register with the inlet ports of the cylinder

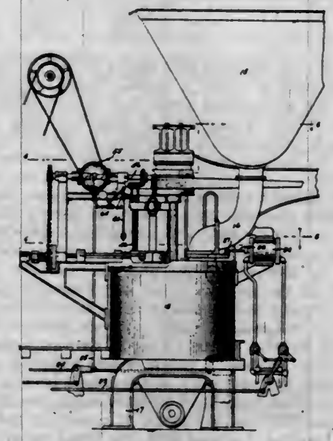
and by virtue of the openings in said sleeve to establish communication between the inlet ports and the interior of the cylinder, and means operating in conjunction with

the inlet and outlet ports, the openings in the sleeve and the passages in the piston for causing successive explosions for the purpose specified.



1,620,566. ROLLING-MILL GUIDE. HARRY MERCER, McDonald, Ohio. Filed Aug. 14, 1925. Serial No. 50,212. 1 Claim. (Cl. 80—51.)

A rolling mill guide comprising a casing, a pair of opposing guide members, a guide carrier slidably mounted in said casing for lateral movement, one of said guide members mounted in said carrier and movable therewith toward and away from said other guide member, a floating wedge mounted for longitudinal movement relative to said casing, projections on the top and bottom of said wedge and fitted into grooves in said casing to prevent lateral movement of said wedge, a flanged tongue projecting from the one side face of said wedge and mounted in an undercut groove in said carrier, whereby reciprocatory movement of said wedge longitudinally of said carrier will move said carrier laterally, a rack on the other side face of said weuge, and a toothed member removably mounted in said casing and in mesh with said rack and adapted to be rotated to cause a longitudinal movement of said wedge.



1,620,567. APPARATUS FOR CONTINUOUS EXTRACTION BY PRESSURE. PLACIDE NAVARRE, Paris, France, assignor to Société Fraisse Freres. Cavaillon, France, and Société P. Navarre et Fils, Paris, France. Filed Oct. 21, 1922, Serial No. 596,082, and in France May 26, 1922. 4 Claims. (Cl. 100—47.)

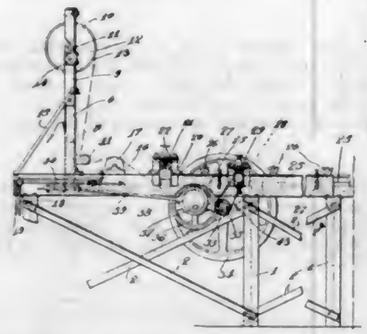
4. A continuous apparatus for extracting by a continuous, variable and adjustable pressure, comprising a rotary cylindrical drum with a perforated wall, within which is discharged the material to be treated, a support mounted in the rotary drum and receiving a rotary movement in the latter, pressure rollers loosely mounted in the rotary to be treated, blades with a smooth edge secured

on the rotary support in an inclined position relative to the pressure rollers for insuring the displacement of the material through the rotary drum, a hollow shaft carrying the support and connected to a source of fluid supply for controlling the temperature of the drum.

1,620,568. CENTRIFUGAL MACHINE. CARROLL THOMAS ORDWAY, Brooklyn, N. Y., assignor of one-half to Charles Ordway, Brooklyn, N. Y. Filed July 9, 1921, Serial No. 483,447. Renewed Jan. 24, 1927. 12 Claims. (Cl. 210—70.)

1. A discharger for a centrifugal machine including a screw threaded shaft, a traveler mounted upon said shaft, a rod carried by said traveler, a blade secured to the end of said rod, and means for turning said rod.

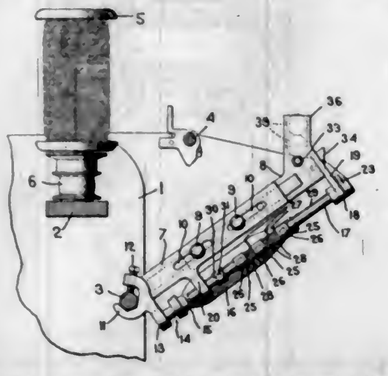
1,620,569. DETACHABLE ANTIGLARE LENS. AARON N. QUICK, Los Angeles, Calif. Filed Oct. 16, 1925. Serial No. 62,778. 2 Claims. (Cl. 88—41.)



1. An anti-glare lens adapted to be applied to a spectacle lens comprising a lens formed of semi-transparent material, a pair of relatively rigid clips mounted upon the anti-glare lens adjacent the top thereof, and a resilient clip mounted adjacent the bottom thereof, said resilient clip consisting of a small strip of resilient material hav-

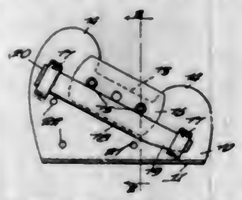
ing one end secured to the anti-glare lens and extending downwardly and forwardly therefrom, and then being bent upwardly and backwardly beneath the bottom edge

of the lens, said clips being adapted to engage upon the rim of a spectacle lens so as to mount said anti-glare lens thereon.



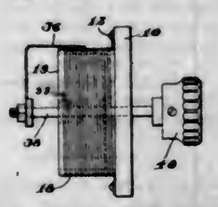
1,620,570. AUTOMATIC GLUING MACHINE FOR APPLYING PAPER TO WOOD. JOSEPH H. REYNOLDS, Bristol, Tenn. Filed Mar. 10, 1923. Serial No. 624,196. 1 Claim. (Cl. 144—279.)

A machine for applying and gluing strips of paper to wood, comprising a frame, a second frame vertically arranged on the first named frame having a feeding chute adapted to receive a plurality of wooden strips, means for holding a paper roll, a removable reciprocating feeding finger for forcing the wooden strips from the chute along the frame, eccentric means for operating the feeding finger, and means for applying glue to the paper comprising a glue pot mounted on a frame and having rotatably mounted therein a roller which functions to rotate in the glue, a suitable resilient pressure roller mounted on the frame in the rear of the glue pot, suitable springs at the ends of the pressure roller and manually operated means for varying the tension on the roller and the paper for gluing to the wooden strips, suitable brushes detachably held in position on the frame, a resilient member for tensioning the brushes, a rotary brush mounted on the frame suitably provided with an adjustable tension means and a heating coil spaced above the frame, thereby providing a machine wherein strips of wood are fed along the frame passing, together with the glued paper, under the brushes and roller, thereby causing the paper to be affixed to the strips, after which the strips are dried by passing under the coils.



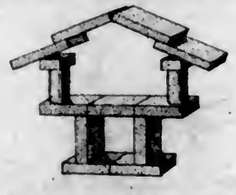
1,620,571. YARN TENSION FOR WINDING MACHINES. ALONZO E. RHOADES and ARTHUR S. JOHNSON, Hopedale, Mass., assignors to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 2, 1925. Serial No. 66,224. 3 Claims. (Cl. 242—151.)

1. A yarn winding machine comprising a yarn carrier mounted on a fixed support, a rotating yarn receiver to draw yarn from the yarn carrier, a projection from said support over which the yarn passes from the yarn carrier to the yarn receiver, a roll guide above the support, one or more superimposed rolls free to rotate and to rise and fall in said guide with their axes transverse to the yarn path and acting by gravity to produce on the yarn a rolling pressure governed in amount by the number and weight of the rolls, a yarn guide for the yarn as it leaves the yarn carrier movable into and out of position to direct the yarn in its path over the projection and



beneath the rolls, a plurality of pivotally mounted fingers resting on the yarn mass on the yarn carrier and acting to prevent ballooning of the yarn and to cause the yarn to be drawn evenly from the yarn carrier, and means operated by the yarn guide when it is moved out of position and acting to swing the fingers clear of the yarn mass.

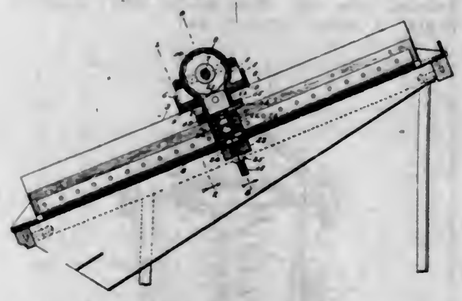
1,620,572. THREAD AND CORD CUTTER. MORRIS ROSENBLUM, Pittsfield, Mass. Filed Mar. 9, 1926. Serial No. 93,383. 3 Claims. (Cl. 30—14.)



1. A device of the character set forth, comprising a body having means whereby it may be mounted on a support, said body having a cutter blade supporting means, spaced offset straps at the ends of the blade supported by said means, and a holding bar that extends the length of the space between the straps and passes through the straps behind the blade throughout its length.

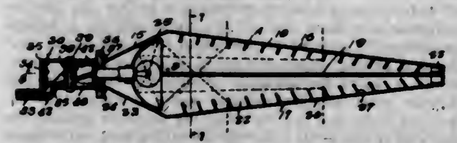
1,620,573. RHEOSTAT. JOSEPH A. ROSTRON, Cambridge, Mass. Filed Mar. 7, 1922. Serial No. 541,760. 4 Claims. (Cl. 201—56.)

3. A vernier rheostat having a helical resistance coil, a longitudinally movable and rotary shaft arranged concentrically thereto, and a yielding contact carried by the shaft and movable thereby transversely and concentrically with respect to the convolutions of the helical coil for the coarse and fine regulation of the current, respectively.



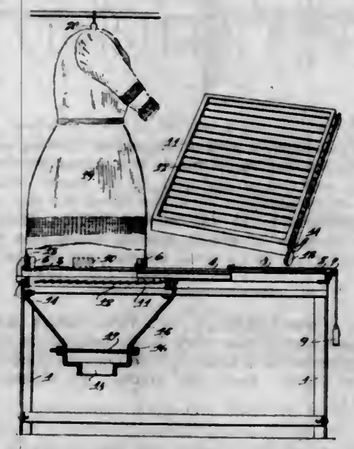
1,620,574. CHANGEABLE ASSEMBLY SET FOR AMUSEMENT AND EDUCATIONAL PURPOSES. EDWARD S. SAVAGE, Rochester, N. Y. Filed Jan. 20, 1925. Serial No. 3,625. 8 Claims. (Cl. 46—35.)

1. A changeable assembly set for amusement and educational purposes formed of a plurality of different elements shaped to be combined to provide a variety of structures and each having a yielding roughened surface coated with an adhesive material which will cause the elements to adhere to each other when placed in contact and which will maintain its adhesive property, at the same time permitting the ready separation of the elements for reassembling to produce other figures.



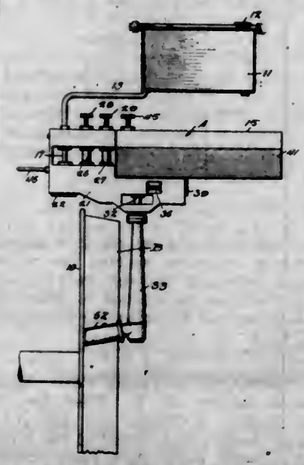
7. A changeable assembly set for amusement and educational purposes, the parts thereof composed of a rigid material, and surfaced with a fibrous material, the outer fibers of the fibrous material being coated with unvulcanized rubber.

1,620,575. VIBRATORY SCREEN. WILLIAM F. SCHADEL, Charleston, W. Va., assignor to Kanawha Manufacturing Company, Charleston, W. Va., a Corporation of West Virginia. Filed May 25, 1926. Serial No. 111,596. 2 Claims. (Cl. 74—14.)



1. An actuating mechanism for vibratory screens, including a support adapted to be positioned above a screen, a housing fixed to said support, a cam in said housing, means for turning the cam, a casing secured to said housing, a rod movable through the casing and adapted to be fixed to the screen, a roller on the rod operated by the cam, a member adapted to be fixed to the lower face of the screen and through which member the said rod projects, and nuts on the rod engaging the member and the screen whereby the screen is firmly secured.

1,620,576. TRAFFIC SIGNAL. LE ROY L. SCHMIDT, South Tacoma, Wash. Filed July 8, 1925. Serial No. 42,266. 6 Claims. (Cl. 116—48.)



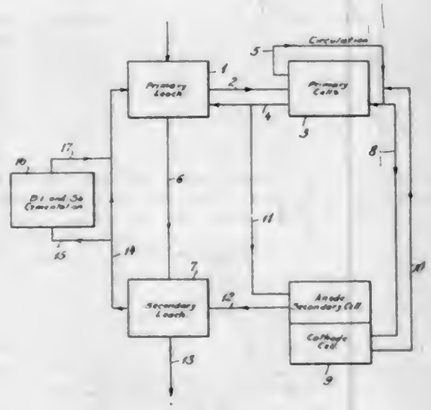
1. The combination with an automobile including a body and a steering post, of a direction signal therefor comprising a bracket secured to the side of the body embodying a hollow arm, a hollow annular bearing cuff formed on the arm, a signaling arm, an incandescent lamp carried by the inner end of the signaling arm, means for deflecting the rays of light emanated from the incandescent lamp outward from the opposite sides of the signaling arm, a bearing cup formed on the inner end of the arm rotatably mounted upon the bearing cuff, a hub formed on the bearing cup, an operating lever associated with the steering post, and a flexible cable secured to the lever extending through the hollow arm into the hollow bearing cuff and connected to said hub.

1,620,577. DRIER. ISADOR SCHUMAN, Kansas City, Mo., and BENJAMIN E. FRANK, Johnson County, Kans. Filed Nov. 10, 1926. Serial No. 147,546. 8 Claims. (Cl. 34—26.)

1. In driers, a stand, a pair of top sections on said stand having relative movement toward and from one another, means tending to separate the top sections, upstanding means carried by said top sections to fit within the bottom of a garment and spread the same, and means for delivering a drying medium upwardly between the top sections into the spread garment.

1,620,578. CAR FLANGE-WHEEL OILER. JOHN L. SCOTT, Harriston, Miss. Filed Jan. 15, 1926. Serial No. 81,498. 7 Claims. (Cl. 184—3.)

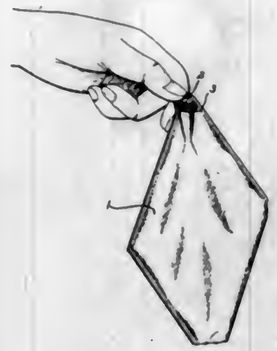
1. A locomotive flange oiler, a supply tank, an auxiliary reservoir, a cup normally arranged above the level of the oil within the reservoir when the locomotive is on a



straight track, a depending supply pipe having communication with the cup, and means for controlling the flow of oil through said cup.

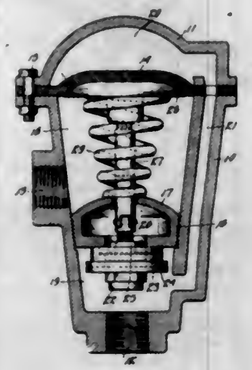
1,620,579. CAN GRID. NORMAN M. SMALL and LEON BUEHLER, Jr., Waynesboro, Pa., assignors to Frick Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Jan. 21, 1926. Serial No. 82,788. 3 Claims. (Cl. 62—159.)

1. The combination with a can grid for holding a set of ice cans in ice making machines, of a supply pipe extending along each end of said grid, an air header connected to each supply pipe and extending along one side of the grid approximately to the middle thereof, and pipes mounted in pairs in spaced relation along said header for supplying air to ice cans, substantially as set forth.



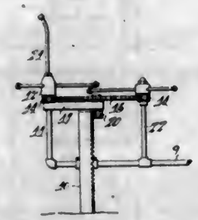
1,620,580. METALLURGY OF TIN. ELIAS ANTHON CAPPELEN SMITH, New York, N. Y., assignor to Guggenheim Brothers, New York, N. Y., a Copartnership. Filed June 27, 1925. Serial No. 40,096. 23 Claims. (Cl. 204—17.)

1. The method of recovering tin from materials containing it, which comprises leaching the material with mixed solvents containing tin and iron compounds and acids, and electrolyzing the solution to deposit a portion of the tin therefrom and to regenerate the solvent.



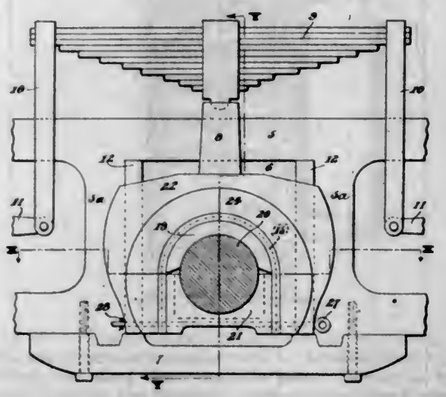
1,620,581. CHEMICAL HEATING PAD. MILDRED AURELIA SMITH, Albany, N. Y. Filed Dec. 17, 1924. Serial No. 756,537. 4 Claims. (Cl. 150—1.)

2. A chemical heating pad formed of two layers of material sewed together along their edges except at one corner, a portion of the material of one layer being cut away to permit the corner of the other layer to extend therebeyond in the form of a flap, whereby the pad can be gripped by this flap, causing a stress on the bias of the pad which forces the two layers to separate at this point, and rows of stitching extending in a converging



manner inwardly from this corner of the pad to join the layers and form a sort of spout or funnel passage through which water can be poured.

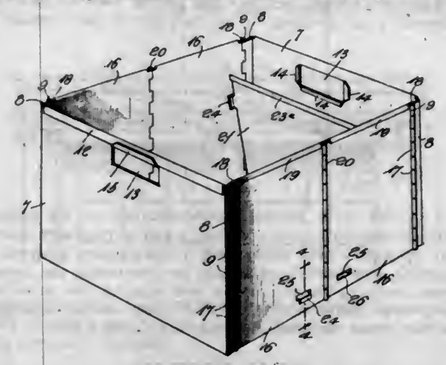
1,620,582. WATER RELIEF VALVE. HOMER A. THRUSH, Peru, Ind. Filed Apr. 9, 1925. Serial No. 21,916. 2 Claims. (Cl. 137—53.)



1. A valve comprising a tapered body casting having openings in its small end and tapered side forming respectively inlet and outlet passages, a hollow cap casting for closing the large end of the body casting, a hollow plug removably secured between said inlet and outlet passages and having upper and lower alined openings therethrough, a valve for normally closing the lower opening, a flexible stem attached to said valve, a diaphragm between the body and cap for directing pressure against the upper end of the valve stem for unseating said valve when pressure is directed against the diaphragm, a by-pass formed in said body casting and providing communication between the smaller end of the valve and the remote side of the diaphragm, substantially as set forth.

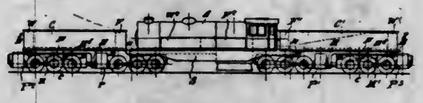
1,620,583. TRAVELING LAWN SPRINKLER. WILLIAM C. TODD and JAMES W. POMEROY, Victoria, British Columbia, Canada. Original application filed July 11, 1922, Serial No. 574,267. Divided and this application filed Apr. 29, 1925. Serial No. 26,750. 3 Claims. (Cl. 299—50.)

1. A water sprinkler, comprising in combination, a central stand pipe to which a water service is delivered, a pipe one end of which is pivotally connected to the water service of the stand pipe to move radially about it and to the other end of which an upright pipe is connected with a jet tube directed upward and outward therefrom, a support wheel rotatably mounted on the radial pipe adjacent the free end, a reaction sprinkler rotatably mounted on the upright pipe below the jet tube, and means for rotating the supporting wheel from the reaction sprinkler.



1,620,584. LOCOMOTIVE DRIVING BOX. WALTER H. UTTERBAUGH, Washington, D. C. Filed Dec. 20, 1924. Serial No. 757,238. 2 Claims. (Cl. 308—165.)

2. In a device of the type described, a drive box, an integral flange at one end thereof, the remaining end of the box being of reduced inverted U-shape and having an unbroken groove formed across the top and down both sides thereof, the top of the main portion of the box having a horizontal pocket provided therein with its bottom wall formed as an extension of the bottom wall of the top part of said groove, and a removable flange carried by the reduced end of the box, said removable flange having a continuous rib received in the groove and a horizontal boss received in said pocket, the top of the boss having a spring saddle receiving seat formed therein.

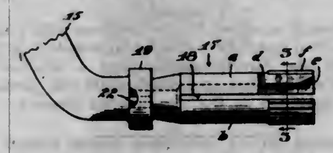


1,620,585. CRATE. FREDERICK WALTHER, Omaha, Nebr. Filed May 7, 1926. Serial No. 107,433. 4 Claims. (Cl. 220—6.)

1. A collapsible box comprising end walls, side walls comprising two members, centrally hinged to each other and to the end walls, said side members having slots therein, flanges formed in the side members adjacent the

slots, bottoms hinged to the end walls, and integral prongs formed in the bottoms and adapted to seat in the slots of the side walls and rest on the integral flanges thereon.

1,620,586. STEAM LOCOMOTIVE. ROBERT HARBEN WHITELEGG, Manchester, England. Filed Oct. 4, 1924, Serial No. 741,567, and in Great Britain Nov. 23, 1923. 33 Claims. (Cl. 105—37.)



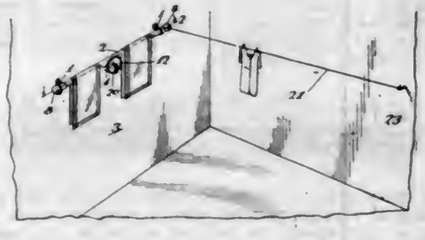
1. An articulated locomotive having a boiler unit consisting of a boiler mounted upon a frame of which the ends extend beyond the ends of the boiler, two power driven units, and a power driven group of wheels, one of the power units being flexibly connected to the power driven group of wheels and supports and is flexibly connected to one extending portion of the boiler frame, while the other power unit supports and is flexibly connected to the other extending portion of the boiler frame.

1,620,587. PLASTER COMPOSITION. AUBREY C. WILLIAMSON, New Orleans, La., assignor of thirty-six per cent to Charles E. Smith and twenty-four per cent to James K. Bagley, both of New Orleans, La. Filed Apr. 25, 1925. Serial No. 25,928. 9 Claims. (Cl. 167—6.)

5. A plastic composition comprising a hard rock-like plastic base, aromatic cedar wood dust incorporated in and evenly distributed through said base whereby to render the same porous, and creosote of wood tar.

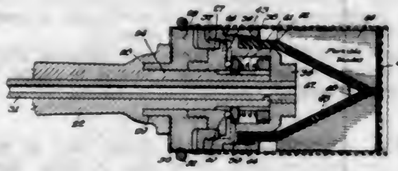
9. A new article of manufacture comprising plaster having cedar sawdust incorporated therein to render the same vermin repellent.

1,620,588. ADJUSTABLE GOLF CLUB. RAY O. WILSON, Los Angeles, Calif. Filed Mar. 8, 1926. Serial No. 93,066. 7 Claims. (Cl. 273—79.)



1. In an adjustable golf club, a shank, an expansible arbor thereon, a head carried by said arbor and turnable thereon, an expander for said arbor, and means for operating said expander for effecting interlocking engagement between said head and arbor.

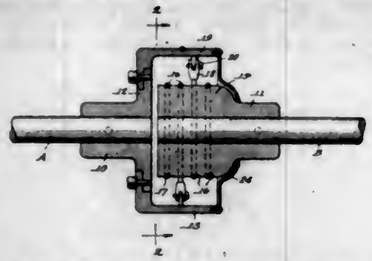
1,620,589. SNAGLESS FISHHOOK. HANNIBAL R. ACKERMAN, Merrill, Wis. Filed June 9, 1926. Serial No. 114,701. 3 Claims. (Cl. 43—40.)



1. A fish hook provided intermediately of its length with an upwardly projecting hook, and in rear with laterally divergent twin hooks, and a downwardly projecting tapering deep blade-form sinker, for preventing the hooks from revolving in the water and causing the same to jump over obstructions, the three hooks having separate shanks joined together and braced by said sinker.

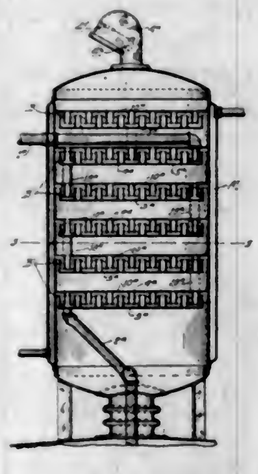
1,620,590. COMBINED TOWEL RACK AND CLOTHESLINE. ORVILLE R. BETTS, San Pedro, Calif. Filed May 25, 1926. Serial No. 111,672. 4 Claims. (Cl. 68—3.)

1. A combined towel rack and clothes line comprising a housing having a reel therein, a tube connected to the reel housing and having communication therewith, a clothes line extending through the tube and wound upon the reel, and means to support the housing and the tube on a wall or the like.



1,620,591. SCRUBBER. NORMAN B. BRALY, Paso Robles, Calif. Filed Feb. 12, 1926. Serial No. 87,929. 16 Claims. (Cl. 15—97.)

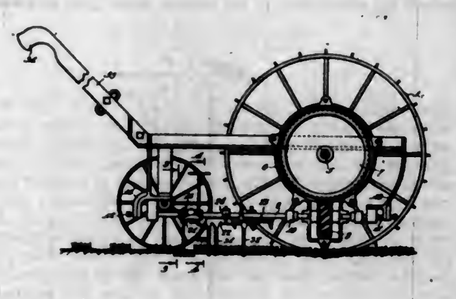
4. In a rotary scrubber, the combination with a spindle, of two carrier members rotatable thereabout, a casing mounted on the carrier member, and a scrubber head within the casing that operates against the same, said head being mounted on the other carrier member.



1,620,592. FLEXIBLE COUPLING. WALTER F. BRISCOE, Trenton, N. J. Filed June 22, 1926. Serial No. 117,817. 4 Claims. (Cl. 64—96.)

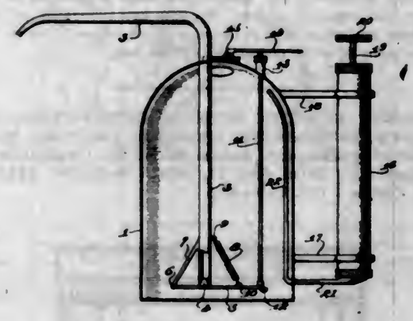
1. A flexible coupling, comprising concentrically disposed driving and driven members arranged one within the other, and flexible elements anchored to the inner periphery of the outer member and the outer periphery

of the inner member and partially embracing the latter, the inner member having peripheral grooves within which the flexible elements are respectively received.



1,620,593. DISTILLING APPARATUS. WALTER E. BROWN, Kansas City, Mo., assignor to United Iron Works, Inc., Kansas City, Mo., a Corporation of Missouri. Filed Aug. 6, 1924. Serial No. 730,525. 4 Claims. (Cl. 261—114.)

1. An apparatus of the character described, comprising an upright casing through which gases circulate, a number of liquid holders arranged in said casing in superimposed relation and each comprising a number of connected trough portions that form a tortuous liquid passageway, said trough portions being separated from each other by openings through which the gases circulate longitudinally of the casing and said liquid holders being so arranged that the liquid supplied to the uppermost holder will pass successively through the other liquid holders in said casing, and means combined with each of said liquid holders and arranged over the gas passageways between the trough portions of same for causing the gases to bubble through the liquid in each holder in traveling longitudinally of the casing past the holder.



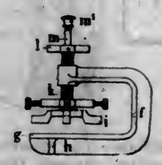
1,620,594. WEEDING MACHINE. ANDERS CHRISTENSEN, Wilson, and AUGUST WERNER WARSEN, Hartford, Conn. Filed Oct. 9, 1925. Serial No. 61,554. 2 Claims. (Cl. 97—38.)

1. In a machine of the character described, a power shaft extending in the same direction in which the machine is adapted to move when in use, a weeding structure connected with said shaft, said weeding structure including a plurality of weeding sections, each section com-

prising a series of weeding arms, a supporting plate for said arms, a clamping block for said plate, and means for adjustably securing said clamping block to said shaft.

1,620,595. PRESSURE OIL CAN. FRED M. DILLEY and CLAY F. HALLBERG, Oelwein, Iowa. Filed Apr. 15, 1925. Serial No. 23,313. 1 Claim. (Cl. 221—52.)

An oil can comprising a closed container, a discharge pipe projecting into the container through the top thereof, to a point adjacent the bottom, an air pump secured vertically and exteriorly upon and in spaced relation to the container and adapted to serve as a handle therefor, an air pipe leading from the bottom of the pump toward the bottom of the container and therefrom to a point adjacent the top thereof, a spring controlled valve on the inner end of said discharge pipe and normally closing said end, a lever pivoted at one end to the top of the container and extending toward the pump, and means operatively connecting said valve to said lever intermediate its said ends to control the operation of said valve.



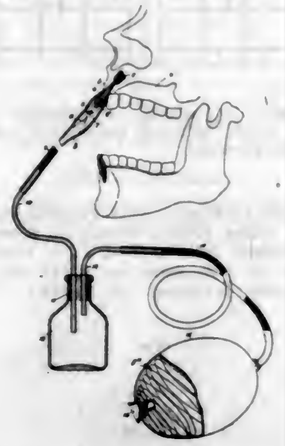
1,620,596. ROLLER-BLIND SUPPORT FOR CASEMENT WINDOWS. ORRIN FRANKLINE CORNWALLIS EWART and ANDREW EWART, Port Huron, Mich. Filed Dec. 22, 1925. Serial No. 77,061. 1 Claim. (Cl. 156—28.)

The combination with a window frame, of a pair of members extensibly connected together at their inner ends, a shade bracket secured to the outer end of one member and hingedly connected to the window frame at one side of the frame opening, a shade bracket formed integral with the outer end of the other extensible member and between which and the first mentioned bracket a shade roller is adapted to be mounted, an extensible

curtain support, and means for detachably connecting said curtain support either to the inner or outer face of the aforesaid brackets.

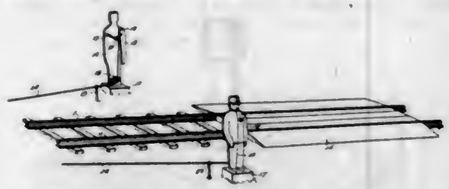
1,620,597. VULCANIZER. PAUL FRANÇOIS MARC ALBERT FONTANA, Cluses, France, assignor to Societe des Appareils Mephisto Jules Manfredi & Cie., Cluses, France. Filed Nov. 19, 1925, Serial No. 70,143, and in France June 25, 1925. 3 Claims. (Cl. 18—18.)

1. In a vulcanizer lighted and heated automatically, a clamping press, two diametrically arranged spark producing elements and a movable striker between said elements.



1,620,598. BOXING APPARATUS. EDGAR E. FOSTER, Montgomery, Ala. Filed Apr. 28, 1926. Serial No. 105,290. 3 Claims. (Cl. 272—76.)

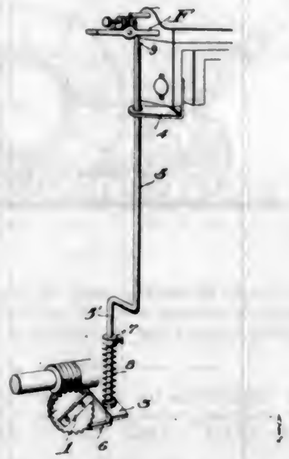
1. A boxing device comprising a base having a convexly curved lower face and a substantially flat upper face, said base having a vertical socket opening through said upper face centrally of the latter, a relatively heavy substance disposed in said socket, a hollow supporting body secured at its lower end to said base so that the axis of said supporting body coincides substantially with



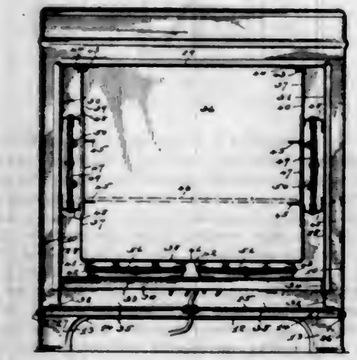
the vertical axis of said base, and a punching head carried at the upper end of said supporting body, said hollow body tapering in cross sectional area from its lower end to said punching head.

1,620,599. ARRANGEMENT FOR REMOVING SECRETIONS FROM DENTAL CANALS BY SUCTION. ROBERT FUST, Glogau, Germany. Filed Aug. 30, 1923, Serial No. 660,214, and in Germany Jan. 31, 1923. 3 Claims. (Cl. 32—7.)

1. In a dental appliance for removing secretions from dental canals by suction through the drilled crown of the tooth, in combination a suction conduit and means to create a vacuum within said suction conduit, a mouthpiece in connection with said suction conduit and in airtight communication with the drill hole in said tooth, and a clamp to guide the said mouthpiece and comprising pivotal jaws adapted to bear with lateral pressure upon the crown.



1,620,600. CROSSING SIGNAL. JOHN B. GEBHARD and HENRY ALTHAUS, Dyersville, Iowa. Filed July 1, 1926. Serial No. 119,916. 1 Claim. (Cl. 246—293.)

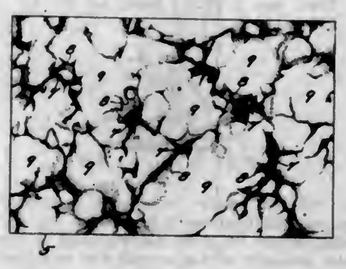


The combination with a track, a crank shaft located under the track, a short crank arm on said shaft, a ramp engaging said short crank arm and adapted to partially turn the shaft when the ramp is depressed by the passage of a wheel over the track, a relatively long crank arm on said shaft, a figure constituting a crossing signal, a pivoted arm on the signal, a pulley on the signal, and a flexible device connecting the long crank arm with the arm of the signal and passed around said pulley.

1,620,601. LOOM ATTACHMENT. ARCHIE GAGNON, Pawtucket, R. I., assignor of one-half to Charles G. Greenhalgh, Pawtucket, R. I. Filed June 3, 1926. Serial No. 113,423. 6 Claims. (Cl. 139—270.)

1. A loom attachment including a feeler having a side notch, a vertically sliding spring pressed rod having a rigid vertically disposed bevelled upper end and an outwardly extending finger at its lower end, the bevelled upper end being formed to engage in said side notch of the feeler, spring means for upwardly tensioning the rod, and a dog formed for securement to the take-up worm gear and having an end engageable with the finger to depress the rod thereby to release the feeler upon each revolution of the gear, the bevelled end of the rod being formed to cam against and move the feeler out of engagement with the yarn upon upward movement of the rod.

1,620,602. ELECTRIC COOKING DEVICE. BENJAMIN MAYER, Baltimore, Md., assignor to The Pronto Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Filed July 21, 1926. Serial No. 123,877. 3 Claims. (Cl. 219—35.)

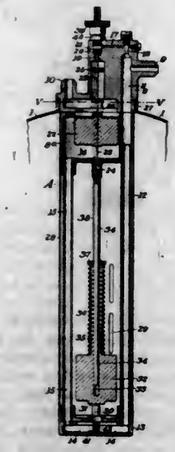


1. In an electric cooking device the combination with an outer body having a detachable bottom, an inner intermediate shell spaced from the sides, top and rear walls of and within the said outer body, said intermediate shell also being spaced from the detachable bottom except at its corners, an inner shell fitting within the said intermediate shell and being spaced from the side and bottom walls of the latter, heating units in the side spaces between the inner and intermediate shells, a switch socket attached to the detachable bottom and a heating unit in the space between the intermediate and the inner shells.

1,620,603. METHOD OF FORMING HINGES. CHARLES A. MUNSON, New Britain, Conn. Filed Apr. 16, 1926. Serial No. 102,530. 4 Claims. (Cl. 29—11.)

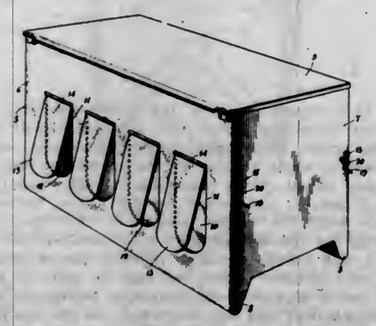
3. The herein described method of forming hinge leaves which consists in stamping a blank from sheet metal, reducing in thickness a portion of the blank adjacent to, but spaced slightly from, one end thereof, and thus forming in one face of the blank a depression having at one end an inclined surface merging into the body portion of the blank and at the other end a narrow portion of normal thickness, rolling the portion of reduced thickness back upon itself into cylindrical form and abutting the end edge of the blank against said inclined surface, trimming the ends of the knuckle and making the hole in the knuckle round and true.

1,620,604. METHOD OF PRODUCING RELATIVE COLOR DESIGN. RUDOLF SYKORA, Boston, Mass. Filed Apr. 22, 1922. Serial No. 556,072. 10 Claims. (Cl. 41—26.)



1. The method of producing a color design on an article consisting of combining solutions of dyestuffs of unlike color effects, applying this solution to the article, and then incorporating into the article a substance containing electro-positive and electro-negative ions.

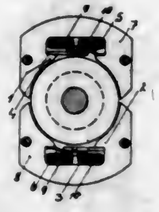
1,620,605. FILM SPOOL. HERMAN A. DE VRY, Chicago, Ill. Filed Sept. 4, 1926. Serial No. 133,536. 4 Claims. (Cl. 242—71.)



1. A film spool comprising a hub and sides, each of the sides being provided with a shaft opening, one of the openings having a plurality of outwardly extending notches to receive a key on a cylindrical shaft of a predetermined size and shaped to receive the corners of a polygonal shaft of a predetermined size, the margins of the opening between the notches being shaped to fit either the sides of a polygonal or the periphery of the cylindrical shaft with a key, and whereby the spool will be adapted to be driven by either of such shafts and to rotate on a plain cylindrical shaft.

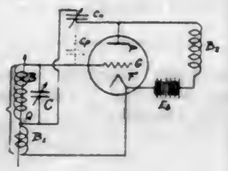
1,620,606. METHOD OF AND APPARATUS FOR INDICATING THE AMOUNT OF LIQUID IN A SUPPLY TANK. JAMES MCELWAIN, Wheeling, W. Va., assignor of one-half to J. E. Wright, sr., Wheeling, W. Va. Filed Apr. 21, 1922. Serial No. 555,823. 8 Claims. (Cl. 116—118.)

3. A liquid gage including a tank, a conduit through which liquid is withdrawn from the tank, the conduit having an opening to the tank through which liquid normally passes from the tank to the conduit, the conduit also having a second opening through which liquid may pass from the tank to the conduit, but offering a greater resistance to flow than the first mentioned opening, means for closing the first mentioned opening when the liquid level in the tank falls to a predetermined point, adjustable means acting on said closing means for changing the predetermined level, and indicating means responsive to the varying resistance to flow substantially as described.



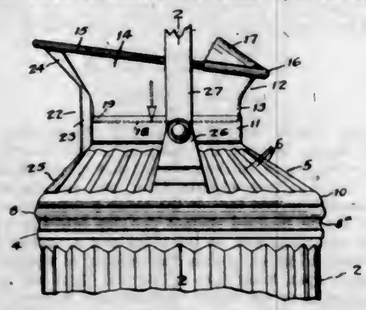
1,620,607. POULTRY FEEDER. GEORGE F. MOYERS, Osceola, Iowa. Filed Sept. 7, 1926. Serial No. 133,934. 4 Claims. (Cl. 119—63.)

1. A poultry-feeder comprising a receptacle having outer vertical straight side with a plurality of openings therein, closures for said openings hinged at their upper



ends and movable outwardly and inwardly at their free ends to vary the size of the clearance of the openings, an operating means engaging all of the closures and provided with cranks to uniformly vary the angle of said closures.

1,620,608. ELECTRIC MACHINE WITH SPLIT POLES. HERMANN PAPST, Vienna, Austria, assignor to Edward D. Feldman, New York, N. Y. Filed May 25, 1926, Serial No. 111,586, and in Austria Mar. 11, 1925. 3 Claims. (Cl. 171—252.)

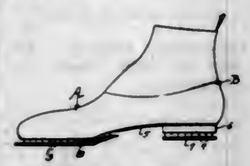


1. In a split pole dynamo electric machine having brushes interposed midway between the pole gaps, means interposed between said poles for shifting the pole clearance to an unsymmetrical position with respect to said pole gaps, whereby the path of the cross magnetizing field of the motor armature during load is shifted to produce a substantially neutral zone in the region of said brushes, said means comprising a single member adapted to be detachably connected to either of the opposite edges of two adjacent poles to shift the position of said pole clearance.

1,620,609. RADIO APPARATUS. GEORGE SOMERSALO, Providence, R. I. Filed Feb. 9, 1926. Serial No. 86,985. 7 Claims. (Cl. 179—171.)

1. In a signaling system, the combination of a three-element thermionic device with an input circuit and an output circuit, said input circuit including a coil, one terminal of which is connected to the grid of said device and said output circuit connecting the plate and filament of said device; and means for preventing feed-back of energy from the output circuit to the input circuit through the inherent capacity between electrodes of the device, said means including a capacity interposed between the other terminal of said coil and the plate of said device, and a separate coil electrically interposed between one terminal of said first-mentioned coil and the filament of said device, said coils being inductively related to each other and the one wound oppositely with respect to the other, the coupling between said two coils being less than unity.

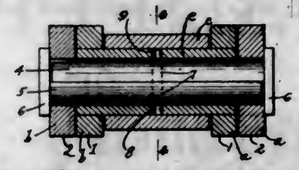
1,620,610. MEASURING BUCKET OR VESSEL. AUGUSTINE DAVIS, Jr., Cincinnati, Ohio. Filed Nov. 16, 1925. Serial No. 69,358. 2 Claims. (Cl. 73—62.)



1. In a measuring bucket, a breast having an upstanding neck flange, and a spout member having a neck portion formed with an inwardly bent calibrating flange at the bottom, said member being set telescopically into said flange and welded thereto with said calibrating flange at an ascertained level.

1,620,611. FASTENER. EMANUEL DRESNER, Chicago, Ill. Filed Apr. 2, 1925. Serial No. 20,143. 7 Claims. (Cl. 292—118.)

1. A lock for luggage comprising a housing, an arm pivoted on said housing to lie flat on top of the same or swing up at an angle thereto, and a bolt pivoted about its own axis normal to said arm to project through said housing and fasten an element below the same.

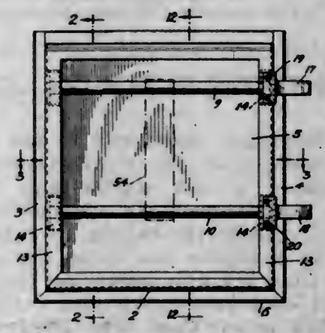


1,620,612. SHOE. ROBERT E. MCKIBBEN, Warrendale, Pa. Filed Nov. 25, 1922. Serial No. 603,277. 1 Claim. (Cl. 36—12.)

In a shoe, an upper having its lower portion turned under, a top sole beneath and secured to the turned under portion of the upper, a frame fitting within the upper and above the turned under portion thereof, pointed members carried by and permanently associated with the frame, said members passing through the turned under portion of the upper and through the top sole and projecting beyond the outer face thereof, and an outer sole driven onto the projecting portions of said pointed members and secured in position thereby.

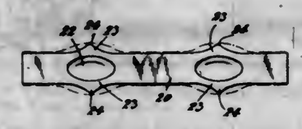
1,620,613. CHAIN. HERMAN V. SHIRLEY, Long Beach, Calif. Filed Nov. 15, 1923. Serial No. 674,868. 7 Claims. (Cl. 74—32.)

2. In a chain, the combination, of two spaced links, a pin between such links, said pin being formed in cooperative halves, each one of said halves being formed with a transverse bore and means adapted to be received within such transverse bores of the two halves for holding



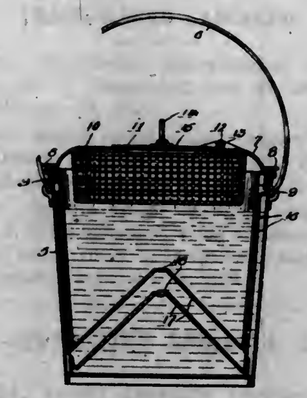
the pin in position of service to such links; each half of the said pin being formed wtih a head, which heads are adapted to engage opposite sides of the links.

1,620,614. VEHICLE DOOR CONSTRUCTION. ALBERT L. LAMBERT, Narberth, Pa., assignor to Heintz Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 15, 1923. Serial No. 662,803. 5 Claims. (Cl. 296—44.)



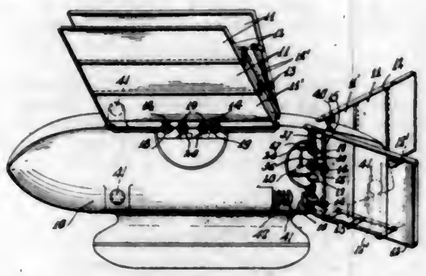
1. In a door of the character described, in combination, a rear panel having along its upper edge an overhanging flange spaced rearwardly of the panel, a front panel member having a portion extending rearwardly over the top of the door and having an overhanging flange fitting over the overhanging flange of said rear panel, an upholstery pad on the rear of the door, the upper edge of said pad being seated behind and overlapped by said overhanging flanges, and an offset formed on the rear panel seating against said pad and locating the top edge of the pad closely against said overhanging flanges.

1,620,615. VEHICLE DOOR CONSTRUCTION. ALBERT L. LAMBERT, Narberth, Pa., assignor to Heintz Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 19, 1923. Serial No. 663,524. 4 Claims. (Cl. 296—44.)



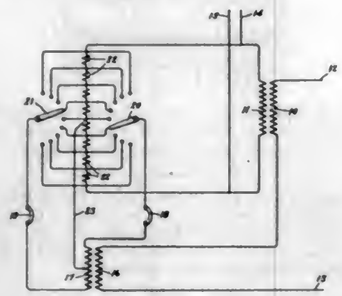
1. In vehicle door construction, the combination with two opposed edge members, of a tubular member extending between said edge members, end plates rigidly secured to said tubular member, one at each end thereof, and each plate being rigidly secured to one of said opposed edge members, and a hinge secured to one of said edge members and to one of said end plates adjacent an end of said tubular member, whereby said end plate and tubular member reenforce the door at the hinge.

1,620,616. METHOD OF MAKING AXLE HOUSINGS. ALBERT L. LAMBERT, Philadelphia, Pa., assignor to Heintz Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 21, 1926. Serial No. 82,670. 3 Claims. (Cl. 29—153.)



1. The method of making axle housing sections, which consists of widening laterally to the required width predetermined portions of a sheet metal blank which would otherwise be too narrow for the section, leaving metal of the original thickness of the blank at the side edges of the widened portions, the blank being thereby rendered thinner between said side edges, cutting the blank down to predetermined shape, and fashioning the blank to have a bowed portion with oppositely extending arms and to have transverse curvature, with said widened portions located at the juncture between the arms and the bowed portion, so that the side walls at the widened portions will have the original thickness of the blank.

1,620,617. FISHERMAN'S BAIT TRAP AND CARRIER. LOUIS MARSH and OLIVER J. DUFRESNE, St. Paul, Minn.; said Louis Marsh assignor to said Oliver J. Dufresne. Filed Apr. 25, 1925. Serial No. 25,817. 1 Claim. (Cl. 43—56.)



The combination with a container for water, of a minnow trap, formed in sections adapted to be telescoped one within the other within said container, and a cover for said container composed of foraminous material throughout the greater portion of its area, a foraminous basket rigidly attached thereto and positioned above the water in said container, said cover closing the top of said basket and said cover being provided with a spring-actuated door arranged to allow access to the interior of said basket.

1,620,618. PROPELLING, LIFTING, AND STEERING DEVICE FOR AIRSHIPS. ANTONIO CHIARELLI, New York, N. Y. Filed Feb. 4, 1926. Serial No. 85,902. 8 Claims. (Cl. 244—20.)

1. In a device of the class described, having pivotally mounted frame members pivotally supporting wing members, the inner wing members having gears coaxially mounted to its pivot, and a motor having an eccentric on the end of its shaft, the combination of a shaft, gears on said shaft meshing with said gears, a support, a gear sector pivoted to said support, said gear sector being formed with an extended arm, another gear on said shaft meshing with said sector, another support, a dog pivoted to said support, one end of said dog engaging said eccentric, the other end engaging said extended arm, and means for changing the distance between said supports.

1,620,619. TRANSFORMER-VOLTAGE-REGULATING SYSTEM. PHILIP M. CURRIER, Ballston Lake, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 29, 1926. Serial No. 119,455. 4 Claims. (Cl. 171—119.)

1. The combination with a main transformer of a transformer having a winding provided with taps, a voltage regulating transformer having one winding connected in series with a winding of said main transformer and a second winding having a connection from an intermediate voltage point thereof to an intermediate point of said tapped winding, and means for connecting each end of said second winding of the voltage regulating transformer to selected taps of said tapped winding.

Patents Nos. 1,620,620 to 1,621,485.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 356—No. 3. TUESDAY, MARCH 15, 1927. Price—$5 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Disclaimer.

1,533,616.—*Stanley D. Shipley* and *Guy C. Given*, Stamford, Conn. LACQUER AND LACQUER ENAMEL. Patent dated April 14, 1925. Disclaimer filed February 24, 1927, by the assignee, *Atlas Powder Company*.

Hereby enters this, its disclaimer, to the subject matter of claims 1, 2, 3, 5, 12, 13, 14, 16, 18, 21, and 22 of said patent, said claims being as follows:

"1. A composition comprising nitrocellulose and ethyl-glycol.

"2. A composition comprising nitrocellulose, ethyl-glycol, and a nonsolvent diluent miscible therewith without precipitation of the nitrocellulose.

"3. A composition comprising nitrocellulose, ethyl-glycol and a hydrocarbon diluent miscible with the same without precipitation of the nitrocellulose.

"5. A composition comprising nitrocellulose, ethyl-glycol and a benzene hydrocarbon.

"12. A nitrocellulose solvent mixture, the essential constituent of which is ethyl-glycol ($OHCH_2CH_2OC_2H_5$).

"13. A nitrocellulose solvent comprising a mixture of ethyl-glycol and a nonsolvent of nitrocellulose miscible as a diluent with said mixture.

"14. A nitrocellulose solvent comprising a mixture of ethyl-glycol and a hydrocarbon miscible as a diluent with said mixture.

"16. A nitrocellulose solvent comprising a mixture of ethyl-glycol and a benzene hydrocarbon.

"18. A nitrocellulose solvent comprising a mixture of ethyl-glycol and benzene.

"21. The process of forming a body of nitrocellulose which comprises dissolving nitrocellulose in a solvent consisting essentially of ethyl-glycol ($OHCH_2CH_2OC_2H_5$) and evaporating said mixture.

"22. The process of forming a body of nitrocellulose comprising dissolving nitrocellulose in a mixture of ethyl-glycol and a nonsolvent for nitrocellulose and causing the said mixture to evaporate."

TRADE-MARKS CANCELED.

186,736. Mincemeat. Merrell-Soule Company, Syracuse, N. Y. Registered July 22, 1924. Canceled February 23, 1927.

196,453. Salami sausage and summer sausage. Arnold Busch & Sons, Chicago, Ill. Registered March 17, 1925. Canceled February 23, 1927.

202,815. Certain named medicinal preparations. William J. O'Shaughnessy, doing business as H. O. Company, Brooklyn, N. Y. Registered September 1, 1925. Canceled February 23, 1927.

NOTICE—CHANGES IN PATENT OFFICE FEES—EFFECTIVE APRIL 14, 1927.

The act of Congress approved February 14, 1927, amends section 4934, Revised Statutes, so as to provide (except in design cases) a fee on filing each original application for a patent of $20 and of $1 for each claim in excess of twenty, and on issuing each original patent, of $20 and of $1 for each claim in excess of twenty.

The new rates are effective in connection with all applications filed on or after April 14, 1927, and all final fees paid on or after that date.

In every case which contains more than twenty claims, the payment after April 13, 1927, of a final fee of $20, or less than $20 plus $1 for each claim in excess of twenty, will not save the case from forfeiture.

Condition of Applications Under Examination at Close of Business March 4, 1927.

(Total number of applications awaiting action, excluding Trade-Mark Division, 55,382; Trade-Mark Division, 1,934. Oldest new case, July 17, 1926; oldest amended, July 17, 1926. The dates given are 1926 except where † indicates 1927.)

Room No.	Divisions, Examiners, and Subjects of Inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

GRAY *v.* GREENE. GREENE *v.* GRAY.

No. 1,881. Decided December 6, 1926.

1. INTERFERENCE—ISSUE—COUNTS WHICH ORIGINATED IN A PATENT—CONSTRUCTION OF.

Counts which originated in a patent should be given the meaning plainly intended by the patentee.

2. INTERFERENCE—CLAIMS OF PATENT TAKEN AS ISSUE—CONSTRUCTION OF.

Where certain counts of the interference, which originated in G.'s patent, provide for a reactance to be cut into the primary circuit of an electric furnace, and in G.'s patent this is accomplished by the use of reactance coils which are cut into or out of the primary circuit by means of switches, *Held* that the provision for a reactance introduced or cut into the primary circuit does not mean a reactance element introduced in the secondary circuit and producing a similar result.

APPEAL from the Commissioner of Patents. Affirmed in part.

Mr. D. A. Usina and *Mr. E. W. Shepard* for Gray.

Mr. E. W. Merchant, Mr. Merton W. Sage, Mr. Geo. J. Hesselman, and *Mr. R. K. Stevens* for Greene.

Before MARTIN, Chief Justice, VAN ORSDEL, Justice, and HATFIELD, Judge U. S. Court of Customs Appeals.

MARTIN, *C. J.:*

These are cross appeals from a decision of the Commissioner of Patents in a patent interference proceeding.

Gray filed his application with eight claims on July 20th, 1918; his patent was regularly issued on September 10th, 1918. About a year later, to wit on September 8th, 1919, Greene filed, copying all of Gray's claims. An interference was declared, the eight counts being copies of Gray's claims. Greene is accordingly bound to prove his case beyond a reasonable doubt. Testimony was taken by both parties. The Examiner of Interferences awarded priority as to all of the counts to Gray; this decision was affirmed by the Examiners in Chief; but upon appeal the Commissioner of Patents awarded priority to Greene as to counts 1, 2, 4 and 7, and to Gray as to counts 3 and 6; the appeal was dismissed by consent as to counts 5 and 8. These cross appeals were then taken.

[1, 2] The invention relates to electric furnaces for melting and refining metals, and particularly to the use of high and low voltages during the melting and refining periods respectively, and the method and means for cutting a reactance into the power circuit during the melting period in order to prevent excessive surges of the current and consequent interruption of the arc, and for cutting the reactance out during the refining period in order to secure a good power factor. The apparatus consists in part of a transformer, producing an induced E. M. F. by means of primary and secondary circuits acting in correlation. The entire construction is fully described in the decisions of the Patent Office and need not be repeated here.

The following are the counts in controversy:

1. The method of melting and refining metal in an electric furnace which consists in supplying a current of comparatively high E. M. F. to the electrodes during the melting-down period to produce a comparatively long arc and cutting a reactance into the primary circuit to thereby insure continuity of the arc and prevent surges on the power line.

2. The method of melting and refining metal in an electric furnace which consists in changing the E. M. F. from a higher to a lower voltage when performing respectively the melting-down and refining operations, reactances being introduced into the circuit at the time the charge is being melted down and the higher E. M. F. used.

3. The method of varying the kwh. input into electric furnaces for melting down and refining the charge which consists in introducing a current of high E. M. F. through a reactance in the circuit to prevent surges on the power line and subsequently cutting out said reactance and introducing a comparatively low E. M. F. during the finishing or refining period.

4. In combination with an electric furnace, circuit arrangements whereby a reactance is introduced in the primary circuit and comparatively high voltage utilized during the melting down of the charge and means whereby the E. M. F. may be lowered during the finishing operation to vary the intensity of the heat generated at the electrodes to prevent injury to the said walls and roof of the furnaces.

6. In combination with the electrodes of an electric furnace a transformer and means whereby the E. M. F. and the reactance in the primary circuit may be varied to insure the continuity and vary the intensity of the arc within the furnace.

7. In combination with the electrodes of an electric furnace, a transformer, reactance coils and means whereby the reactance coils may be cut in circuit with windings of the transformer during the melting down of the charge to permit the use of the comparatively high E. M. F. and long arc with a current of great strength without producing excessive current fluctuations or surges on the line, and means whereby a comparatively lower E. M. F. may be impressed on the windings of the transformer to give a shorter arc during the finishing or refining period.

The record discloses that the evidence in the case was first carefully reviewed and considered by the Examiner of Interferences, who found that Greene should be restricted to his filing date for reduction to practice as to all of the counts, and for conception as to counts 1, 4, 5, 6 and 8; that as to counts 2, 3, and 7, Greene had established conception as early as March, 1917, but had failed in diligence between the respective filing dates of the parties. Priority was accordingly awarded to Gray as to all of the counts. The evidence was

again fully considered by the Examiners in Chief with similar results. We think these conclusions are fully supported by the record.

The Commissioner of Patents however has held upon the evidence that Gray was the first to conceive and the first to reduce to practice as to counts 3 and 6; but that Greene was the first to conceive and the first to reduce to practice as to counts 1, 2, 4, and 7.

It will be noted that counts 1 and 4 of the interference provide for a reactance to be cut into the primary circuit during the melting process. In Gray's patent this is accomplished by the use of reactance coils which are cut into or out of the primary circuit by means of switches. Greene's disclosure has no provision for any reactance elements to be cut into or out of the primary circuit. The Commissioner however held that a similar effect was produced in Greene's apparatus by means of reactance coils in the secondary circuit, saying that it is well understood that when a reactance coil is introduced into a secondary circuit its reactance is simultaneously introduced into the primary circuit, and that the lag produced by the reactance coil appears in both circuits. In our opinion, however, these counts, which originated in Gray's patent, should be given the meaning plainly intended by the patentee, and we see no escape from the interpretation that the provision for a reactance introduced or cut into the primary circuit, means a reactance element actually serving in the primary circuit, and not an element used in the secondary circuit producing a similar result. We are unable therefore to agree with the Commissioner's conclusion respecting counts 1 and 4. In respect to counts 2 and 7 it will be observed that both counts provide for the melting and refining of metal in the electric furnace by changing the E. M. F. from a higher to a lower voltage when performing respectively the melting-down and refining operations, reactances being introduced into the circuit at the time the charge is being melted down and the higher E. M. F. used. The Commissioner held upon the evidence that Greene in the year 1917 must have contemplated operating a system with reactance coils in circuit at some time, and accordingly his system would support these counts which say nothing about cutting the coils out during the low-voltage period. We think this conclusion is erroneous. Counts 2 and 7 provide for the cutting in of the reactance coils during a specific period, to wit the melting-down period, whereas Greene's prior device fails to show or describe the relation between the cutting in and out of the reactance and the change of voltage called for by these counts. It is not apparent that Green had in mind in 1917 that it was especially desirable to introduce reactance into the circuit during the melting-down period in the process of melting and refining metal.

We are therefore of the opinion that the Commissioner of Patents erred in awarding priority to Greene as to counts 1, 2, 4, and 7, and his decision to that effect is accordingly reversed, with directions to award priority as to these counts to Gray. The decision awarding priority to Gray as to counts 3 and 6 is affirmed.

Court of Appeals of the District of Columbia.

AMERICAN WATCH IMPORT COMPANY v. WESTERN CLOCK COMPANY.

No. 1,867. Decided December 6, 1926.

1. TRADE-MARKS—GEOGRAPHICAL NAMES—ACT OF 1905—10-YEAR PROVISO.

   A geographical name which is not capable of exclusive appropriation as a trade-mark at common law may be registered under the 10-year proviso of the act of February 20, 1905.

2. SAME—"AMERICUS"—"AMERICA"—DECEPTIVE SIMILARITY—WATCHES—CLOCKS—SAME DESCRIPTIVE PROPERTIES.

   The names "Americus" and "America" are obviously so similar as to be likely to cause confusion in the trade if used upon goods having the same descriptive properties, such as watches and clocks.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. O. F. Barthel for American Watch Import Company.

Mr. E. S. Rogers for Western Clock Company.

Before MARTIN, Chief Justice, VAN ORSDEL, Justice, and HATFIELD, Judge U. S. Court of Customs Appeals.

MARTIN, *C. J.:*

This is an appeal from a decision of the Commissioner of Patents sustaining an opposition to the registration of a trade-mark.

The record discloses that on December 4, 1906, the appellee, the Western Clock Company, regularly obtained a registration in the Patent Office of its trade-mark consisting of the name "America", for use upon clocks. The registration was allowed under the proviso in section 5 of the act of February 20, 1905, permitting the registration of marks which had been in the actual and exclusive use of the applicant or his predecessors for 10 years next preceding the passage of the act. The appellee has continued in the use of the registered mark, having sold more than 12,000,000 clocks bearing it, and having spent more than $700,000 in advertising its America clocks.

On May 20, 1923, the appellant, the American Watch Import Company, filed an application in the Patent Office for registration of its trade-mark consisting of the word "Americus", for use upon watches, claiming use of the mark in its business since June 1, 1922.

This application was opposed by the appellee as an attempted infringement of its prior mark, the appellee claiming that the goods in question, to wit clocks and watches, were of the same descriptive properties, and that the substantial identity of the two marks would be likely to lead to confusion in the trade, to its damage.

The opposition was heard upon testimony, and was sustained by concurring decisions in the Patent Office, whereupon this appeal was taken.

[1] We think this decision was correct. It is true the name "America" is a geographical name which is not capable of exclusive appropriation as a trade-mark at common law. But it has been held that such a mark may be registered under the 10-year proviso of the act of February 20, 1905. *Scandinavian Belting Co.* v. *Asbestos & Rubber Works*, 257 Fed. 937. See also *Thaddeus Davids Co.* v. *Davids Mfg. Co.*, 202 O. G. 952, 233 U. S. 461.

[2] The names "Americus" and "America" are obviously so similar as to be likely to cause confusion in the trade if used upon goods having the same descriptive properties, such as watches and clocks. This would probably lead to the appropriation by the later registrant of the goodwill built up by the opposer, to the injury and damage of the latter. In *N. Wolf & Sons* v. *Lord & Taylor*, 202 O G. 632, 41 App. D. C. 514, this court held that the registration, for knitted and textile underwear, of a trade-mark which is identical with a registered mark in use by the opposer for hosiery, will be denied as tending to mislead or confuse the purchasing public; and damage to the opposer need not be shown, since such a conflict implies damage, both to the opposer and to the public. See also *Oppenheim, Oberndorf & Co. Inc.* v. *President Suspender Co.*, 332 O. G. 5, 3 Fed. (2d) 88.

The record does not disclose any actual abandonment by appellee of its mark; nor do we find that appellee's mark was used as a "grade-mark" only; nor that appellee is estopped from maintaining its present opposition.

This court has adopted a strict rule in refusing registration in all cases where the apparent similarity would probably lead to confusion in trade, holding that the field of selection for marks is so broad that no necessity exists for the invasion of one trader upon even the apparent rights of another, and that the broadest protection will be afforded the purchasing, consuming public by the courts. *Summit City Soap Works* v. *Standard Soap Company*, 174 O. G. 587, 37 App. D. C. 604.

Upon a consideration of the entire record we affirm the decision of the Commissioner of Patents.

Particular description of goods.—Coffee, Bouillon Cubes, Canned Pork and Beans, Catchup, Olives, Pickles, Peanut Butter, Salad Dressing, Chili Sauce, Vinegar, Chile Con Carne, Spices, Breakfast Cereals, Honey, Cottonseed Oil, Preserved Fruits, Flavoring Extracts for Food Purposes, Canned Sauerkraut, Canned Fish, Canned Fruits, Canned Vegetables, Evaporated Milk, Canned Berries, Canned Shellfish, Canned Fruits for Salad, Malt Extract for Food Purposes.

Claims use since September, 1922.

Ser. No. 206,671. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) KELLOGG COMPANY, Battle Creek, Mich. Filed Dec. 13, 1924.

PEP

Particular description of goods.—Cereal Breakfast Food Composed Principally of Bran.

Claims use since Sept. 1, 1914.

Ser. No. 207,083. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) KING OF ALL CLEANER COMPANY, Atlantic, Iowa. Filed Dec. 22, 1924.

KING OF ALL CLEANER

No claim is made to the word "Cleaner" apart from the mark shown.

Particular description of goods.—Liquid Preparation for Cleaning the Hands, Fabrics, Etc.

Claims use since Oct. 5, 1923.

filed June 30, 1926, D. C. N. J., Doc. E 2077, *E. R. Tolfree* (*X Laboratories*) v. *S. G. Kentzler et al.* Bill dismissed Jan. 25, 1927.

1,305,198 and 1,305,199, W. H. Deubener, Bag, appeal filed Jan. 28, 1927, C. C. A. (8th Cir.), Doc. 7585, *R. Brownson & Co.* v. *W. H. Deubener.* Appeal dismissed Jan. 28, 1927.

1,305,199. (See 1,305,198.)

1,377,405, L. de Forest, Audion circuit, suit filed Jan. 3, 1927, D. C. N. J., Doc. E 2286, *De Forest Radio Co. et al.* v. *North Ward Radio Co., Inc.*

1,379,583, S. T. Walkup, Car door, appeal filed Jan. 26, 1927, C. C. A. (2d Cir.), Doc. 9510, *S. T. Walkup* v. *Interborough Rapid Transit Co.*

1,380,601, T. E. Shafer, Dumping truck, suit filed Nov. 3, 1926, D. C., S. D. Calif. (Los Angeles), Doc. K–117–J, *T. E. Shafer* v. *G. R. Curtiss Co., Inc., et al.*

1,423,956. (See 1,018,502 (*b*) and (*c*).)

1,423,957. (See 1,018,502 (*b*) and (*c*).)

1,486,779, C. Mayer, Girdle brassière, suit filed Jan. 31, 1927, D. C., E. D. Mich. (S. Div.), Doc. 1876, *Nature's Rival Co.* v. *Jackson Corset Co.*

1,508,569, W. B. Newkirk, Grape sugar, suit filed Nov. 30, 1925, D. C., S. D. N. Y., Doc. E 34/331, *International Patents Development Co. et al.* v. *American Maize Products Co. et al.* Decree sustaining patent and granting injunction Feb. 3, 1927.

1,539,309, I. S. Goldman, Treating fruit, suit filed Nov. 16, 1926, D. C., S. D. Calif. (N. Div.), Doc. C–37–M, *I. S. Goldman & Co.* v. *W. C. Cook & Co.*

1,546,014, C. L. Downey, Coin-counting machine, suit filed Oct. 12, 1926, D. C., S. D. Ohio (W. Div.), Doc. E 437, *C. L. Downey* v. *The Washington Bank & Savings Co.* Dismissed without prejudice Feb. 4, 1927.

1,560,468, J. C. Dodson, Wooden sucker-rod guide, appeal filed Jan. 27, 1927, C. C. A. (8th Cir.), Doc. 7730, *Mexia Planing Mill Co.* v. *H. Richman et al.*

1,571,501, H. R. Van Deventer, Electrical condenser, appeal filed Aug. 20, 1926, C. C. A. (2d Cir.), *Dubilier Condenser & Radio Corp.* v. *New York Coil Co.* Decree of district court affirmed (notice dated Jan. 27, 1927).

1,573,788, O. C. Wiese, Cloth, suit filed Feb. 1, 1927, D. C., S. D. N. Y., Doc. E 40/198, *S. Fromm* v. *M. Mazik, Inc., et al.*

1,579,753, M. P. Burke, Driving mechanism for oil-well rigs, suit filed Oct. 9, 1926, D. C., S. D. Calif. (N. Div.), Doc. C–34–M, *M. P. Burke et al.* v. *Midway Iron Works, Inc.*

1,587,723, H. C. Hamer, Nail stripper, suit filed Nov. 18, 1926, D. C., S. D. Calif. (Los Angeles), Doc. L–4–M, *H. C. Hamer* v. *C. F. Smith.*

1,590,409, H. Bender, Sport cap, suit filed Jan. 31, 1927, D. C. Nebr. (Omaha), Doc. E 849, *Omaha Cap Mfg. Co.* v. *Omaha Hat Factory.*

1,600,900, H. E. Marsh, Quarry-block-sawing machine, suit filed Oct. 5, 1926, D. C., S. D. Calif. (Los Angeles), Doc. K–104–M, *H. E. Marsh* v. *The Celite Co.*

Des. 65,813, J. K. Kabalan, Shawl, suit filed Dec. 3, 1924, D. C., S. D. N. Y., Doc. E 30/312, *J. K. Kabalan* v. *F. Engelman.* Decree sustaining patent and granting injunction Feb. 2, 1927.

Des. 68,770, W. H. Dewar, Radiocabinet, suit filed Sept. 27, 1926, D. C., S. D. Calif. (Los Angeles), Doc. K–98–M, *The Pooley Co.* v. *Blue Bird Furniture Mfg. Co.*

Des. 71,117, F. J. Peters, Plate, suit filed Nov. 15, 1926, D. C., S. D. N. Y., Doc. E 39/91, *F. J. Peters* (*B. Tomby & Co.*) v. *Heinrich & Winterling, Inc.* Decree sustaining patent and granting injunction Jan. 26, 1927.

Re. 14,755. (See 1,022,866.)

ADJUDICATED PATENTS.

(C. C. A. Mo.) The Schulde patent, No. 1,225,682, for counter refrigerator, claims 1 and 2 *Held* not infringed and claim 3 *Held* valid and infringed. *Gustav J. Gruendler Mfg. Co.* v. *Harry L. Hussmann Refrigerator & Supply Co.*, 16 F. (2d) 571.

(C. C. A. Calif.) The Tomlinson patent, No. 1,320,662, for doughnut machine, claim 1 *Held* valid and infringed. *Bake-Rite Mfg. Co.* v. *Tomlinson*, 16 F. (2d) 556.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,537,682, G. Krause, Telegraphic receiving system, decided February 26, 1927, claim 2.

Pat. 1,555,143, A. J. Mitkos, Automatic automobile alarm, decided February 24, 1927, claims 1 and 2.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Feb. 23, 1927.*

Beyer Bros. Commission Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Corbin & Wiesmer, 17 Ferry Street, Binghamton, N. Y., for registration of a trade-mark and trade-mark registered February 6, 1917, No. 115,285, to Beyer Bros. Commission Co., 182 Duane Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Beyer Bros. Commission Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Beyer Bros. Commission Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Feb. 17, 1927.*

WM. A. KINNAN,
First Assistant Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 15, 1927.

[VOL. 356. NO. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 166,270. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE WM. SCHLUDERBERG-T. J. KURDLE CO., Baltimore, Md. Filed June 29, 1922.

The diagonal lines represent blue, the hatched lines on the letters and inside border lines are orange, and the blank letters are white. The word "Quality" is disclaimed apart from the mark other than as shown on the drawing.

Particular description of goods.—Lards, Creamery Butter, Fresh and Smoked Hams, Fresh and Smoked Bacon, Fresh and Smoked Shoulders, Fresh and Smoked Sausage, Pork Roll, Dried Beef, Cheese, and Lard Compound Made from Cottonseed and Other Oils.

Claims use since Nov. 1, 1919.

Ser. No. 175,236. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) CHOPAK TEXTILE CO., INC., New York, N. Y. Filed Jan. 29, 1923.

Particular description of goods.—Artificial-Silk, Silk, and Cotton Piece Goods and Combinations Thereof and Knitted Artificial-Silk, Silk, Cotton, and Woolen Piece Goods and Combinations Thereof, Not Including Corduroys, Velveteens, and Warp Sateens.

Claims use since September, 1919.

Ser. No. 200,829. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) PREMIER APPLIANCE CO., INC., Philadelphia, Pa. Filed Aug. 1, 1924.

Particular description of goods.—Cream Toilet and Shaving Soap for Use in Soap Dispensers.

Claims use since July 1, 1924.

Ser. No. 203,551. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WEST SIDE WHOLESALE GROCERY CO., Chicago, Ill. Filed Oct. 7, 1924.

LAWNDALE

Particular description of goods.—Coffee, Bouillon Cubes, Canned Pork and Beans, Catchup, Olives, Pickles, Peanut Butter, Salad Dressing, Chili Sauce, Vinegar, Chile Con Carne, Spices, Breakfast Cereals, Honey, Cottonseed Oil, Preserved Fruits, Flavoring Extracts for Food Purposes, Canned Sauerkraut, Canned Fish, Canned Fruits, Canned Vegetables, Evaporated Milk, Canned Berries, Canned Shellfish, Canned Fruits for Salad, Malt Extract for Food Purposes.

Claims use since September, 1922.

Ser. No. 206,671. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) KELLOGG COMPANY, Battle Creek, Mich. Filed Dec. 18, 1924.

PEP

Particular description of goods.—Cereal Breakfast Food Composed Principally of Bran.

Claims use since Sept. 1, 1914.

Ser. No. 207,083. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) KING OF ALL CLEANER COMPANY, Atlantic, Iowa. Filed Dec. 22, 1924.

KING OF ALL CLEANER

No claim is made to the word "Cleaner" apart from the mark shown.

Particular description of goods.—Liquid Preparation for Cleaning the Hands, Fabrics, Etc.

Claims use since Oct. 5, 1923.

Ser. No. 216,149. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOSEPH B. COHEN, doing business as Kosher Dog Company, Chicago, Ill. Filed June 22, 1925.

The word "Kosher" is disclaimed apart from the mark shown.

Particular description of goods.—Meat Sausage.

Claims use since Jan. 1, 1914.

Ser. No. 221,778. (CLASS 43. THREAD AND YARN.) CLARENCE C. SELDEN & CO., Los Angeles, Calif. Filed Oct. 15, 1925.

Particular description of goods.—Plant Fibers, Thread, and Yarn.

Claims use since Aug. 5, 1925.

Ser. No. 222,516. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) MARLBORO WIRE GOODS COMPANY, Marlboro, Mass. Filed Oct. 29, 1925.

LOOPWELD

Particular description of goods.—Dish Drainers, Sponge Holders, Soap Dishes, Toothbrush Holders, Wall Brackets, Broilers, Plate Racks and Holders, Tumbler Holders, Towel Racks, Flatiron Rests, Strainers, Soap Shakers, Toilet-Paper Brackets, Pipe Hangers, Cake Coolers, Shelving, Pot Rack Holders, Kettle Bottoms, and Pot Stands.

Claims use since May or June, 1921.

Ser. No. 223,651. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) A. J. MOELLER PICKLE CO., San Francisco, Calif. Filed Nov. 21, 1925.

DOLORES VALLEY

Particular description of goods.—Pickles, Chowchow, Mexican Hot (Tomato Sauce with Chopped Pickles), Sweet Indian Relish, Piccalilli, Sweet Pickled Green Tomatoes, Pickled Onions, Gherkins, Prepared Mustard, Distilled Vinegar, Apple-Cider Vinegar, Horse-Radish with Vinegar.

Claims use since Sept. 1, 1912.

Ser. No. 224,226. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WOODE J. BATSON, doing business as Spencer Popcorn Company, Spencer, Iowa. Filed Dec. 4, 1925.

"OH BOY"

"Oh Boy."

Particular description of goods.—Raw Pop Corn.

Claims use since Sept. 1, 1925.

Ser. No. 224,802. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) BLISS, FABYAN & COMPANY, New York, N. Y. Filed Dec. 17, 1925.

RIPPLETTE

Particular description of goods.—Bedspreads.

Claims use since Jan. 1, 1910.

Ser. No. 225,360. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HICKMAN & COWARD, Buffalo, N. Y. Filed Dec. 31, 1925.

Particular description of goods.—Butter and Eggs.

Claims use since about January, 1890, as to butter; since August, 1925, as to eggs.

Ser. No. 225,577. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) RING-TING CANDY SHOP, Evanston, Ill. Filed Jan. 6, 1926.

Particular description of goods.—Candy and Salted Nuts.

Claims use since about Nov. 30, 1920.

Ser. No. 225,922. (CLASS 32. FURNITURE AND UPHOLSTERY.) HOLLAND BRASS WORKS, INC., Chicago, Ill. Filed Jan. 14, 1926.

SAINT MARY

Particular description of goods.—Prie-Dieus.

Claims use since Apr. 1, 1921.

Ser. No. 226,707. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) BEACON MANUFACTURING COMPANY, New Bedford, Mass., and Providence, R. I. Filed Feb. 1, 1926.

Signet

"Signet."

Particular description of goods.—Cotton Blankets.

Claims use since Dec. 22, 1925.

Ser. No. 226,708. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) BEACON MANUFACTURING COMPANY, New Bedford, Mass., and Providence, R. I. Filed Feb. 1, 1926.

Mistral

The mark consists of the word "Mistral."

Particular description of goods.—Cotton Blankets.

Claims use since Dec. 22, 1925.

Ser. No. 227,233. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) HUTTO ENGINEERING CO., Detroit, Mich. Filed Feb. 12, 1926.

The letter "O" is lined to indicate shading only.

Particular description of goods.—Cylinder Grinders and Devices for Grinding Cylindrical Apertures and Parts Thereof.

Claims use since Nov. 10, 1925.

Ser. No. 228,356. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHEMISCHE FABRIK AUF ACTIEN (VORM. E. SCHERING), Berlin, Germany. Filed Mar. 9, 1926.

Particular description of goods.—Extirpating Preparations for Insects and Plants, Disinfectants, Chemical Fire-Extinguishing Preparations, Chemical Dyestuffs, Preparations for Preserving and Coloring Leather, Tanning Compositions, Spring Salts, Bathing Salts, Perfumeries, Volatile Oils, Bleaching Preparations, Antirusting Preparations; Remedies and Preparations for the Treatment of Affections Caused by Chill, Tuberculosis, and Other Diseases of the Respiratory System, Leprosy, Rheumatism, Gout, Seasickness, Anæmia, Low Blood Pressure, Diseases of the Urinary Tract, Gonorrhea and Other Venereal Diseases; Remedies and Preparations for the Treatment of Disorders of the Larynx, Heart, Liver, Bile, Stomach, Bowels, Skin, Eyes, and Wounds; Preparations for the Diagnosis of Pregnancy, Sedatives, Analgesics, Antiphlogistics, Anæsthetics, Hypnotics, Antistreptococcal and Diphtheria Serums, Preparations for Diabetics, Organo-Therapeutic Preparations, Nerve Tonics, Disinfecting Preparations, Acetylosalicylic Acid, Boric Acid, Camphoric Acid, Carbolic Acid, Gallic Acid, Lactic Acid, Oxalic Acid, Phosphoric Acid, Pyrogallic Acid, Salicylic Acid, Tannic Acid, Ammonia Water, Ammonium Salts, Amyl Nitrite, Antimony Lactate, Antimony Sulphide, Bismuth Salts, Borax, Bromoform, Cadmium and Its Salts, Calcium Salts, Camphor, Monobromated Camphor, Caustic Soda, Collodion Preparations and Chemicals for Making the Same, Chloral Hydrate, Chloral Chloroform, Cyanide Salts, Ether Bromide, Ether Chloride, Ethyl Chloride, Sulphuric Ether, Formalin, Glycerophosphates, Hydroquinone, Iodine, Iodoform, Iron Salts, Lead Salts, Lithium Salts, Metallic Magnesium and Its Salts, Mercury and Its Salts, Methyl Salicylate, Naphthalene, Paraldehyde, Potassium and Its Salts, Resorcin, Rubidium Bromide, Rubidium Iodide, Carlsbad Salts, Rochelle Salts, Silver Salts, Sodium and Its Salts, Strontium Salts, Sulphur, Sulphur Iodide, Cream of Tartar, Tin Chloride, Metallic Salts for Electroplating, and Zinc Salts.

Claims use since about May, 1924.

Ser. No. 228,357. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHEMISCHE FABRIK AUF ACTIEN (VORM. E. SCHERING), Berlin, Germany. Filed Mar. 9, 1926.

Particular description of goods.—Extirpating Preparations for Insects and Plants, Disinfectants, Chemical Fire-Extinguishing Preparations, Chemical Dyestuffs, Prepara-

tions for Preserving and Coloring Leather, Tanning Compositions, Spring Salts, Bathing Salts, Perfumeries, Volatile Oils, Bleaching Preparations, Antirusting Preparations; Remedies and Preparations for the Treatment of Affections Caused by Chill, Tuberculosis, and Other Diseases of the Respiratory System, Leprosy, Rheumatism, Gout, Seasickness, Anæmia, Low Blood Pressure, Diseases of the Urinary Tract, Gonorrhea and Other Venereal Diseases; Remedies and Preparations for the Treatment of Disorders of the Larynx, Heart, Liver, Bile, Stomach, Bowels, Skin, Eyes, and Wounds; Preparations for the Diagnosis of Pregnancy, Sedatives, Analgesics, Antiphlogistics, Anæsthetics, Hypnotics, Antistreptococcal and Diphtheria Serums, Preparations for Diabetics, Organo-Therapeutic Preparations, Nerve Tonics, Disinfecting Preparations, Acetylosalicylic Acid, Boric Acid, Camphoric Acid, Carbolic Acid, Gallic Acid, Lactic Acid, Oxalic Acid, Phosphoric Acid, Pyrogallic Acid, Salicylic Acid, Tannic Acid, Ammonia Water, Ammonium Salts, Amyl Nitrite, Antimony Lactate, Antimony Sulphide, Bismuth Salts, Borax, Bromoform, Cadmium and Its Salts, Calcium Salts, Camphor, Monobromated Camphor, Caustic Soda, Collodion Preparations and Chemicals for Making the Same, Chloral Hydrate, Chloral Chloroform, Cyanide Salts, Ether Bromide, Ether Chloride, Ethyl Chloride, Sulphuric Ether, Formalin, Glycerophosphates, Hydroquinone, Iodine, Iodoform, Iron Salts, Lead Salts, Lithium Salts, Metallic Magnesium and Its Salts, Mercury and Its Salts, Methyl Salicylate, Naphthalene, Paraldehyde, Potassium and Its Salts, Resorcin, Rubidium Bromide, Rubidium Iodide, Carlsbad Salts, Rochelle Salts, Silver Salts, Sodium and Its Salts, Strontium Salts, Sulphur, Sulphur Iodide, Cream of Tartar, Tin Chloride, Metallic Salts for Electroplating, and Zinc Salts.

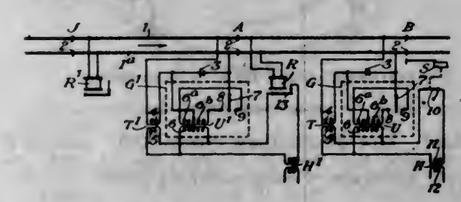
9,630.—*Title:* TUESDAY ONLY. For Grocery and Foods. THOMAS D. TAYLOR, Philadelphia, Pa. Published February 3, 1927.

9,631.—*Title:* PREMIER RED ASH COAL. For Coal. GAYLE EDWARD WEBER, Cincinnati, Ohio. Published December 17, 1926.

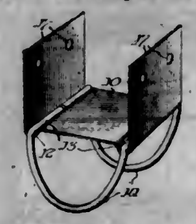
REISSUES



MARCH 15, 1927.

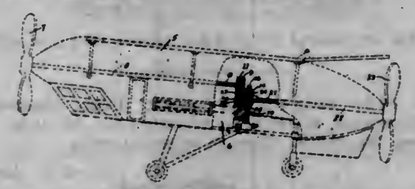
16,570. SANITARY PAD. MARTHA V. BAUER, Washington, D. C. Filed May 29, 1922. Serial No. 564,628. Original No. 1,341,875, dated June 1, 1920, Serial No. 334,784, filed Oct. 31, 1919. 4 Claims. (Cl. 128—290.)

1. An absorbent body comprising an inner covering of foraminous material, a filling of absorbent material therein, means passing through said inner covering and filling to restrain bunching of said filling, and an outer covering of foraminous material over said inner covering and filling.



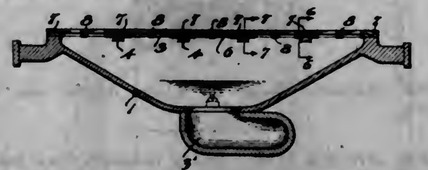
16,571. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. RONALD A. MCCANN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 3, 1926. Serial No. 99,656. Original No. 1,512,120, dated Oct. 21, 1924, Serial No. 692,682, filed Feb. 14, 1924. 21 Claims. (Cl. 246—34.)

1. Railway traffic controlling apparatus comprising a stretch of railway track, a track battery connected with the rails of said stretch, a rectifier for charging said battery, and means responsive to traffic conditions for controlling said rectifier.



16,572. SLEEPER ANCHOR. WILLIAM E. WHITE, Chicago, Ill., assignor to Kalman Steel Co., Chicago, Ill., a Corporation of Delaware. Filed June 5, 1925. Serial No. 35,241. Original No. 1,496,504, dated June 3, 1924, Serial No. 521,600, filed Dec. 12, 1921. 7 Claims. (Cl. 72—101.)

6. In a device of the class described, the combination of a single wire bent to provide a pair of V-shaped anchor elements, horizontal wires connecting said elements, and wings connected to and adapted for pivotal movement

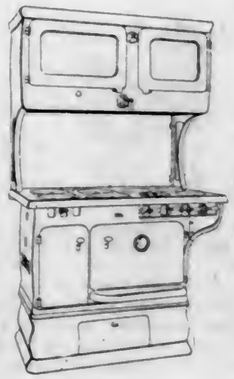


around said connecting wires and adapted to lie in a vertical plane at right angles to the vertical plane of the anchor elements.

16,573. PROPELLING MEANS. ROB TANNER, Attica, Ohio. Filed Dec. 31, 1926. Serial No. 158,349. Original No. 1,523,671, dated Jan. 20, 1925, Serial No. 726,557, filed July 17, 1924. 12 Claims. (Cl. 244—25.)

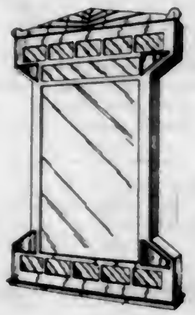
10. In an airship, the combination with a supporting frame and a power plant, of a forward propeller shaft, a rearward propeller shaft, propellers on the free ends of said shafts, said shafts being arranged in offset end to end relation, and means responsive to the speed and thrust of the respective propellers for driving the propellers.

16,574. BURNER. FRANK V. RISINGER, Lakewood, Ohio. Filed Dec. 2, 1926. Serial No. 152,242. Original No. 1,519,056, dated Dec. 9, 1924, Serial No. 629,193, filed Mar. 31, 1923. 5 Claims. (Cl. 158—99.)



1. As a new article of manufacture, a grid for gas burners, comprising longitudinal spaced strips, and blocks maintaining the strips in spaced relationship, said blocks having longitudinal recesses in their upper faces receiving the strips, the alternate blocks being of the same length with the adjacent blocks of different lengths.

DESIGNS

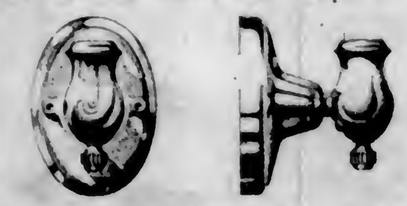


MARCH 15, 1927.

72,202. KITCHEN RANGE. WILBUR BENNETT, Scranton, Pa., assignor to The Graff Furnace Company, New York, N. Y., a Corporation of New York. Filed May 22, 1926. Serial No. 17,814. Term of patent 7 years.

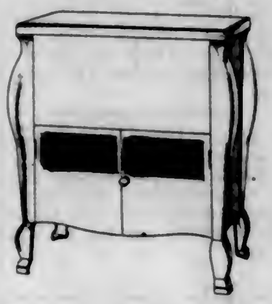
The ornamental design for a kitchen range, as shown.

72,203. SIGN-DISPLAY CASE. HARRY COURTRIGHT CHEVALIER, Mount Olive, Ill. Filed Nov. 29, 1926. Serial No. 19,868. Term of patent 14 years.



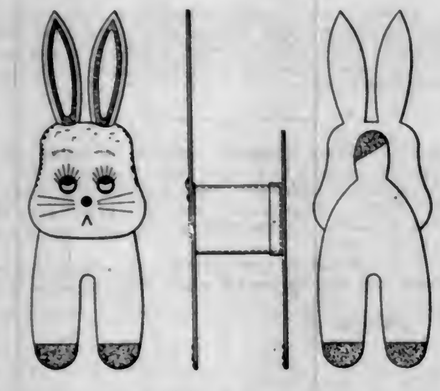
The ornamental design for a sign display case, as shown.

72,204. FINGER RING. JULIUS DINHOFER, New York, N. Y. Filed Apr. 20, 1926. Serial No. 17,358. Term of patent 7 years.



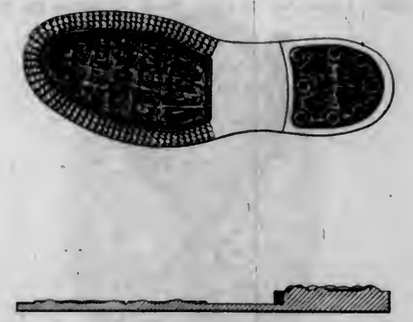
The ornamental design for a finger ring, as shown.

72,205. LAMP FIXTURE. ELMER A. ERMOLD, Philadelphia, Pa., assignor to Wirt Company, Philadelphia, Pa., a Corporation of Maine. Filed Mar. 29, 1926. Serial No. 17,095. Term of patent 7 years.



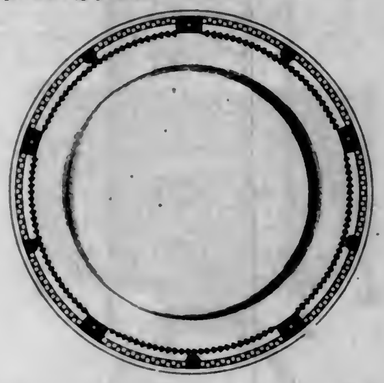
The ornamental design for lamp fixture as shown.

72,206. STOVE. EDWARD G. GERMER, Erie, Pa. Filed Dec. 10, 1926. Serial No. 20,011. Term of patent 3½ years.



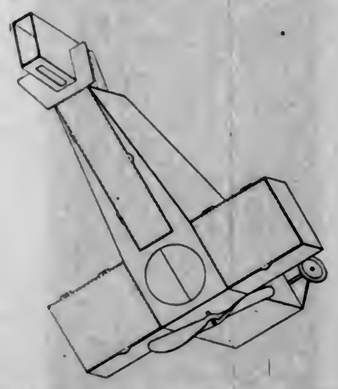
The ornamental design for a stove as shown.

72,207. BOX OR SIMILAR CONTAINER. ARTHUR T. GOLLNIK, New York, N. Y. Filed Nov. 11, 1925. Serial No. 15,406. Term of patent 3½ years.



The ornamental design for a box or similar container as shown.

72,208. SHOE SOLE. JAMES E. GROSJEAN, Lima, Ohio. Filed Oct. 11, 1926. Serial No. 19,294. Term of patent 7 years.

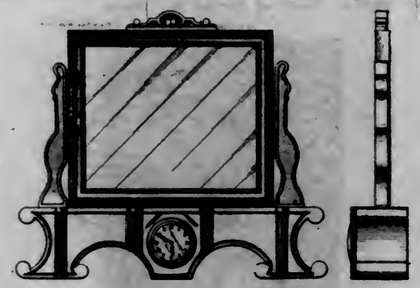


The ornamental design for a shoe sole, as shown.

72,209. PLATE OR SIMILAR ARTICLE. AUGUST HASHAGEN, New York, N. Y., assignor to The Alliance Vitrified China Company, Alliance, Ohio, a Corporation of Ohio. Filed Dec. 9, 1926. Serial No. 19,995. Term of patent 3½ years.

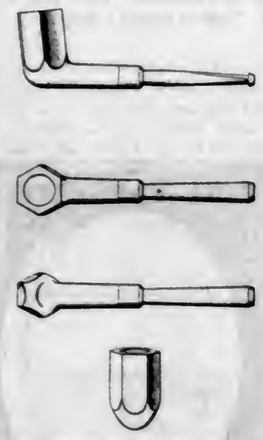
The ornamental design for a plate or similar article, as shown.

72,210. SMOKER'S SET. LEONARD H. HERSKOVITZ, New York, N. Y. Filed June 30, 1926. Serial No. 18,215. Term of patent 7 years.



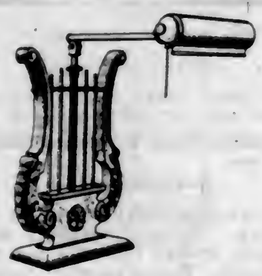
The ornamental design for a smoker's set substantially as shown.

72,211. PICTURE MOUNTING. WILLIAM J. HELMQUEST, San Francisco, Calif., assignor to California Card Manufacturing Company, San Francisco, Calif., a Corporation of California. Filed Dec. 6, 1926. Serial No. 19,944. Term of patent 7 years.



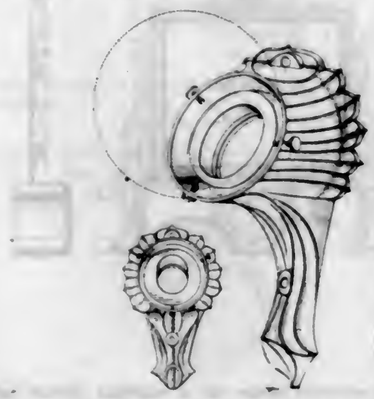
The ornamental design for picture mounting, substantially as shown.

72,212. COMBINED PICTURE FRAME AND STAND THEREFOR. MICHAEL LESKIEWICZ and WOJCIECH BARTKOWIAK, Chicago, Ill. Filed Nov. 29, 1926. Serial No. 19,878. Term of patent 14 years.



The ornamental design for a combined picture frame and stand therefor, as shown.

72,213. TOBACCO PIPE. WILLIAM H. LEWIS, New York, N. Y. Filed June 2, 1926. Serial No. 17,923. Term of patent 3½ years.

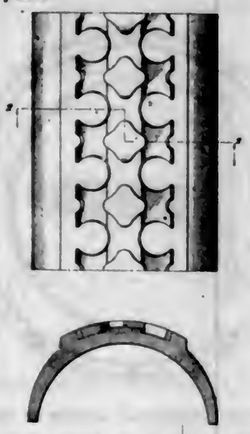


The ornamental design for a tobacco pipe, as shown.

72,214. LAMP. JOSEPH LIEBERMAN, Bayonne, N. J. Filed Dec. 16, 1926. Serial No. 20,062. Term of patent 7 years.

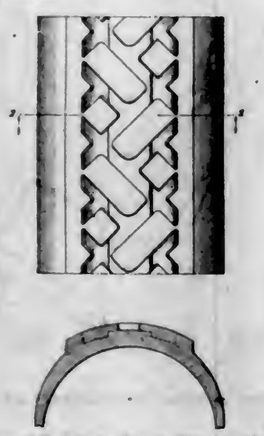
The ornamental design for a lamp as shown.

72,215. ELECTRIC-LIGHT FIXTURE. GEORGE LIPSCHUTZ, Philadelphia, Pa. Filed Jan. 4, 1927. Serial No. 20,278. Term of patent 3½ years.



The ornamental design for an electric light fixture as shown.

72,216. GOBLET. VIRGIL V. LOOMIS, Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 20, 1926. Serial No. 19,127. Term of patent 14 years.



The ornamental design for a goblet, substantially as shown.

72,217. TIRE. ANDRÉ JULES MICHELIN, Paris, France. Filed Jan. 6, 1927. Serial No. 20,290. Term of patent 14 years.

The ornamental design for a tire as shown.

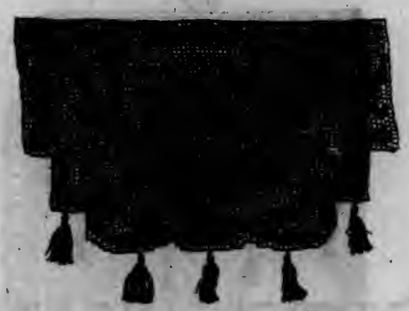
72,218. TIRE. ANDRÉ JULES MICHELIN, Paris, France. Filed Jan. 6, 1927. Serial No. 20,291. Term of patent 14 years.

The ornamental design for a tire as shown.

72,219. LACE DOILY OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 18, 1926. Serial No. 20,075. Term of patent 3½ years.

The ornamental design for a lace doily or the like, substantially as shown.

72,220. LACE MAT OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 18, 1926. Serial No. 20,076. Term of patent 3½ years.



The ornamental design for a lace mat or the like, substantially as shown.

72,221. LACE TABLE COVER OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 18, 1926. Serial No. 20,078. Term of patent 3½ years.

The ornamental design for a lace table cover or the like, substantially as shown.

72,222. LACE MAT OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 18, 1926. Serial No. 20,080. Term of patent 3½ years.

The ornamental design for a lace mat or the like, substantially as shown.

72,223. LACE MAT OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 18, 1926. Serial No. 20,081. Term of patent 3½ years.

The ornamental design for a lace mat or the like, substantially as shown.

72,224. LACE SCARF OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 18, 1926. Serial No. 20,082. Term of patent 7 years.

The ornamental design for a lace scarf or the like, substantially as shown and described.

72,225. LACE MAT OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 18, 1926. Serial No. 20,083. Term of patent 3½ years.

The ornamental design for a lace mat or the like, substantially as shown.

72,226. LACE TRAY COVER OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 18, 1926. Serial No. 20,084. Term of patent 3½ years.

The ornamental design for a lace tray cover or the like, substantially as shown.

72,227. LACE COVER OR SIMILAR ARTICLE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,178. Term of patent 7 years.

The ornamental design for a lace cover or similar article, substantially as shown and described.

72,228. LACE COVER OR SIMILAR ARTICLE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,179. Term of patent 7 years.

The ornamental design for a lace cover or similar article, substantially as shown and described.

72,229. LACE COVER OR SIMILAR ARTICLE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,180. Term of patent 3½ years.

The ornamental design for a lace cover or similar article substantially as shown and described.

72,230. LACE COVER OR SIMILAR ARTICLE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,181. Term of patent 7 years.

The ornamental design for a lace cover or similar article, substantially as shown and described.

72,231. LACE COVER OR SIMILAR ARTICLE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,182. Term of patent 3½ years.

The ornamental design for a lace cover or similar article, substantially as shown and described.

72,232. LACE COVER OR SIMILAR ARTICLE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,183. Term of patent 3½ years.

The ornamental design for a lace cover or similar article substantially as shown.

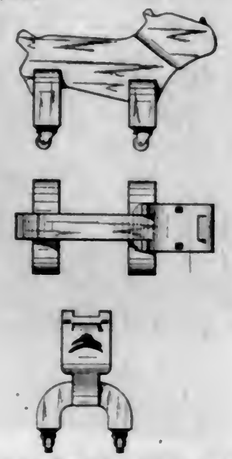
72,233. LACE COVER OR SIMILAR ARTICLE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,185. Term of patent 3½ years.

The ornamental design for a lace cover or similar article substantially as shown and described.

72,234. LACE COVER OR SIMILAR ARTICLE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,186. Term of patent 3½ years.

The ornamental design for a lace cover or similar article, substantially as shown and described.

72,235. LACE SCARF OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 18, 1926. Serial No. 20,073. Term of patent 7 years.



The ornamental design for a lace scarf or the like, substantially as shown and described.

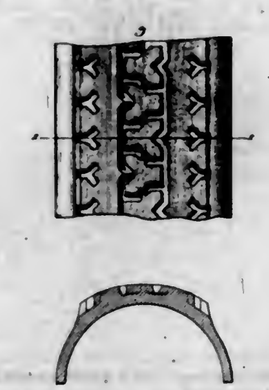
72,236. DOOR KNOCKER. ROSA MAY PICKARD, Wilmette, Ill. Filed Sept. 13, 1926. Serial No. 19,043. Term of patent 7 years.

The ornamental design for a door knocker as shown.

72,237. TOY DOG. NEAL W. PLOOSTER, Minneapolis, Minn. Filed Aug. 6, 1926. Serial No. 18,625. Term of patent 7 years.

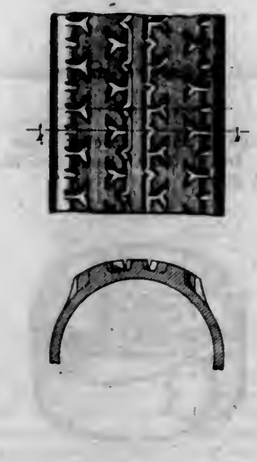
The ornamental design for a toy dog, as shown.

72,238. LIGHTING-FIXTURE BACKPLATE. GEDALIA RABINOWITZ, Arverne, N. Y., assignor to Venus Lighting Fixture Corporation, a Corporation of New York. Filed Jan. 12, 1927. Serial No. 20,357. Term of patent 3½ years.



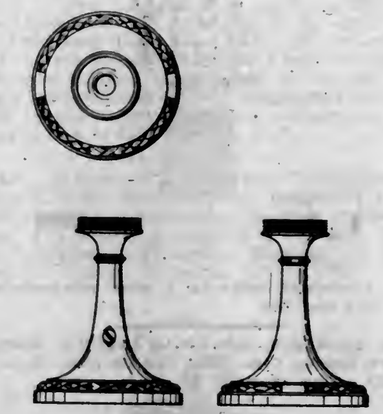
The ornamental design for a lighting fixture backplate substantially as shown and described.

72,239. KNITTED CAP. SAMUEL S. SAMPLINER, Cleveland, Ohio, assignor to The Rich-Sampliner Knitting Mills Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 29, 1926. Serial No. 19,865. Term of patent 14 years.



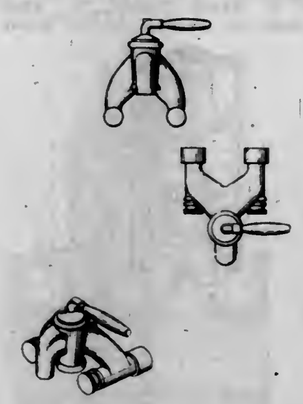
The ornamental design for a knitted cap, as shown and described.

72,240. TIRE. EDWARD M. SEARS, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1926. Serial No. 20,254. Term of patent 14 years.



The ornamental design for a tire as shown.

72,241. TIRE. EDWARD M. SEARS, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Jan. 15, 1927. Serial No. 20,398. Term of patent 14 years.



The ornamental design for a tire as shown.

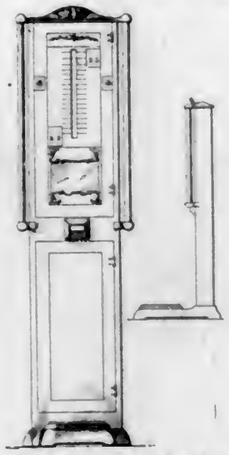
72,242. DISPLAY PEDESTAL. EMORY P. SEIDEL, River Forest, Ill., assignor to Stover Signal Engineering Company, Racine, Wis., a Corporation of Delaware. Filed Dec. 11, 1926. Serial No. 20,032. Term of patent 14 years.

The ornamental design for a display pedestal, substantially as shown.

72,243. SPIGOT. MORRIS SHOEB, Philadelphia, Pa., assignor to Sanitary Refrigerator Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 21, 1926. Serial No. 16,192. Term of patent 7 years.

The ornamental design for a spigot as shown.

72,244. DRESS. MAUDE SIEGEL, New York, N. Y., assignor to Franklin Simon & Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 13, 1927. Serial No. 20,363. Term of patent 3½ years.



The ornamental design for a dress, substantially as shown and described.

72,245. BOOK END OR SIMILAR ARTICLE. BESSIE N. SKIFF, Boulder, Colo. Filed Nov. 22, 1926. Serial No. 19,811. Term of patent 3½ years.

The ornamental design for a book end or similar article as shown.

72,246. CASING FOR A WEIGHT-PRINTING MACHINE. VINCENT F. SLEZAK, Chicago, Ill. Filed Oct. 25, 1926. Serial No. 19,481. Term of patent 14 years.

The ornamental design for a casing for a weight printing machine, substantially as shown.

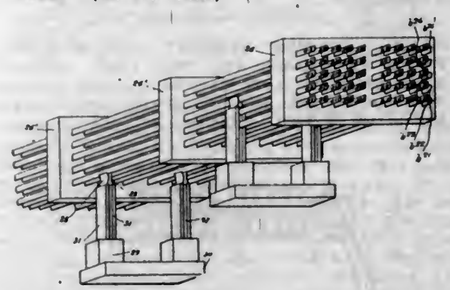
72,247. GOBLET OR SIMILAR ARTICLE. JULES H. VENON, New York, N. Y. Filed Jan. 6, 1927. Serial No. 20,293. Term of patent 14 years.

The ornamental design for a goblet or similar article, as shown and described.

72,248. CUP OR SIMILAR ARTICLE. CHARLES HENRY WALKER, East Liverpool, Ohio. Filed Apr. 9, 1926. Serial No. 17,225. Term of patent 14 years.

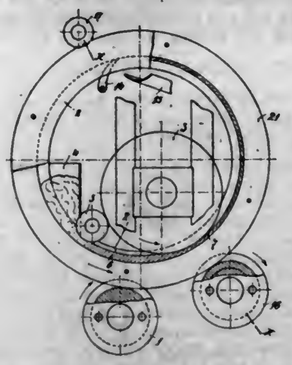
The ornamental design for a cup or similar article as shown.

72,249. COSMETIC JAR. ALFONSO ORZO, New York, N. Y. Filed Dec. 7, 1926. Serial No. 19,056. Term of patent 14 years.



The ornamental design for a cosmetic jar as shown.

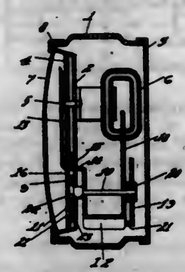
PATENTS



GRANTED MARCH 15, 1927.

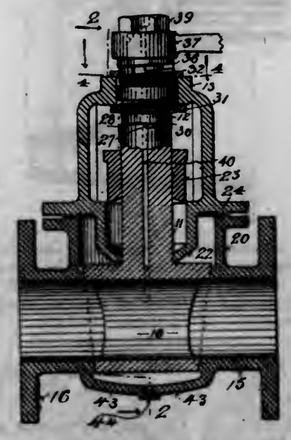
1,620,620. SELECTOR FOR AUTOMATIC TELEPHONE EXCHANGES. GUIDO ALFANI, Firenze, and LEANDRO MAZZA, Genoa, Italy. Filed Mar. 31, 1922, Serial No. 548,389, and in Italy Apr. 1, 1921. 7 Claims. (Cl. 179—27.5.)

7. A selector system for automatic telephone exchanges comprising a frame; insulating supporting plates secured to said frame; a plurality of flat parallel bars mounted in said supporting plates; a combiner associated with said frame comprising a plurality of discs; controlled and controlling shafts mounted in said frame; a plurality of levers operated by said discs; a step magnet for operating said combiner and said controlling shaft; a change-over magnet for controlling the actuation of said combiner and said controlling shaft; means for moving said shafts simultaneously upon actuation of said step magnet to move said switch carrier laterally under said bars; and means for moving said switch carrier longitudinally in order that the contact elements may contact with said bars.



1,620,621. PRESS FOR MAKING BRIQUETTES. HUGO APPELBECK, Falkenau, Czechoslovakia. Filed Oct. 8, 1926, Serial No. 140,308, and in Germany Jan. 21, 1924. 6 Claims. (Cl. 25—21.)

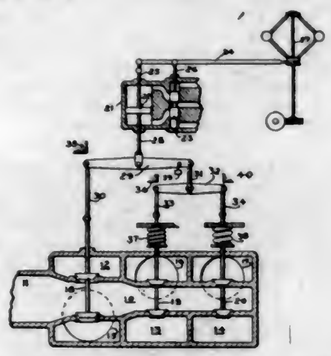
2. A briquetting press, comprising a revoluble ring embodying two coordinate annular sections arranged face to face and conjointly providing between the adjacent inner faces of their rim portions an annular compression groove; means for feeding material to the groove; a rotary compressing disc mounted within and eccentrically of said ring and projecting conformably into said groove; and means for automatically moving the ring sections laterally away from and toward each other at certain points in the rotary travel of the ring.



3. A briquetting press, comprising a revoluble ring embodying two coordinate annular sections arranged face to face and conjointly providing between the adjacent inner faces of their rim portions an annular compression groove; means for feeding material to the groove; a rotary compressing disc mounted within and eccentrically of said ring and projecting conformably into said groove; and a roller engaging the periphery of the ring and having a circumferential collar of wedge-section which is adapted to project between the said adjacent faces of the ring sections to force the latter apart.

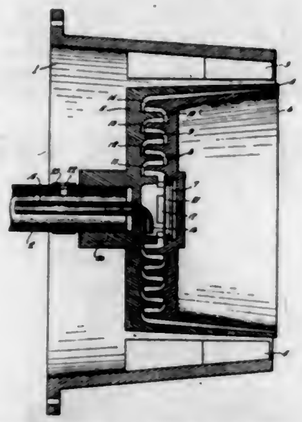
1,620,622. ELECTRICAL MEASURING INSTRUMENT. RALPH G. ABEY, Worcester, Mass., assignor to Lundquist Tool and Manufacturing Company, Worcester, Mass., a Copartnership consisting of August F. Lundquist and Einar B. Lundquist. Filed May 17, 1926. Serial No. 109,626. 3 Claims. (Cl. 171—95.)

1. An electrical measuring instrument comprising a fixed scale, a conductive coil, an arbor, an armature, rotatable on said arbor, carrying a pointer, a spring rigidly connected at its ends to said arbor and said armature opposing the pull of said coil adapted to bias said pointer toward the zero of the scale, and means accessible from the front of the scale for angularly adjusting said arbor to bring said pointer on the zero of the scale.



1,620,623. PLUG COCK. THOMAS HERIOT ADDIE, Philadelphia, Pa. Filed June 23, 1925. Serial No. 38,997. 1 Claim. (Cl. 251—97.)

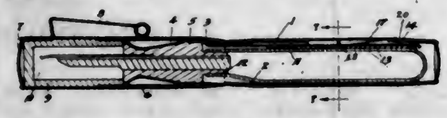
A plug valve comprising a valve coupling having a plug seat, a plug fitting in said seat, a stem on said plug, a yoke having a bushing for engaging the stem at



a distance from the plug, means for adjusting said bushing and means for vertically adjusting the plug as it is opened or closed.

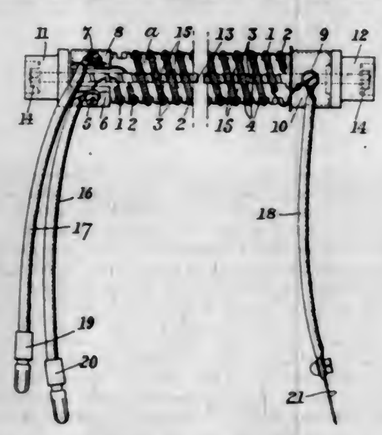
1,620,624. TURBINE VALVE. ROBERT C. ALLEN, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 5, 1923. Serial No. 673,033. 10 Claims. (Cl. 137—158.)

6. A valve mechanism comprising a plurality of valves, a link connected to said valves, a motor device connected to said link for opening and closing said valves, and means for limiting opening movement of one of said valves and constituting a fulcrum for the link so that the full force of said motor will be applied to at least one other valve.



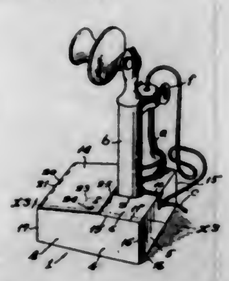
1,620,625. OIL ATOMIZER. JOSEPH J. BABKA, Berwyn, Ill. Filed Oct. 13, 1923. Serial No. 668,268. 11 Claims. (Cl. 158—77.)

1. In an oil atomizer, a cup shaped member having a series of annular flanges on the inside thereof, and a second cup shaped member positioned inside said first member and having a series of annular flanges on the outside thereof.



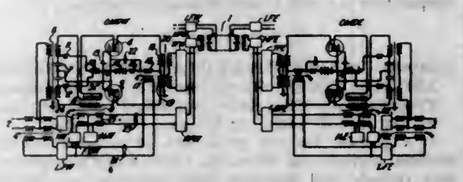
1,620,626. FOUNTAIN PEN. WALTER F. BENSON, Fort Madison, Iowa. Filed Apr. 23, 1925. Serial No. 25,392. 5 Claims. (Cl. 120—46.)

1. In a fountain pen the combination with a barrel of a pressure bar spring mounted therein, a pressure bar carried at one end of said spring, a lever mounted in hinged relation with said barrel, said lever having means for engaging said spring and also means for engaging said pressure bar, the coaction of said means being



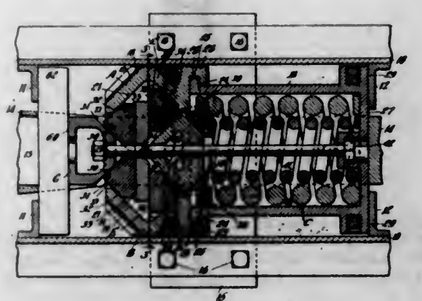
operative to depress said pressure bar, the end thereof joined with said spring being depressed ahead of the free end thereof.

1,620,627. HEATING ELEMENT FOR ELECTRIC FIRES, RADIATORS, AND THE LIKE. HERBERT HENRY BERRY and JAMES WATT REID, London, England. Filed Apr. 5, 1926, Serial No. 100,004, and in Great Britain Apr. 6, 1925. 2 Claims. (Cl. 219—19.)



1. A heating element for an electric fire or radiator comprising a tubular central bar grooved longitudinally and with two start helical grooves, separate resistance wires in the helical grooves, separate metal plates, one for each wire at one end of the bar, a block of insulating material for holding the metal plates to the bar and a bolt having a nut and passing completely through the bar and the block for holding the block to the bar.

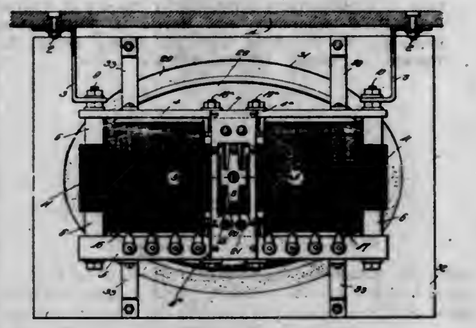
1,620,628. TELEPHONE LOCK. EBRON CARL BETH, Los Angeles, Calif. Filed Jan. 5, 1926. Serial No. 79,305. 6 Claims. (Cl. 179—189.)



1. A telephone lock comprising a receptacle for the base and dial mechanism of an automatic desk telephone; a cover to said receptacle provided with an opening to accommodate the column of a desk telephone, said cover being adapted to admit a telephone base and dial and to terminate slightly above the top of the dial; and means to lock said cover to the receptacle.

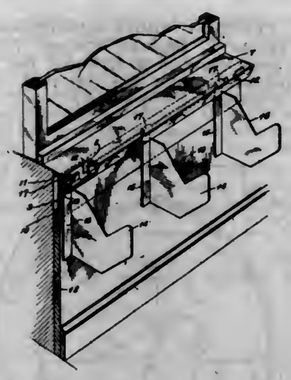
1,620,629. CARRIER-WAVE SIGNALING SYSTEM. HAROLD S. BLACK, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 13, 1924. Serial No. 755,628. 13 Claims. (Cl. 179—15.)

1. In a two-way carrier wave signaling system, a station comprising means for generating a carrier wave, means for generating a modulating wave, means for modulating said carrier wave in accordance with said modulating wave, means for selecting from the wave of the modulator components including a single side band and for transmitting said components, and means for demodulating an incoming side band having the same carrier frequency but of opposite sign to the transmitted side band, said carrier current generating, modulating, and demodulating means employing a common electric discharge structure.



1,620,630. FRICTION SHOCK-ABSORBING MECHANISM. ARILD M. BRENNE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Feb. 9, 1923. Serial No. 617,941. 14 Claims. (Cl. 213—22.)

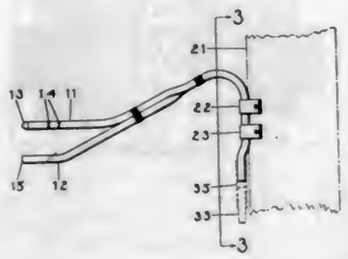
1. In a friction shock absorbing mechanism, the combination with a rigid shell having a set of inwardly converging and a set of inwardly diverging wedge faces on the interior thereof; of a follower acting means, said means and shell being relatively movable toward and away from each other; a spring resistance; and a multiple wedge system, including a plurality of wedges some of which have wedge faces co-acting with said first named set of wedge faces and others of which have wedge faces co-acting with said second named set of wedge faces, a wedge block and a combined wedge and spring follower, said wedge block being movable with said follower acting means and having wedging engagement with certain of said wedges, and said spring follower having wedging engagement with the remaining wedges.



1,620,631. ELECTROMAGNETIC SOUND REPRODUCER. CYRIL A. BRIGHAM, East Orange, N. J., assignor to Brandes Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed Sept. 13, 1926. Serial No. 135,192. 8 Claims. (Cl. 179—114.)

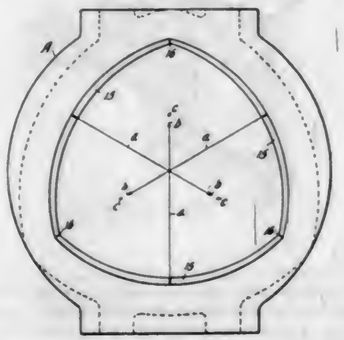
1. In an electromagnetic sound reproducing apparatus an electromagnetic field system including a plurality of pole pieces directed toward each other and separated by a gap, a pair of conductive members positioned over said pole pieces forming substantially parallel walls, a flat coil member resiliently suspended between said parallel walls, a sound reproducing diaphragm mechanically connected

with said flat coil member, said coil member being energized by variable signal currents for the setting up of mechanical vibrations in a direction substantially normal to the direction of said pole pieces whereby corresponding vibrations are imparted to said sound reproducing diaphragm.



1,620,632. SUPPORT FOR RADIATORS AND THE LIKE. JOSEPH F. BRODERICK, Springdale, Conn. Filed Oct. 27, 1925. Serial No. 65,216. 3 Claims. (Cl. 248—17.)

1. In a device of the character described, the combination, with a sheet-metal plate adapted to provide a window-sill or the like, said plate being bent to provide a longitudinal channel extending the length thereof with the edge of said plate projecting vertically into said channel and forming a track-rail, of a sheet metal bracket having a substantially rigid, vertical, outwardly projecting plate provided at its upper edge with means adapted to engage a radiator member for radiator support, said bracket also having a rectangular flange at its supported edge, said flange projecting upwardly beyond the upper edge of said bracket and being provided at its upper end with a hook adapted to engage said rail and be slidable



thereon, and said plate being provided with a bottom opening connecting with the channel to afford access for said hook to the interior of said channel in position for slidable engagement with said rail.

1,620,633. PITOT-STATIC TUBE. CHARLES H. COLVIN, Brooklyn, N. Y., assignor to Pioneer Instrument Company, a Copartnership consisting of Charles H. Colvin, Brice H. Goldsborough, and Morris M. Titterington, Brooklyn, N. Y. Filed Apr. 16, 1924. Serial No. 706,990. 4 Claims. (Cl. 73—167.)

1. A Pitot-static tube, comprising in combination, two tubes which throughout a part of their length are straight, parallel and spaced apart, and which throughout a second part of their length are adjacent and each bent upon substantially the same radius, and which throughout a third part of their length are straight, parallel and adjacent, said tubes being soft throughout said second part and said third part being at an angle to said first part, and said second part forming an angularly adjustable connection between said first part and said third part.

1,620,634. FRICTION SHOCK-ABSORBING MECHANISM. ARNOLD E. DENTLER, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Mar. 15, 1923. Serial No. 625,192. 7 Claims. (Cl. 213—32.)

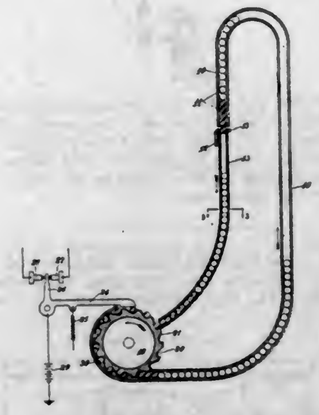
1. As an article of manufacture, a friction shell for shock absorbing mechanisms, said shell having a plurality of interior, longitudinally extending, independent, cylindric friction surfaces converged inwardly of the shell, each said surface being formed on a radius of greater length than the distance from any point thereof to the longitudinal axis of the shell.

1,620,635. FUEL OIL. FRANK L. DIETZ, Brooklyn, N. Y. Filed Jan. 3, 1922. Serial No. 526,656. 2 Claims. (Cl. 44—9.)

1. A fuel oil for the generation of power in explosion engines, consisting of low temperature tar, an alcohol acting as agent to prevent the solidification of such low temperature tar, and a naphthalenetetrahydride.

1,620,636. MANUFACTURE OF ARTIFICIAL THREADS AND FILAMENTS. HENRY DREYFUS, London, England. Filed Feb. 25, 1924, Serial No. 695,117, and in Great Britain Mar. 7, 1923. 12 Claims. (Cl. 18—54.)

1. A process for the production of cellulose acetate artificial threads and filaments, which comprises spinning said threads and filaments from solutions of cellulose acetates which cellulose acetates have viscosities of not less than 50, reckoned as aforesaid, said spinning solutions being of concentrations between about 4% and 20%.

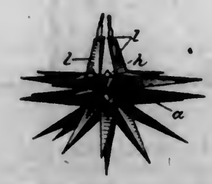


1,620,637. BUILT-IN TELEPHONE CABINET. GEORGE EVANS, El Paso, Tex., assignor to El Paso Sash and Door Company, El Paso, Tex. Filed Sept. 8, 1926. Serial No. 134,208. 2 Claims. (Cl. 211—7.)

1. A built-in telephone cabinet comprising a casing adapted to be set into a wall of a room and means dividing said casing into three compartments arranged one above the other, the upper compartment adapted to contain the bell, the intermediate compartment adapted to receive the telephone, and the lower compartment receiving a bin like member which is hinged at its lower end to the front of the casing and swings to open position to permit access thereto and to provide a support for the telephone.

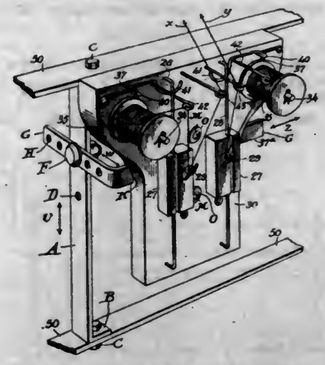
1,620,638. METHOD OF AND DEVICE FOR TRANSMITTING ELECTRIC IMPULSES. ERNEST A. FALLER and EDWARD E. KLEINSCHMIDT, Brooklyn, N. Y., assignors, by mesne assignments, to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Filed Dec. 10, 1921. Serial No. 521,394. 15 Claims. (Cl. 178—17.5.)

1. Apparatus for transmitting electrical impulses comprising contact carrying means, contact operating means, a plurality of paths of movement in each of which said contact operating means may be caused to move in a manner to cause variable operation of said contact carrying means, and means for selectively compelling movement



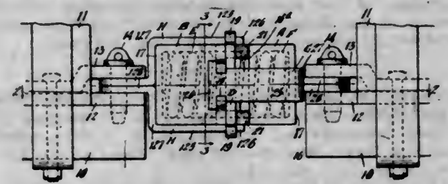
of said contact operating means into one or the other of said paths in accordance with the nature of the impulses to be transmitted.

1,620,639. TRITURATING MACHINE. ADINO F. FILES, Maumee, Ohio. Filed Nov. 12, 1926. Serial No. 147,864. 3 Claims. (Cl. 83—9.)



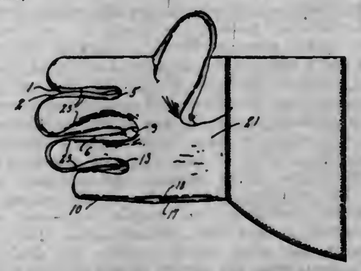
1. In a triturating machine a pair of unconnected rollers, a drum, each end of the drum having a slot in its peripheral portions, the rollers having hubs that extend into the slots for guiding the rollers and means for rotating the drum.

1,620,640. COLLAPSIBLE LANTERN. KUAT KARL FRIEDRICH, Annaberg im Erzgebirge, Germany. Filed Mar. 10, 1926, Serial No. 93,637, and in Germany May 23, 1925. 6 Claims. (Cl. 240—36.)



1. Foldable illumination lantern comprising two rows of foldable pyramids, the pyramids in each row being foldably joined by their adjoining edges and the two rows being joined by their common edge, a frustrum of a pyramid at one end of each row and a foldable pyramid foldably joined to the free edge of one pyramid of each row.

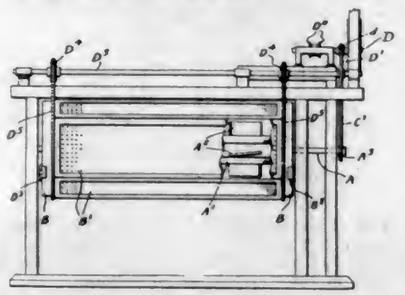
1,620,641. LET OFF DEVICE. THEODORE J. GARISIO, Allentown, Pa. Filed Apr. 14, 1926. Serial No. 101,976. 5 Claims. (Cl. 139—54.)



1. A let-off for intermediate selvage devices comprising a frame carrying a pair of take-up devices and final thread guides adjacent one another, and means to bodily adjust the frame in three rectangular directions.

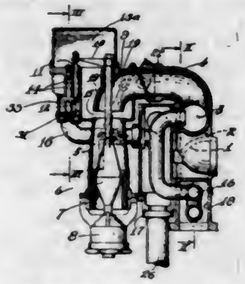
1,620,642. RESILIENT SHACKLE. WILLIAM A. GEIGER, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Sept. 19, 1923. Serial No. 663,684. 7 Claims. (Cl. 213—48.)

1. In a resilient shackle, the combination with relatively movable casings; of tandem arranged yieldable units within said casings; followers interposed between said units, each of said followers being held by one of the casings and movable with respect to the other casing; oppositely arranged yokes adapted to be connected at their outer ends to adjacent vehicles, and each having its inner end connected to the casing remote from said yoke so as to permit movement of each yoke toward the casing to which it is connected and restrain relative movement with respect thereto in the opposite direction.



1,620,643. GLOVE. HERMAN GILLIAN, Columbus, Ohio. Filed May 3, 1926. Serial No. 106,263. 1 Claim. (Cl. 2—161.)

A glove having a one-piece wear facing front having integral palm and finger portions, a plurality of finger back wear facings terminating from the finger tips in the region of the crotches for the fingers, a one-piece lining front having integral palm and finger portions, and a one-

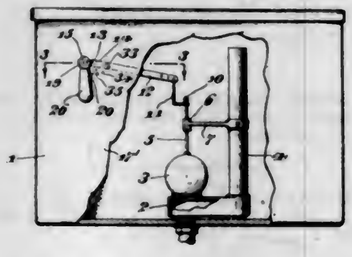


piece lining back having integral hand back and finger portions, a plurality of the finger back wear facings being stitched together to form a unit, said linings being stitched together at the tips of the fingers only.

1,620,644. METHOD OF HULLING GREEN PEAS. JOHN GOFFIN, Niagara Falls, N. Y., assignor to Chisholm-Ryder Co. Inc., Niagara Falls, N. Y., a Corporation of New York. Filed Jan. 8, 1925. Serial No. 1,205. 3 Claims. (Cl. 130—30.)

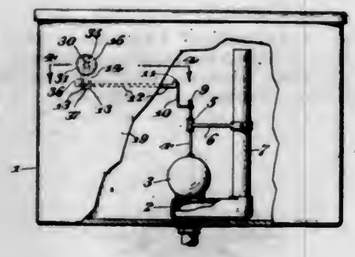
1. The improvement in the method of vining green peas in which the vines are carried to an elevated position and subjected to impact in falling, which consists in lifting the vines at a definite rate measured in quantity of vines and, during the vining operation, varying the speed of movement of the impacting elements according to the quality of the green peas to be acted upon and independently of the rate at which the vines are lifted.

1,620,645. FUEL-SUPPLY MEANS FOR COMBUSTION ENGINES. JOHN GOOD, Brooklyn, N. Y., assignor to Good Inventions Co., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 16, 1916. Serial No. 131,613. 6 Claims. (Cl. 261—13.)



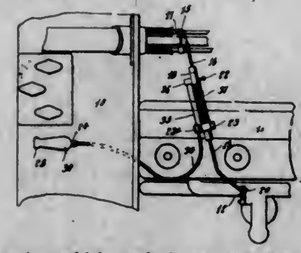
2. The combination with an internal combustion engine and an exhaust passage therefrom, of two branch or parallel intake passages having a common outlet to the engine and a common air entrance, a source of liquid fuel having an outlet into one of said passages, an air actuated control body located in said common entrance whereby it is actuated by the air flow of both intake passages, means controlled by the actuation of said body for controlling the delivery of fuel from said outlet, a throttle in each branch intake passage, and manually operable means for actuating said throttles to control the engine, said means including a lost motion connection whereby the throttle in said fuel passage opens ahead of the throttle in the other branch passage and moves to its closed position after the throttle in said other passage, said branch fuel passage being contained in said exhaust passage and being of such size or capacity that the engine suction maintains an air flow therethrough sufficient to maintain the delivery of fuel to the engine regardless of the freedom of flow in the other branch passage.

1,620,646. WINDOW. CHARLES T. E. GOULD, Detroit, Mich. Filed Oct. 19, 1925. Serial No. 63,341. 8 Claims. (Cl. 16—124.)



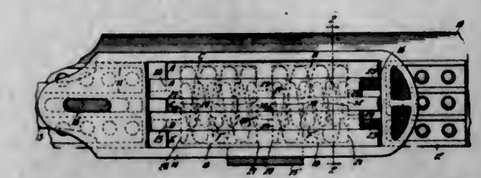
1. A window provided with an upper sash and a lower sash slidable vertically relative to one another, the upper sash having a ventilating hole formed through its side bar; a box-like closure for said hole, said closure forming a shoulder adapted to be engaged by the fingers to raise and lower the upper sash.

1,620,647. VALVE-OPERATING MEANS FOR FLUSH TANKS. WILLIAM U. GRIFFITHS, Philadelphia, Pa. Filed Mar. 24, 1926. Serial No. 96,625. 6 Claims. (Cl. 4—67.)



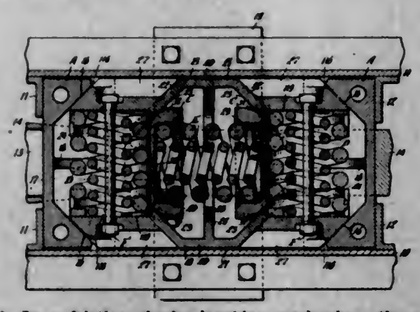
1. In means of the character described, the combination of a rotatable shaft, a lever extending transversely of said shaft and having connection thereto at a point a distance from the axis thereof, a pivotally movable fulcrum having engagement with the said lever at an intermediate portion thereof, and means for causing rotation of said shaft to effect longitudinal and pivotal movements of the said lever.

1,620,648. MEANS FOR ACTUATING FLUSH-TANK VALVES. WILLIAM U. GRIFFITHS, Philadelphia, Pa. Filed Mar. 24, 1926. Serial No. 96,927. 4 Claims. (Cl. 4—67.)



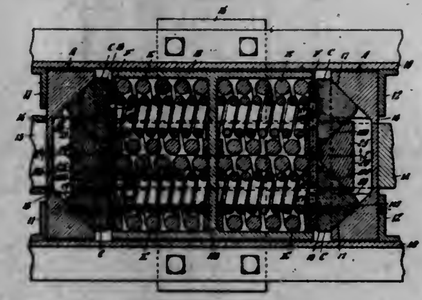
1. In means for actuating a flush tank valve, the combination of a rotatable shaft having an inwardly extending arm and also having an upwardly extending arm, the latter being provided with an opening therethrough adjacent its upper end, means for connecting the first named arm to the valve to be actuated, a bearing for the said shaft mounted upon a side of the said tank, and a reciprocatory rod extending through and supported by the said side of the tank and having its inner end extended through and slidably engaged with the opening in the second named arm, substantially as described.

1,620,649. ACCELERATOR ATTACHMENT. PHILIP LEO HARTZ, Akron, Ohio. Filed Nov. 13, 1926. Serial No. 148,206. 9 Claims. (Cl. 74—39.)



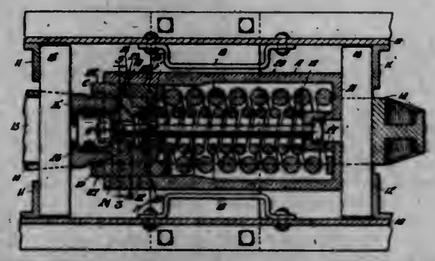
1. In a motor vehicle, a fuel control valve located on one side of the vehicle engine and having an operating arm movable away from the engine to open the valve, a hand operating rod on the opposite side of the engine and having a crank arm movable from its normal position toward the engine, a series of mechanical elements connecting the operating arm to the crank arm for causing the movement of the crank arm to push through the entire series of mechanical elements to open the valve, a pedal, and means connecting the pedal to a portion of said series of elements and operative to cause the depression of said pedal to produce a push upon said portion of the series of elements to open the valve.

1,620,650. SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Apr. 19, 1923. Serial No. 633,048. 13 Claims. (Cl. 213—48.)



1. In a shock absorbing mechanism, the combination with a plurality of pressure-transmitting elements having recesses therein, said elements being of equal length and alternated, and the front and rear ends of adjacent elements being staggered; of cushioning means enclosed within said recesses and opposing relative movement of said elements.

1,620,651. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Jan. 7, 1924. Serial No. 684,692. 5 Claims. (Cl. 213—39.)

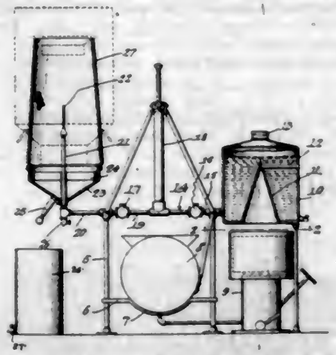


1. In a friction shock absorbing mechanism, the combination with front and rear followers each having wedge means thereon; of a pair of side members having friction faces coacting with the wedge faces of said followers; cushioning means directly engaging said members, said cushioning means being interposed therebetween; additional cushioning means interposed between said members; and follower means co-acting with said last named cushioning means, said follower means and side members having co-acting friction wedge faces thereon.

1,620,652. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Jan. 21, 1924. Serial No. 687,529. 13 Claims. (Cl. 213—22.)

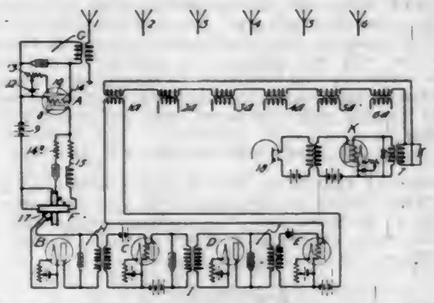
1. In a friction shock absorbing mechanism, including a drawbar and a yoke, the combination with an auxiliary yoke mounted within and extending longitudinally of said first named yoke; of movement resisting mechanism coacting with and supported by said first named yoke and supporting said auxiliary yoke independently thereof, said movement resisting mechanism including wedge members coacting with the opposite ends of said auxiliary yoke.

1,620,653. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 13, 1926. Serial No. 128,951. 3 Claims. (Cl. 213—32.)



3. In a friction shock absorbing mechanism, the combination with a friction shell having interior friction surfaces, of a plurality of friction shoes co-operating with said surfaces; a main wedge co-operating with said shoes, a spring follower, said spring follower and shoes having co-operating wedge faces; and a main spring resistance, including an element opposing movement of said shoes independently of the remainder of said spring resistance.

1,620,654. HOT-WATER CAN WASHER. OLE K. HAUGEN, Hancock, Minn. Filed Nov. 15, 1924. Serial No. 750,172. 1 Claim. (Cl. 141—7.)

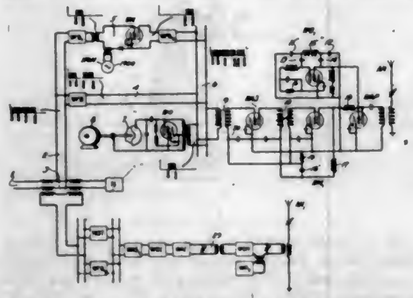


A can washer comprising a supporting frame including a pipe extending transversely of the frame, a water tank connected to one end of the pipe, a can support supported

at the opposite end of the pipe, a pipe extending upwardly through the can support and having a nozzle at its free end adapted to spray a can positioned on the can support,

a pump supported intermediate the ends of the first mentioned pipe, and in communication therewith, said pump adapted to draw liquid from the tank and force the liquid through the pipes and into the nozzle.

1,620,655. DIRECTIVE RADIO RECEIVING SYSTEM. RAYMOND A. HEISING, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 8, 1920. Serial No. 408,889. 16 Claims. (Cl. 250—11.)

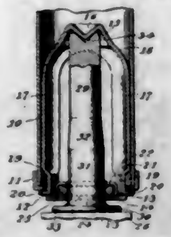


3. The method of eliminating undesired energy in a receiving system comprising a plurality of linearly arranged antennæ feeding, through individual receiving circuits, into a common detecting circuit, which consists in operating on the waves generated in the receiving antennæ to produce harmonics and selecting out a corresponding harmonic in each receiving circuit whereby there is effectively caused a phase shift in said waves in adjacent receiving circuits, and combining these harmonics in the common detecting circuit.

10. A radio receiving system comprising an array of linearly arranged, uniformly spaced antennæ more than two in number, a common detecting means, and means whereby the waves incident on said antennæ from a desired direction may act cumulatively on said detector to the substantial exclusion of waves from all other directions, the interval between adjacent antennæ being small as compared with one-half the wave length of the received waves.

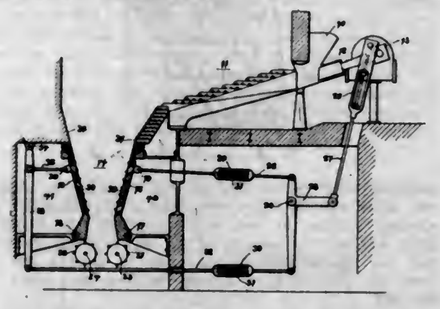
1,620,656. CARRIER-WAVE SIGNALING SYSTEM. RAYMOND A. HEISING, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 1, 1924. Serial No. 753,029. 5 Claims. (Cl. 250—36.)

1. A source of oscillations comprising an evacuated vessel containing a cathode, an anode and a third electrode, and an oscillation circuit having a capacitatively reactive path between said third electrode and said cathode and a separate capacitatively reactive path between said anode and said cathode; an electric discharge repeating device comprising at least two electrodes; means connecting said two electrodes to one of the pairs of electrodes



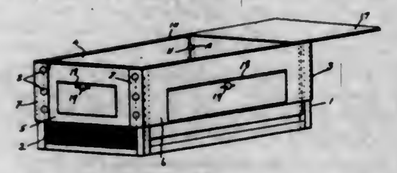
of said source between which there is a capacitatively reactive path; said source being designed to produce an energy output greater than would be required for efficient amplification of said output by said repeating device.

1,620,657. CASTER. WALTER F. HEROLD, Upper Montclair, N. J., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 18, 1925. Serial No. 76,228. 6 Claims. (Cl. 16—39.)



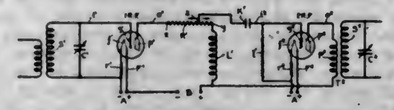
1. In a support, a spring frame adapted to be inserted in an opening in a furniture leg or the like, including a thrust bearing portion and side leg portions adapted to frictionally engage the interior of the furniture leg, a base member having a central pintle receiving opening and portions engaged by said side leg portions, said side leg portions being provided with inwardly offset end portions each having a lateral flange extending outwardly to retain said base member and adapted to engage directly beneath the lower end of said furniture leg, whereby thrust on said bearing portion is adapted to be transferred directly to said furniture leg.

1,620,658. CASTER. WALTER F. HEROLD, Upper Montclair, N. J., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 18, 1925. Serial No. 76,229. 8 Claims. (Cl. 16—39.)



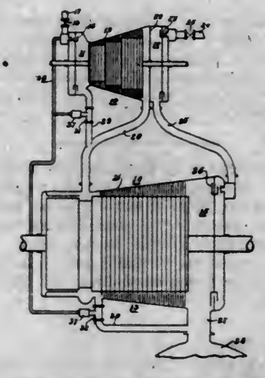
1. In a support, a floor engaging element including a pintle, an apertured spring retaining base adapted to be secured to a furniture leg or the like, and including a circumferential lateral confining portion and an axial confining portion constituting an annular pocket, and a spring ring loosely retained in said pocket, said ring adapted to grip said pintle and being rotatable therewith with respect to said base, the apertures of said base above and below said spring ring being of equal diameter and constituting pintle-bearing portions.

1,620,659. CLINKER GRINDER. FRANCIS HODGKINSON, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 12, 1921. Serial No. 460,789. 11 Claims. (Cl. 110—32.)



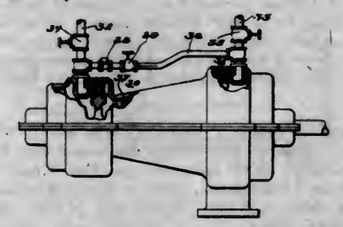
5. An ash discharging apparatus for stokers comprising a pair of oscillatory side walls, pivotally mounted at their lower ends to form an ash receptacle of variable horizontal section, the horizontal section being reduced intermediate the top and bottom, and means to oscillate said side walls to and from each other about their pivots.

1,620,660. ENVELOPE SHIELD FOR CRIB BEDS. MADELINE B. HOUSTON, Evanston, Ill. Filed Nov. 27, 1925. Serial No. 71,566. 3 Claims. (Cl. 5—93.)



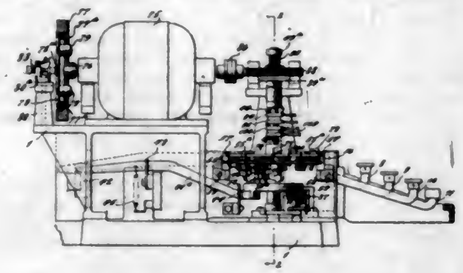
1. In an envelope shield for crib beds, the combination with a crib frame, of a box shaped bag made of suitable flexible material disposed within the crib and having its walls in close relation to the inner sides of the crib, a flexible strip united with the upper edges of said bag and adapted to lie upon the upper edges of the crib frame, individual flexible flaps united with said strip and depending therefrom and partially covering the outer sides and ends of the crib, the side flaps being extended lengthwise to provide overlapping end portions adapted to overlap the end flaps, and fastening devices mounted on the end flaps and the overlapping portions of the side flaps adapted to hold the shield in close relation to the crib.

1,620,661. RADIOFREQUENCY AMPLIFYING SYSTEM. LESTER L. JONES, Oradell, N. J. Filed Mar. 6, 1926. Serial No. 92,761. 10 Claims. (Cl. 179—171.)



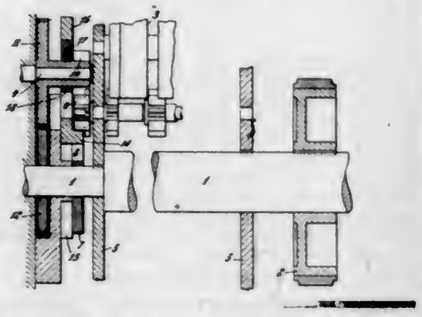
1. An amplifying system comprising a pair of electron discharge tubes, each having input and output circuits capacitively coupled through the electrostatic coupling of the tube elements, means for tuning the input circuit of the first tube, means for tuning the output circuit of the second tube, the output circuit of the first tube being connected by non-tunable means to the input circuit of the second tube, said non-tunable means comprising a coupling inductance and a resistance in the output circuit of the first tube for compensating for the feeding-back reaction due to said coupling inductance, a portion of said resistance being included in the input circuit of the second tube for substantially neutralizing the distant stage feed-back reaction of the tuned output circuit of the second tube on the tuned input circuit of the first tube.

1,620,662. TURBINE. ALEXANDER T. KASLEY, Essington, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 12, 1923. Serial No. 631,671. 2 Claims. (Cl. 60—70.)



1. A turbine comprising an ahead section, an admission valve for said ahead section, a passage providing communication between the admission valve and the ahead section, a reversing section, a passage providing communication between the inlet and exhaust ends of the ahead section, a valve in the second-mentioned passage, means urging said valve to open position, pressure-responsive means for closing said valve, and means independent of the second-mentioned passage for providing communication between the first-mentioned passage and the pressure-responsive means.

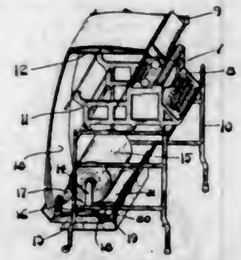
1,620,663. TURBINE. ALEXANDER T. KASLEY, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 12, 1923. Serial No. 631,672. 3 Claims. (Cl. 253—70.)



1. In a turbine installation, an ahead section which develops a pumping action when operating reversely, a reversing section, a conduit between the inlet ends of said sections, and a check valve in the conduit which opens in the direction of the inlet end of the ahead section, whereby, when the reversing section is in operation, steam is also supplied to the inlet end of the ahead section.

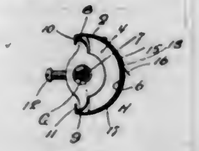
1,620,664. PRINTING TELEGRAPHY. EDWARD E. KLEINSCHMIDT, Brooklyn, N. Y., assignor, by mesne assignments, to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Filed Oct. 12, 1921. Serial No. 507,215. 31 Claims. (Cl. 178—17.5.)

1. A transmitter comprising a stationary storage member provided with a plurality of groups of circuit controllers, movable means for setting up combinations of said circuit controllers, and movable means for transmitting code impulses in accordance with the positions of said controllers.



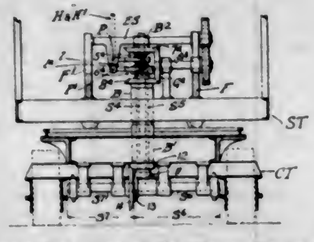
1,620,665. DRIVING DEVICE OF COUNTING MECHANISM IN MACHINES FOR FRANKING POSTAL MATTER AND THE LIKE. ULRICH KOHLER, Bern, Switzerland, assignor to Hasler A.-G. vormals Telegraphenwerkstätte von G. Hasler, Bern, Switzerland, a Swiss Corporation. Filed Sept. 8, 1926, Serial No. 134,214, and in Switzerland Sept. 14, 1925. 3 Claims. (Cl. 74—7.)

1. In a driving device of the character described, the combination with a shaft, of a locking disc mounted on said shaft and having a recess in its periphery, a plurality of pinions arranged to move about said disc and adapted to be locked thereby against rotation, except when opposite said recess, a slide movable radially in said recess and arranged to open and close the same, and a positively driven member carrying said slide.



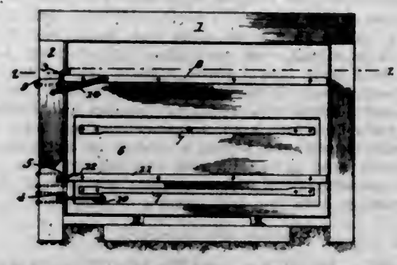
1,620,666. FEEDING DEVICE FOR ROLL STATIONERY. HARRY H. KONERMAN and ALPHONSE E. IMBUS, Cincinnati, Ohio, assignors to The Globe Register Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 3, 1925. Serial No. 54,276. 2 Claims. (Cl. 197—133.)

1. In combination with a record making device, a feeding device for roll stationery comprising a rack to support a roll of stationery beneath the record making device, substantially vertically slotted supports back of the rack, a roller mounted rotatively in the slots for substantially vertical movement therein, said record making device having a web carrying part located above and adapted to receive the web from the roll, said roll being so positioned that the web in its passage therefrom leaves the top of the roll, passes beneath the roller and upwardly to the web carrying part of the record making device, said web carrying part having reciprocatory movement in a direction transversely of the direction of web travel, movement of said part in one direction being



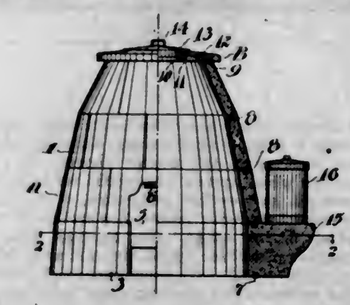
adapted to lift the vertical portion of said web, whereby the roller will be lifted, cessation of movement of said vertical portion of the web permitting the roller to drop, whereby the portion of the web between the roller and the roll will be drawn upon to unwind the web from the roll to form a loop between the roller and the roll.

1,620,667. DOLL'S EYES WITH LASHES. ALEXANDER KONOFF, New York, N. Y., assignor to Overland Metal Novelty Co. Inc., New York, N. Y., a Corporation of New York. Filed Mar. 20, 1925. Serial No. 17,102. 19 Claims. (Cl. 46—40.)



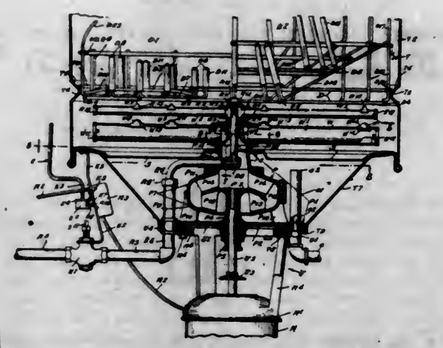
2. An eye structure comprising an eye shell, an eye lash member therefor, and gripping means including parts mechanically adjustable to cause the eye lash member to be gripped and held in position.

1,620,668. STEERING MECHANISM FOR CREEPER TRACTORS. LOUIS P. LIPPS, Cleveland, Ohio, assignor to The Brown Hoisting Machinery Company, Cleveland, Ohio, a Corporation. Filed Mar. 5, 1926. Serial No. 92,469. 1 Claim. (Cl. 180—9.2.)



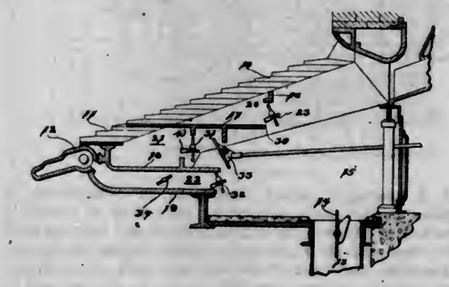
In a locomotive crane of the creeper tractor type, having a revolvable superstructure and a source of power thereon, the combination of a pair of concentrically arranged shafts extending vertically downward from said superstructure through the center of rotation of the same to and within the tractor frame below, a pair of right and left transversely aligned track-driving shafts extending inwardly from the sides of the frame to a point beneath the lower ends of said concentrically arranged shafts, a bevel gear on the inner end of each of said track-driving shafts, bevel pinions on the lower end of said concentrically arranged shafts in mesh, respectively, with the bevel gears on said inner ends of said track-driving shafts, a pair of spaced-apart horizontally disposed bevel gears of the same diameter provided with clutch-engaging means, freely mounted on the upper portions respectively of said concentrically arranged shafts, a power shaft operatively connected with said source of power extending to said interspace between said bevel gears on said upper portions, an upright bevel gear fixedly mounted on the free end of said power shaft in mesh with the bevel gears on said upper portions, double-faced clutch mechanisms slidably mounted on said upper portions, provided with means for clutch engagement, one with the other, or with the next adjoining or said horizontally disposed bevel gears, when contacting therewith for the purpose, together with means for selectively actuating said clutches into one or the other of such engagements, substantially as shown and described.

1,620,669. MINE DOOR. THOMAS EDWARD LITTLEJOHN, Lookout, W. Va. Filed June 16, 1926. Serial No. 116,428. 4 Claims. (Cl. 70—16.)



1. A mine door structure comprising a frame having a vertical upright, a hinge pintle mounted upon the upright, a U-bolt mounted upon the upright and having its intermediate portion in alinement with the pintle, other U-bolts mounted upon the upright and located one at each side of the line between the pintle and the intermediate portion of the first mentioned U-bolt, a door panel, a hinge member carried by the door panel and engaging the pintle, a loop member carried by the panel and engaging the intermediate portion of the first mentioned U-bolt and members applied to the sides of the door panel and provided with end portions extending beyond the edge thereof and having notches adapted to receive the second meationed U-bolts when the panel is swung with relation to the frame.

1,620,670. SECTIONAL CONCRETE ASH RECEPTACLE. MICHAEL A. MARSH, St. Paul, Minn. Filed Oct. 30, 1925. Serial No. 65,827. 1 Claim. (Cl. 220—5.)



A receptacle of the character described, comprising a plurality of curved interlocking sections positioned in annular layers superposed one upon another, one of said sections having a protuberance thereon to form a shelf extending outwardly from the side of said receptacle, each of said sections having a groove in the upper edge thereof, and a tongue in the lower edge thereof to fit into the groove in the next lower row of interlocking sections and to terminate short of the bottom thereof, and an annular metal reinforcing ring insertible in the groove in the upper edges of each row of sections to bind said sections against outward displacement.

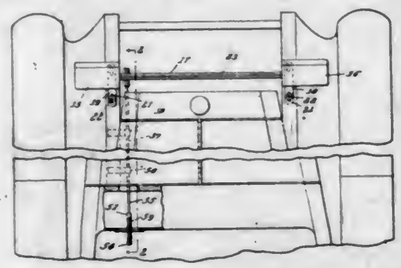
1,620,671. WASHING MACHINE. HENRY R. MERSELES, Bronxville, N. Y., assignor to Herbert E. Merseles, Bronxville, N. Y. Filed Aug. 17, 1922. Serial No. 582,396. 23 Claims. (Cl. 141—9.)

3. In a dish washing machine, a wash and rinse unit comprising a frame, a fluid projector rotatably mounted thereon, a second projector rotatably mounted on said first projector, and separate fluid conduits communicating with said projectors respectively.

1,620,672. AIR-CONTROL MEANS FOR MECHANICAL STOKERS. CHARLES F. MILLER, Moore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 10, 1923. Serial No. 638,129. 5 Claims. (Cl. 110—44.)

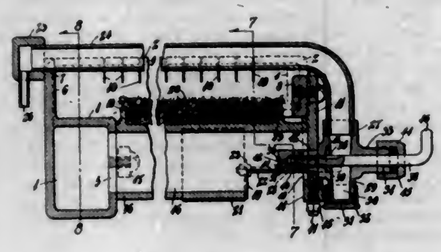
3. The combination with a forced-draft stoker embodying a plurality of groups of tuyères, each group with its separate air supply duct, of means for establishing a pre-determined relation of air pressures at the respective tuyère groups, and means for restricting the air flow in at least one of the ducts when the air velocity tends to exceed a given pre-determined velocity.

1,620,673. DISPLAY CARTON. CHARLES C. MILLER, Fort Wayne, Ind. Filed July 26, 1926. Serial No. 124,792. 2 Claims. (Cl. 206—44.)



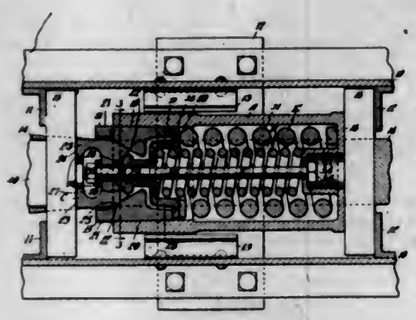
1. A display carton consisting of a receptacle portion and a cover portion having its top extended and secured to the bottom of the receptacle, a display panel secured to one wall of the receptacle and to the said top, and the cover being foldable on the said extension either over and onto the receptacle or under the receptacle to support it.

1,620,674. HANGER FOR EAR CLAMPS. GRACE VICTORIA MILLER, San Francisco, Calif. Filed Apr. 25, 1923. Serial No. 634,466. 2 Claims. (Cl. 63—4.)



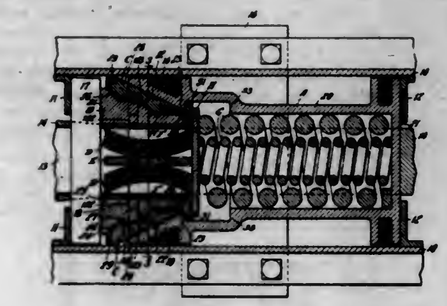
2. An earring comprising a lobe engaging loop having inner and outer arms, a lobe engaging member carried by the outer arm of the loop, an adjustable lobe gripping member carried by the inner arm of the loop, and an ear encircling guard loop having its shank swingingly connected with the inner arm of the lobe engaging loop.

1,620,675. HEADLIGHT CONTROL. THOMAS J. MOAN, Belvidere, Ill. Filed Apr. 7, 1924. Serial No. 704,581. 10 Claims. (Cl. 240—61.)



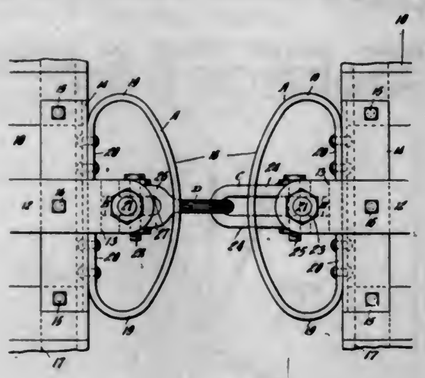
1. A headlight control comprising, in combination, a tubular casing, means supporting the casing so that it is rotatable about its longitudinal axis, a cap nut threaded onto each end of the casing, a light-supporting bracket mounted on each end of the casing, a pair of headlights each having a spindle mounted on one of the brackets to turn about a vertical axis, a shifting rod mounted in the casing to rotate therewith but being shiftable lengthwise with respect thereto, a coiled spring interposed between each end of said rod and the adjacent cap nut, a connection between each spindle and said rod for oscillating the spindle by lengthwise movement of the rod, and means for oscillating the casing to tilt the headlights vertically and for shifting said rod for swinging the headlights horizontally.

1,620,676. BURNER. JAMES H. NUTTER, Erlanger, Ky. Filed Mar. 12, 1925. Serial No. 15,033. 2 Claims. (Cl. 158—65.)



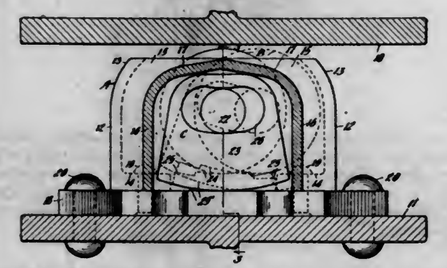
1. In a burner, a body comprising parallel laterally spaced distributing ducts closed at their front ends and a distributing head integral with the lower parts of the rear ends of said ducts, into which said ducts open downwardly, having an opening in its front below said ducts, said ducts having slots cut transversely in their tops, down into their lateral sides, a plate secured to said front ends of said ducts, depending therefrom and having an opening therebelow, a mixing chamber held between said plate and said head, in communication with the openings therein, and having a lateral air inlet, and a vaporizing tube having its rear end supported on said head, extending along over the space between said ducts and curving down into said opening in said plate.

1,620,677. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Feb. 12, 1923. Serial No. 618,449. 4 Claims. (Cl. 213—34.)



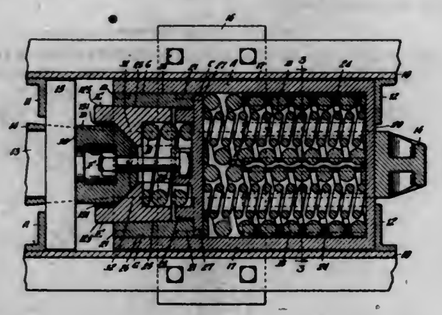
1. In a friction shock absorbing mechanism, the combination with a friction shell having inwardly converging friction surfaces on the interior thereof; of a friction generating wedge system co-operable with the shell friction surfaces, said system comprising, a contractible wedge pressure-transmitting means, a plurality of wedge friction shoes having wedge faces coacting with said wedge pressure-transmitting means and said shell friction surfaces, a central wedge, said wedge and wedge pressure-transmitting means having coacting wedge faces with said contractible wedge pressure-transmitting means, all of said wedge faces being intersected by a common transverse plane; and a main spring resistance opposing inner movement of said central wedge.

1,620,678. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Apr. 26, 1923. Serial No. 634,698. 19 Claims. (Cl. 213—31.)



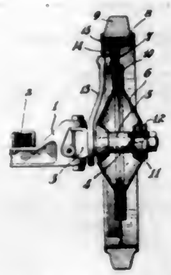
1. In a friction shock absorbing mechanism, the combination with a friction shell; of a spring resistance; and a multiple-part, compressible wedge unit, said unit and shell having co-acting friction surfaces disposed at a relatively keen wedge-acting angle with reference to the line of applied force, said unit including a plurality of elements having engaging sets of faces disposed at relatively blunt releasing angles with reference to the line of applied compressing force, and resilient means compressible transversely of the applied force, interposed between certain of said elements and tending to hold said wedge unit expanded.

1,620,679. CAR CONSTRUCTION. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Sept. 28, 1923. Serial No. 665,311. 4 Claims. (Cl. 213—7.)



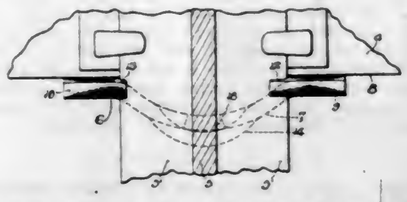
1. In a device of the character described, the combination with the end structure of a car, including a draw bar; of a resilient element having a centrally bowed portion spaced outwardly from the end of said draw bar, said resilient element having looped side portions and inwardly turned end portions secured to the car structure inwardly of the outer end of said draw bar; and a coupling element operatively associated with said draw bar and arranged to extend outwardly of said resilient element in one position, and inwardly of said element in another position.

1,620,680. ANTIFRICTION BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Apr. 3, 1924. Serial No. 703,899. 8 Claims. (Cl. 308—226.)



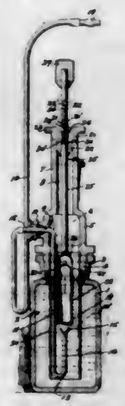
1. In an antifriction bearing, the combination with a housing adapted to be secured to a bolster or the like; of an anti-friction roller therein; a rockable cradle carrying said roller and actuated in unison therewith under load; and means associated with said roller and said cradle permitting said roller to move free of peripheral contact with said cradle during one phase of operation, and to support the same for rotation about a fixed axis when free of peripheral contact with said cradle.

1,620,681. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed July 18, 1925. Serial No. 44,419. 6 Claims. (Cl. 213—32.)



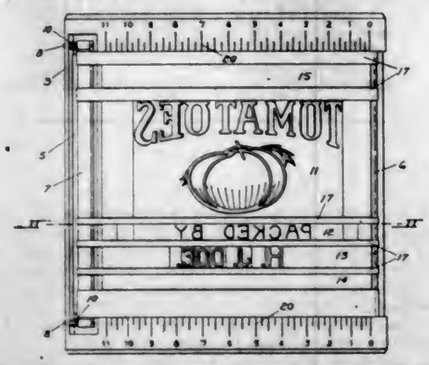
1. In a friction shock absorbing mechanism, the combination with a spring cage casting open at one end only and of substantially uniform interior cross sectional area, said cage having means attached thereto at said open end presenting opposed friction surfaces and restricting the cross sectional area of said cage, said cage having retaining means thereon for said first named means; of twin arranged main springs within the shell; a spring follower; and a wedge-friction system co-operating with the shell, the retaining means of said cage being so formed as to permit free insertion of the springs and spring follower through the open end of the cage.

1,620,682. APPARATUS FOR SUPPORTING VEHICLE LOADS. WILLIAM H. OPPEN, Brooklyn, N. Y. Filed July 25, 1921. Serial No. 487,361. 9 Claims. (Cl. 152—28.)



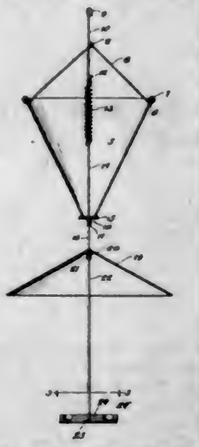
1. The combination in apparatus for supporting vehicle loads of means for supporting the load and permitting displacement under shock impact, and means for restoring the load whenever displaced by road inequalities and which offer substantially no opposition to the displacing movement.

1,620,683. RAIL ANTICREEPER. ALPHONSO T. PALMER, Chicago, Ill. Filed July 29, 1925. Serial No. 46,707. 16 Claims. (Cl. 238—330.)



1. In combination, a railway rail, a tie under said rail, and a resilient member having end portions engaging the edges of the flange portion of said rail and an edge portion engaging the bottom surface of said flange, said edge portion being beveled at an acute angle to bite into the surface of said rail

1,620,684. APPARATUS FOR ADMINISTERING RADIUM EMANATIONS. HARRY B. PALMER, Mendham, N. J. Filed Nov. 16, 1923. Serial No. 675,119. 8 Claims. (Cl. 167—7.)

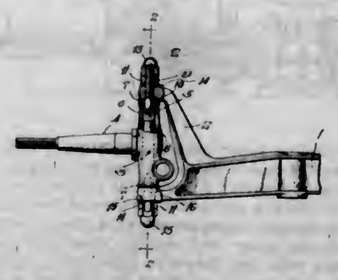


1. In a device of the kind described, a water container, a discharge tube having an exteriorly directed upper end and a lower end disposed within said container, an upwardly directed receiving arm connected with said lower end of said discharge tube, said arm having an intake port adjacent to its free extremity, a vertically movable capsule holder, and means for guiding said capsule holder, downward movement of said capsule holder being adapted to move a capsule supported thereby into operative relation to the receiving arm whereby the latter penetrates the interior of said capsule to permit the content thereof to enter said intake port and be withdrawn through said discharge tube.

1,620,685. PRINTING STAMP. WILLIAM J. PANNIER, Jr., Pittsburgh, Pa., assignor to Pannier Bros. Stamp Co., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 10, 1925. Serial No. 49,197. 2 Claims. (Cl. 101—378.)

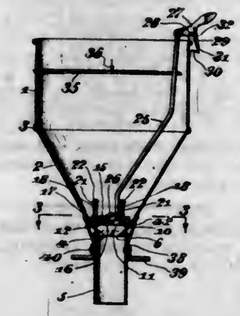
1. The combination with a part cylindrical base having a fixed cross bar and a relatively movable cross bar at each side of a printing area, and fixed temper screw abutments beyond the movable bar, of a plurality of printing elements mounted on the base having reduced thickness retaining flanges, a plurality of retaining straps each having a hooked terminal at each end engaging the fixed cross bar and the movable cross bar respectively and with their intervening portions engaging the retaining flanges of the printing elements, and temper screws mounted in the abutments and engaging the movable cross bar for tightening the straps over the flanges of the printing elements.

1,620,686. POULTRY FEEDER AND EXERCISER. HIRAM J. PAULEY, Streator, Ill. Filed Apr. 1, 1926. Serial No. 99,009. 1 Claim. (Cl. 119—70.)



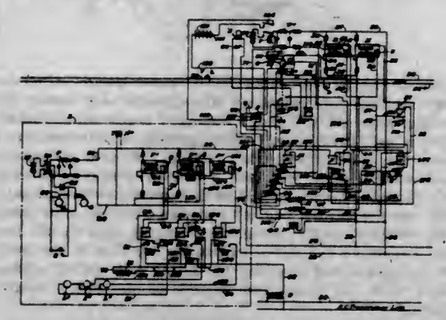
In combination, an inverted cone-shaped hopper having the lower end thereof open, said hopper being provided with openings adjacent its upper end, a V-shaped rod inverted and having its ends piercing the openings at the upper end of the hopper, a second rod bent intermediate its end to provide an eye for receiving the apex of the inverted V-shaped rod, the ends of the second rod terminating in hooks, a spring engaged with one hook, a valve rod engaged with the spring, a valve on the valve rod closeable normally by the spring over the lower open end of the hopper, a link engaged with the valve rod, a cone-shaped distributor on the link, a supporting rod engaged with the link and depending downwardly therefrom, and a bait holder on the lower end of the supporting rod.

1,620,687. AUTOMATIC SORTER FOR PUNCH PRESSES. DANIEL W. REESE, Detroit, Mich., assignor to McCord Radiator & Mfg. Co., Detroit, Mich., a Corporation of Maine. Filed Nov. 1, 1924. Serial No. 747,309. 6 Claims. (Cl. 209—90.)



1. A sorter adapted to be applied to a punch press and having two downwardly inclined troughs with outlets at their outer ends, said troughs being connected and arranged one above the other with the upper trough disposed to initially receive both the stampings and the scrap as discharged from the press, said upper trough having slots therein for the passage only of the scrap from the upper to the lower trough, and means carried by the sorter for jarring the same for progressing the scrap and stampings down the troughs and disposed to be actuated by a moving part of the press.

1,620,688. ADJUSTABLE SPINDLE BOLT. EDWARD H. REHN, Lima, Ohio. Filed May 25, 1926. Serial No. 111,572. 3 Claims. (Cl. 280—96.1.)

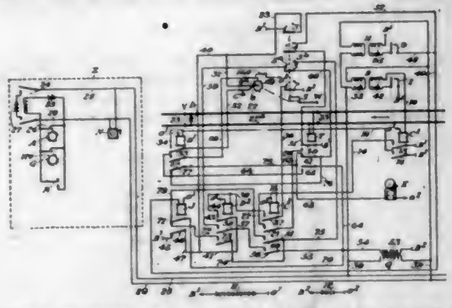


1. In a vehicle, the combination with a fork-arm axle, of a wheel-spindle having a knuckle fitted between the fork-arms of the axle, bushings fitted in the opposite ends of the knuckle and each formed with a flange at one end and an internal seat to receive the thrust of an adjusting bolt, there being a clearance between the flanges of the bushings and adjacent faces of the fork-arms, and means operating to maintain said clearance and effect a pivotal support of the axle on the bushings, said means consisting of bolts having a threaded adjustment in the fork-arms and exerting pressure upon the internal seats of the bushings.

1,620,689. MEASURING FUNNEL. JOHN J. REILING, Philadelphia, Pa., assignor to George D. Ellis & Sons, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 6, 1925. Serial No. 768. 3 Claims. (Cl. 226—36.)

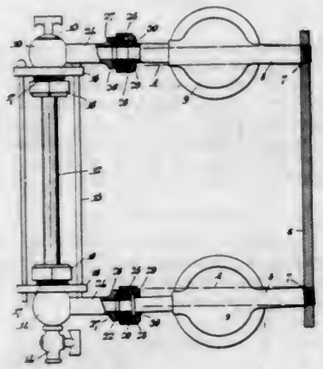
1. A measuring funnel comprising, in combination, a valve for closing the outlet opening thereof, vertical pins located above the valve seat upon which said valve is slidably mounted, yielding means mounted upon said pins for holding said valve in closed position, means for opening said valve, and releasable means for holding the valve in open position during the period in which the liquid is being discharged from the funnel into a receiver.

1,620,690. RAILWAY-TRAFFIC-GOVERNING APPARATUS. DANIEL W. RICHARDS and HARRY P. HANCOCK, Roanoke, Va. Filed Apr. 25, 1922. Serial No. 556,506. 58 Claims. (Cl. 246—5.)



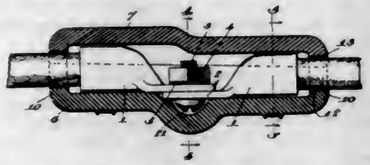
3. In combination, a railway signal, two selectors associated therewith and selectively responsive to two different impulse combinations, means controlled by said selectors for placing said signal at stop or proceed, and means including two code keys under the control of a despatcher at a distant point for transmitting said two impulse combinations to said selectors.

1,620,691. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. DANIEL W. RICHARDS and HARRY P. HANCOCK, Roanoke, Va. Filed May 21, 1924. Serial No. 714,801. 11 Claims. (Cl. 246—5.)



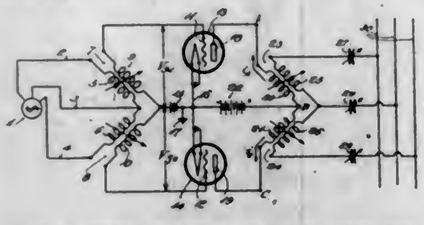
2. In combination, a section of railway track provided with a track circuit including a normally closed track relay, a signal for said section controlled by said track

relay, a code wheel operated by said signal, a local circuit for said code wheel including a source of current and



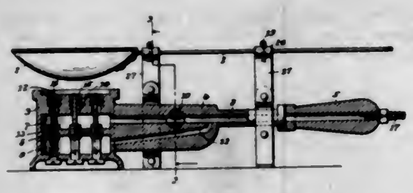
a back contact of said track relay, and means located at a distant point for receiving the impulse combination transmitted by said code wheel.

1,620,692. SELF-ADJUSTING WATER-GAUGE CONNECTION. WILLIAM RIGNEY, Irvington, N. J. Filed Dec. 5, 1924. Serial No. 754,077. 1 Claim. (Cl. 285—120.)



In an adjustable union for a water gauge structure, pipe sections approximately alined with each other, the section adjacent the gauge having a faucet end provided with a cylindrical counterbore defining a plane seat surface, the other pipe section having a flanged spigot end presenting a plane end face, a pair of compressible packing elements nested in the said counterbore and presenting complementary conical abutting surfaces and plane end surfaces, and a union nut engaging said faucet end, and having an end flange embracing the rear of the flange on the spigot end to clamp the latter into sliding engagement with the plane end surface of the outer packing element.

1,620,693. TERMINAL INSULATOR. HUGH WILLIAM IVOR ROYAL, North Youngstown, Ohio. Filed May 28, 1926. Serial No. 112,341. 1 Claim. (Cl. 173—268.)

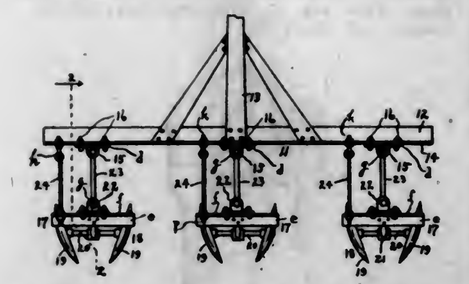


An insulator for coupled terminals having flat widened overlapping connected ends and smaller round cable engaging ends; said insulator comprising an elongated tubular housing composed of a bottom and a top section widened at their central portions to form a chamber to receive said flattened terminal portions, and having reduced ends to snugly fit the cable engaging ends of the terminals, the bottom section having a bolt head receiving depression and the top having a downward offset opposite said depression, said sections having interfitting flanges at their meeting edges and provided on their outer faces with registering peripheral grooves, the grooves in the top section terminating at points spaced peripherally from each other and having seats therein, and resilient split metal bands mounted in said grooves with the ends thereof flared to facilitate removal and release of the sections, said ends having inwardly extending projections to engage said seats whereby the sections are releasably held engaged.

1,620,694. METHOD FOR AMPLIFYING THREE-PHASE HIGH-FREQUENCY POWER. GEORGE C. SALMONS, West Brighton, N. Y., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 20, 1926. Serial No. 89,800. 10 Claims. (Cl. 179—171.)

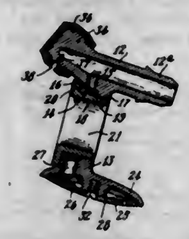
1. In a system for amplifying three phase high frequency power, the combination with a source of three phase high frequency current, a pair of electron tubes connected in balanced relationship, input and output circuits for said tubes, an open delta transformer system connected in said input circuits for impressing energy from said source upon said electron tubes, a load circuit, and means for impressing three phase high frequency current derived from said output circuits upon said load circuit.

1,620,695. GASOLINE TORCH. OLTMANN G. SCHMIDT, Fargo, N. Dak. Filed June 4, 1926. Serial No. 113,715. 3 Claims. (Cl. 158—32.)



1. A gasoline vapor burner comprising a body having a head portion and a shank portion, the head portion being hollow and having a horizontal partition wall which divides the interior thereof into upper and lower chambers, the shank portion having passageways which communicate one with the other and which communicate at their inner ends with the chambers respectively, a valve for controlling the passage of vapor through one of the passageways, and burner nozzles passing through the upper and lower walls of the head and engaging in the partition wall of the head the lower ends of the nozzles being closed, the upper ends of the burner nozzles being spaced from the surfaces of the walls of the upper side of the head, wicks surrounding the discharge ends of the burner nozzles, said nozzles having ducts which communicate at their lower end with the lower compartment of the head.

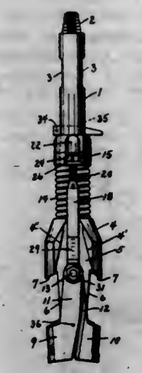
1,620,696. EXPLOSIVE. ADOLPHE SEGAY, Montrouge, France. Filed Apr. 30, 1923, Serial No. 635,785, and in Belgium May 26, 1922. 13 Claims. (Cl. 52—16.)



1. An explosive composition comprising ammonium nitrate coated with a waxy substance, constituting the base of the product, an alkali-metal perchlorate similarly coated, and a metallic substance the combustion of which gives out a large amount of heat.

1,620,697. SPACE-ADJUSTING MEANS FOR GROUND-ENGAGING IMPLEMENTS. JOSEPH SPENCE, Maywood, Nebr. Filed July 16, 1925. Serial No. 43,978. 1 Claim. (Cl. 97—54.)

In space-adjusting means for ground-engaging implements, each implement being provided with a supporting-plate having a vertical flange and provided with an apertured bracket midway between the ends of said flange, a drag-bar having a vertical flange provided longitudinally with apertures arranged in groups, apertured brackets for said drag-bar each being removably mounted in apertures of a group thereof, eye-bolts for said drag-bar each being removably mounted in an aperture of a group, draw-bars each having up-set end-portions engaging the bracket of a supporting-plate and a bracket of the drag-bar, and a plurality of radius-rods each having an up-set end-portion engaging an eye-bolt, its opposite end having a rigid connection with the vertical flange of a supporting-plate near one of the ends of said plate.

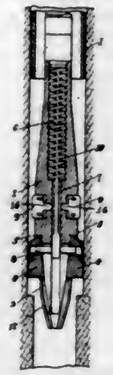


1,620,698. SURFACE WASHER. FRED G. STONE, Manchester, N. H., assignor to Stone Surface Washer Company, Inc., North Andover, Mass., a Corporation of Massachusetts. Filed July 3, 1926. Serial No. 120,373. 2 Claims. (Cl. 299—112.)

1. A three-piece surface washer comprising a water-receiving-head of cast metal, a water-conducting neck composed of an annular body member cast integral with the receiving-head and provided with an internal annular groove communicating with the receiving-head, an internal annular seat at one side of the groove, and an internal screw-thread at the opposite side of the groove, a separately formed annular closing member covering the groove and forming therewith an annular conduit, said closing member forming also a finger-receiving opening and being provided at one end with an external screw-thread engaging said internal thread, and at its opposite end with a flange bearing on said seat, and a delivering-head composed of a back member cast integral with the body member of the neck, and a separately formed perforated front member having a water-tight connection with the back member, and forming therewith a water chamber communicating with the neck.

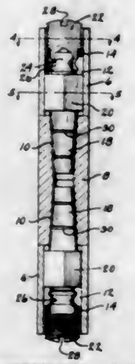
2. In a surface washer, a water-delivering head comprising a rigid back member provided with a central outwardly projecting boss having a tapped socket, and with an annular inwardly facing shoulder surrounding and spaced from said boss, a concavo-convex perforated flexible front member formed at its margin to bear on said shoulder and having a central orifice coinciding with the boss socket, and a headed clamping screw inserted in said orifice and engaged with said socket, the screw securing the front member to the boss, and flexing the front member to expand its margin and press the same against the annular shoulder, thereby forming a water-tight connection between the margin of the front member and the annular shoulder of the back member.

1,620,699. UNDERREAMER. FRED SWAN, Wichita, Kans. Filed July 16, 1925. Serial No. 43,995. 3 Claims. (Cl. 255—75.)



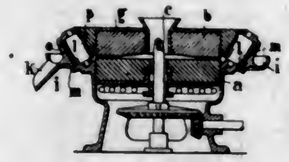
1. In an underreamer a reamer body having its upper portion solid, having at its lower end oppositely arranged tapering surfaces and abutments at the upper ends of said tapering surfaces, a pair of cutters movable on said tapering surfaces having their upper ends adapted to fit against said abutments and provided with shanks extending upward and inward so that the upper ends of the shanks of opposite cutters are in line with the axial center of the reamer body, a pivot pin connecting the upper ends of said shanks, a yoke slidable upon the upper portion of the reamer body and provided on opposite sides with recesses which are adapted to receive nuts therein and an opening into each recess from below, side rods each secured at its lower end to one end of the pivot pin and having its upper end extending through one of said openings into a recess and provided therein with a nut, the walls of the recess being so formed as to protect the nut from contact with the walls of the well hole, and a spring carried by the upper portion of the reamer body and acting to force said yoke upward and to move the cutters against said abutments.

1,620,700. UNDERREAMER BIT OR CUTTER. FRED SWAN, Wichita, Kans. Filed Aug. 5, 1925. Serial No. 48,291. 1 Claim. (Cl. 255—75.)



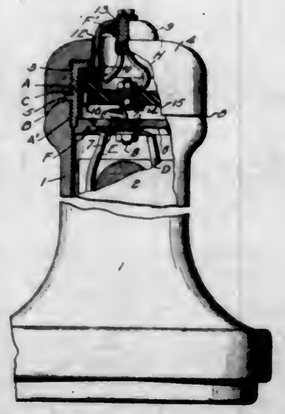
In an underreamer of the type in which cutters are movable on tapering ways into and out of expanded position and are moved into expanded position by a spring, a cutter having a cutting edge at its lower end and

having its outer face above the cutting edge inclined inward and formed on an arc of a circle corresponding



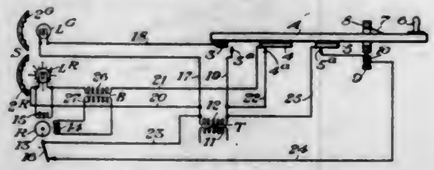
in diameter to the interior diameter of the casing and roughened to increase its frictional contact with the interior of the casing.

1,620,701. HINGE. ERNEST L. TEICH, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Nov. 27, 1926. Serial No. 151,056. 6 Claims. (Cl. 16—140.)



1. In a hinge the combination of two leaves having alterating knuckles, non-rotatable longitudinally movable pintle members mounted within the outer knuckles, and screw plugs within said outer knuckles holding said pintle members within their respective knuckles.

1,620,702. COCOA AND CHOCOLATE GRINDER. OTTO THURMANN, Berlin, Germany. Filed May 10, 1924, Serial No. 712,196, and in Germany Feb. 6, 1924. 4 Claims. (Cl. 83—7.)

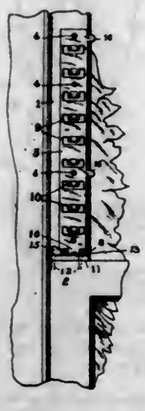


1. In a cocoa mill, the combination of a pair of horizontally disposed grinding members in juxtaposition to each other, one of said members being stationary and the other rotatable, a pair of complementary housings enclosing said grinding members, the housing of the rotatable member being rotatable with said member, an annular chamber carried by the housing of the stationary member, said chamber being in communication with the interior of said housings, a plurality of grinding elements disposed within said chamber and adapted to rotate in contact with a portion of the wall of the rotatable housing, means for feeding material to be ground to the center of the horizontal grinding members, and means for delivering the ground material at the periphery of said annular chamber.

1,620,703. SWIVEL FOR TELEPHONE RECEIVERS. HERMAN F. TROMPETER and JOHN P. BROWN, Topeka, Kans. Filed Aug. 27, 1925. Serial No. 52,796. 3 Claims. (Cl. 179—179.)

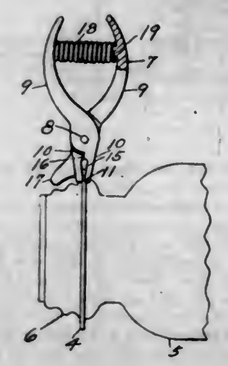
1. In a swivel for a telephone receiver, in combination with a telephone, a housing threadedly connected to the outer end of the receiver, a rotatable member engaging in the housing, a cap threadedly engaging on the outer end of the housing, a receiving cord attached to the rotatable member, a spring tensioning means between the housing and the rotatable member for contact of said members, and to function as circuit closing means between the telephone and the receiver.

1,620,704. RAILWAY-SIGNALING APPARATUS. ALBERT L. VENCILL, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 7, 1925. Serial No. 60,979. 14 Claims. (Cl. 246—138.)



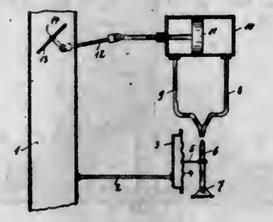
1. In combination, a signal comprising an electric lamp, means for supplying current to said lamp, and indication means for said lamp controlled jointly by the current flowing in the lamp and by the voltage across the terminals of the lamp.

1,620,705. WINDOW LOCK. JOHN WAITCH, Pittsburgh, Pa., assignor of one-half to Frank Lasavich, La Porte, Ind. Filed July 5, 1924, Serial No. 724,300. Renewed Aug. 3, 1926. 1 Claim. (Cl. 292—202.)



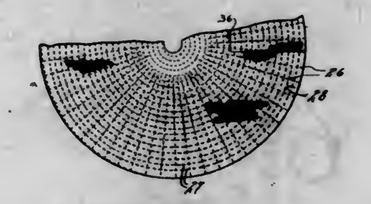
The combination with the upper and lower sash of a window and a curvilinear cam latching element secured to

the upper horizontal member of said lower sash, of an elongated vertically disposed locking plate, mounted on one of the vertical members of said upper sash and formed with a plurality of substantially U-shaped uniformly spaced slots, each of said slots having a depending catch member extending therein and having its ends spaced from the respective ends of said slots, said catch members having a horizontally disposed convexed rear face corresponding to the curvature of the said latch-



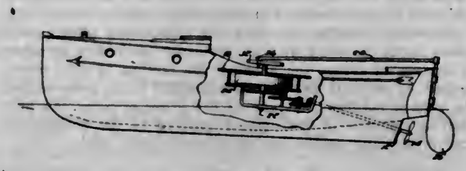
ing element, said plate having its marginal edges bent rearwardly forming flanges engaging the front face of said associated upper sash and providing clearance between the front face of the latter and the rear convex faces of said catch members to permit of the engagement of said latching elements wtih said catch members, said plate further provided with projecting ears to facilitate the engagement of said latching element with said catch members, substantially as described and for the purpose set forth.

1,620,706. JAR-OPENING DEVICE. THOMAS E. WELSH, Woodbridge, Conn. Filed Dec. 10, 1921. Serial No. 521,455.. 4 Claims. (Cl. 81—3.1.)



1. A tool of the plier type comprising two pivotally connected members provided wtih a pair of jaws and a pair of handles, resilient means operating to separate the jaws, the jaws having arc-shaped ends adapted to fit a circular jar cap, a projection provided on one of the jaws adapted to contact with the jar or cap and serve as a fulcrum when the jaws grip a sealing ring for the purpose of pulling the ring from its sealing position between the cap and the jar.

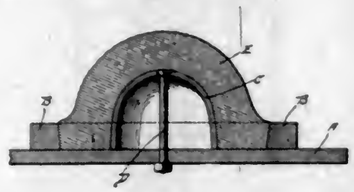
1,620,707. DEVICE FOR REGULATING GAS PRESSURE. GUIDO WÜNSCH, Steglitz, near Berlin, Germany. Original application filed Feb. 29, 1924, Serial No. 696,103, and in Germany Mar. 7, 1923. Divided and this application filed Feb. 20, 1925. Serial No. 10,717. 4 Claims. (Cl. 137—78.)



1. In a device for regulating gas pressure in combination a pressure pipe adapted to conduct a flow of the gas the pressure of which is to be regulated, a second pipe adapted to conduct a continuous flow of a medium under pressure, means adapted to move said last mentioned pipe corresponding to the rising and falling pressure in the said pressure pipe and means operated by the said medium escaping from said second pipe and adapted to effect the pressure regulation.

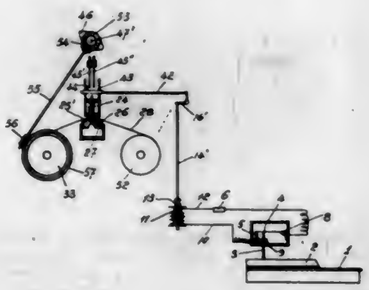
1,620,708. MULTIPLY BUFFER. FRANK L. YERGES, Fremont, Ohio, assignor of one-tenth to Harry Zimmerman, Fremont, Ohio. Filed Oct. 15, 1923. Serial No. 668,587. 2 Claims. (Cl. 51—193.)

1. A buffing disc section embodying a plurality of concentric flat plies of fabric adjacently dissimilarly extending as to the fabric threads, a general assembling spiral stitching therefor, and additionally a pocket forming stitching overlapping said spiral stitching.



1,620,709. TOY MOTOR BOAT. PHILIP E. YOUNG, Fairhaven, Mass., assignor to Acushnet Process Company, a Corporation of Massachusetts. Filed Aug. 26, 1926. Serial No. 131,618. 2 Claims. (Cl. 46—37.)

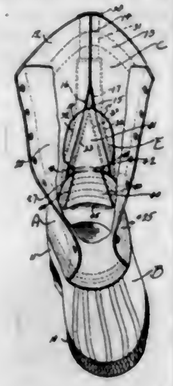
1. In a toy motor boat, the combination of a spring motor, a propeller driven thereby, a member rotated relatively slowly by said spring motor and provided with an axial opening and with non-axial openings, a rudder, a tiller at an angle thereto, and a steering rod pivoted to the tiller provided with a portion adapted to be placed



in any one of said openings, whereby the boat may be caused either to follow a straight course or to follow various courses which are substantially continuously curving and successively reversing.

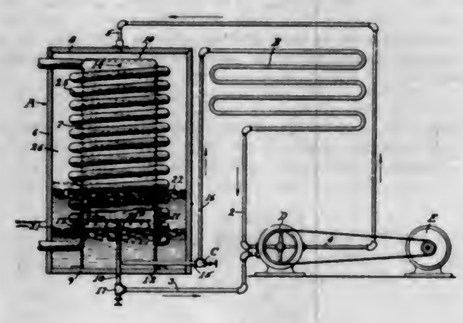
1,620,710. BAKING PAN. VIRGIL A. ZIEGLER, St. Louis, Mo. Filed Nov. 21, 1925. Serial No. 70,559. 3 Claims. (Cl. 53—6.)

1. A baking pan for pastry shells comprising a substantially flat metal back member, a plurality of hollow metal knobs extending outwardly from the upper surface of said back member and having a substantially air tight joint therewith, and those portions of said back member positioned under said knobs being imperforate whereby a dead air space is formed under each of said knobs.



1,620,711. PERFORATING APPARATUS. ANGELO BARBIERI, Milan, Italy. Filed June 26, 1923, Serial No. 647,951, and in Italy June 28, 1922. 1 Claim. (Cl. 164—113.)

In an apparatus of the character described comprising a punching device, an electric solenoid actuating means for the punching device controlled by the core of the electric solenoid, musical instrument key controlled electric means for energizing the solenoid, the actuating means for the punching device including a plate adapted to slide in horizontal direction above the punch and to be lowered in order to press the underlying punch, said plate being provided with an upwardly projecting member, a system of levers for causing the sliding of said plate, a pair of vertical parellel bars adapted to be reciprocated in such a manner that one or the other engages the projecting member of the plate according to the position of the latter, and means for reciprocating the bars.



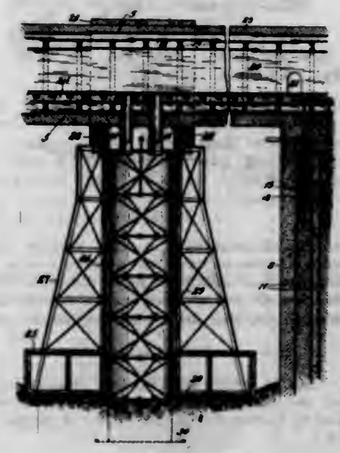
1,620,712. INSIDE PROTECTING STAY FOR LEATHER-TOP RUBBERS. LEON L. BEAN, Freeport, Me. Filed Jan. 28, 1926. Serial No. 84,479. 5 Claims. (Cl. 36—55.)

2. In a shoe construction the combination of a shoe including a vamp, an upper secured to the vamp in exterior overlapping relation therewith, and a relatively short inside back stay including portions stitched at

opposite sides of the top edge of the vamp and including a neck extending across the top edge of the vamp in protecting relation therewith.

1,620,713. COMBINATION CONDENSER AND OIL SEPARATOR. FRED C. BELL, Alameda, Calif. Filed Feb. 5, 1924. Serial No. 690,791. 4 Claims. (Cl. 257—229.)

1. A combination condenser and oil separator of the character described, comprising an outer closed cylindrical casing, an interior cylindrical casing mounted therein and spaced therefrom to form an annular interior chamber, an inlet pipe in the top of the outer casing for the admission of gas and oil, a cooling coil in said annular chamber extending substantially from the top to the bottom thereof to condense the gas and oil vapors, and to permit separation and stratification thereof, a discharge pipe for the condensed refrigerant, and a discharge pipe for the oil, said pipe extending upwardly into the oil strata.



1,620,714. TRIAZO-NITRATE EXPLOSIVES AND PROCESS OF PRODUCING THE SAME. FRANK H. BERGEIM, Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed June 18, 1926. Serial No. 116,977. 11 Claims. (Cl. 260—144.)

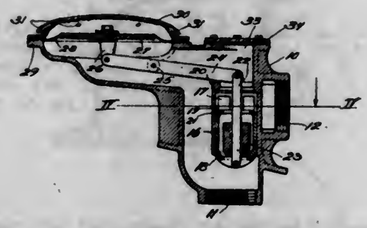
1. An explosive compound containing a triazo group and a nitrate group.

1,620,715. EXPLOSIVE COMPOSITION. FRANK H. BERGEIM, Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Original application filed June 18, 1926, Serial No. 116,977. Divided and this application filed Sept. 9, 1926. Serial No. 134,583. 20 Claims. (Cl. 52—11.)

1. An explosive composition containing a compound having therein a triazo group and a nitrate group.

1,620,716. SUBMERGED BRIDGE. WILLIAM BLANCHARD, Houston, Tex. Filed Apr. 30, 1925. Serial No. 27,014. 9 Claims. (Cl. 61—42.)

1. In a submerged bridge, the combination of a tubular section enclosing a road-bed, a submerged barge resting on the bottom of the waterway, a superstructure extending upwardly from the barge and forming an intermediate support for said section, and a vertically disposed cylinder within said superstructure and extending through the barge and adapted to contain ballast, the base of said cylinder being extended laterally beneath the bottom of the barge.

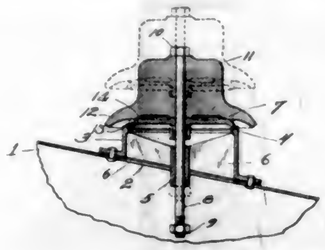


1,620,717. WATER SOFTENER. NORMAN E. BRICE, Brooklyn, and HERBERT G. SNYDER, New York, N. Y., assignors to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 6, 1924. Serial No. 742,027. 14 Claims. (Cl. 210—24.)

1. Apparatus for softening water, comprising a container, exchange silicates therein, connections leading to a high point therein, connections leading to a low point therein, in combination with a multi-way cock having two ports, each in communication with one of said connections and means at a point between said cock and the exchange silicates for holding salt, said cock having a water supply port, a port for water to be used and a waste water port, together with a rotor arranged to be positioned in the regenerating phase of said apparatus to establish communication through the cock from the water supply port, through one of said connections, through the salt holding means, through the container, through the other connection back to the cock and to the waste port, while separately establishing communication through the

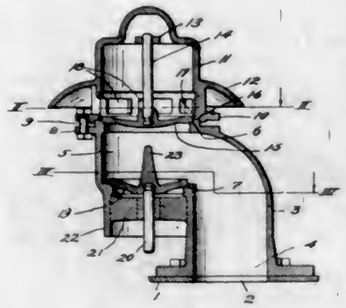
cock from the water supply port to the port for water to be used, whereby, during regeneration, water from the water supply port may be obtained.

1,620,718. AUTOMATIC VAPOR-TAKE-OFF VALVE FOR OIL TANKS. CHARLES P. BUCK, Topeka, Kans., assignor to Gustin-Bacon Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Nov. 13, 1922. Serial No. 600,759. 5 Claims. (Cl. 137—153.)



8. In combination with a valve casing having a pair of openings, a valve passage provided with lateral ports affording communication between one of said openings and the interior of the casing, said passage also being formed with an interior valve seat, an open-ended cylindrical valve slidingly mounted in said passage and adapted to close said ports when in engagement with the valve seat, and a pressure-actuated diaphragm constantly exposed to the pressure within the casing operatively connected to said valve.

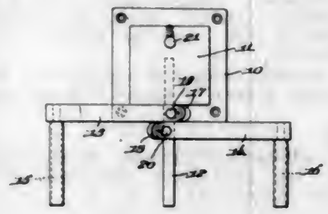
1,620,719. RELIEF VALVE FOR EXCESSIVE-PRESSURE VAPOR TANKS AND LINES. CHARLES P. BUCK, Topeka, Kans., assignor to Gustin-Bacon Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed May 14, 1923. Serial No. 638,844. 1 Claim. (Cl. 137—53.)



A tubular member terminating at one end in an upwardly facing beveled valve seat and formed with a valve guide, a valve stem sliding in said valve guide, a relatively flat plate having its periphery slightly downturned and forming a beveled valve and having a central open-

ing for the reception of said valve stem and normally resting on said valve seat, and a weight resting on said valve and interlocked therewith, said weight having a

skirt flaring downwardly and outwardly to deflect gas escaping through said tubular member in such a direction as to secure a substantially vertically upward reaction to maintain the valve in open position.

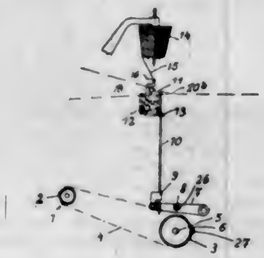


1,620,720. COMBINATION VACUUM AND PRESSURE RELIEF VALVE. CHARLES P. BUCK, Topeka, Kans., assignor to Gustin-Bacon Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed July 27, 1925. Serial No. 46,340. 1 Claim. (Cl. 277—61.)

A combined pressure and vacuum relief valve comprising, a valve casing formed with an open-ended vertical passageway, vacuum and pressure valves respectively closing the bottom and top of said passageway, a dome surrounding said pressure valve and having a series of pressure release ports, said dome and said ports being so arranged that the pressure valve shall close the dome when it has moved upwardly and has its lower periphery in substantially the plane of the upper edge of said ports, a valve stem for said pressure valve projecting into the dome, a guide within the dome and slidingly receiving the stem of said pressure valve, a valve stem for said vacuum valve, a guide slidingly receiving vacuum valve stem and carried by the casing, and means on said vacuum valve whereby opening movement thereof beyond a predetermined point shall effect opening movement of the pressure valve.

1,620,721. FINISHING MACHINE FOR BOOTS AND SHOES. ANTHONY COCOZELLA and ANTHONY COCOZELLA, Jr., Lynn, Mass. Filed Apr. 27, 1925. Serial No. 26,259. 5 Claims. (Cl. 12—123.)

1. A treeing machine of the class described comprising a base portion having a boss upstanding therefrom; a spindle extending from said boss; arms adjustably mounted on said spindle and laterally extending therefrom; and a spindle extending from each of said arms whereby a

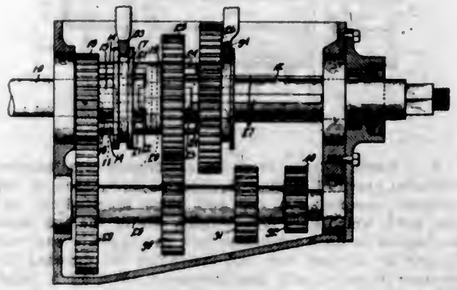


last having a shoe thereon may be pivotally supported by said first spindle and laterally supported in turn by each of the other spindles.

1,620,722. HAIR CURLER. MAY C. CONANT and CLARE SEELY, Cleveland, Ohio. Filed Feb. 27, 1925. Serial No. 11,917. 3 Claims. (Cl. 132—43.)

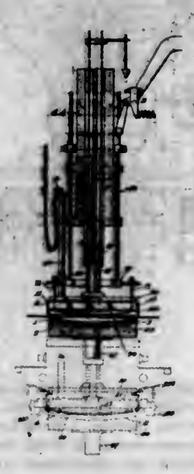
1. A hair curler comprising a rigid member substantially arcuate in cross section, said member having a portion thereof cut out and bent in a direction opposite to the curvature of said member, and a flexible member engaged through the ring defined by the cut out portion.

1,620,723. LOOM FOR WEAVING. JOHANN GABLER, Ettlingen, Germany. Filed Feb. 16, 1925, Serial No. 9,510, and in Germany Feb. 13, 1924. 3 Claims. (Cl. 139—123.)



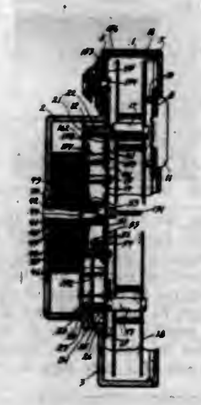
1. Weft inserting mechanism for looms for weaving of the type referred to comprising at both sides of the loom a combined weft insertion and withdrawing rod, a sliding rod to bring the weft into the path of the inserter and a pattern chain for controlling the movement of the sliding rod.

1,620,724. VARIABLE-SPEED GEARING. JOHN F. GAYLORD, Indianapolis, Ind. Filed Dec. 2, 1924. Serial No. 753,517. 2 Claims. (Cl. 74—59.)



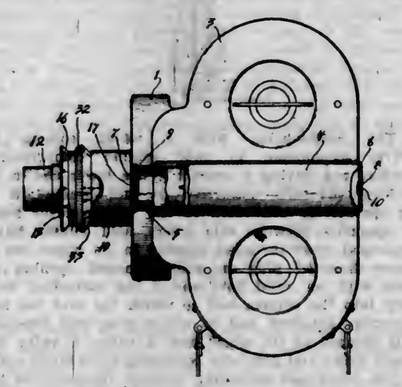
1. A change speed transmission comprising a driving shaft, a driven shaft, a combination gear and clutch member on the driving shaft, a clutch member on the driven shaft, a clutch member splined on the driving shaft between said pair of members and adapted to be moved into engagement with the combined gear and clutch member for causing the same to rotate with its supporting shaft and adapted to be moved in the opposite

direction for effecting a drive directly between the driving and the driven shafts, a jack shaft, a plurality of fixed gears on said jack shaft, one of said gears engaging the combined gear and clutch member on the driving shaft, a combined gear and clutch member rotatably mounted on the driven shaft, and a second combined gear and clutch



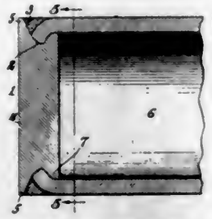
member splined on the driven shaft and movable into engagement with the first mentioned combined gear and clutch member on the driven shaft to cause the same to rotate with the shaft, a gear and clutch member splined on the driven shaft being also movable into engagement with gears on the jack shaft for effecting low or reverse speeds, substantially as set forth.

1,620,725. DIE FOR BOX-MAKING MACHINES. FRED G. HEYER and FRANCIS M. SMITH, Detroit, Mich. Filed July 20, 1925. Serial No. 44,703. 1 Claim. (Cl. 93—54.)



In a box making machine wherein a cover is adapted to be applied to a box lid and a portion of the lid provided with a curved wall;—a platen, a yieldable pad on the platen and having a concave face, a die body having a lower convex face adapted to cooperate with said pad in applying the cover to the box lid and imparting curvature to a lid wall, said die body having a recess therein, a core of insulation approximating in area the area of said recess, a heating element about said core of insulation and having lead-out wires, a cover plate on said die body over the recess thereof, and a vertically disposed conduit carried by said cover plate for the leading-out wires of said electric heating element.

1,620,726. MOTION-PICTURE CAMERA AND THE LIKE. ALBERT S. HOWELL, Chicago, Ill., assignor to Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 13, 1923. Serial No. 662,478. 32 Claims. (Cl. 88—17.)

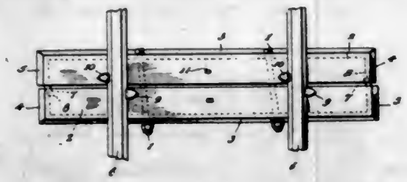


1. A motion picture camera including an enclosing casing open at one side, a frame comprising plates secured together in spaced parallelism and removably secured in said casing inwardly of said open side and in parallelism therewith and removable through said open side, a power spring device carried on the frame on a transverse axis and having the spring thereof disposed on the outside of the inner plate thereof, and a multiplying gear train for driving from the spring device and comprising gears carried by the frame between the plates thereof.

1,620,727. PHOTOGRAPHIC CAMERA. ALBERT S. HOWELL, Chicago, Ill., assignor to The Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 12, 1925. Serial No. 49,772. 9 Claims. (Cl. 95—45.)

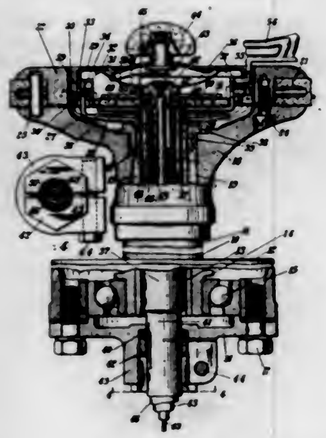
1. In a photographic camera the combination with a photographic lens adjustable for focusing the same, of a view finder coordinated with the lens, and means indicating the focal adjustment of the photographic lens and adapted to be observed through the view finder as and for the purpose described.

1,620,728. CLOSURE PLUG FOR PIPES. PERCY JACKSON, Chattanooga, Tenn., assignor to Walsh & Weidner Boiler Co., Chattanooga, Tenn., a Corporation of Tennessee. Filed July 10, 1925. Serial No. 42,732. 2 Claims. (Cl. 137—76.)



1. A closure plug for tube ends and the like comprising a disc-like metal block of substantial thickness having a V-shaped annular groove around its edge, said groove having a rounded portion and having side walls of different inclinations to the plane of the disc thereby to provide one flange to engage the end of the tube and another flange of smaller dimension to fit in the tube, the rounded portion of the groove providing an anvil against which the end of a tube may be crimped.

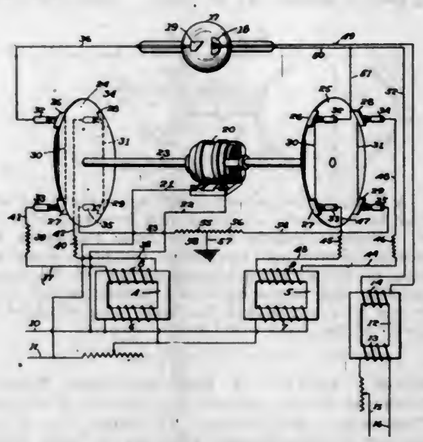
1,620,729. WATER-COLUMN ALARM. WILFRED H. KUHN, Detroit, Mich., assignor to Wright-Austin Company, Detroit, Mich., a Corporation of Michigan. Filed July 6, 1925. Serial No. 41,527. 2 Claims. (Cl. 137—102.)



1. The combination with a water column and a valve mechanism in said column comprising a depending rod having a bracket at its lower end, a bottom lever pivotally connected to said bracket, a top lever operatively connected to the bottom lever and a float operative between said levers, said column having an enlarged screw-threaded opening in its upper end; of a screw-threaded plug in said enlarged opening and formed with an axial bore and a lug extending downwardly into the column and to which lug said top lever is pivotally attached and to which plug said depending rod is secured at its upper end, a valve, a valve stem for said valve and pivotally connected at its lower end to said top lever and extending upward through the bore of the plug, a valve casing carried by the outer end of the plug and formed with an axial bore of greater diameter than the diameter of said valve and valve stem, whereby the removal of said casing from said plug will expose the valve and upper end of its stem above said plug, a fitting on the outer end of the casing, a detachable valve seat interposed between said fitting and the end of said casing, and an alarm member carried by said fitting.

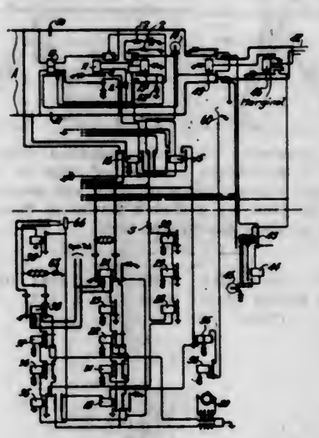
1,620,730. METALLIC RAILWAY TIE. AMOS MITCHELL, Kirksville, Mo. Filed Apr. 7, 1926. Serial No. 100,397. 2 Claims. (Cl. 238—38.)

2. A metal railroad cross tie, comprising complemental sections, provided with rail engaging lugs, each of the sections comprising a top and outer longitudinal and end walls which flare downwardly, one of the end walls having an inclined projection and the opposite end wall having an inclined face and fastenings for drawing the sections together and simultaneously effecting a longitudinal movement thereof by the inclined projections riding upon the inclined faces.



1,620,731. MOTOR VEHICLE. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 29, 1923. Serial No. 628,534. 17 Claims. (Cl. 74—39.)

1. In a steering mechanism, the combination with a steering post having an enlarged end, said end being formed with a recess therein, a housing mounted in and enclosing said recess except a small space between the walls of the housing and said recess and motor control devices arranged in said housing with parts thereof projecting through the space between the housing and the recess.



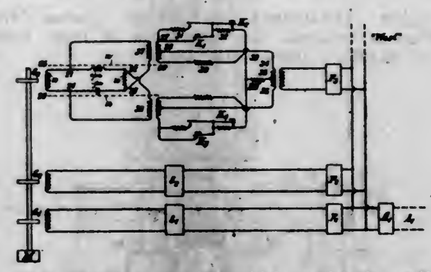
1,620,732. THERAPY X-RAY SYSTEM. ARTHUR MUTSCHELLER, New York, N. Y., assignor to Wappler Electric Co., Inc., a Corporation of New York. Filed Jan. 23, 1923. Serial No. 614,358. 10 Claims. (Cl. 250—34.)

1. In a device of the character described, the combination, with an X-ray tube and a circuit connected therewith, of mechanism included in said circuit for supplying to said circuit a succession of high potential intermittent currents each having its potential substantially uniform throughout the period of duration of the current impulse, said circuit having small static capacity

and including a damping resistance quantitatively co-related to said small capacity, and co-acting therewith for preventing oscillations.

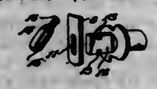
1,620,733. TELEPHONE SYSTEM. STANLEY F. NELSON, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 3, 1926. Serial No. 99,644. 5 Claims. (Cl. 179—50.)

1. In a telephone system, trunks, an operator's telephone set, means responsive to the seizure of a trunk for automatically associating the operator's telephone set with said seized trunk, and means effective incident to the connection of the operator's telephone set with the seized trunk for automatically transmitting a signal over said trunk, said signal consisting of a plurality of impulses of tone current.



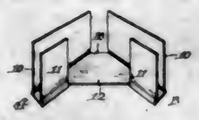
1,620,734. RIM CONTRACTOR AND EXPANDER. VICTOR NYLUND, Minneapolis, Minn. Filed Feb. 25, 1926. Serial No. 90,543. 4 Claims. (Cl. 157—1.)

1. A device of the class described, having in combination, a rectangular tubular member having its lower portion cut away at one end to form spaced vertical shoulders, the sides of said member outward of said shoulders being formed as hooks adapted to engage over the edge of the tire rim, a channel shaped member slidable in said tubular member and having a plurality of spaced slots through its web and being cut away adjacent its outer end to form vertical surfaces on its flanges, said flanges outward of said surfaces being formed with hooks adapted to engage over the edge of the rim, a member secured to said tubular member adjacent its inner end having spaced upstanding ears,



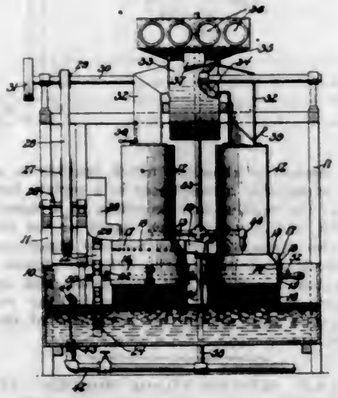
a lever comprising spaced bars pivoted between said ears and a hook link pivoted between the spaced bars of said lever and having a hook formed on its end adapted to engage in one end of said slots to pull on said channel member and to engage the other ends of said slots to push on said channel member whereby said channel member may be collapsed into said tubular member and said hook link can be collapsed between the sides of said lever with said lever on top of said tubular member.

1,620,735. MULTIPLEX SIGNALING SYSTEM. HARRY NYQUIST, Millburn, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 12, 1925. Serial No. 15,058. 11 Claims. (Cl. 178—53.)



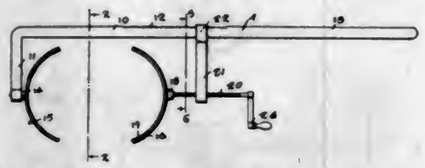
1. The method of signaling which consists in sending a current comprising a component of a certain frequency modified at the sending end according to a signal to be transmitted, and detecting such signal at the receiving end and also compensating the received component in a branch circuit according to the detected signals to remove the signal modifications therefrom, and applying the compensated current to synchronize the receiving apparatus with the transmitting apparatus at the other end of the line.

1,620,736. WINDOW-SHADE HOLDER. JAMES P. OLSON, Mobile, Ala. Filed June 11, 1925. Serial No. 36,499. 2 Claims. (Cl. 156—27.)



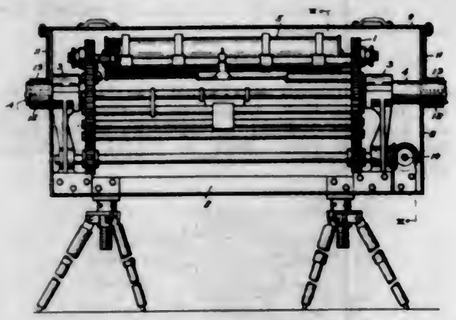
2. A roller mounting comprising a hanger formed with an opening adapted to receive a roller trunnion with a portion of the trunnion formed with a seat projecting from the plate, and a keeper consisting of an open loop of flat metal having a portion pinched together to form a tongue extension at one end, the loop being adapted to be fitted upon the projected portion of the trunnion with its tongue extending transversely therefrom and a portion of the loop seated in the seat formed in the trunnion whereby the loop may engage the adjacent face of the hanger about its opening and prevent withdrawal of the trunnion.

1,620,737. PARTITION-HOLDING CLIP. EMIL A. PETERSON, Chicago, Ill. Filed Mar. 10, 1923. Serial No. 624,092. 1 Claim. (Cl. 211—28.)



A partition-holding clip of the character described comprising a single piece of flat spring metal formed with a pair of partition-holding parts extending at right angles to each other and forming substantially an L-shaped structure as viewed from the top, each of said parts being substantially U-shaped as viewed from the end thereof and each having a top member an outer side member and an inner side member, the respective inner and outer side members being spaced apart and formed to hold a partition between them by spring pressure, the side members of each of said U-shaped parts terminating sufficiently short of the place where the planes of the outer side members intersect each other to provide a passageway within which such partition may be accommodated and through which it may extend when normally engaged by either of said U-shaped parts, the top members being connected by a diagonal integral corner piece.

1,620,738. AIR-MOISTENING DEVICE. GEORGE CRIST PRENZEL, Columbia, Tenn. Filed Feb. 19, 1926. Serial No. 89,397. 7 Claims. (Cl. 261—30.)

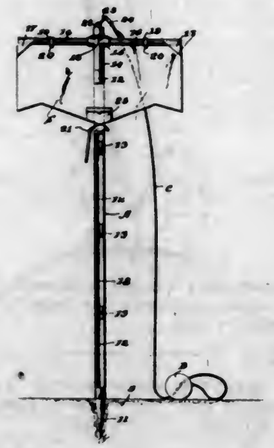


1. In a device of the character described, the combination of a receptacle adapted to contain water, an upright casing supported above the bottom of the receptacle and open at its lower end, a screen secured to and surrounding the lower end of said casing and extending downwardly to the normal level of the water in the receptacle, a fan casing connected with the upper end of said upright casing and having conduits leading therefrom, a rotary fan in the fan casing operable to draw air through said screen into the fan casing and expel it through said conduits, a traveling chain with buckets extending into the water in the receptacle and driven by the fan shaft to lift water from said receptacle, and means for receiving water from the buckets and causing it to dribble over the screen to moisten the air which passes therethrough.

1,620,739. HEADLIGHT-RIM WRENCH. CHARLES H. PERSHO, Alma, Nebr. Filed Aug. 24, 1925. Serial No. 52,046. 3 Claims. (Cl. 81—130.)

3. A headlight rim wrench comprising a shank, an arm carried by the shank, an arcuate jaw connected with the arm, a hanger slidably mounted upon the shank for movement toward and away from the jaw, means for holding the hanger in an adjusted position on the shank, a movable jaw, means adjustably connecting the movable jaw with the hanger, the jaws being arranged at one side of the shank and laterally thereof.

1,620,740. APPARATUS FOR BUILDING JOINTS. DONALD M. SIMONS, Osborne, Pa., assignor to Standard Underground Cable Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 8, 1926. Serial No. 100,501. 3 Claims. (Cl. 242—7.)



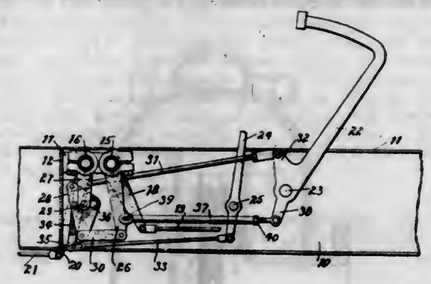
1. In apparatus for jointing oil-filled cables a tank, means for introducing a length of cable in liquid-tight penetration through the tank walls, and means arranged within the tank for wrapping insulation upon a length of cable in place within the tank.

1,620,741. CURTAIN PULL. CHARLES W. SMITH, Grand Rapids, Mich. Filed Feb. 4, 1925. Serial No. 6,762. 1 Claim. (Cl. 24—115.)

A curtain pull comprising a knob having a tapped hole in its lower side and a smaller continuation thereof extending through the upper side, said smaller hole being adapted to receive a cord with a knotted end upon which the knob is suspended, and a handle having a threaded portion to enter said tapped hole in the knob.

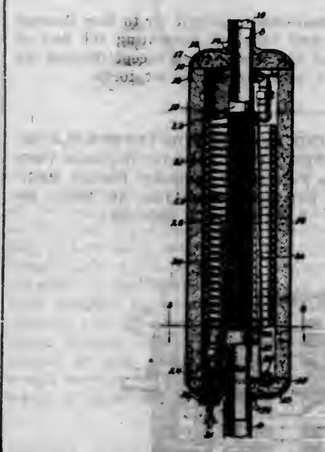
1,620,742. GAME. LEWIS B. STAFFORD, Chicago, Ill. Filed Nov. 15, 1926. Serial No. 148,500. 8 Claims. (Cl. 273—98.)

1. A game apparatus, comprising an upright, a vertically disposed partition at the upper end of the upright and extending on opposite sides thereof, a ball, and a flexible element connecting the ball with the upper end of the upright above the partition.



1,620,743. PROTECTOR. LILLIAN STUART, New York, N. Y. Filed Dec. 9, 1925. Serial No. 74,296. 1 Claim. (Cl. 36—2.)

A protector comprising an elongated member composed of waterproof extensible material shaped to conform to the leg, and an extensible lining for said member.

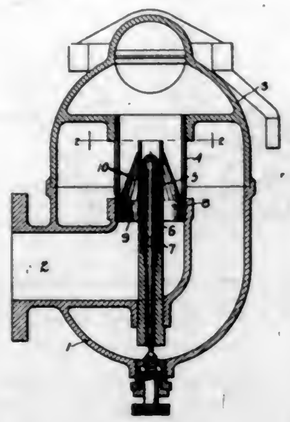


1,620,744. MOTOR VEHICLE. MILTON TIBBETTS, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 19, 1926. Serial No. 110,144. 9 Claims. (Cl. 188—10.)

1. In a motor vehicle, the combination with a front and rear brake, a brake operating lever, and means connecting the lever to the brakes for operating said brakes with balanced action between them, of normally inopera-

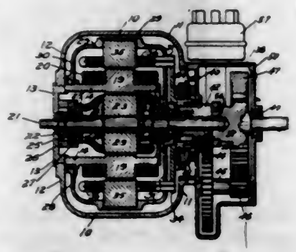
tive means for operating at least one of said brakes from said lever upon impairment of parts to an extent sufficient to destroy the balanced action.

1,620,745. ELECTRIC WATER HEATER. WILLIAM WILSON WAINWRIGHT, Tacoma, Wash. Filed July 15, 1925. Serial No. 43,820. 2 Claims. (Cl. 219—39.)



2. In an electric water heater, the combination of a cylindrical casing member, a central pipe section extending longitudinally through the casing member, end caps mounted on the end portions of the pipe section and adjustable longitudinally thereof into supporting relation to the cylindrical casing member and forming closures for the ends thereof, two nipples connected to the central pipe section within the casing and near the respective end caps, a pipe coil within the casing and connected to said nipples, an insulating sleeve surrounding the central pipe section and extending substantially from one nipple to the other, and an electric heating element wound about said sleeve within the pipe coil.

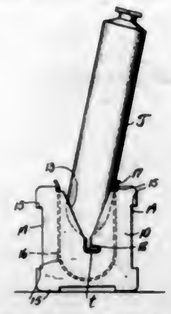
1,620,746. CARBURETOR. ALBERT E. WEAVER, Indianapolis, Ind., assignor, by mesne assignments, to Ira T. Swartz, trustee, Indianapolis, Ind. Filed Sept. 3, 1921. Serial No. 498,337. 3 Claims. (Cl. 261—63.)



2. In a carburetor, a spraying nozzle, a tube surrounding said nozzle in spaced relation thereto and having an air inlet passage through the tube into the passage around the nozzle, a second tube surrounding said first-mentioned tube for supplying air around and into said first mentioned tube for commingling with the fuel to

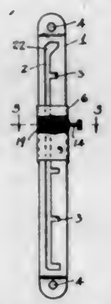
be supplied by the carburetor, a collapsible venturi carried by said second tube and collapsible toward the first tube for cutting off the supply of air between the first and

second tubes and expansible to permit air to flow through its end about said first tube but preventing the flow of air between said first and second tubes except through the end of said venturi, substantially as set forth.



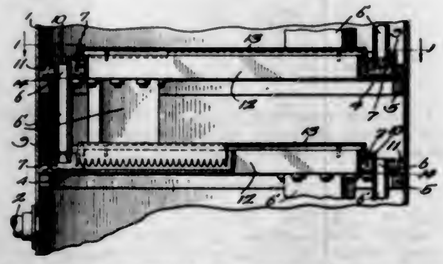
1,620,747. STARTING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. FRED ALLISON, Highland Park, Mich., assignor to Ford Motor Company, Detroit, Mich., a Corporation of Delaware. Filed June 19, 1922. Serial No. 569,542. 3 Claims. (Cl. 290—48.)

1. In a device of the class described, the combination with a housing composed of separable sections, an electric generator and an electric motor disposed within said housing, a shaft passing through said housing, a generator armature on said shaft, a concentrically disposed shell extending around said shaft and enclosing said generator armature, a second concentrically disposed shell surrounding said first shell, a concentrically arranged starter core carried by said second shell, commutators for both the generator and the starter, a motor shaft, reduction gearing connecting said motor shaft with said armature shaft, overrunning clutch mechanism in said gearing, and a housing for said gearing.



1,620,748. DISPENSING-TUBE HOLDER. BERTRAM F. BAKER, Tannersville, N. Y. Filed Oct. 19, 1926. Serial No. 142,565. 6 Claims. (Cl. 221—60.)

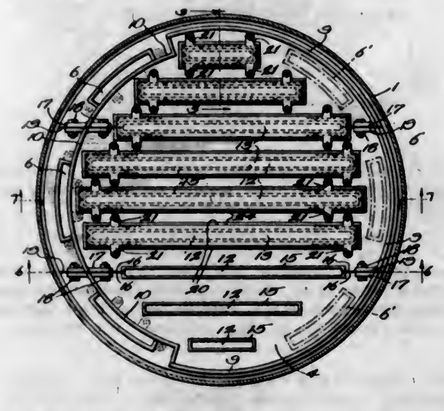
1. The herein described tube holder comprising a pair of end pieces, parallel to each other and constituting a succession of selective supporting bases, and connecting means between and connected to the end pieces for holding the sealed end of the tube and around which the



tube is adapted to be wrapped as a result of a relative rotational movement between the holder with its connected bar and the tube.

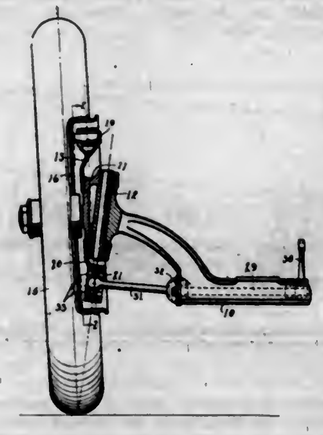
1,620,749. SAFETY WINDOW DEVICE. JAMES J. BARTAK, Cleveland, Ohio. Filed June 5, 1926. Serial No. 114,005. 2 Claims. (Cl. 292—342.)

1. A safety device for windows comprising a guide plate having an elevated central portion, a wedge block having lateral depending flanges engaging the sides of said plate and slidable longitudinally thereof, said plate having a longitudinal slot with notches provided at spaced intervals communicating therewith, and means on said wedge block for engaging said notches to hold said wedge block in any desired position of adjustment.



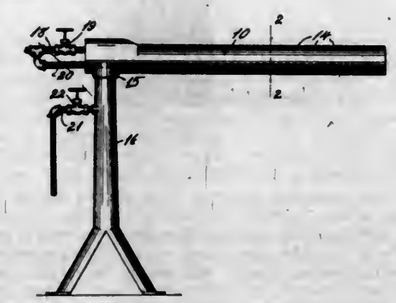
1,620,750. APPARATUS FOR SEPARATING LIQUIDS AND GASES. KENT W. BARTLETT, Hammond, Ind. Filed May 6, 1926. Serial No. 107,077. 1 Claim. (Cl. 261—114.)

The combination with a casing carrying a ledge therein; of a liquid receiving tray seated upon said ledge and spaced apart from the surrounding casing wall to afford a liquid receiving pocket above the ledge and between



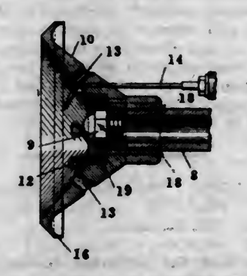
the tray and surrounding casing wall, said tray having a gas passage extending upwardly therethrough and separated from the liquid receiving space of the tray and a liquid passage communicating with and extending downwardly from said liquid receiving pocket and terminating at its upper end above said ledge; and a cap above said gas passage and shaped and positioned to constrain the flow of gas under pressure from this passage through the liquid in the tray and to thereafter permit the escape of gas from the liquid, a flow of gas also obtaining through the space surrounded by the ledge and into said liquid receiving pocket through leakage space intervening between the tray and ledge.

1,620,751. TRAY. KENT W. BARTLETT, Hammond, Ind. Filed May 6, 1926. Serial No. 107,078. 1 Claim. (Cl. 261—114.)



A tray having a liquid holding space, an opening through its bottom and a wall margining said opening and extending above the tray bottom to separate said opening and the liquid receiving space of the tray, the tray being formed in sections between said opening intervenes and having opposed face portions in fluid-tight assembly and terminating at said opening.

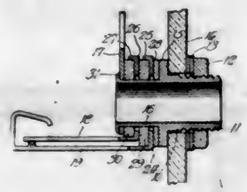
1,620,752. BRAKE. PAUL BASTIEN, Cleveland, Ohio. Filed Oct. 4, 1923. Serial No. 666,513. 2 Claims. (Cl. 188—194.)



2. In brake mechanism, the combination of an axle, a steering wheel spindle member pivoted thereto, a wheel on said spindle member, a brake drum carried by said wheel, a brake cooperating with said drum and having opposed ends adapted to be separated to apply the brake to said drum, the plane of said brake being at an angle to the plane of said pivot, a cam member having an external bearing surface whereon it is rotatable about an axis that intersects and is normal to the axis of said pivot and below the latter, said cam member having an opening therein and grooves on opposite sides of said opening, and a shaft projecting into said cam member with its axis substantially coincident with the axis of said cam member and having trunnions engaging with said grooves to provide a universal joint connection between the shaft and cam member.

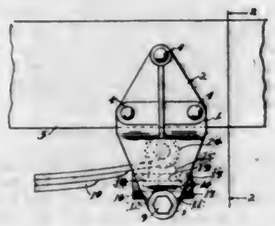
1,620,753. STEAM BOARD. HERMAN BETKE, Denver, Colo. Filed May 20, 1926. Serial No. 110,425. 2 Claims. (Cl. 68—9.)

1. A steam board comprising a standard adapted to be secured to a base, a substantially cylindrical head secured at one end to the upper end of said standard and projecting laterally therefrom, means within said head adapted for connection with a source of steam whereby steam may be discharged through vents in the convex upper surface of said head, said means comprising spaced parallel bores closed at one end and converging to form a common chamber at the other end, separate means within said head adapted to be connected with a source of steam whereby said head may be heated by the circulation of steam through said latter means, together with means carried by said standard and coacting with said latter means carried by said head for exhausting steam and water of condensation from said head.



1,620,754. OIL BURNER. DAVID M. BOYD and WALLACE C. CAPEN, St. Louis, Mo., assignors, by mesne assignments, to Electrol, Inc. of Missouri, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 11, 1926. Serial No. 80,420. 4 Claims. (Cl. 158—73.)

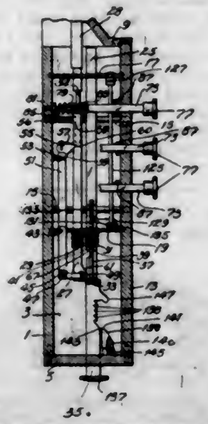
3. In a device of the class described, the combination with a casing through which air is adapted to be forced, of a removable member on the forward end of said casing provided with a restricted opening, a fuel nozzle in said



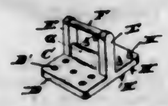
casing, a forwardly flaring conical member on said nozzle, said conical member being provided with air openings, some of said openings being parallel to the axis of the nozzle and others being inclined thereto, and a flange on said conical member forming an air dam to force air through said openings, said flange being spaced from the wall of the casing to form an air passage surrounding said member.

1,620,755. JACK. ALVA J. CARTER, Chicago, Ill., assignor to Carter Radio Company, Chicago, Ill., a Corporation of Illinois. Filed May 24, 1926. Serial No. 111,319. 13 Claims. (Cl. 179—96.)

13. An insulating mounting for a contact spring, comprising a base, a fastening element extending outwardly from said base, an insulting distance piece snugly encircling said fastening element, a contact spring superposed on said fastening element and having an opening larger than said element and smaller than said distance piece, said spring and distance piece having interlocking means to prevent electrical contact between said fastening element and spring at their area of juxtaposition.



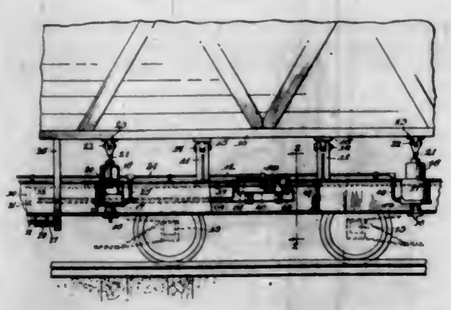
1,620,756. SHACKLE ASSEMBLY. HENRY E. CURTIS, San Jose, Calif., assignor of one-half to John H. Betts, Long Beach, Calif. Filed July 8, 1924. Serial No. 724,860. 5 Claims. (Cl. 267—54.)



1. The combination with a vehicle chassis, of a supporting element mounted thereon, a sleeve pivotally mounted on said element at right angles to the longitudinal axis of said chassis, an upstanding yoke pivotally mounted on said sleeve to swing in parallel relation to the longitudinal axis of said chassis, and a spring mounted on said yoke to lie in parallel relation to the longitudinal axis of said chassis.

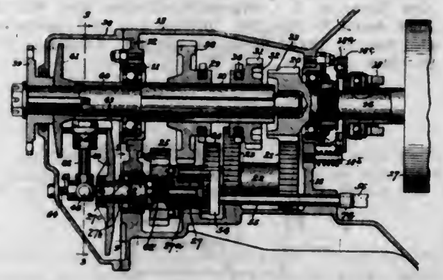
1,620,757. LOCK. WHEATON C. FERRIS, University City, Mo. Filed Feb. 11, 1926. Serial No. 87,568. 12 Claims. (Cl. 70—54.)

10. A lock comprising a latch bar, a tumbler adapted normally to hold the latch bar in locked position, a plurality of escapement bars adapted in particular positions to permit movement of the tumbler to release said latch bar to open position, and escapement means associated with the escapement bars for permitting movement of said escapement bars to said particular positions, a safety bar adapted to permit movement of the tumbler to release said latch bar, means for holding the safety bar in normal position, means for releasing the safety bar from normal position whereby the tumbler is positively prevented from moving.



1,620,758. ANTISKID FREIGHT-ANCHORING DEVICE FOR FLAT CARS. ISADOR LEO FRIEDLAENDER and STEPHEN J. MARX, Detroit, Mich. Filed Mar. 29, 1926. Serial No. 98,224. 5 Claims. (Cl. 16—1.)

1. An anti-skid anchoring device for freight consisting of a plate having a plurality of studs projecting from the plate, with an integral loop portion extending at right angles to the plate to receive the end of an anchoring strap.

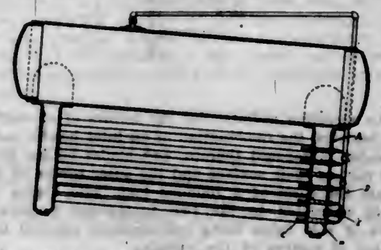


1,620,759. DUMPING CAR. PETER HAMEL, Waukegan, Ill. Filed Nov. 28, 1924. Serial No. 752,612. 4 Claims. (Cl. 105—271.)

1. A dumping car body, running gear, means pivotally supporting the body upon the running gear, hangers connected with the body and depending therebelow, said hangers being spaced longitudinally of the body, a pair of locking bolts co-operating with each of the said hangers for maintaining the car body in a horizontal

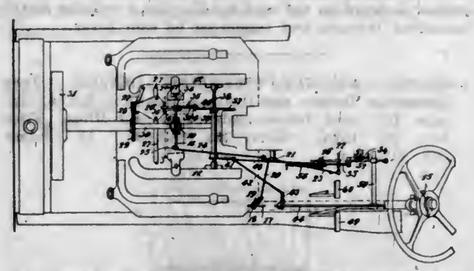
position, means operatively connecting the bolts, said means embodying formations whereby locking bolts at the opposite ends of the car body and on opposite sides of the body will be simultaneously actuated, and means for controlling at will the actuation of said locking bolts.

1,620,760. VARIABLE-SPEED POWER-TRANSMISSION MECHANISM. FRANK A. HAYES, New York, N. Y. Filed Apr. 3, 1922, Serial No. 548,948. Renewed June 15, 1925. 21 Claims. (Cl. 74—58.)



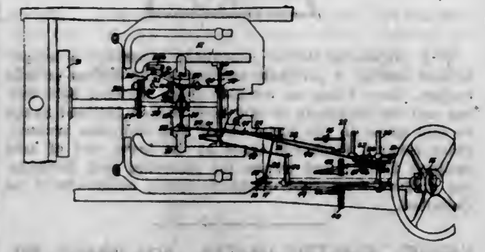
1. In a variable-speed power-transmission mechanism, in combination, a pair of gears shiftable into mesh while both are rotating, mechanism for driving one gear from the other at variable speed while the gears are unmeshed, and means controlled by said mechanism for normally preventing meshing of the gears but permitting meshing when the gears have a predetermined pitch-line velocity ratio.

1,620,761. METHOD OF PREPARING ORES FOR FLOTATION. HARRY H. HENDRICKSON, Aravaipa, Aris., assignor to Grand Central Mining Company, Phoenix, Ariz., a Corporation of Delaware. Filed Sept. 9, 1926. Serial No. 134,576. 9 Claims. (Cl. 75—18.)



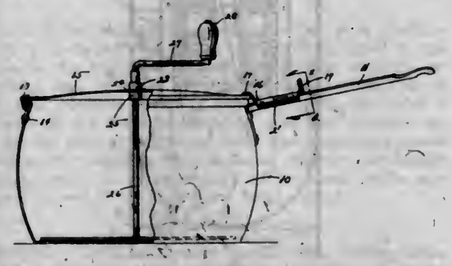
1. The method of preparing ores for flotation, which comprises treating the comminuted ore with a sulphidizing agent and water heated above 130 degrees Fahrenheit.

1,620,762. SOOT-BLOWING APPARATUS FOR WATER-TUBE BOILERS. JOHN H. HINMAN, St. Louis, Mo., and ROBERT F. BURKE, Phoenixville, Pa., assignors to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed July 24, 1924. Serial No. 727,918. 2 Claims. (Cl. 122—390.)



1. In a water tube boiler, the combination of a hollow stay bolt, a steam jet nozzle that projects inwardly through said stay bolt, a steam supply header, a pipe reducer that joins said nozzle to said header, means for preventing said header from moving with respect to the end of the stay bolt, and an adjustable closure for the stay bolt arranged between the pipe reducer and the stay bolt and adapted to be adjusted independently of said reducer and said bolt so as to force said closure tightly against the outer end of the stay bolt.

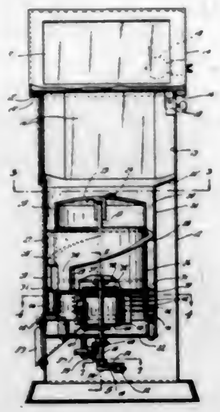
1,620,763. SPEED-CONTROLLING APPARATUS FOR INTERNAL-COMBUSTION ENGINES. EDWARD T. HULL, New York, N. Y. Filed July 25, 1922. Serial No. 577,462. 5 Claims. (Cl. 192—01.)



1. Means for controlling the speed of the internal combustion engine of a motor vehicle, including a fuel supply controller, means for moving said controller to idling speed position upon disengaging the clutch between the engine and the mechanism driven thereby, and manually actuated operating mechanism for said controller independent of said means whereby the speed of the engine may be varied at will while the clutch is disengaged.

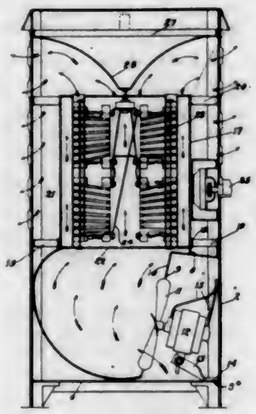
1,620,764. SPEED-CONTROLLING APPARATUS FOR ENGINES. EDWARD T. HULL, New York, N. Y. Filed May 16, 1923. Serial No. 639,306. 9 Claims. (Cl. 74—107.)

1. A vehicle having an engine motive fluid controller, an automatic speed governor operated by the engine, a brake lever, operating connections between said lever and said controller, and yielding connections between said speed governor and said controller entirely independent of the first mentioned connections.



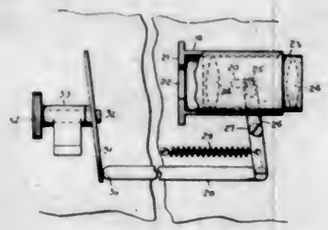
1,620,765. CORN POPPER. JOHN A. JACKSON, Des Moines, Iowa. Filed Feb. 26, 1926. Serial No. 89,628. 3 Claims. (Cl. 53—4.)

1. In combination, a vessel, a removable cover therefor, a handle on said vessel, an ear secured to the outside of said vessel and extending over the periphery



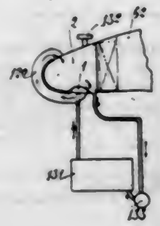
of the removable cover when the same is on the vessel, a catch member having a base portion, ears extending from said base portion and bent around said handle, a projection extending from said base portion designed to overlap the said cover when the catch member is pushed forward on the said handle, and a stirring means extending through and supported by said cover.

1,620,766. ARTICLE-DISPENSING DEVICE. JENS CHRISTIAN JENSEN and ORVILLE LEIGHROY MILES, Chicago, Ill.; said Jensen assignor to said Miles. Filed Jan. 25, 1924. Serial No. 688,483. 10 Claims. (Cl. 211—8.)



1. A dispensing device comprising a casing; a hopper in said casing; a rotatable member at the bottom of said hopper, there being an annular space between said casing and the periphery of said member; an inclined flange in said space on the periphery of said rotatable member, there being a discharge space at the lower end of said inclined flange; and means for removing and discharging articles from said discharge space, substantially as described.

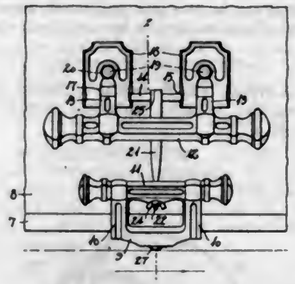
1,620,767. ELECTRIC HEATER. AXEL JOHNSON, Oakland, Calif. Filed June 1, 1926. Serial No. 112,834. 6 Claims. (Cl. 219—34.)



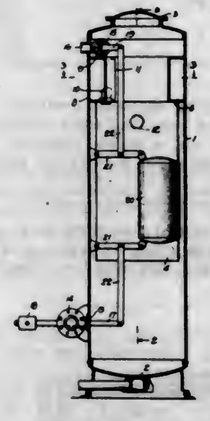
1. A portable electric heater comprising a heater casing provided near its upper end with louvered air outlet ports disposed circumferentially about the same, an air circulation duct disposed vertically within the casing with its wall spaced from the casing wall, an inverted frustum overlying the discharge end of the duct for directing the air radially therefrom through said outlet ports, means for closing the lower end of the space between the casing and the duct wall, an electric heating element within the duct, and an electric fan for causing an air circulation through the duct.

1,620,768. FOCUSING DEVICE FOR MOTION-PICTURE-PROJECTING APPARATUS. HENRY W. JOY, New York, N. Y. Original application filed Feb. 5, 1924, Serial No. 690,706. Divided and this application filed Nov. 12, 1924. Serial No. 749,390. 3 Claims. (Cl. 88—24.)

1. In a motion picture projecting apparatus, a focusing element comprising a lens and an adjustable lens jacket therefor, yieldable means for imparting longitudinal movement to said jacket in one direction, and a control disc disposed obliquely to its axis of rotation and operatively associated with said first means for determining the amount of longitudinal adjustment of said jacket.



1,620,769. RADIATOR. ALEXANDRE LAMBLIN, Paris, France. Filed Oct. 24, 1923, Serial No. 670,449, and in France Nov. 10, 1922. 14 Claims. (Cl. 244—31.)



1. In a cooling radiator for the motors of aircraft and other vehicles, the combination of an inlet header, an outlet header juxtaposed thereto, and blades hollow for the major part of their surface and the outer profile of which presents the form of a rounded loop, said blades being directly connected to the two juxtaposed headers, the surface of said tubes being substantially parallel to the direction of motion of the vehicle.

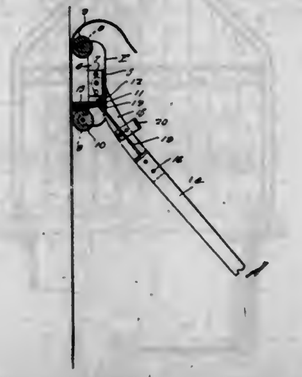
1,620,770. VAULT HANDLE. CHRISTOPHER J. LEDWIDGE, Hot Springs National Park, Ark. Filed Mar. 27, 1926. Serial No. 97,969. 5 Claims. (Cl. 16—112.)

1. A device of the character described comprising a pair of spaced plates adapted to be secured to the hood of a vault and having slots, a hinge rod engaging and held by said plates and extending across the space between said plates, an upper handle connected to said rod for swinging movement and engaging in said slots, a lower handle for the bottom of the vault, and means to connect the lower handle and said rod between said plates for holding said rod and lower handle against separation with the upper handle free for swinging movement.

1,620,771. OIL AND GAS SEPARATOR. DAVID G. LORRAINE, Los Angeles, Calif. Filed May 26, 1924. Serial No. 715,894. 17 Claims. (Cl. 183—2.7.)

1. A device of the character described comprising a settling chamber, a gas chamber, a discharge from said settling chamber, a valvular control for said discharge at the exterior of the device, a gas discharge from said gas chamber, a valvular control for said gas discharge inside of said gas chamber, a float movable in accordance with the level of a flow relative to the device, and operating connections between the float and the respective valvular controls.

1,620,772. MECHANICAL TOY. HARRY E. MCCOY, Pittsburgh, Pa., assignor, by direct and mesne assignments, to The McDowell Manufacturing Company, Millvale, Pa., a Corporation of Pennsylvania. Filed Feb. 2, 1924. Serial No. 690,264. 8 Claims. (Cl. 273—86.)

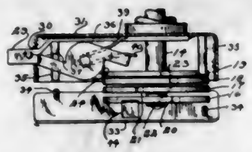


1. A toy comprising a base having its surfaces marked to represent a circular race track, a crank shaft extending over said track and provided with a plurality of cranks, a figurative object pivotally connected with each of said cranks, a motor including a drive shaft mounted on said base, said drive shaft disposed at the diametric center of said track and connected to said crank shaft for swinging the latter around over said track, and means for rotating the said crankshaft during the swinging of said crankshaft around over said track.

1,620,773. SALIVA EJECTOR. JOHN R. MACKINNON, Boston, Mass. Filed Apr. 22, 1925. Serial No. 25,052. 5 Claims. (Cl. 32—33.)

1. An ejector for saliva or the like comprising a tube the end portion of which is formed to provide a lateral opening and an integral cap securing member forwardly of said opening, a cap secured to said cap securing member, said cap having an imperforate end wall forwardly of said lateral opening and a cylindrical wall spaced from and surrounding the end of said tube, the end of the cylindrical wall of said cap opposite said end wall being substantially beveled to provide for said cap when the ejector is in operation, an air entry port and a saliva entry port, said saliva entry port being between said air entry port and the end wall of said cap.

1,620,774. COMBINATION ROLLER AND BRUSHING DEVICE. FRANK MAURER, Sekitan, Ohio, assignor of one-half to Dennis E. Gleason, North Bend, Ohio. Filed May 25, 1926. Serial No. 111,576. 2 Claims. (Cl. 216—7.)

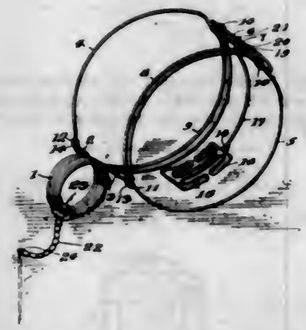


1. A device of the class described including, in combination, a U-shaped member, a pair of sides fixed to the ends of the U-shaped member and having laterally extending legs at their extremities, rollers journaled in the legs, brackets pivotally associated with the sides, a handle in the brackets, a brush pivotally mounted between the sides adjacent one roller, and connecting means between the brackets and the brush whereby the handle may be swung to vary the angle of the brush to the surface over which the rollers are being moved.

1,620,775. LOCK. CHARLES F. MEILINK, Toledo, Ohio. Filed Aug. 19, 1922. Serial No. 582,867. 1 Claim. (Cl. 70—53.)

A door having a wall, a spindle through said wall, a lock housing section into which the spindle extends, tum-

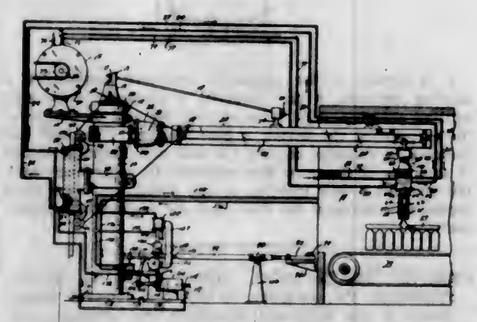
biers in said section about said spindle, a sleeve for the spindle abutting the housing section about the spindle and axially of which sleeve the spindle is shiftable into said section with said tumblers, a closure section for the housing section axially beyond the spindle, a projection fixed with said closure section, a bolt mounted in the housing section for shifting radially of the spindle to protrude



from said housing section, said bolt having a ledge in the housing section, a catch pivotally mounted in the housing section, and a torsion spring swinging said catch into held position against said projection and coacting as said projection is displaced by axial shifting of the spindle as to the sleeve to swing the catch into engagement with said bolt ledge to preclude withdrawal of the bolt.

1,620,776. TROPICAL HOUSE. TAIDE MONTERUBIO, St. Louis, Mo. Filed June 24, 1926. Serial No. 118,337. 5 Claims. (Cl. 47—17.)

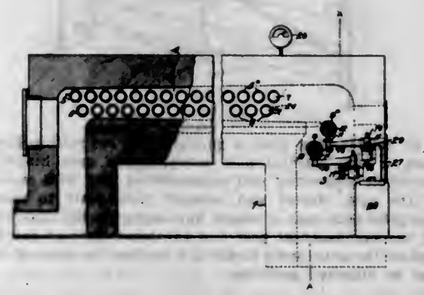
1. A tropical house comprising, in combination, spaced rails providing a trackway, an artificially dug ditch being provided between portions of the rails, the walls of the ditch being unobstructed, a portable structure traveling on the rails for movement above the ditch or to a point to one side thereof, and means for locking the structure when in either of said two positions against displacement with respect to the rails, the walls of the structure having their major portions transparent.



2. A tropical house comprising, in combination, spaced rails providing a trackway, an artificially dug ditch being provided between portions of the rails, the walls of the ditch being unobstructed, a portable structure traveling on the rails for movement above the ditch or to a point to one side thereof, means for locking the structure when in either of said two positions against displacement with respect to the rails, the walls of the structure having their major portions transparent, and wheels carried by the portable structure directly engaging the rails, said rails being provided with depressions to receive the wheels when the portable structure is properly positioned over the ditch and to cause the structure to have a slight drop.

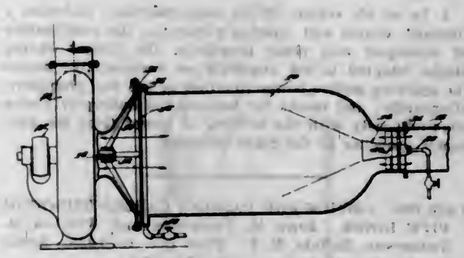
1,620,777. ANIMAL TRAP. EDGAR A. NERBY, Milwaukee, Wis. Filed Nov. 2, 1925. Serial No. 66,342. 6 Claims. (Cl. 43—85.)

1. A trap including oppositely arranged pairs of upper and lower coacting bails, end wires connecting the pairs of bails together, and a trigger connected with at least one of said end wires for holding the jaws in their set positions.



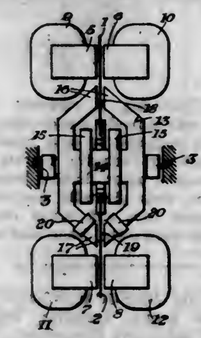
1,620,778. CARRYING-IN DEVICE FOR LEERS. EARL R. ODOM, St. Louis, Mo. Filed June 4, 1923, Serial No. 643,320. Renewed Sept. 28, 1926. 34 Claims. (Cl. 198—31.)

1. The combination with a leer having an intermittently movable conveyor and an article support in front of the leer, of automatically operating means successively engaging a plurality of the articles on the support, carrying a plurality of articles into the leer, depositing the articles in the leer in a line, returning to its initial position, and again engaging a second lot of articles.



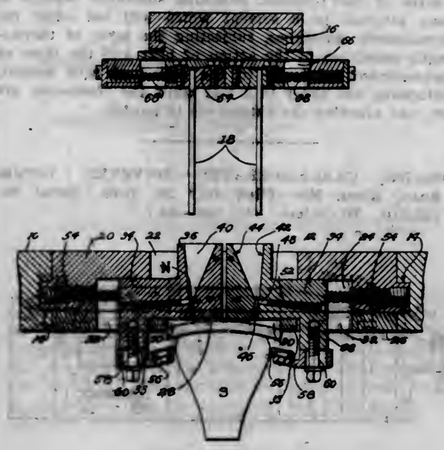
34. A carrying-in mechanism of the character described including a supporting structure, a beam extending therefrom, the beam and the supporting structure being provided one with a ball and the other with a socket receiving the ball whereby said beam may move laterally in a horizontal plane and vertically, a carrier mounted on the beam for longitudinal movement therealong, ware-engaging members mounted on the carrier, means for reciprocating the carrier on the beam and operating said ware-engaging members, and means for giving the beam a step by step motion in one direction and after a predetermined number of steps returning the beam to its initial position.

1,620,779. HARDENING STEEL ARTICLES. DAVID STANISLAUS O'DONOVAN, Vogelfontein, Transvaal, South Africa, assignor to O'Donovan Furnaces Limited, Johannesburg, South Africa. Filed Dec. 9, 1922, Serial No. 605,927, and in the Union of South Africa Oct. 7, 1922. 31 Claims. (Cl. 263—6.)



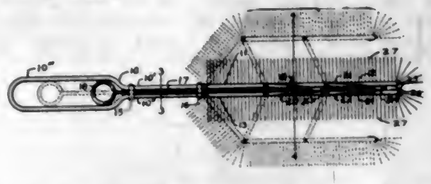
1. The process of heating a magnetic metal body which consists in so movably supporting the body that its movement is not substantially influenced by its weight, retaining the body in a heating zone by the attraction of a magnet on the body, and at the same time applying to the body a force tending to withdraw it from the heating zone.

1,620,780. AIR-CLEANING APPARATUS. FRED FORREST PEASE, East Braintree, Mass., assignor to F. F. Pease Inc., Boston, Mass., a Corporation of Massachusetts. Filed Apr. 5, 1923, Serial No. 630,624. Renewed July 29, 1926. 2 Claims. (Cl. 183—13.)



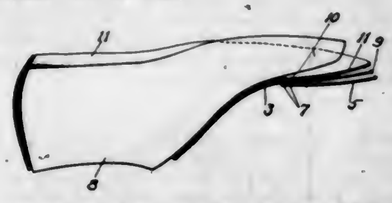
1. Air cleaning apparatus comprising an elongated settling chamber, a rotary atomising cup positioned at one end of the chamber, an air intake surrounding the atomising cup and adapted to be impregnated with liquid spray from the cup, a rotary screen separator located at the opposite end of the chamber and designed to remove entrained liquid and impurities from the air, and means beyond the screen separator for causing a movement of air and liquid through the chamber.

1,620,781. ALTERNATING-CURRENT RELAY. LESLIE HORST PETER, King's Cross, London, England, assignor, by mesne assignments, to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 15, 1925, Serial No. 43,778, and in Great Britain Nov. 1, 1924. 4 Claims. (Cl. 175—338.)



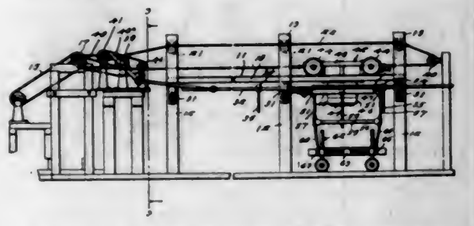
1. A relay comprising two separate magnetic circuits, two windings one for creating an alternating magnetic flux in each said circuit, and a movable member controlled jointly by the fluxes in said circuit and arranged to be operated only when the flux in one of said circuits is above a predetermined frequency.

1,620,782. NAILING MACHINE. ELMER R. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 27, 1922. Serial No. 603,576. 17 Claims. (Cl. 1—16.1.)



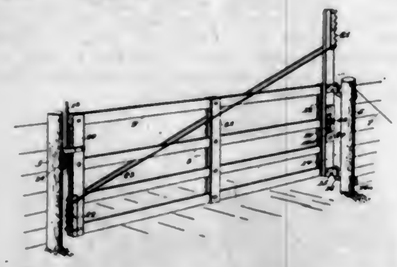
1. In a heel-seat-nailing machine, a plurality of nail-inserting mechanisms including independently movable sections, the sections having position-determining projections contacting adjacent to the rand-crease with the counter-portion of a shoe to be nailed and arranged to determine the relation of the points of insertion of the nails in the outsole to said rand-crease.

1,620,783. BRUSH. IRWIN E. RICE, Denver, Colo. Filed July 24, 1925. Serial No. 45,760. 2 Claims. (Cl. 15—165.)



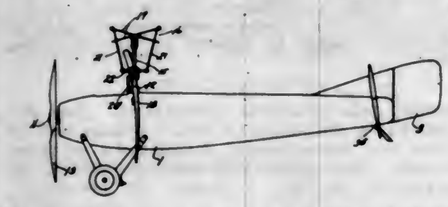
1. A brush comprising a skeleton handle, spaced collars on said handle whereby a slide bearing is formed, a push rod slidingly mounted in said handle and adapted for manual adjustment relative thereto, channel bars pivoted to said handle, other channel bars pivoted to the first channel bars, rods pivotally connecting said push rod to said channel bars and brush elements mounted on and projecting outwardly from said channel bars.

1,620,784. ART OF MANUFACTURING SHOE STIFFENERS. FRED RICKS, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 28, 1925, Serial No. 19,160, and in Great Britain Apr. 11, 1924. 9 Claims. (Cl. 12—146.)



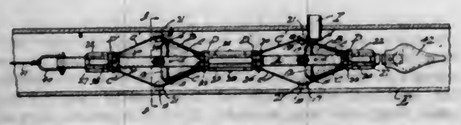
1. The method of making stiffened parts of boots and shoes which comprises placing in the upper in superposed relation a layer of thermoplastic stiffening substance and a layer of heat-resistant stiffening substance capable of being softened by a solvent which will not affect the thermoplastic substance, subjecting the layer of thermoplastic substance to the action of heat and the layer of heat-resistant substance to the action of said solvent, conforming the upper to a last while the substances are soft, and allowing the substances to harden.

1,620,785. CABLE-OPERATED CONVEYER. LUTHER ROAN, Rives, Mo. Filed July 20, 1926. Serial No. 123,710. 10 Claims. (Cl. 104—88.)



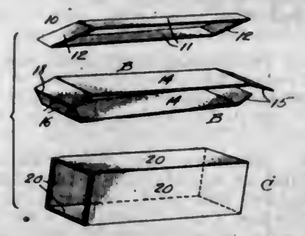
1. A conveyer of the character described comprising a supporting section, a track thereon, a carriage movable on the track, a shaft having a drum, a cable extending over the drum and connected at opposite ends to the carriage, guides for the cable, driving means for said shaft, manually controlled means located at a loading point whereby the shaft may be connected to the driving means to drive the shaft in a direction to move the carriage away from the loading point, manually adjustable means movable into the path of movement of the carriage and acting to automatically disconnect the shaft from the driving means when the carriage engages said adjustable means, and manually controlled means for connecting the shaft to its driving means and driving the shaft in a direction to return the carriage to the loading point.

1,620,786. FARM GATE. JOHN C. SCHULTE, Norway, Iowa. Filed July 23, 1925. Serial No. 45,624. 1 Claim. (Cl. 39—82.)



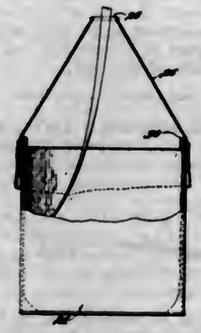
In combination with a gate and its supporting hinge-post, a supplemental post carrying the gate hinges, a pivot-bolt connecting said supplemental post with one end of the gate, slotted and recessed cheek-plate to receive the pivot-bolt, and a looped guy engaging the upper end of the supplemental post and the lower part of the free end of the gate, with means for holding the ends of said guy in adjusted positions.

1,620,787. COMBINED AIRPLANE AND HELICOPTER. WALTER L. THOMAS, Fruitland, Fla. Filed Sept. 27, 1926. Serial No. 137,899. 3 Claims. (Cl. 244—15.)



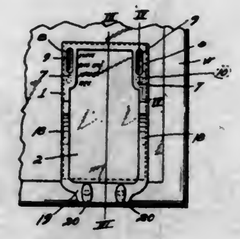
1. In an air vehicle of the class described, including a fuselage, engine and steering elements; the combination of helicopter and plane propellers, the former having blades adapted to set angularly or horizontally; means for applying motive power to either of the two propellers, alternately; and means for leveling the helicopter blades simultaneously with the shifting of power from the helicopter propeller to the plane propeller.

1,620,788. DEVICE FOR PASSING CABLES THROUGH PIPE LINES. JOHN M. THOMPSON and WILLIAM H. THOMPSON, Buffalo, N. Y. Filed Dec. 10, 1925. Serial No. 74,429. 10 Claims. (Cl. 175—376.)



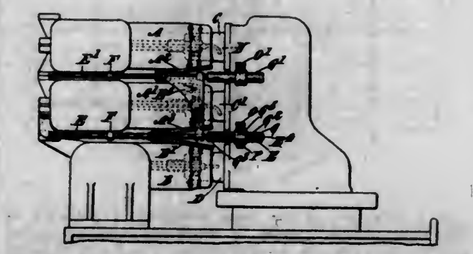
1. In a device for passing cables through pipe lines, the combination of a rod, a cup-shaped propelling member of flexible material arranged on said rod, and a plurality of pairs of arms, each of said arms of a pair being yieldingly connected at one end to said rod and the other ends of said arms being pivotally connected together, the arms of each pair extending outwardly from said rod in opposite directions, one arm of each pair being adjacent to said cup-shaped member, whereby said arms will be deflected inwardly toward said rod when meeting obstructions in the pipe line while said device is moving in either direction, the inward deflection of an arm by an obstruction causing said cup-shaped member to be deflected away from said obstruction.

1,620,789. CARTON. GEORGE URBAN, Jr., Cheektowaga, N. Y. Filed Apr. 1, 1924. Serial No. 703,426. 2 Claims. (Cl. 229—10.)



1. In a carton adapted to support a plurality of articles in rows arranged face to face, the combination of a pair of open sided frames in which the articles are arranged in rows, said frames being placed together with an open face of each frame facing an open face of the other frame, a folder surrounding said frames and extending around the opposite open faces thereof, and an open ended sheath into which said folder with the frames arranged therein is inserted endwise, each end of the folder being secured to one end of each frame.

1,620,790. APPARATUS FOR USE IN HANDLING WELTING. GEORGE E. WARREN, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed June 27, 1919, Serial No. 307,129. Divided and this application filed Jan. 8, 1921. Serial No. 435,911. 4 Claims. (Cl. 206—1.)

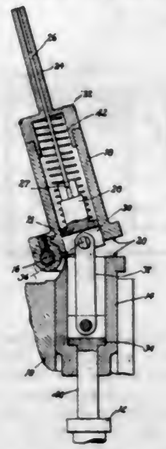


4. A receptacle for handling welting comprising a permeable bag for the welting, a protective casing open at top and bottom for surrounding and supporting the bag, and a protective cover for the top of the casing, the bag being doubled back over the top of the casing and the cover being constructed with a depending portion to fit within the bag to hold the sides of the bag in place.

1,620,791. AUTOMOBILE IDENTIFICATION DEVICE. STRAUD K. WOOD, Hutchinson, Kans. Filed Aug. 13, 1923. Serial No. 657,013. 3 Claims. (Cl. 40—2.2.)

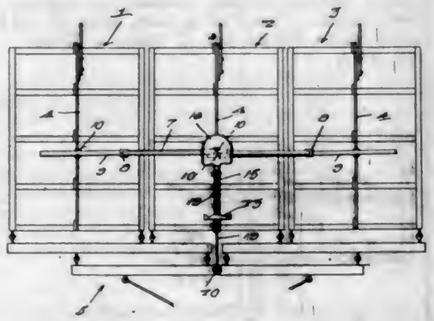
1. The combination of a frame open at one of its faces, a glass plate fitting within and closing said open face of the frame, a card within the frame and fitting flatwise against the inside face of said glass plate and having an opening, and a mutilating element secured in said frame and engaged in said card opening, said element being adapted to mutilate a portion of the card upon the withdrawal of said card, the frame, card and mutilating element being so arranged that the card cannot be removed from the frame without mutilation.

1,620,792. METAL-CLAD ELECTRIC SWITCH GEAR OF THE DRAW-OUT TYPE. WILLIAM ANDERSON, Hebburn-on-Tyne, and HENRY WILLIAM CLOTHIER, Wallsend-on-Tyne, England, assignors to A. Reyrolle & Company Limited, Hebburn-on-Tyne, England, a Company of Great Britain. Filed Feb. 4, 1926, Serial No. 86,103, and in Great Britain Apr. 2, 1925. 5 Claims. (Cl. 175—298.)



1. In electric switchgear of the draw-out type having sockets on the fixed portion provided with doors which are opened and closed by the reciprocation of operating rods attached to the draw-out portion, the combination with one of said doors of gear between it and its operating rod, such gear being actuated by the door itself when it is opened to free the operating rod from positive engagement with the draw-out portion.

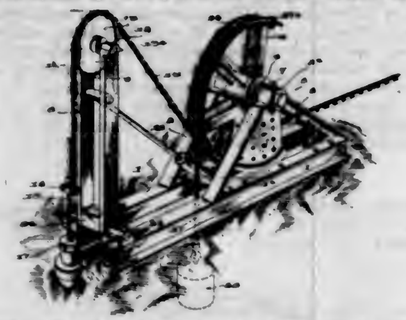
1,620,793. SUPPORT. WILLIAM RODERICK BARCLAY and WILFRID THOMAS MINETT, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 20, 1924, Serial No. 721,198, and in Great Britain July 24, 1923. 8 Claims. (Cl. 1—32.)



1. A jack comprising a body-portion, a spindle projecting from said body-portion and arranged to enter an

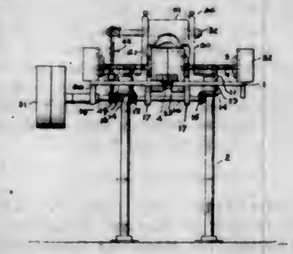
opening in a last, the spindle having passages situated at opposite sides of and parallel to its axis, a carrier mount-

ed to reciprocate in the body-portion, and drivers mounted upon the carrier at opposite sides of its axis and extending into the spindle-passages.



1,620,794. HARROW-WEIGHT-DISTRIBUTING DEVICE. ROY L. BARTON, Milton, Iowa. Filed Nov. 21, 1925. Serial No. 70,643. 1 Claim. (Cl. 55—84.)

In a structure of the class described, a plurality of individual harrow frames, a draft appliance connected with the forward ends of said frames, a centrally disposed bar extending longitudinally of each frame, two-way connectors mounted upon the central portions of said bars, a pair of pipes pivotally connected at their opposite ends to said connectors, a vertical arch having the lower ends of its arms pivotally connected with the intermediate portions of said pipes, an extensible connection between the central portion of the arch and said draft appliance, and a seat supported adjacent the central part of said arch.



1,620,795. PUMP JACK. LEE J. BLACK, Beaumont, Tex. Filed Aug. 24, 1926. Serial No. 131,251. 10 Claims. (Cl. 74—5.)

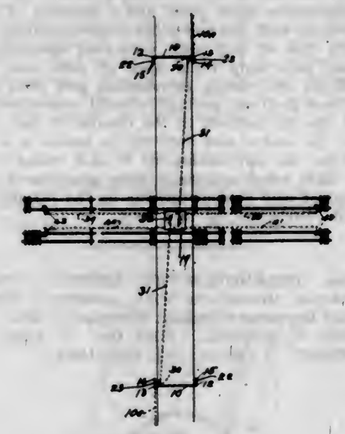
1. A pump jack comprising a frame, a power wheel journaled upon said frame, a mast swingingly mounted upon said frame and having a pulley journaled thereon and positionable over the well casing head, a flexible polished rod operating connection trained over said pulley and driven by said power wheel, an adjustable brace for said mast whereby the mast may be swung from its operative position to a point clear of the casing head, said power wheel including spaced rim supporting web sections, a reciprocatory jack line for operating said power

wheel, and variably positionable means carried between said web sections for connecting said line to the wheel at various points with respect to its axis.

1,620,796. MACHINE FOR CORRECTING IRREGULARITIES IN FLANGES OF CANS PRELIMINARY TO SEALING THE CANS. GEORGE W. BLANKENHORN, San Francisco, Calif.; Pauline E. Witherby guardian of the estate of said George W. Blankenhorn. Filed July 31, 1922. Serial No. 578,594. 4 Claims. (Cl. 153—32.)

1. A machine for correcting irregularities in cans having lateral flanges at the open ends thereof and preliminary to sealing the cans comprising a support, means for moving cans to and from the support, a rotary member on the support operating to engage and restore to normal shape the upper ends of cans passing beneath said member and during movement of the cans, said member having a projection adapted to extend into and press into true shape the open ends of the cans.

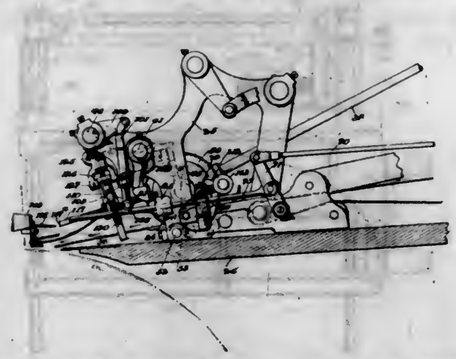
1,620,797. ARCH SUPPORT. BARNEY S. BONAVENTURE, New York, N. Y. Filed Mar. 13, 1925. Serial No. 15,297. 3 Claims. (Cl. 36—1.)



1. As an article of manufacture a foot support for insertion in a ballet slipper to rest upon the insole, said support including a flexible strip having a transverse slit extending backwardly from its front end and terminating in the intermediate or arch portion of the strip, a bowed spring between the layers of the slit portion along the longitudinal center thereof and fixedly connected to one layer of the slit portion, and an adhesive for holding together the slit portion of the strip at the sides of the bowed spring.

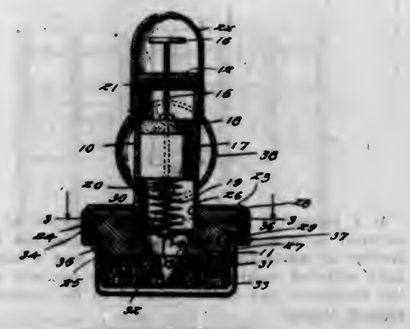
1,620,798. LICENSE HOLDER. HENRY E. BUTLER, Scotia, N. Y. Filed Dec. 1, 1926. Serial No. 152,017. 3 Claims. (Cl. 40—10.)

1. A holder for a license or the like comprising a button having means for attaching it to a garment and a paper, said holder comprising a wall having an opening, means carried by the wall for supporting a button with its attaching means exposed through said opening, and means which forms with said wall a pocket for holding a paper.



1,620,799. AUTOMATIC SAFETY GATE FOR RAILROAD CROSSINGS. GEORGE F. CARSON, Memphis, Tenn. Filed Dec. 4, 1926. Serial No. 152,588. 3 Claims. (Cl. 246—125.)

1. A safety device for highway-railroad crossings comprising a supporting and a stop post, disposed on opposite sides of said highway adjacent said railroad, a box adjacent said supporting post, said box having a slot in the top, and a groove in the bottom thereof leading toward said post, a rigid gate of width to span said highway when closed thereacross, having a pivot post at one end thereof stepped in said slot and groove and spaced from said supporting post, a tension support extending from the free end of said gate to the top of said supporting post, buffer springs secured to said posts and adapted to lie between said gate and said posts when said gate is closed across said highway, and means for swinging said gate into closed position on the approach of a train and to open position on the passage of said train.

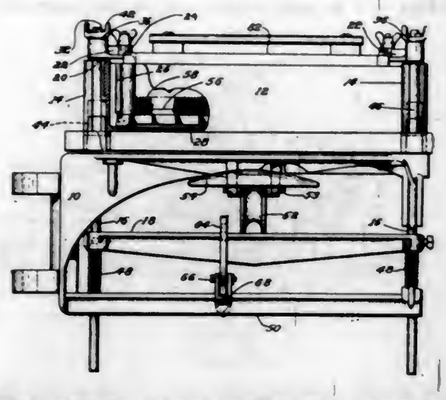


1,620,800. AUTOMATIC THROW-OUT MECHANISM FOR PRINTING PRESSES AND THE LIKE. CARL E. CHRISTOPHEL, Pearl River, N. Y., assignor to Dexter Folder Company, Pearl River, N. Y., a Corporation of New York. Filed May 9, 1923. Serial No. 637,826. 9 Claims. (Cl. 192—126.)

2. In a sheet feeding machine, the combination of a throw-out mechanism, means controlling the operation of the same including a shaft, a pair of front registry detecting elements operated from said shaft, a side registry detecting element on each side of the machine mounted on said shaft and depending therefrom and projecting into the path of the sheets, means controlled by

said elements preventing the rotation of said shaft when the sheet is out of registry with the front elements and one of said side elements, said front elements and one of said side elements being moved by the sheet when it is properly positioned to permit movement of said shaft.

1,620,801. LIQUID-POLISH APPLIER. WILL A. CLARK, St. Louis, Mo. Filed Apr. 8, 1926. Serial No. 100,646. 2 Claims. (Cl. 15—123.)



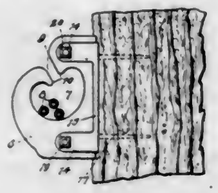
1. A dauber pad for use in applying polish comprising a cap having a central aperture for the passage of polish, a block fitting the cap and having a groove formed in the side wall thereof in opposition to the side wall of the cap, said block having a central opening, a pad secured to the outer face of the block and likewise having a central opening, a porous covering for the pad and block, a retaining element engaging the covering and maintaining the same within the groove and means retaining the block, pad and covering in position within the cap.

1,620,802. APPLYING APPARATUS. JOHN W. COSGROVE, Medford, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 13, 1925. Serial No. 30,013. 16 Claims. (Cl. 91—46.)

2. An applying apparatus comprising a receptacle, a grid movable in the receptacle, and a work-engaging helix secured to the grid at one side only thereof.

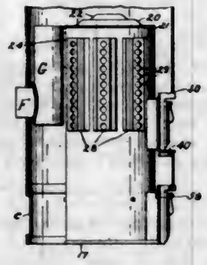
16. The combination with a frame, of a receptacle supported thereon, a rod movable in the frame and having

a shoulder, a projection spaced from the shoulder, a grid situated in the receptacle and resting upon the shoulder below the projection, and a retaining member arranged



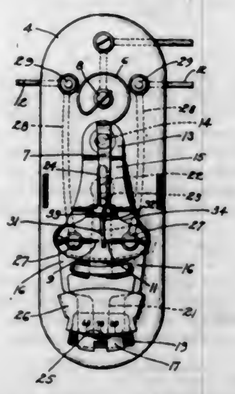
to turn about the rod and provided with a cam-surface contacting with the projection and arranged in its rotation to clamp the grid against the shoulder.

1,620,803. COLLAPSIBLE RECEPTACLE. JOHN B. CURRAN, Westfield, Mass., assignor, by mesne assignments, to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Jan. 25, 1924. Serial No. 688,442. 3 Claims. (Cl. 150—49.)



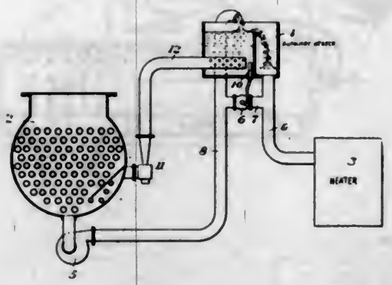
1. A receptacle having a bottom composed of flexible material, a stop-cock secured to said bottom for the outflow of liquid from the receptacle, and a support of rigid material secured at its ends to opposite sides of the receptacle and rigidly secured to the stop-cock for support thereof.

1,620,804. INSULATOR. SCOTT C. CUTTER, Oswego, Ill. Filed Aug. 13, 1924. Serial No. 731,731. 2 Claims. (Cl. 173—321.)



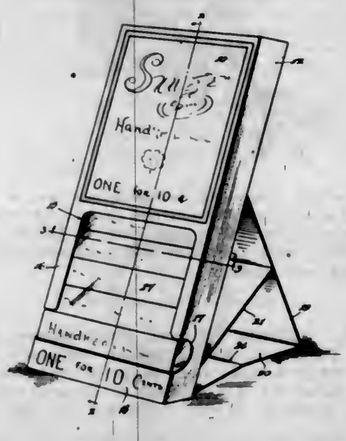
1. An insulator mounting comprising a back piece having a substantially curved surface against which an insulator may be disposed, two pairs of ears extending from the back piece, one pair being adapted to embrace the upper portion of the insulator and the other pair being adapted to embrace the lower portion of the insulator, a member connecting each pair of ears adapted to fasten the insulator to the mounting and means back of each pair of ears for enabling the mounting to be attached to a support.

1,620,805. FURNACE. ROBERT K. DAWSON, Akron, N. Y. Filed Oct. 2, 1926, Serial No. 139,188, and in Canada Jan. 30, 1925. 6 Claims. (Cl. 126—99.)



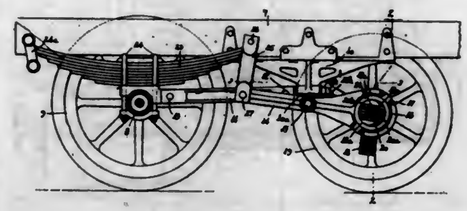
1. In a furnace having an outer casing, a heater arranged in said casing and including a tubular shell within which combustion takes place, and a plurality of channel strips secured with their open faces approximately against the outer face of said shell to extend upwardly along the same, each strip being open at both ends to the space within said casing surrounding said shell and all spaced apart from one another laterally around said shell, whereby the air confined in the channel of each of said strips by the wall of said shell will be heated to a greater extent than the surrounding air in said casing and will have a stack effect causing a more pronounced upward movement of said surrounding air by the injector action of the air discharged by said flues.

1,620,806. THERMOELECTRIC SWITCH. FREDERICK S. DENISON, Minneapolis, Minn., assignor to Minneapolis Heat Regulator Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Dec. 10, 1923. Serial No. 679,657. 7 Claims. (Cl. 200—139.)



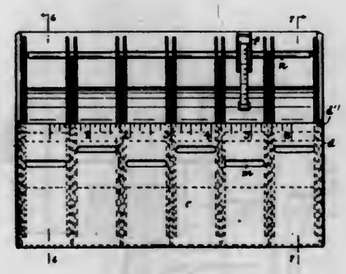
1. A device of the class described comprising a base, a thermo element thereon, a plate pivoted to the base and having a pair of contacts, a finger carried by and rockably engaged with said pivoted plate, and arranged between the contacts, and a tension element connecting the finger and thermo-element and holding said finger rockably engaged on its movable supporting plate.

1,620,807. WATER-HEATING SYSTEM FOR POWER PLANTS. RAYMOND N. EHRHART, Pittsburgh, Pa., assignor to Elliott Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 19, 1920. Serial No. 382,655. 11 Claims. (Cl. 257—24.)



1. In feed-water-heating apparatus of the character described, the combination with a condenser and a steam ejector arranged to exhaust the air and steam from the condenser, of a main feed water heater, an auxiliary feed water heater receiving heat from said ejector and vented to the atmosphere, a pump for delivering water from the condenser to said heaters, a bypass in the connection from the pump to the heaters, and means for automatically controlling the flow of water through said pipes and thereby the amount of water flowing from the auxiliary heater.

1,620,808. HANDKERCHIEF-DISPLAY CASE. RAY W. ELDRIDGE, Orleans, Vt. Filed June 11, 1925. Serial No. 36,510. 1 Claim. (Cl. 211—8.)

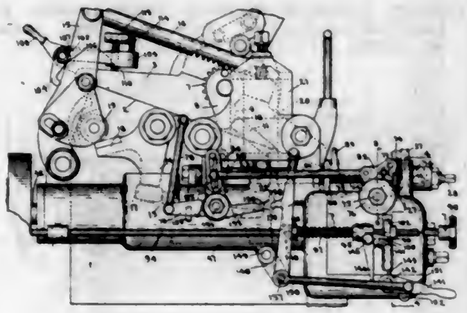


A flat oblong casing for displaying articles provided with means for supporting it upon end in upright position, and having a sight opening in the lower portion of its front and retaining flanges at opposite sides of the sight opening, said flanges terminating a distance from the bottom of the sight opening to provide a discharge slot, and having finger notches in the side walls in line with the said discharge slot, and having a cross strip connecting the bottom and side walls below the discharge slot an article resting upon the bottom of the casing with its upper surface in a plane with the upper edge of the cross strip to support the article immediately thereabove in a position for delivery through said slot and across the bar.

1,620,809. VEHICLE RUNNING GEAR. ALBERT H. FAGER, Los Angeles, Calif. Filed July 7, 1926. Serial No. 121,030. 11 Claims. (Cl. 180—22.)

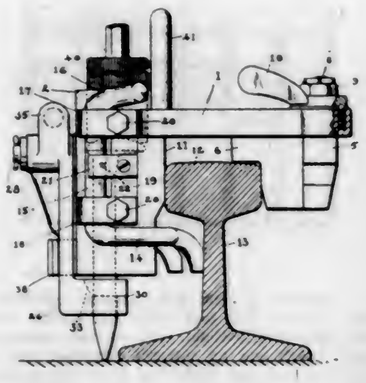
1. The combination of a vehicle frame, members at opposite sides connected with the frame for upward and downward movement, and a wheel axle having an oscillatory connection with one of said members and an oscillatory and sliding connection with the other member.

1,620,810. DISPLAY CONTAINER. HERMAN A. FEIGELMAN, Paterson, N. J. Filed Dec. 4, 1924. Serial No. 753,859. 3 Claims. (Cl. 206—52.)



1. A container of stiff sheet material including a rectangular bottom and four walls upstanding from and integral with the bottom, each of two opposite walls having at each end an integral extension bent toward the other of such two walls and each two corresponding extensions being arranged inside of the adjoining one of the other two opposite walls and each of the latter two walls having a flap folded over and down inside of the two adjoining extensions, said flaps having openings arranged above the bottom whereby to form bearings for the axial support of an article to be rotatively supported in the container.

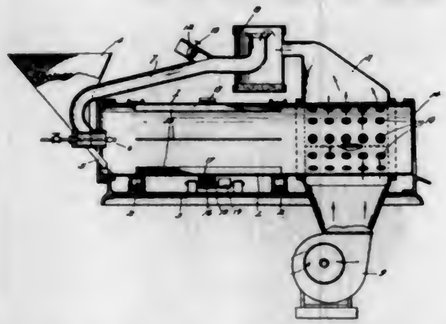
1,620,811. WORK-SETTING MEANS FOR GEAR-GENERATING MACHINES. EDWIN R. FELLOWS, Springfield, Vt., assignor to The Fellows Gear Shaper Company, Springfield, Vt., a Corporation of Vermont. Filed Jan. 27, 1923. Serial No. 615,315. 37 Claims. (Cl. 51—52.)



1. A generating machine of the character set forth including a reciprocating carriage, a spindle rotatable on said carriage, means for rotating the spindle when the carriage is reciprocated, mechanism for giving increments of rotary feed movement to the spindle, timing mecha-

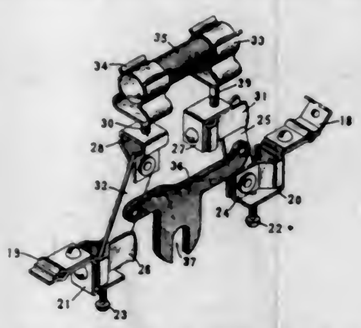
nism for causing such increments of feed movement to take place in alternation with a series of reciprocating movements of the carriage, a locating means for placing

the carriage in a definite position, and a gage mounted adjustably on the carriage and adapted to determine the position of a work piece on said spindle.



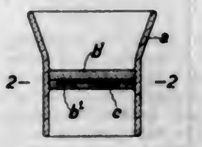
1,620,812. APPARATUS FOR DRIVING RAILROAD SPIKES. JOHN G. FOGARTY, West Webster, N. Y., assignor of one-fourth to Sweeney and Boland, Rochester, N. Y., a Copartnership consisting of Michael E. Sweeney and Patrick T. Boland. Filed Apr. 19, 1926. Serial No. 103,168. 10 Claims. (Cl. 1—47.)

1. In an apparatus for locating and guiding railroad spikes, the combination of a supporting frame, a guide sleeve on one side of said frame, a supporting jaw at the other side of said frame, and a pair of yielding jaws mounted at the lower end of said guide sleeve, said yielding jaws being adapted to hold a spike in an upright position in said guide sleeve and locate the end of said spike in a predetermined position on the tie with relation to the base of the rail.



1,620,813. PROCESS OF MAKING ASPHALTIC ROAD MATERIAL. JOHN D. FORRESTER, Kansas City, Mo., assignor to Peter J. McInerney, Dallas, Tex. Filed Nov. 30, 1925. Serial No. 72,205. 4 Claims. (Cl. 106—31.)

1. A process of making asphaltic road material, comprising the steps of properly grading a mineral aggregate, heating the same to dryness, separately heating an asphaltic binder and adding a hydrocarbon solvent to increase its fluidity, incorporating into the asphalt

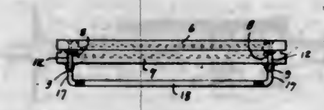


mix while hot a filler comprising an argillaceous material and intimately combining the final asphaltic mixture with the dried mineral aggregate.

1,620,814. ELECTRIC SAFETY SWITCH. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed July 13, 1926. Serial No. 122,060. 9 Claims. (Cl. 200—114.)

1. A switch comprising an insulating base, a switch contact and a hinged blade carried thereby, an insulating fuse receptacle carried by the base, a switch contact and a hinged blade carried by said receptacle and a link connecting said blades.

1,620,815. FILTER. MORDKO HERSCHKOWITSCH and PAUL PRAUSNITZ, Jena, Germany, assignors to the Firm Schott & Gen., Jena, Germany. Filed June 12, 1924, Serial No. 719,685, and in Germany June 27, 1926. Serial No. 94,503. 2 Claims. (Cl. 248—37.)



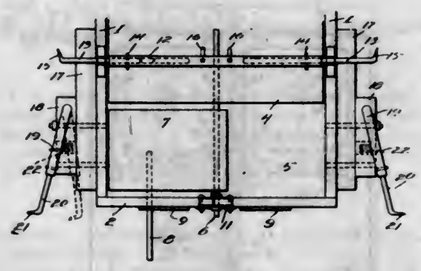
In a filter a porous body of fritted glass particles, and a non-porous glass vessel into which the said porous body is fused.

1,620,816. ARM REST. LORRN D. HOUCK, Toledo, Ohio. Filed Sept. 23, 1926. Serial No. 137,283. 2 Claims. (Cl. 155—198.)

1. A detachable arm rest comprising a hollow metal body and a fixture attached to the under side of the top of the body and projecting thru the side wall thereof and having an angular arm adapted to fit in a socket.

1,620,817. WINDOW-SASH ATTACHMENT. HENRI HUYARD, San Francisco, Calif. Filed Apr. 20, 1926. Serial No. 103,313. 1 Claim. (Cl. 268—134.)

An upper window sash and spaced elongated members secured at their upper ends to said sash, said members extending downwardly adjacent the sides of said sash to within a person's convenient grasp, and a transverse bar threadedly joining the lower ends of said members, said bar being detachable from said members, a lower window sash and guide means on said lower sash for said members.



1,620,818. TIRE FLAP. JOE JACOBS, Denver, Colo. Filed Sept. 24, 1925. Serial No. 58,297. 2 Claims. (Cl. 152—20.)

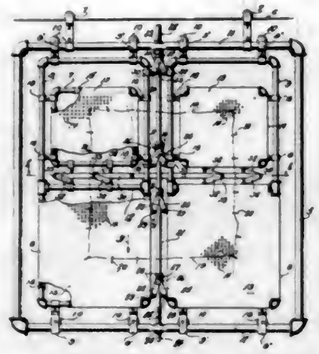
1. A tire flap comprising a strip of cord fabric having the cords extending transversely thereof and a rubber covering on each side of the strip.

1,620,819. BAG HOLDER. FRED A. JOHNSON, Wolverton, Minn. Filed May 26, 1925. Serial No. 33,004. 3 Claims. (Cl. 83—44.)

1. In a structure of the class described, a table frame, bag holding means supported on said frame and including swingably mounted hooks adjacent one end of the frame, a tube supported on said frame in spaced relation to said end, additional hooks slidably mounted in the ends of said tube, a fulcrum rod extending through said end of the frame and associated with said

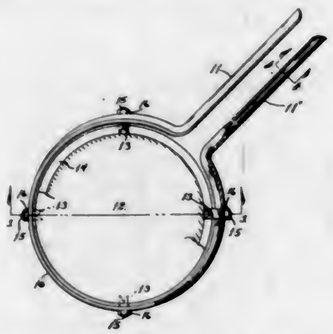
intermediate portion of said tube, a plate hingedly connected to said rod, and operating means for said plate extending through an opening in said frame.

1,620,820. FLAG HOLDER FOR THE MOTOMETERS AND SIMILAR DEVICES OF AUTOMOBILES. MURRAY ALBERT KANE, Johnstown, Pa. Filed Mar. 13, 1926. Serial No. 94,503. 2 Claims. (Cl. 248—37.)



1. A flag holder for use with motometers and the like comprising two sections each formed from a sheet of metal having an opening extending to one edge thereof and being formed about the edges of the opening with an offset flange, the body of the sheet being provided with a depressed portion, said depressed portions combining in the assembled relation of the sections to produce a socket for the reception of a staff and securing elements directed through said sections for clamping the sections upon the staff and upon the ornament to which they are applied.

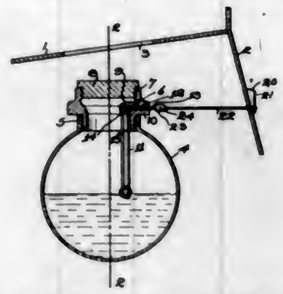
1,620,821. APPARATUS FOR STRETCHING AND DRYING SKINS, LEATHER, AND OTHER MATERIALS. EWALD E. KORNITZ, Milwaukee, Wis., assignor of one-half to Carl A. Bechstein, Milwaukee, Wis. Filed Feb. 8, 1923. Serial No. 617,800. 8 Claims. (Cl. 149—21.)



1. An apparatus of the character described, comprising supporting means, a plurality of frame members, means for attaching work to the frame members, means

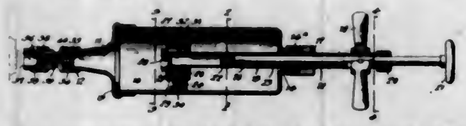
connecting the frame members with the supporting means whereby they are permitted movement toward and away from each other with their work engaging surfaces

in a substantially common plane, and means connecting the frame members and operable to procure relative movement therebetween.



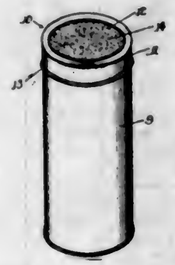
1,620,822. CARBON SCRAPER. GEORGE D. LAWSON, Fort Dodge, Iowa. Filed June 21, 1926. Serial No. 117,380. 2 Claims. (Cl. 15—104.01.)

1. A spring band of circular form and open at one point, integral handles at the ends of said band, cutting bits carried by said band and projecting inwardly thereof, said handles and the end portions of said band being curved transversely and the mid-portion of the band being plane transversely to permit bending and compression of the band by pressure on said handles.



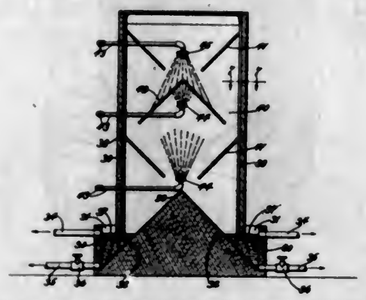
1,620,823. LIQUID-LEVEL INDICATOR. PAUL S. MARIS, Detroit, Mich., assignor of one-half to William Liston, Detroit, Mich. Filed July 8, 1925. Serial No. 42,119. 1 Claim. (Cl. 73—82.)

In a liquid level indicator for automobile tanks, the combination with a tank arranged under the cowl and having its upper end in front of an instrument board, of a bushing the lower end of which is adapted to engage a filler opening in a tank, said bushing being open at both ends and having a lateral opening therethrough, an inward projection in said bushing through which said lateral opening is formed, a depending element secured to the underside of said projection, a rod extending through and rotatably mounted in said lateral opening, a link in said bushing one end of which is fixed to said rod, a lever fulcrumed on the lower end of said element, a float on one end of said lever, a member connecting the other end of said lever with the end of the link remote from said rod, said member being raised and lowered by the rise and fall of said float and turning said link and rod,



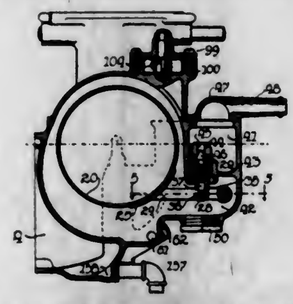
a gauge on the instrument board, a pointer on said gauge, and means connecting the rod and pointer for turning said pointer by the rotation of said rod.

1,620,824. LUBRICATING GUN. CHARLES W. MANZEL, Buffalo, N. Y., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed June 16, 1921. Serial No. 477,959. 11 Claims. (Cl. 221—47.3.)



1. A compressor for supplying lubricant under pressure to a lubricant receptacle comprising a barrel provided with a rigid discharge conduit, having means at its free end for making a tight joint with said lubricant receptacle, a piston in said barrel for placing an initial pressure upon the lubricant contained therein, a second piston for increasing the pressure on the lubricant in said barrel and conduit, and a valve for controlling the passage of lubricant through said discharge conduit, the aforementioned parts being so arranged relatively to each other that when pressure is exerted upon said second piston in a direction lengthwise of said compressor, the lubricant in said barrel and discharge conduit will be placed under increased pressure, said joint will be established, and said valve opened.

1,620,825. RECEPTACLE CLOSURE. WALLACE C. MILLS, Rockford, Ill., assignor to J. L. Clark Manufacturing Co., Rockford, Ill., a Corporation of Illinois. Filed Mar. 21, 1925. Serial No. 17,261. 5 Claims. (Cl. 152—27.)

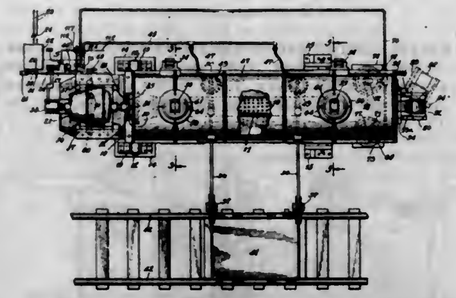


5. A receptacle closure comprising, in combination, a sheet metal wall having a portion of its surface depressed inwardly to form a shallow recess and a peripheral flange overlying said recess, and an abrasive carrying disk having its peripheral edge clamped against said depressed portion by said flange, said depressed portion having a central raised portion which serves to position part of said disk above the top of said flange.

1,620,826. SMOKE CONSUMER. WALTER C. MITCHELL, St. Louis, Mo. Filed July 6, 1925. Serial No. 41,585. 7 Claims. (Cl. 261—115.)

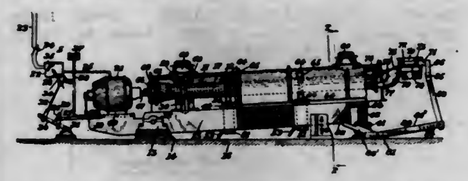
1. An apparatus of the character described comprising a spray pipe, a pipe from a source of combustion products' supply having a flexible joint opening into said spray pipe, means for producing sprays in said spray pipe, an enclosure into which said spray pipe opens, elements forming a tortuous passage in said enclosure, means for producing sprays in said passage, a device for drawing the combustion products through said enclosure, a tortuous passage receiving the combustion products from said device, and means for producing sprays in said second tortuous passage.

1,620,827. CARBURETOR. FRANK C. MOCK, CHARLES J. GUSTAFSON, and MILTON E. CHANDLER, Chicago, Ill., assignors to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed July 10, 1918. Serial No. 244,231. 1 Claim. (Cl. 261—23.)



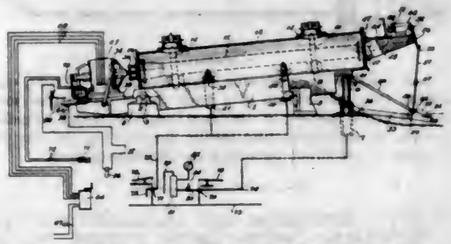
In a carburetor, the combination of a casing forming a pair of carbureting passages, a fuel nozzle in each of said passages adapted for simultaneous operation throughout the working range, a float chamber of relatively small transverse dimension located between said carbureting passages, a cylindrical float having its axis horizontal and having a pivotal support, the pivotal axis of which support is parallel with the float axis, the axis of said float lying substantially in a line connecting the discharge openings of said nozzles, the plane of flotation of said float in said float chamber normally passing substantially through the said axis of the float, and the portion of the chamber within which the various positions of the liquid fuel level lies, being substantially symmetrical about said axis, so that tilting of the carburetor produces a minimum variation of the fuel level of said nozzles.

1,620,828. HIGH-FREQUENCY VESICAL ELECTRODE. MARTIN MOLONY, San Francisco, Calif. Filed Jan. 2, 1926. Serial No. 79,866. 10 Claims. (Cl. 174—89.)



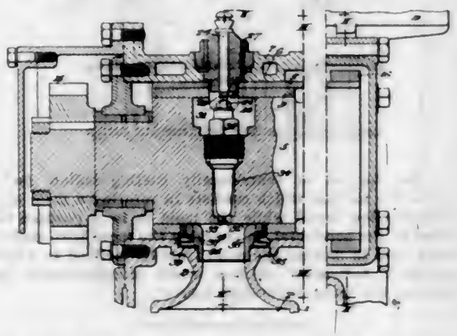
1. A vesical electrode for high frequency current comprising the combination of a fixed rod, a second rod movable relative thereto, a terminal beak pivotally attached to both of said rods, and means for moving the one rod relative to the other to angularly swing said beak.

1,620,829. METHOD OF AND APPARATUS FOR CENTRIFUGALLY CASTING METAL BODIES. WILLIAM D. MOORE and WALTER MORGAN, Birmingham, Ala., assignors, by mesne assignments, to Sand Spun Patents Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 7, 1923. Serial No. 656,180. 116 Claims. (Cl. 22—65.)



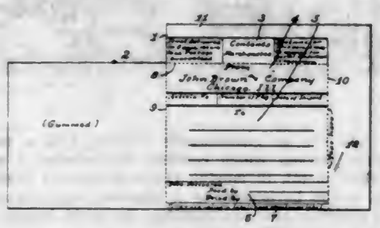
1. In the art of centrifugally casting hollow metal bodies, the method which consists in rotating a mold at a relatively low speed while the mold is in a position inclined to the horizontal, in charging the mold with molten metal, and in moving the mold from its inclined to a substantially horizontal position while simultaneously increasing the speed of rotation thereof.

1,620,830. METHOD OF AND APPARATUS FOR CENTRIFUGALLY CASTING METAL BODIES. WILLIAM D. MOORE and WALTER MORGAN, Birmingham, Ala., assignors, by mesne assignments, to Sand Spun Patents Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 20, 1923. Serial No. 681,702. 52 Claims. (Cl. 22—65.)



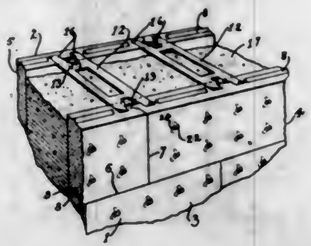
1. In the art of centrifugally casting hollow metal bodies, the method which consists in charging a mold with molten metal, in moving the same from a position inclined to the horizontal to a substantially horizontal or level position, and in operating the mold during the levelling thereof by first rotating the same at a relatively low speed during a part of the levelling period and by then increasing the speed of rotation of the same during another part of the levelling period.

1,620,831. CHARGING DEVICE FOR TILTING MOLDS. WILLIAM DAVIS MOORE, Birmingham, Ala., assignor to Sand Spun Patents Corporation, Wilmington, Del., a Corporation of Delaware. Filed July 8, 1925. Serial No. 42,168. 35 Claims. (Cl. 22—65.)



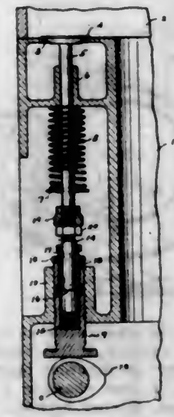
1. The step in the method of casting centrifugally in tilting molds, which consists in so timing the introduction of the charge with the movement of the mold to level position, that the longitudinal flow of substantially all of the molten metal is checked at its ultimate destination in the length of the casting.

1,620,832. INTERNAL-COMBUSTION ENGINE. FINLEY R. PORTER, New York, N. Y., assignor to Porter Engine Development, Inc., New York, N. Y., a Corporation of New York. Filed May 28, 1924. Serial No. 716,386. 15 Claims. (Cl. 123—190.)



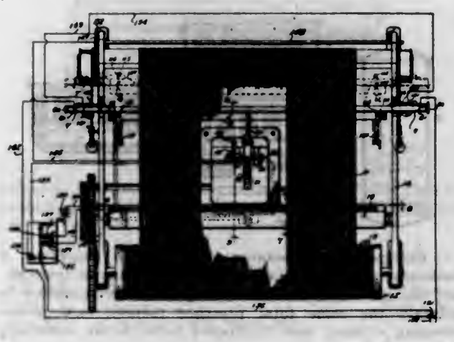
1. In an internal combustion engine, a cylinder port, a valve chest having inlet and exhaust ports, a valve for opening and closing said ports, and means to change the time of said inlet opening and exhaust closing, said means being controlled by varying throttle conditions.

1,620,833. COMBINATION LABEL. LOUIS REISS, Ryan, Iowa. Filed Dec. 7, 1925. Serial No. 73,772. 1 Claim. (Cl. 283—20.)



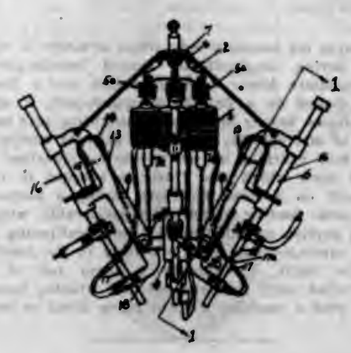
A combination label of the character described, comprising a sheet foldable into upper and lower parts of which the upper part has a margin projecting on two edges from the lower part, said margins and the said lower part having their back surfaces gummed, and the back of said upper part within said margins having a coating of duplicating pigment, said sheet being supplied with lines of perforations along their angle of folding and across said upper part between its main body and said margins for the purpose of separation of said main body by ripping along the perforated lines when desired.

1,620,834. WALL CONSTRUCTION. ELMER RHODES, Long Beach, Calif. Filed Mar. 22, 1926. Serial No. 96,498. 8 Claims. (Cl. 72—30.)



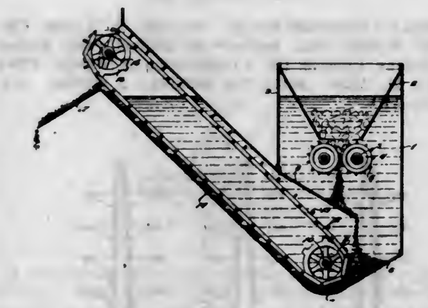
1. In a wall construction, the combination of two retaining walls disposed apart and composed of blocks laid in corresponding courses with the vertical joints of one course disposed at an intermediate point with respect to the vertical joints of the corresponding course in the other wall, and transverse bonding members connecting the retaining walls, each bonding member having one end secured in one of the retaining walls at the junction of a vertical joint with a horizontal joint and with its other end secured at a point in the opposite wall at an intermediate point between the vertical joints.

1,620,835. VALVE LIFTER. JOHN C. ROBERTS, Harrisburg, Tex. Filed June 1, 1926. Serial No. 112,828. 8 Claims. (Cl. 123—90.)



3. A valve lifter including a female member, a male member telescoping within said female member, a yieldable seat within the female member on which the male member is seated, the outer end of the male member being reduced forming an annular shoulder, a gland surrounding said male member and threaded into the female member and whose inner end opposes said shoulder, a lock nut threaded on to said gland and abutting the adjacent end of said female member and a detachable cap carried by the outer end of the male member.

1,620,836. ELECTRICAL STOP MECHANISM FOR LOOMS. FRANK F. SCHMIEGE, Appleton, Wis. Filed May 19, 1924. Serial No. 714,486. 5 Claims. (Cl. 139—341.)



1. In a power operated loom, a swinging slay, a shuttle race-way, shuttle boxes arranged at the end of said race-way, a control circuit, a switch arranged in each shuttle box and adapted to be opened when the shuttle moves out of the shuttle box, a coil arranged on the machine and connected to said circuit, a locking member adapted to engage the slay when said coil is deenergized, a clutch controlled lever, and a rack and pinion for controlling said lever, said rack and pinion being actuated by the movement of said locking member to an inoperative position.

1,620,837. ELECTRODE-HOLDING DEVICE. RUSSELL PLATO SCHWARTZ, Cincinnati, Ohio. Filed July 6, 1926. Serial No. 120,665. 9 Claims. (Cl. 176—115.)

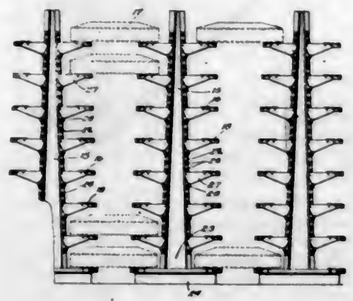
1. In combination with a holder, a plurality of sets of electrodes, said electrodes mounted so as to project rays of maximum intensity at acute angles to the vertical, and means of adjusting the electrode mountings so as to change the angles to the vertical of the rays projected from the electrodes.

1,620,838. METHOD OF AND APPARATUS FOR BREAKING COAL. PETER G. SEIGLE, Dunmore, and GEORGE EDGAR DEAN, Scranton, Pa. Filed Jan. 2, 1925. Serial No. 201. 4 Claims. (Cl. 83—52.)

1. Coal breaking apparatus comprising a tank, submerged breaking elements therein, a conveyer operating in the tank below the said breaking elements, and a retarding baffle plate arranged within the tank below the breaking elements and above the lower part of the conveyor.

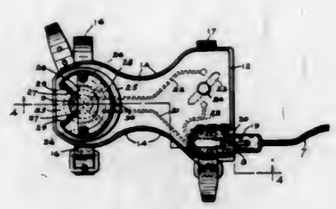
1,620,839. DUMP-CAR UNDERFRAME. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Apr. 12, 1926. Serial No. 101,361. 31 Claims. (Cl. 105—270.)

1. A car underframe comprising a one-piece casting in the form of a box girder forming a center sill and having integral upstanding elements on which a tilting car body may be mounted.



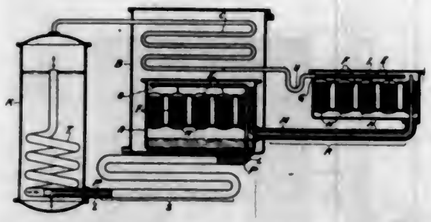
1,620,840. FLUE STOPPER. WINFIELD H. SOUTHARD, Presque Isle, Me. Filed June 16, 1926. Serial No. 116,485. 2 Claims. (Cl. 126—319.)

2. In a stopper of the class described, a cylinder having an internal circumferential rib intermediate its ends, an annular flange at its outer end and diagonally dis-



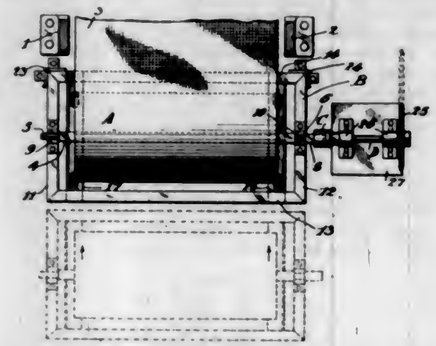
posed corrugations at its inner end, a cover disk having an inturned peripheral flange engaging over the flange of the cylinder, and a second disk positioned within the cylinder and held spaced from the cover disk by means of the said rib.

1,620,841. FENDER RACK. WALTER N. VANCE, Chicago Heights, Ill., assignor to Durand Steel Locker Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 20, 1920. Serial No. 367,563. 2 Claims. (Cl. 211—14.)



1. In a shelf or rack construction, the combination of uprights spaced apart, a cantilever arm extending from each upright so as to provide spaced horizontal, parallel, supports therefrom, each of said arms consisting of a metal member returned upon itself, a cross-support connected to the substantially extreme outer ends of said arms, a second cross-support extending between said arms at a point substantially midway between the ends of said arms and the point of attachment of said arms to said uprights, a shelf member having a downwardly bent flange underlying forward portions of said cantilever arms, the opposite end of said shelf member having a downwardly bent flange provided with a forward lip, which lip is adapted to underlie said second cross-support, thereby holding said shelf member firmly resting on said two cross-members and bridging the space between the two cantilever arms.

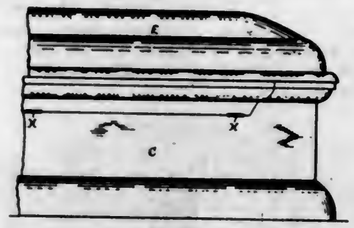
1,620,842. ELECTRIC HAND LANTERN. JERE VAN RENSSELAER, Jr., Council Bluffs, Iowa. Filed Apr. 13, 1922. Serial No. 552,343. 1 Claim. (Cl. 177—329.)



An electric hand lantern, comprising an electric lamp, a support member therefor, guard members positioned in said support member and surrounding said lamp, a removable deflector member, and means for tensioning said deflector member upon the guard members, including a fashioning of the deflector to engage the guard members, and a clasp for additionally holding said deflector in its tensioned position.

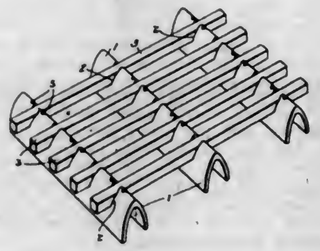
1,620,843. ABSORPTION REFRIGERATING APPARATUS. BALTHAR CARL VON PLATEN, Ystad, and CARL GEORG MUNTERS, Dalajarna, Sweden, assignors, by mesne assignments, to Electrolux Servel Corporation, a Corporation of Delaware. Filed Aug. 4, 1923, Serial No. 655,768, and in Sweden Aug. 18, 1922. 10 Claims. (Cl. 62—119.)

1. Refrigerating apparatus comprising a generator, a condenser, an evaporator, an absorber, means to interconnect the generator, condenser, evaporator and absorber to maintain the same total pressure therein, said means including a liquid seal interposed between the condenser and evaporator.



1,620,844. SPINDLE CARRIAGE AND CLUTCH. MAURICE WALKER, New York, N. Y. Filed Mar. 27, 1924. Serial No. 702,369. 1 Claim. (Cl. 242—55.)

Apparatus for handling long strips of fabric, a winding spindle having longitudinally spaced bearing-portions; an intermediate fabric winding portion and a free end portion shaped as a detachable clutch-part, a wheeled carriage-frame having bearings for mounting said bearing-portions of said spindle, said frame with its wheels maintaining said bearings at an unvarying elevation above the floor upon which said frame is adapted to run; a drive shaft on a level with and having a horizontally disengageable mating clutch part cooperably with said free end portion of said spindle; and positioning means for said carriage-frame fixed relatively to the position of said drive shaft, all whereby a heavy roll of fabric may be rolled easily into and out of a winding functional relation with a machine without being lifted or lowered.

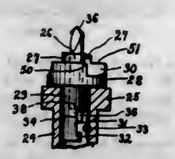


1,620,845. BURIAL CASKET. FRANK N. WATT, Richmond, Ind. Filed Apr. 12, 1926. Serial No. 101,358. 2 Claims. (Cl. 27—4.)

1. In combination with a burial casket having a hinged lid, a front consisting of a stationary portion and a hinged portion; a telescoping arm connected at its upper end to the lid, a link pivoted to the lower end of said arm, a shaft rotatably mounted to the inner side of the stationary part of the front, a crank extending at right angles from said shaft and pivoted to said link, a curved arm connected to said shaft and contacting with the hinged front but without direct at-

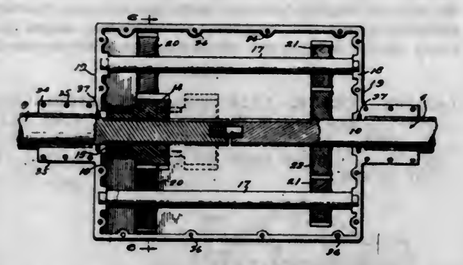
tachment thereto, and a cap secured to the inner face of the hinged front and surrounding a portion of said curved arm but without direct attachment thereto.

1,620,846. GRATING. ARTHUR E. WELLS, Toronto, Ontario, Canada. Filed Oct. 31, 1921. Serial No. 511,780. 2 Claims. (Cl. 189—82.)



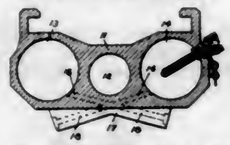
1. A plurality of horizontally arranged V-shaped angle bars (1) parallelly spaced and disposed with their apexes upward and each having a plurality of notches (2) with horizontal bottoms formed in the apex, a plurality of horizontally arranged cross bars (3) inserted in said notches and having flat bottom surfaces resting flatly on the horizontal bottoms of said notches, the upper surfaces of the latter bars being arranged in a common plane slightly below the uppermost edges of said V bars (1), said latter bars (3) being deformed laterally at (4) to engage the underside of the metal forming the apexes of the V bars.

1,620,847. JOINTER HEAD. VIRGIL P. WHISLER, Ottumwa, Iowa. Filed June 30, 1926. Serial No. 119,734. 5 Claims. (Cl. 144—230.)



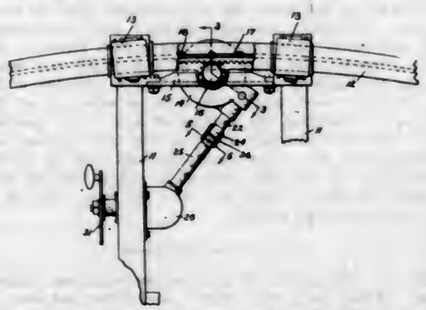
1. A jointer head, comprising a cylindrical member adapted to be mounted for rotation and formed with tangential slots opening through the periphery thereof, clamping plates and cutting blades mounted substantially parallel with each other in said slots, the cutting blades being provided with cutting edges projecting through the periphery of the head, said head being formed with registering holes and seats, the planes of which intersect said slots, said clamping plates and cutting blades being formed with openings registering with said holes and seats, the openings in the clamping plates being tapped, and screws mounted in said holes and extending through said openings into engagement with said seats.

1,620,848. DRILLING AND COUNTERSINKING TOOL. MORRIS B. WILDER, Omaha, Nebr. Filed Apr. 13, 1925. Serial No. 22,620. 1 Claim. (Cl. 77—66.)



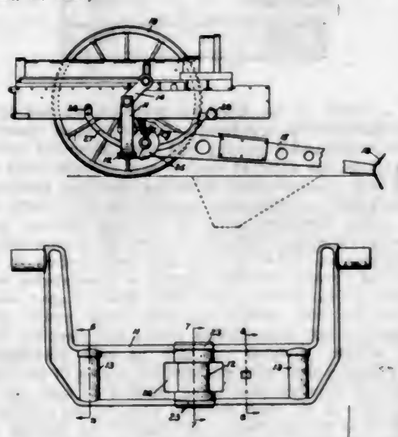
A drilling and countersinking tool for use with a chuck having a cross pin, comprising a countersinking member having a head and a shank on the inner end of the head for seating in a chuck, said head having counter-sinking projections on its outer end and provided with an axial opening extending inwardly through said projections, head and shank, said shank having a deep recess in one side to receive the cross pin of the chuck and intersecting the opening at its upper end to provide a flat face in the recess and a shoulder at the top of the flat face comprising the bottom of said axial opening, and a drill bit removably fitting in the axial opening and engaging said seat at its inner end, said drill bit having a projection at one side adapted to engage the flat face of said shoulder to hold the drill bit from turning in the countersinking member.

1,620,849. GEARING. JAMES TETTER WILLIAMS, Miami, Mo. Filed July 14, 1925. Serial No. 43,570. 1 Claim. (Cl. 74—58.)



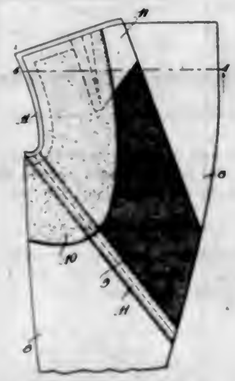
In a device of the character described, an automobile drive shaft divided into front and rear sections connected to the transmission gearing and the differential gearing respectively, the adjacent ends of said sections benig provided with longitudinally extending ribs and grooves, a longitudinally movable gear mounted on said shaft, said gear being provided with an opening having longitudinally extending ribs and grooves to permit relative longitudinal movement of said gear with respect to said shaft and prevent relative rotation, a transmission shaft mounted on each side of said drive shaft, a gear mounted on the rear section of said drive shaft, gears mounted on said transmission shafts and meshing therewith, a gear mounted on each of said transmission shafts in alinement with the forward section of said drive shaft, said movable gear being adapted to span the adjacent ends of the shaft sections when in one position to couple them to each other, and means for moving said movable gear into mesh with said last mentioned gears to connect the front section of said drive shaft to the rear section through said transmission shafts.

1,620,850. FORMATION OF PASSAGES BETWEEN CHAMBERS. HARRY C. ZIMMERMAN, Washington, D. C. Filed Sept. 11, 1924. Serial No. 737,174. 3 Claims. (Cl. 89—43.) (Granted under the act of Mar. 3, 1883, 22 Stat. L. 625.)



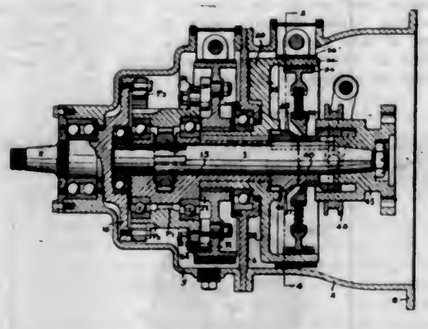
2. A member having a plurality of chambers, a block formed transversely thereon, and said member having a communicating passage between the chambers formed by intersecting bores originating in the block.

1,620,851. TRAVERSING GEAR FOR GUNS. HARRY C. ZIMMERMAN, Washington, D. C. Filed Sept. 11, 1924. Serial No. 737,175. 4 Claims. (Cl. 89—40.) (Granted under the act of Mar. 3, 1883, 22 Stat. L. 625.)



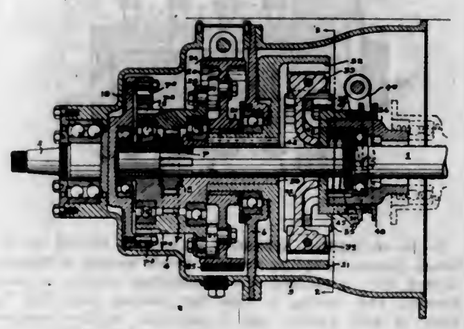
4. In a wheeled gun carriage, an axle, a rack secured thereto, a pair of trail members movably supported on the axle, a housing provided with lateral arms for attachment to the trail members, and actuating means enclosed in the housing for traversing the trail members.

1,620,852. CRANK AXLE FOR GUN CARRIAGES. HARRY C. ZIMMERMAN, Washington, D. C. Filed Sept. 16, 1924. Serial No. 738,072. 9 Claims. (Cl. 89—40.) (Granted under the act of Mar. 3, 1883, 22 Stat. L. 625.)



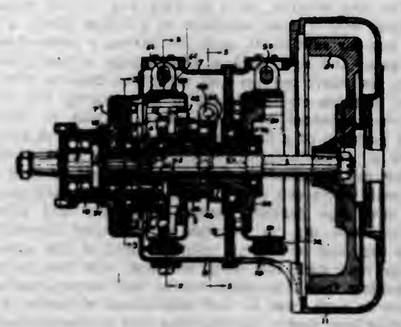
9. In combination with a pair of wheels, a crank axle on which the wheels are mounted, removable trail members connected to the axle, and means for locking the axle and trails together to hold the axle in position of angular adjustment.

1,620,853. GARMENT CONSTRUCTION. NICHOLAS ZUCK, Rochester, N. Y. Filed July 21, 1921. Serial No. 486,408. 1 Claim. (Cl. 2—276.)



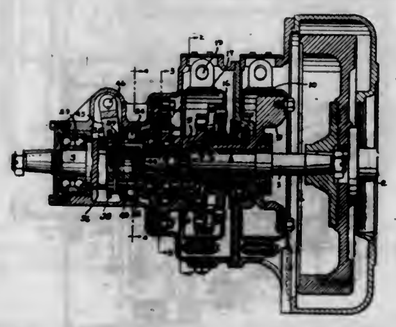
A laminated fabric structure including a thickness of haircloth, a strip of protective tape stitched to said laminated structure, said tape being located along the free edge of the haircloth and extending in opposite directions from said free edge and above the plane of the haircloth, and a cementitious substance on the under surface of the tape toward the haircloth acting to form a close bond with the tape and to prevent the ends of the hairs in the haircloth from protruding.

1,620,854. TRANSMISSION GEARING. CHARLES E. F. AHLM, Cleveland, Ohio, assignor to Automotive Patent Holding Company, Cleveland, Ohio, a Corporation of Delaware. Filed Dec. 30, 1924. Serial No. 758,940. 29 Claims. (Cl. 74—34.)



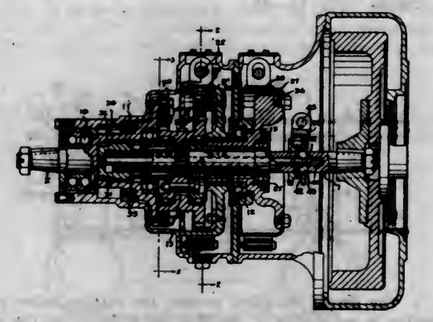
1. In a transmission gearing, in combination, a casing, a pair of members to be connected in different speed relations and carried by the casing, a rotatable and revoluble gear member in offset relation thereto surrounding one of said members and having a geared connection with both, a releasable connection between the gear member and casing for retarding the rotating movement of the gear member but permitting the revolving movement thereof for imparting a low speed from one of the first mentioned members to the other and means for holding the gear member against revolution but permitting it to rotate freely for a different speed.

1,620,855. TRANSMISSION GEARING. CHARLES E. F. AHLM, Cleveland, Ohio, assignor to Automotive Patent Holding Company, Cleveland, Ohio, a Corporation of Delaware. Filed Dec. 30, 1924. Serial No. 758,941. 5 Claims. (Cl. 74—34.)



1. In a gearing, in combination, a driving member having a pinion, a driven member, a composite gear in mesh with said pinion and surrounding one of said members, an eccentric bearing for said gear capable of independent rotation relative to the driving member and of being held against rotation, a driven member having a geared connection with said composite gear, means for preventing the rotation of said composite gear while permitting it to revolve upon the eccentric bearing when the bearing is free to rotate for transmiting one speed to the driven member, and means including an expanding friction clutch for holding the eccentric bearing for an additional speed.

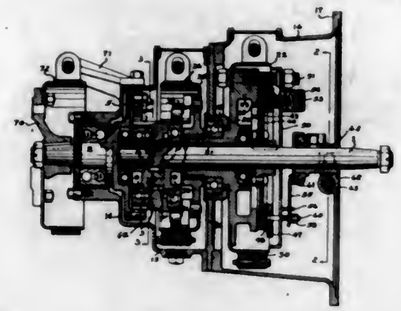
1,620,856. TRANSMISSION GEARING. CHARLES E. F. AHLM, Cleveland, Ohio, assignor to Automotive Patent Holding Company, Cleveland, Ohio, a Corporation of Delaware. Filed Dec. 30, 1924. Serial No. 758,942. 11 Claims. (Cl. 74—34.)



1. In a transmission gearing in combination a driving member, a gear rigid therewith, a rotatable and revoluble composite gear member having a plurality of sets of teeth rigid with each other, said gear member being in offset axial relation to the driving member and having one set of teeth in mesh with the gear thereof, a driven member and a gear rigid therewith meshing with another of said sets, means for retarding the rotating movement of the gear member but permitting a revolving movement thereof for imparting a low speed to the driven member, a bearing for said gear member independent of the driving member, adapted to rotate idly when said retarding means is operating and means for connecting said bearing to said retarding means whereby said bearing and said composite gear member rotate as a unit for securing another speed of the driven member.

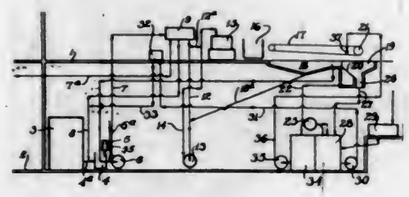
1,620,857. TRANSMISSION GEARING. CHARLES E. F. AHLM, Cleveland, Ohio, assignor to Automotive Patent Holding Company, Cleveland, Ohio, a Corporation of Delaware. Filed Dec. 30, 1924. Serial No. 758,943. 16 Claims. (Cl. 74—34.)

1. In a gearing, in combination, a driving member having a pinion, a composite gear member in mesh with said pinion, an eccentric bearing for said gear member capable of independent and synchronous rotation relative to the driving member and of being held stationary, a driven member having a geared connection with said composite gear, means for retarding the rotation of said composite gear while permitting it to revolve upon the eccentric bearing when the bearing is free to rotate for transmitting one speed to the driven member, means for holding the eccentric bearing against rotation for an additional speed and means for connecting the eccentric bearing directly to the driven member for effecting a third speed.



1,620,858. TRANSMISSION GEARING. CHARLES E. F. AHLM, Cleveland, Ohio, assignor to Automotive Patent Holding Company, Cleveland, Ohio, a Corporation of Delaware. Filed Dec. 30, 1924. Serial No. 758,944. 8 Claims. (Cl. 74—34.)

1. In a transmission gearing in combination, a shaft, a rotatable and revoluble hollow gear member in surrounding and off-set relation thereto and having a geared connection therewith, another shaft having a geared connection with said gear member, a brake and a gear on



the brake cooperating with the gear member for retarding the rotating movement of the gear member but permitting it to revolve for connecting the shafts at one speed, clutch members drivingly rigid with both the driving and driven members, and means for causing the members to cooperate for effecting direct drive.

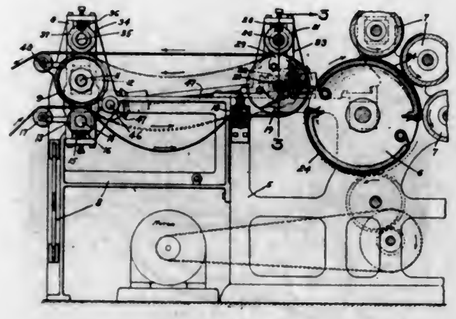
1,620,859. TRANSMISSION GEARING. CHARLES E. F. AHLM, Cleveland, Ohio, assignor to Automotive Patent Holding Company, Cleveland, Ohio, a Corporation of Delaware. Filed Dec. 31, 1924. Serial No. 759,045. 8 Claims. (Cl. 74—34.)

1. In a gearing, a pair of rotatable members, gears rigid with each of the members, a rotatable eccentric bearing journaled about one of the rotatable members, a composite gear member having mutually rigid separate gears each of which mesh with a respective first mentioned gear, the composite gear surrounding the bearing and being supported thereby, a member rigid with the bearing and having a plurality of friction surfaces, a member rigid with one of the first mentioned members and having cooperating friction surfaces one adjacent each of the first mentioned surfaces and means to cause such adjacent surfaces to engage to control the relative rotation of the bearing and last mentioned rotatable member.

1,620,860. PROCESS AND APPARATUS FOR MAKING PAPER OR THE LIKE. CARLTON H. ALLEN, Dayton, Ohio. Filed Jan. 11, 1926. Serial No. 80,585. 39 Claims. (Cl. 92—46.)

1. The herein described process for making paper consisting in automatically effecting and maintaining the consistency of certain stock ingredients, as the ground wood pulp, near its source of supply, in effecting continuous delivery of the stock so regulated to a common stream for mixing stock ingredients, and in maintaining a continuous flow of the mixed stock directly to the paper making machine.

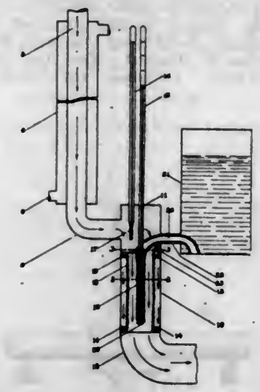
1,620,861. IGNITION APPARATUS. SAMUEL ALSOP, New York, N. Y. Filed Mar. 4, 1920. Serial No. 363,272. 8 Claims. (Cl. 175—183.)



1. In an ignition apparatus, a housing having an interior groove, a spring contact brush having a reflexed slotted foot, a binding screw extending outside of said housing and having a head for holding said foot in place in said groove, and a rotatable contact member co-operating with said brush within said housing.

1,620,862. PACKING BOX FOR SIPHON PIPES. CHARLES H. ATKINS, Palmer, Mass., assignor to Atkins and Company, Inc., Palmer, Mass., a Corporation of Massachusetts. Filed Nov. 28, 1925. Serial No. 71,969. 1 Claim. (Cl. 285—22.)

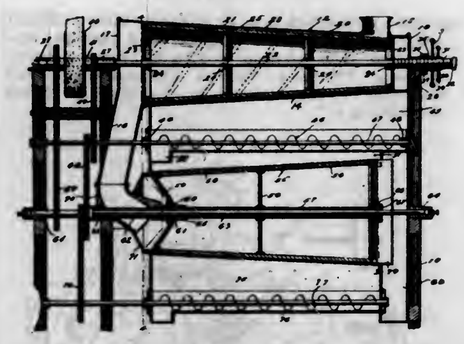
The combination, in a packing box of the class described, with a drum mounted on a hollow shaft, a bearing box for said shaft, said box having a screw-threaded flange at the outer end, a siphon pipe of less diameter than the shaft passage and extending through said passage, packing on said shaft in said bearing box, and a follower mounted on said pipe in position to compress said packing, of a case encircling said pipe and provided with a screw-threaded head to engage said flange, a screw cap mounted on the outer terminal of said case, through which cap said pipe extends, a follower mounted on said pipe partially within said case and partially within said cap, in position to be moved inwardly by said cap, and having an enlarged head at the outer end to prevent such end from entering said case, a spring extending from the inner end of said second-named follower in said case to said first-named follower in said bearing box, and a packing-ring and a washer mounted on said pipe between adjacent ends of said second-named follower and spring.



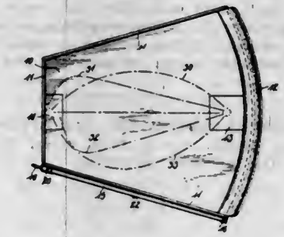
1,620,863. FEEDING ATTACHMENT FOR PRINTING PRESSES. DANIEL BELCHER, Minneapolis, Minn., assignor to Bemis Bro. Bag Co., Minneapolis, Minn., a Corporation of Missouri. Filed Apr. 16, 1924. Serial No. 706,917. 9 Claims. (Cl. 101—228.)

1. The combination with means for printing at intervals upon a continuous web, a feed cylinder and rolls cooperable therewith for continuously feeding respective runs of a web to and from the printing means, movably journaled synchronously driven gripper-rolls, cooperable with the printing means to intermittently feed the web

at a higher speed than said continuous web feeding means, during a printing operation, and means for checking the travel of the incoming run of the web.



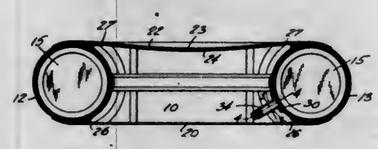
1,620,864. MEANS AND METHOD FOR ASCERTAINING, INCREASING, AND MAINTAINING THE EFFICIENCY OF WATER-GAS-GENERATING MACHINES. MATTHEW E. BENESH, Chicago, Ill. Filed July 8, 1921. Serial No. 483,122. 4 Claims. (Cl. 73—51.)



1. The method of determining the percentage by volume of undecomposed steam in gases from a water gas generator, which includes bringing said gases to a predetermined constant temperature above the dewpoint and reading a wet bulb thermometer inserted in the flow of said gases and calibrated at said temperature to read the moisture content directly in percentage by volume.

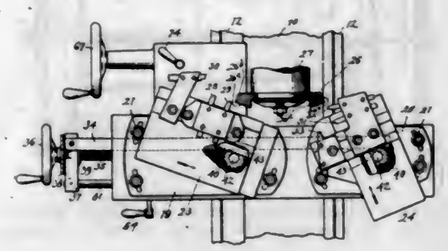
1,620,865. GRAIN CLEANING AND GRADING MACHINERY. PERRY D. BLACKDEN, Sacramento, Calif., assignor of one-half to Ora A. Morse, Sacramento, Calif. Filed Mar. 2, 1923. Serial No. 622,390. 5 Claims. (Cl. 209—287.)

2. In a machine of the character described, a revolving screen and means for rotating said screen including a hollow shaft and a universal coupling connecting said hollow shaft with one end of said revolving screen, and means for imparting a jogging motion to said screen including a shaft extending through said hollow shaft and carrying an eccentric, said screen having an eccentric strap cooperating with said eccentric.



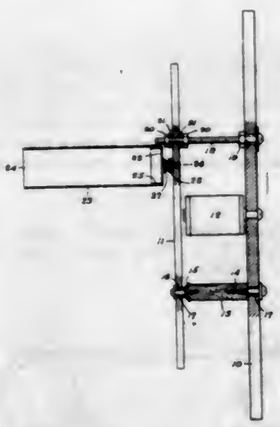
1,620,866. GAME. WILLIAM H. BOOTH, Kincardine, Ontario, Canada. Filed Oct. 28, 1924. Serial No. 746,329. 6 Claims. (Cl. 273—89.)

1. A playing board comprising a playing surface in the shape of a trapezoid having fence-like closures for its narrow parallel side and for its diverging sides, a deflector board bounding its longer parallel side, meeting said surface at an angle whereby to cause an article projecting along said surface to leave said surface upon engagement with said deflector board and to travel freely through the air.



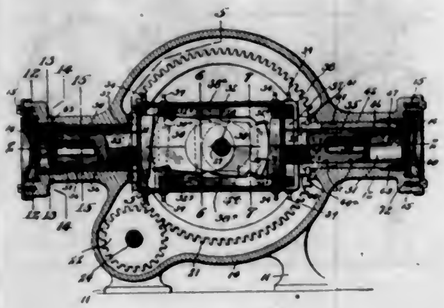
1,620,867. COLLAPSIBLE BOAT. JAMES F. BOYLE, Hammondsport, N. Y. Filed June 11, 1925. Serial No. 36,377. 14 Claims. (Cl. 9—2.)

3. An inflatable and collapsible boat including an inflatable tubular structure forming the sides of the boat, a bottom secured to said tubular structure, a seat made



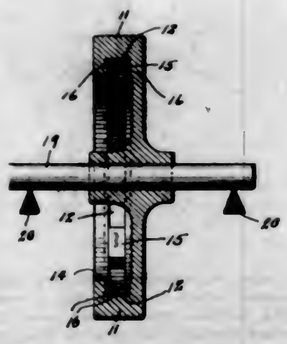
of flexible material and secured at its ends to the upper faces of the tubular structure, and reinforcing strips connecting the under face of said seat and said tubular structure.

1,620,868. CROSS-SLIDE CARRIAGE FOR TURNING AND FACING BLANKS. WILLIAM J. BURGER, East Cleveland, Ohio, assignor to The Warner and Swasey Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 7, 1922. Serial No. 550,256. 21 Claims. (Cl. 82—25.)



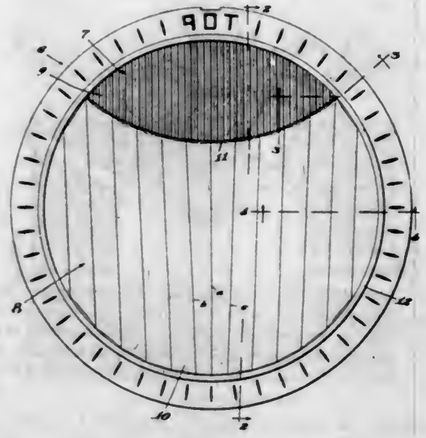
1. In a machine tool, a bed, front and rear tool slides for supporting cutting tools adapted for simultaneous operation on the same work-piece, a common supporting member on the bed for said slides, and means for simultaneously operating the slides comprising a rotary member, and a common sliding member on said supporting member between the rotary member and the slides.

1,620,869. SOUND RESONATOR. SEWALL CABOT, Brookline, Mass. Filed July 3, 1918, Serial No. 243,240. Renewed May 11, 1923. 18 Claims. (Cl. 181—.5.)



12. A musical sounder comprising a nodally mounted bar, and a stopped air resonator rigidly joined to and supported by said bar and physically isolated from all other structure.

1,620,870. COMPRESSOR. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey-Morse Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 9, 1924. Serial No. 685,164. 19 Claims. (Cl. 230—27.)

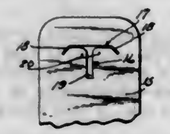


1. A compressor comprising a cylinder, a pair of telescopic pistons cooperatively arranged therein, means for positively actuating each of said pistons, and cup valves enclosing the ends of said pistons and having lost motion connection therewith for controlling the communication between said pistons and the pressure chamber of said cylinder.

1,620,871. FLYWHEEL AND METHOD OF BALANCING SAME. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey-Morse Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 15, 1924. Serial No. 743,811. 5 Claims. (Cl. 74—6.)

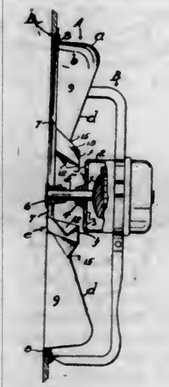
1. A balanced wheel comprising a flanged wheel provided in its inwardly disposed face with an undercut annular groove, and a plurality of blocks of metal adjustable in said groove to bring said wheel in balance, said blocks being adapted to be fixed in adjusted position by applying pressure thereto causing them to spread laterally in engagement with the walls of said groove.

1,620,872. HEADLIGHT LENS. JACK CATHRILL, West Hollywood, Calif. Filed Feb. 3, 1925. Serial No. 6,508. 2 Claims. (Cl. 240—48.4.)



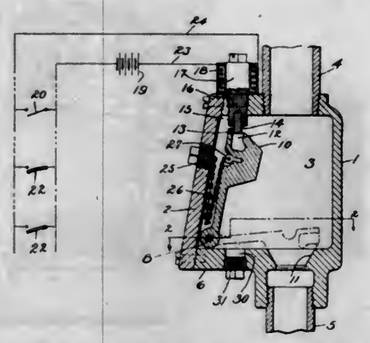
2. In a lens of the character described, a glass plate having upper and lower prismatic areas of different character, the juncture of the upper and lower areas extending on an inverted arc; the upper area consisting of a series of vertical parallel prisms of triangular cross section and the lower area including a central vertical prism and oppositely inclined prisms on each side of the vertical prism, the prisms of each series of the lower area being formed at an angle to the rear face of the lens.

1,620,873. PROCESS OF TREATING SULPHIDE ORES OF LEAD AND ZINC. NIELS C. CHRISTENSEN, Salt Lake City, Utah. Filed Dec. 26, 1923. Serial No. 682,832. 5 Claims. (Cl. 75—18.)



1. The process of treating ores and the like containing galena which consists in mixing said ores with a cold acid brine and thoroughly agitating said mixture so as to liberate the H_2S therefrom, and thereby dissolving the lead out of said ores.

1,620,874. FASTENING DEVICE. ORVEL JAY CRAIG, Minneapolis, Minn. Filed June 4, 1925. Serial No. 34,850. 2 Claims. (Cl. 40—26.)

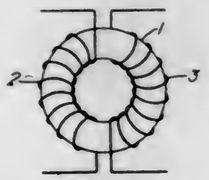


1. A tag having a T-shaped button-receiving passage, the stem of which is in the form of a slot adapted to receive the shank of a button, the length of said slot being such that when the tag is attached to a button and positioned with the shank of the button at the bottom of said slot, the upper edge of the button will be below the head of said passage, the head of the passage having at its ends downturned extensions.

1,620,875. FAN WHEEL. GAIL G. CURRIE, Los Angeles, Calif. Filed Mar. 7, 1921. Serial No. 450,289. 9 Claims. (Cl. 230—1.)

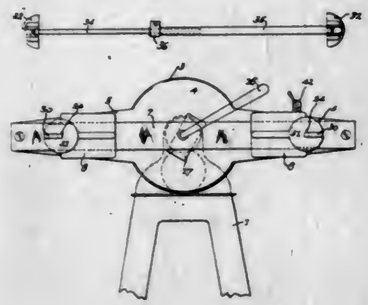
1. A fan wheel comprising fan blades the rear edges of which are in a common plane and the forward edges and front fans of which blades are formed with dentations; the forward faces of said blades being respectively formed with outer and inner loops and there being channels at the backs of the blades between the dentations and loops.

1,620,876. AUTOMATIC CUT-OFF VALVE. JOHN F. CURRIVAN, Cambridge, Mass. Filed Oct. 30, 1924. Serial No. 746,906. 9 Claims. (Cl. 137—162.)



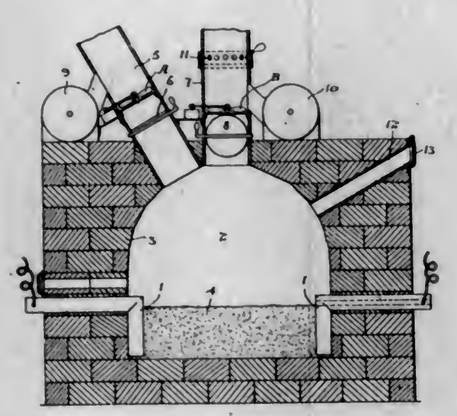
3. A safety valve for gas pipes including a valve casing, a valve therein biased towards closed position, an element readily deformable by heat normally maintaining said valve in open position, and electric heating means carried by but exterior to said casing for effecting destruction of said element whereby said valve may close.

1,620,877. COMPOSITION OF MATTER. ROBERTSON P. DRUMMOND, Los Angeles, Calif., assignor to Pacific Cast Iron Pipe & Foundry Company, Los Angeles, Calif., a Corporation of California. Filed Aug. 7, 1925. Serial No. 48,880. 3 Claims. (Cl. 75—1.)



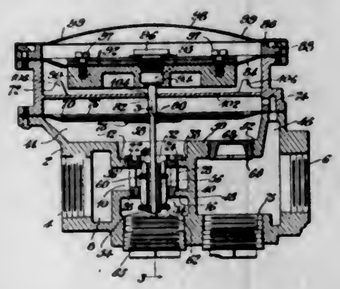
1. A new composition of matter, comprising in combination: iron, carbon 1.75 to 2%, manganese 6.25 to 8%, and silicon 1.50 to 2%.

1,620,878. ELECTROMAGNETIC DEVICE. GUSTAF W. ELMEN, Leonia, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 16, 1921. Serial No. 492,723. 9 Claims. (Cl. 175—356.)



1. An electromagnetic device having an electrical conductor disposed about a core comprising at least two elements of the magnetic group, one of which is nickle, and having a higher permeability than iron for magnetizing forces of the order of a few tenths of a C. G. S. unit or less.

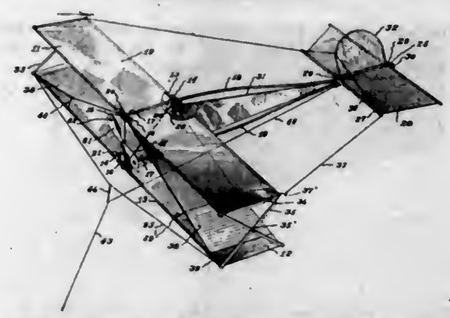
1,620,879. COIL WINDER. ALVIN J. FATHAUER, Cleveland, Ohio. Filed Feb. 28, 1925. Serial No. 12,202. 8 Claims. (Cl. 140—92.2.)



1. A coil-winder comprising a rotating member, a pair of carriers mounted thereon and movable radially toward and away from the axis of rotation, rigid abutments located on said carriers and adapted to receive a coil of wire, screw-threaded means for moving said carriers toward and from each other, and means additional to said screw-threaded means for displacing said carriers toward and from each other to release the coil therefrom without losing the screw-threaded adjustment.

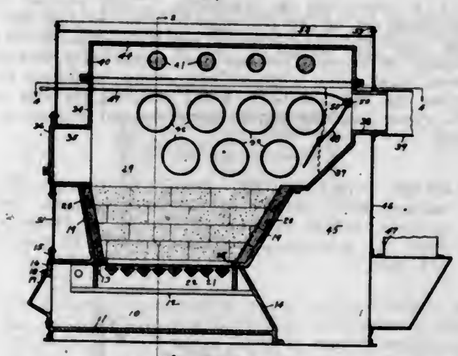
1,620,880. PROCESS OF PRODUCING METALLIC OXIDES. GEORGE B. FILMER, Toronto, Ontario, Canada, assignor of one-half to Walter James Harvey, Toronto, Ontario, Canada. Filed Dec. 12, 1924. Serial No. 755,487. 3 Claims. (Cl. 204—64.)

1. A process of producing metallic oxides, consisting in first providing a molten mass of substantially non-volatile material within a closed chamber, then introducing a metallic substance into the molten mass, then conducting the fume therefrom, and finally introducing oxygen into the fume.



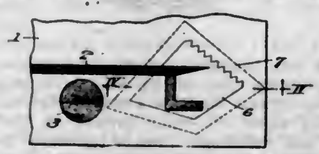
1,620,881. FLUID-CONTROLLING MECHANISM. JAMES POWELL FISHER, Bartlesville, Okla., assignor, by mesne assignments, to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 15, 1920. Serial No. 424,144. 27 Claims. (Cl. 50—10.)

14. In a fluid controlling device, a fluid conductor, a valve for controlling the passage of fluid through the conductor, and a pair of diaphragms operable to control the valve selectively and independently in accordance with varying conditions of flow of fluid through the conductor.



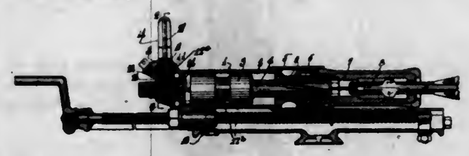
1,620,882. AEROPLANE KITE. EDISON A. FOUNDS, Philadelphia, Pa., assignor of one-fourth to Robert B. Grimes, Philadelphia, Pa. Filed Oct. 18, 1926. Serial No. 142,400. 13 Claims. (Cl. 244—23.)

1. In a knock-down aeroplane kite, the combination of a fuselage frame and superposed plane sections including a horizontal and vertical rudder therefor, of means detachably connecting said frame, plane sections and horizontal rudder, auxiliary wing surfaces positioned and secured between said plane sections, means for staggering said plane sections to impart an angle of incidence thereto relative to said fuselage frame and horizontal rudder, a



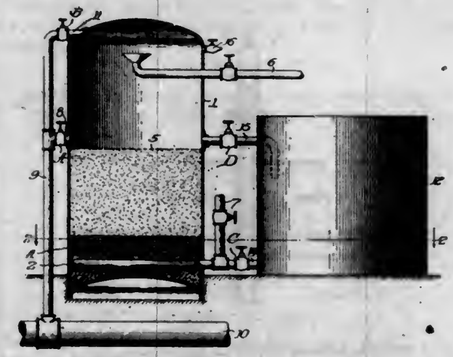
control cord having a multiple point suspension from said kite adapted to maintain true flight equilibrium, said auxiliary wing surfaces providing means for counteracting the pull of said cord on said plane sections and maintaining the rigidity thereof.

1,620,883. FURNACE. SHERMAN FRENCH, Portland, Oreg., assignor of one-fourth to Clara B. French, Portland, Oreg. Filed Jan. 17, 1925. Serial No. 3,076. 3 Claims. (Cl. 126—109.)



1. A furnace having, in combination, a combustion chamber; a casing around said combustion chamber; and horizontal flues passing through said combustion chamber and having one end opening into the space between said casing and combustion chamber and the other end passing through said casing and connecting with a warm air conducting pipe.

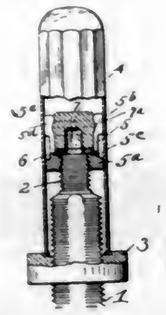
1,620,884. METHOD OF REPAIRING TORN FABRIC. GUSTAVO GALLOPIN, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 13, 1924. Serial No. 731,888. 2 Claims. (Cl. 41—35.)



1. A method of repairing mutilated drawing sheets of translucent material which includes the following steps: cutting out with a crooked cut a part of the sheet including the mutilated portion of the drawing, cutting out at the same time a piece of translucent material having an outline identical with that of the cut out portion of the drawing, inserting the piece of translucent material in place of such cut out portion of the drawing and securing said piece in position by applying to the back of said piece and said sheet a patch of translucent fabric with the intermediation of translucent adhesive, thereby leaving the front of the repaired sheet as a substantially smooth surface upon which may be redrawn cut out portions of the drawing.

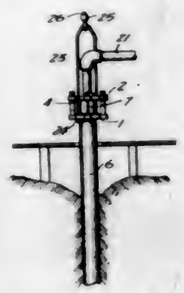
1,620,885. ROCK-DRILLING DEVICE. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Apr. 10, 1922. Serial No. 551,326. 13 Claims. (Cl. 121—6.)

8. A controlling valve mechanism for a rock drilling motor and drill steel cleansing means comprising a casing having fluid passages formed therein leading respectively to said motor and said steel cleansing means, a main controlling valve arranged within said casing and having means for controlling said passages, said valve having an operating handle, an auxiliary valve arranged coaxially within said main valve and movable axially relative thereto for controlling the passages leading to said cleansing means and having an operating handle pivoted on said main valve operating handle, said auxiliary valve being adapted to be opened when said handles are pressed together and automatically closed when said handles are released.



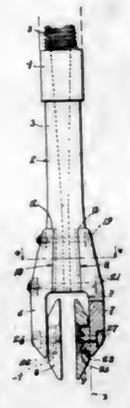
1,620,886. APPARATUS FOR REGENERATION OF ZEOLITES AND THE LIKE. WALTER H. GREEN, Chicago, Ill., assignor, by mesne assignments, to General Zeolite Company, Chicago, Ill., a Corporation of Illinois. Filed July 17, 1922. Serial No. 575,663. 8 Claims. (Cl. 210—24.)

1. In apparatus of the class described, in combination with a treating device comprising a casing and a pervious bed of treating material therein, a tank for regenerating solution having outlet communication with the casing below the bed of treating material, a discharge conduit having communication with the casing at a point adjacent the surface of the bed of treating material and at a point adjacent the top of the casing, a return con-



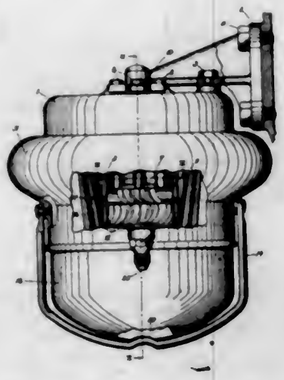
duit to the tank for draining the portion of the casing above the bed and valves for controlling communication between the tank and the casing and the discharge conduit and the casing.

1,620,887. DUST CAP. HENRY J. HANSEN, Cleveland, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 5, 1921. Serial No. 435,103. 3 Claims. (Cl. 152—12.)



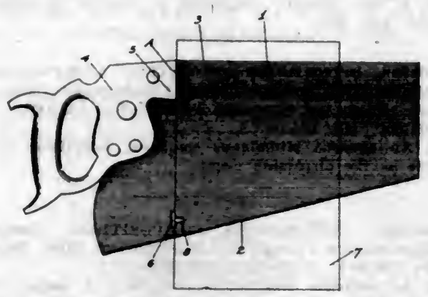
2. A dust cap comprising a shell which is open at one end, a member within said shell, a member having a central opening within said shell, which member slidably engages the inner wall of said shell, said member having expanding portions at one end thereof and at the opposite end being provided with a threaded opening by which it may be attached to a threaded stem, an expanding member within the opening of the first mentioned member and closely engaging the inner wall of said member, the said expanding member being formed with an annular ridge and the first mentioned member being formed with an annular groove upon the inner wall thereof, the said ridge and groove having a wedging engagement to expand the slidable member for the purpose described.

1,620,888. CASING HEAD. JAMES E. HITCHCOCK, Fullerton, Calif. Filed Aug. 20, 1923. Serial No. 658,333. 2 Claims. (Cl. 285—131.)



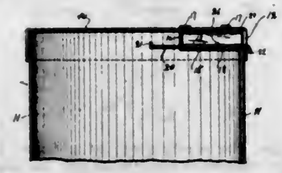
1. A casing head including: a cap; a ring applicable to a casing below a collar secured on an end of said casing; means applicable to said ring for engaging the lower end of said collar; upstanding links secured at their lower ends to said ring and projecting through slots in said cap; and wedges adapted to be driven through slots in the upper ends of said links for engaging the upper face of said cap to clamp said ring and said cap upon the lower and upper ends respectively of said collar; said links being formed in two sections, a threaded shank on one end of one section engaging a threaded socket in the adjoining end of the other section for extending or shortening the links to vary the clamping of the head to adapt the head to the collars of different lengths.

1,620,889. DISK BIT. WILLIAM S. HOLDAWAY, Los Angeles, Calif. Filed Apr. 6, 1925. Serial No. 20,995. 3 Claims. (Cl. 255—71.)



1. A rotary disk bit comprising a body recessed at its lower end on opposed sides to form upthrust bearing faces and bearing faces angularly disposed, legs shaped to fit such recesses and engage such bearing faces, there being a tongue and groove connection between the legs and body, means clamping the legs to the shank, and disk cutters carried by and between the legs.

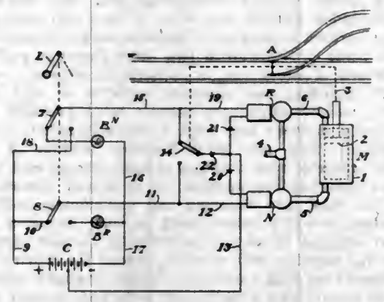
1,620,890. AIR CLEANER. ERNEST R. HUNTLEY, Milwaukee, Wis., assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Oct. 6, 1920. Serial No. 415,158. 11 Claims. (Cl. 183—77.)



1. In a gas washer, a cleaning liquid reservoir, an inverted rotatable cone having its apex dipping beneath the surface of said liquid, whereby a thin film of liquid is elevated along the outer surface of said cone by adhesion and centrifugal force, a rotatable hollow cone member, means for passing the liquid film from the outer surface of the first cone to the inner surface of said hollow cone, and means for passing the gas to be cleaned along the inner surface of said hollow cone.

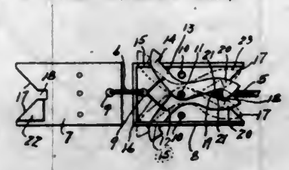
1,620,891. COMBINATION SAW AND SQUARE. ROBERT R. IRVINE, Mokelumne Hill, Calif. Filed July 6, 1926. Serial No. 120,668. 1 Claim. (Cl. 7—13.)

A combined saw and square comprising a toothed blade whose edge opposite the teeth is straight, a handle for the blade having a portion terminating at its inner end and adjacent said straight edge in an edge extending at right angles thereto; the blade between the said handle portion and the tooth edge having a sighting slot, one edge of which is alined with the handle-portion edge, and another slot substantially parallel to the straight edge of the blade being cut into said blade from the alined edge of the first-named slot.



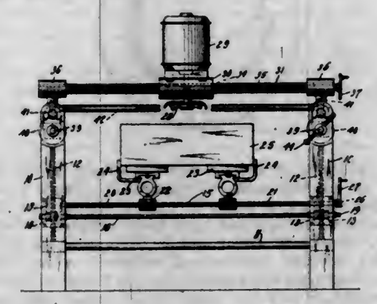
1,620,892. DISCHARGE MECHANISM FOR CONTAINERS. ANDRE JANER, Flushing, N. Y. Filed Feb. 16, 1926. Serial No. 88,520. 15 Claims. (Cl. 221—62.)

1. In combination with a closed container having an opening in its side, a pair of telescoped relatively slidable conduits, the outer of which is secured beneath the top of the container and the inner of which frictionally engages with the container top, both conduits having openings extending therethrough which are normally out of register but which are adapted to register when the inner conduit is withdrawn from the outer conduit a predetermined distance, said conduits forming a passage through which the contents of the container may be poured therefrom when the openings in said conduits are in register.



1,620,893. CONTROL AND INDICATION OF RAILWAY SWITCHES. ALLEN T. JOHNSTON, Dormont, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 14, 1926. Serial No. 135,380. 2 Claims. (Cl. 246—140.)

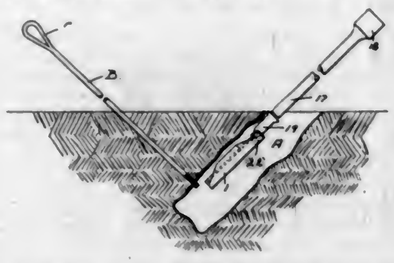
1. In combination, a railway switch having normal and reverse positions, means for operating said switch including a normal magnet and a reverse magnet, a contact actuated by said switch, a manually operable circuit controlling lever having normal and reverse positions, a normal indication lamp and a reverse indication lamp, a circuit for said normal magnet including a normal contact of said lever and a first asymmetric unit, a circuit for said reverse magnet including a reverse contact of said lever and a second asymmetric unit, a circuit for said normal lamp including a normal contact of said lever and a third asymmetric unit and said switch-actuated contact when in normal position, and a circuit



for said reverse lamp including a reverse contact of said lever and said third asymmetric unit and said switch-actuated contact when in reverse position.

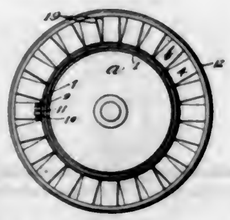
1,620,894. TIRE-CHAIN CATCH. WILLIAM HAROLD JONES, Utica, N. Y. Filed June 30, 1926. Serial No. 119,562. 1 Claim. (Cl. 24—230.)

A connecting device having a casing composed of first and second sections, a bolt connecting said sections, levers pivoted to said bolt, said casing having slots in its side walls, a spring adapted to urge one end of each of the said levers to project through the said slots, each lever having a hook at its other end, blocks positioned within the casing alongside the said hooks, inclined walls provided on said blocks; each block alongside the one hook being adapted to engage the other hook, whereby the said blocks are adapted to form a pocket with inclined walls at one end leading to said pocket, and said levers having substantially inclined and normally separated walls extending beyond the said inclined walls for the purpose specified.



1,620,895. PLANER. JOHN KANDERA, New York, N. Y. Filed Feb. 12, 1926. Serial No. 87,805. 1 Claim. (Cl. 144—2.)

A surface-treating machine comprising a frame, a screw-threaded spindle extending vertically on each end member of said frame, a block slidable on each spindle, a



worm gear rotatably mounted on each block provided with a screw-threaded bore, the threads of each bore being in mesh with the respective spindle, a horizontally extending guide member connecting said two blocks, a screw-threaded spindle journaled in said two blocks extending parallel to said guide member, said last-mentioned spindle being provided with two screw-threaded portions, the threads of which run in opposite directions, a work-support including two elements movable on said guide member, each work-support element being provided with a clamping member and with a screw-threaded bore in engagement with one screw-threaded portion of said spindle, whereby upon rotation of said spindle said work-support elements are adapted to be moved toward and from the work into clamping and unclamping positions, a carriage movable transversely on said frame, a tool-support adapted to move longitudinally on said carriage, means for shifting said carriage, means for moving said tool-support on said carriage, a shaft rotatably mounted in said blocks, and a worm on each end of said shaft in engagement with the worm gear on the respective block, whereby upon rotating said shaft said work-support is raised or lowered in relation to said tool-support.

1,620,896. GROUND ANCHOR. JAMES B. KEARNEY, Kansas City, Mo. Filed Apr. 24, 1922. Serial No. 556,276. 8 Claims. (Cl. 189—90.)

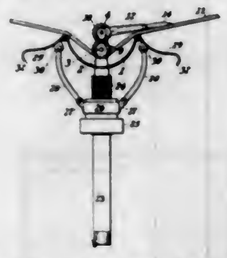
1. A ground anchor having a box-like projection extending from its upper side, and which is open at one end, and yielding guy rod attaching means housed within said box-like extension.

1,620,897. WHEEL. BERNARD J. KEELAN, Los Angeles, Calif. Filed Dec. 8, 1925. Serial No. 74,016. 2 Claims. (Cl. 152—8.)

2. In a device of the character disclosed, a tire comprising an annular series of segmental springs, a tread upon said springs, a series of chains within said tread, said chains being provided with loops adapted to extend inwardly from said tread and be received between the segmental springs, and means adapted to be passed through said loops for maintaining the tread to said segmental springs; said last named means comprising cables received within such segmental springs, and further means included between the chain, tread and outer surface of the segmental springs for interconnecting said segmental springs.

1,620,898. FOOD PRODUCT. ALBERT E. KIDD, Jr., Chicago, Ill. Filed Mar. 31, 1926. Serial No. 98,922. 3 Claims. (Cl. 99—11.)

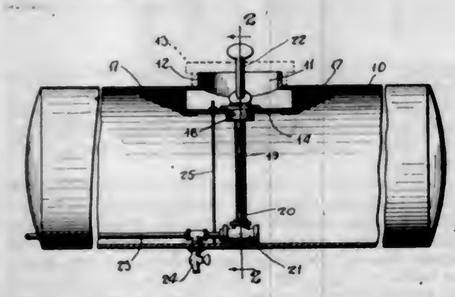
1. A food product comprising a mixture of peanut butter and milk.



1,620,899. BITUMINOUS COMPOSITION AND PROCESS OF MAKING SAME. LESTER KIRSCHBRAUN, Chicago, Ill. Filed Apr. 23, 1921. Serial No. 463,945. 15 Claims. (Cl. 134—1.)

3. An aqueous bituminous emulsion, comprising bentonite as the dispersing agent.

1,620,900. BITUMINOUS COMPOSITION. LESTER KIRSCHBRAUN, Chicago, Ill. Filed Apr. 25, 1924. Serial No. 708,887. 5 Claims. (Cl. 106—31.)

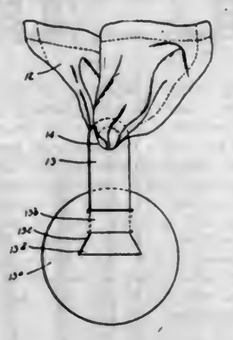


1. An infusible composition comprising a major portion of a normally fusible bitumen pitch type base, and a minor portion of an emulsifying agent having substantially the functions of bentonite, said composition possessing a gel or honeycomb-like structure of such stability as to withstand flow under heat substantially above the melting point of the base.

1,620,901. RAZOR. WILLIAM KITZUL, Hamtramck, Mich. Filed Aug. 18, 1926. Serial No. 129,920. 5 Claims. (Cl. 30—12.)

1. In a razor, the combination of a frame having end plates integral therewith and a handle secured thereto, rollers mounted between said end plates, supporting arms extending from one of said rollers, a blade mounted between the outer ends of said arms, and lateral guides pivotally mounted one on each side of said frame, each guide being adapted to bear against said blade in proximity to one of its lateral edges.

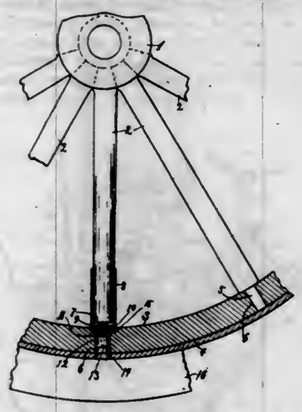
1,620,902. GASOLINE-TANK LOCK. ADAM KNITTEL, Tyner, Tenn. Filed June 16, 1926. Serial No. 116,481. 1 Claim. (Cl. 251—7.)



In combination, a gasoline tank, a draw-off valve located wholly within the tank, said tank having a filling opening at its top, a plate suspended beneath said filling opening, a lock carried by the plate and having a rotary part, a flexible shaft connecting said rotary part and valve to actuate the latter upon actuation of the lock, a feed pipe extending from said valve and lying partly within said tank, and a drain cock carried by the feed pipe and projecting through the bottom of the tank.

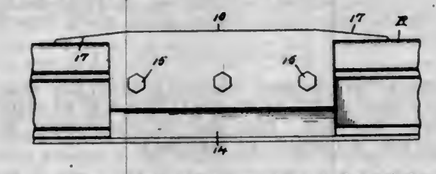
1,620,903. STEEL-WOOL HOLDER. BEULAH G. LANCE, Fulton, Calif. Filed Feb. 5, 1923. Serial No. 617,021. 3 Claims. (Cl. 15—209.)

1. A holder of the kind described, comprising a body having its lower face concaved, a spring clamping member straddling said body and provided at each end with an inwardly directed hook for clamping cleansing material against the concave face of said body, said body being provided with spaced slotted openings therethrough, and an auxiliary clamping member of substantially inverted U-shape having its legs passed through the slots of said body, and provided with hooked ends for clamping the cleaning material against said body.



1,620,904. POCKET ORNAMENT. BURNET B. LEWIS, Indianapolis, Ind., and LEO M. LEVY, New York, N. Y., assignors to Lewis Novelty Manufacturing Company, Indianapolis, Ind., a Corporation. Filed Aug. 26, 1926. Serial No. 131,666. 3 Claims. (Cl. 24—8.)

1. In an article of the character described, a rectangular handkerchief and a retaining anchor therefor comprising two members adjustable with respect to each other, one of said members having an opening therein, said members consisting of relatively flat and stiff material, whereby said handkerchief may be inserted in said opening and retained by said anchor in adjusted position with respect to the bottom thereof.



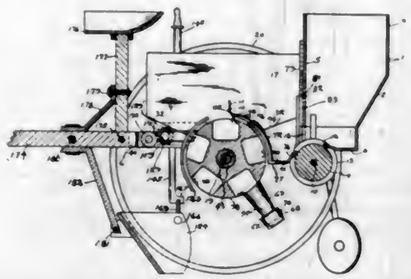
1,620,905. ADJUSTABLE SPOKE. EINAR H. MADSEN, Choklo, Minn. Filed Feb. 2, 1925. Serial No. 6,473. 1 Claim. (Cl. 301—60.)

In a vehicle wheel, the combination of a felly having radial bores for its spokes and wooden spokes, said bores being of larger diameter in their inner than in their outer portions, so as to form an internal shoulder in the bore, a metallic thimble slidable on the outer end portion of each spoke and having its bottom end resting against the internal shoulder and its bottom provided with a central threaded hole, and a screw in each of said threaded holes and bearing with its end against the end of the

spoke in the thimble and having its outer end extending into the smaller portion of the bore and there adapted to be turned by a suitable tool.

1,620,906. RAIL-REPAIRING DEVICE. JOSEPH A. MAHER, Stockton, Ill. Filed May 26, 1926. Serial No. 111,835. 3 Claims. (Cl. 238—220.)

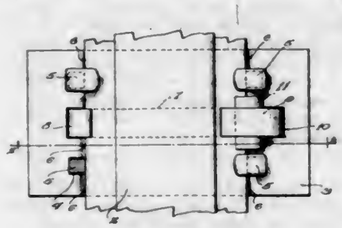
1. A rail repairing device comprising a channeled member adapted to engage over the head of a rail, a rail head engaging flange extending inwardly along one side edge of said member to engage beneath one side of the rail head, a locking block slidable longitudinally of the rail and engageable beneath the opposite side of the rail head and means to detachably connect the block and the channeled member.



1,620,907. PLANTER AND FERTILIZER-DISTRIBUTING DEVICE. GEORGE MARLSDALE, Cincinnati, Ohio. Filed Sept. 10, 1924. Serial No. 736,980. 21 Claims. (Cl. 221—118.)

13. A potato planter comprising a frame, a rotatable drum having equi-distant spaced apart pockets therein and having outwardly tapering concave ridges alternating intermediate said pockets, and having perforations in the walls of each of said pockets, a shank adapted to be secured in each of said perforations, respectively, a carrier integral with said shank and means for supplying potatoes to said carrier comprising a feed wheel fixed to said rear driving shaft and extending into said aperture, and said carrier adapted to deposit said potatoes in said pockets, substantially as and for the purposes specified.

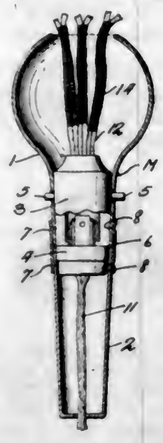
18. A potato planter comprising a frame, a main driving shaft mounted on said frame, a rotatable drum mounted on said shaft and having spaced apart pockets therein, a shank adapted to be secured adjacent each of said pockets, respectively, a carrier integral with said shank and means for supplying potatoes to said carrier comprising a feed wheel fixed to said rear driving shaft and said carrier adapted to deposit said potatoes in said pockets, substantially as and for the purposes specified.



21. A potato planter comprising a frame, a main driving shaft, a rear driving shaft mounted on said frame and

having gear connection with said main driving shaft, a hopper mounted on said frame and having an aperture therein, a rotatable drum mounted on said shaft and having equi-distant spaced apart pockets therein, a shank adapted to be secured adjacent each of said pockets, respectively, a carrier integral with said shank and means for supplying potatoes to said carrier comprising a feed wheel fixed to said rear driving shaft and extending into said aperture, a bowl adapted to receive potatoes from

said feed wheel, said carrier adapted to receive the potatoes from said bowl and deposit them in said pockets, and a curved plate fixed adjacent the outer periphery of said drum and extending part way therearound and adapted to retain said potatoes in said pockets until said pockets, respectively, are positioned below the lower end of said plate, whereby said potatoes are distributed in equi-distant spaced apart relation on the ground beneath said planter.

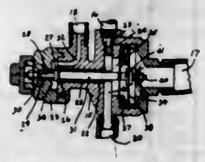


1,620,908. TIE PLATE. CARLTON T. MATTHEWS, Green Bay, Wis., assignor of one-half to Harold K. Matthews, Green Bay, Wis. Filed May 29, 1926. Serial No. 112,389. 6 Claims. (Cl. 238—304.)

1. A tie plate having a slot formed therein and adapted to be secured upon a tie in position to extend beneath a rail, a rail anchor adapted to engage the base of a rail with a portion extending beneath the base of the rail and fitted into the slot of said plate to hold the rail against creeping, and a wedge to hold said anchor in engagement with the rail extending longitudinally of the rail when in place, said plate being formed with openings spaced from opposite sides of the slot and adapted to receive fasteners to secure the plate upon a tie, the fasteners when in place positioned to engage the ends of the wedge and prevent withdrawal of the wedge.

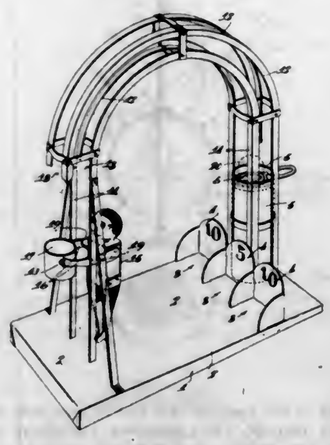
1,620,909. ELECTRICAL FIXTURE. MAYER K. MAXWELL, Butte, Mont. Filed Nov. 12, 1924. Serial No. 749,475. 1 Claim. (Cl. 200—168.)

A device of the class described comprising a body consisting of separable sections, an electric switch carried by one of the sections, means carried by the second section for connecting the switch with a source of electrical energy, and a clamping band disposed around the meeting end portions of the sections of the body for holding the same in assembled relation, the adjacent end portions of



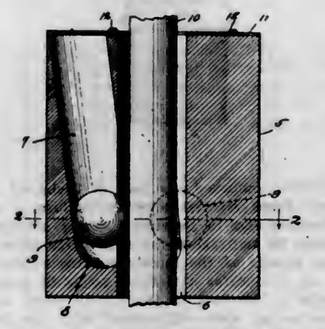
the sections of the body being provided with channels therearound, said clamping band being provided with ribs seating within said channels.

1,620,910. EXERCISING DEVICE. HARRY E. MINNICH, Three Oaks, Mich. Filed Feb. 15, 1923. Serial No. 619,118. 1 Claim. (Cl. 272—82.)



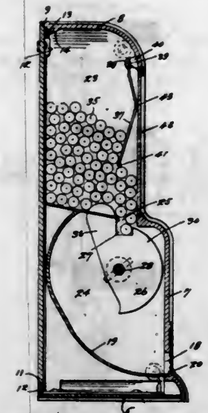
An exercising device comprising an oblong frame, inwardly extending elastic members carried by the ends of the frame and extending towards each other and anchored to the ends of the frame, slidable grip members slidably mounted on the opposite sides of the frame, said grip members comprising tubular members formed from a plurality of convolutions, the outer convolution being connected together and provided with a plurality of eyes formed by convolutions, elastic members having their inner ends anchored to said eyes, the inner ends of said tubular members terminating in inwardly extending axially alined members, and hand grips into which the axially alined members extend.

1,620,911. FLUID-OPERABLE LUBRICATOR AND FEEDER FOR ENGINES. FRED K. MURPHY and RAY W. RETTERER, Indianapolis, Ind. Filed July 6, 1925. Serial No. 41,771. 3 Claims. (Cl. 184—55.)



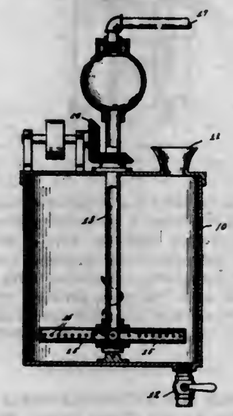
3. In a lubricating system for fluid operable engines, the combination with a source of high pressure fluid and a source of lower pressure fluid, of a pressure lubricator including a reciprocating plunger, a fluid operable turbine therefor, a crank and eccentric connection between said turbine and plunger, and a distributor connected to the lubricator and the high pressure fluid source including means differentially subjected to both fluid pressure sources.

1,620,912. ANIMATED-FIGURE SCORING GAME. HARRY A. OKEL, Wheeling, W. Va. Filed Sept. 3, 1926. Serial No. 133,443. 6 Claims. (Cl. 273—119.)



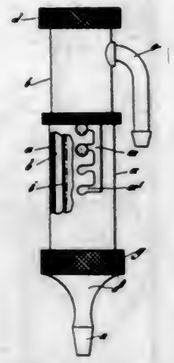
1. A device of the class described comprising a projectile, an acrobatic figure, means for rotatably mounting the figure, an impelling gun, and an upwardly and downwardly arched trackway for guiding the projectile impelled from the gun into contact with the figure to cause it to rotate about a horizontal axis.

1,620,913. ANTISLIP DRILL-ROD DEVICE. LEWIS ORWIG, St. Louis, Mich. Filed July 6, 1925. Serial No. 41,693. 1 Claim. (Cl. 24—144.)



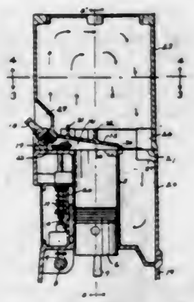
In a device of the character described, a body portion having a central bore extending therethrough, said body portion having a plurality of bores extending at oblique angles with respect to the outer wall of the body portion, the last mentioned bores communicating with the first mentioned bore, said last mentioned bores having their inner end walls curved and spaced from the outer end of the body portion to provide curved supporting surfaces, a plurality of balls disposed within the last mentioned bores and adapted to normally rest on the inner end walls of the bores, said balls adapted to grip a rod positioned within the central bore, and a removable cover plate positioned over the body portion and adapted to close the upper ends of the angularly disposed bores.

1,620,914. VENDING MACHINE. CLAUDE E. PARKER, Mountain View, Calif., assignor to Parker Pencil Company, Inc., Los Angeles, Calif., a Corporation of California. Filed Apr. 16, 1925. Serial No. 23,621. 2 Claims. (Cl. 211—8.)



1. A pencil vending machine having a magazine formed with an inclined bottom having an outlet, a delivery mechanism regulating the outlet and means for continuously grouping a series of pencils in vertical alinement with the delivery mechanism and for holding the other pencils with respect thereto so as to provide a relatively constant uninterrupted source of supply for which pencils will be fed automatically into the delivery mechanism, said grouping means comprising a substantially U-shaped stay formed of a single length of wire secured to the front wall of the magazine and including a body portion directed downwardly and inwardly so that the lower horizontal portion of the stay is disposed in spaced relation to said front wall and at a point above and in spaced relation to the intake end of the delivery mechanism, so that a part of the merchandise is at one side of the stay and a part at the other side thereof.

1,620,915. GYPSUM PRODUCT AND METHOD OF PRODUCING THE SAME. LAYTON M. PARKHURST, Indianapolis, Ind., assignor, by mesne assignments, to Federal Gypsum Products Company, Chicago, Ill., a Corporation of Delaware. Filed May 6, 1922. Serial No. 559,113. 13 Claims. (Cl. 106—34.)



1. Process of making gypsum products which comprises preparing a mortar by mixing calcined gypsum with water and carbon dioxide.

1,620,916. MILKING MACHINE. ROBERT CHARLES PESSELL, Bath, England. Filed July 17, 1926, Serial No. 123,144, and in Great Britain Apr. 25, 1925. 2 Claims. (Cl. 31—85.)

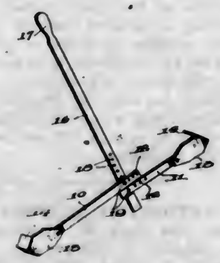
1. In milking apparatus, a teat cup comprising a casing composed of a pair of telescopically connected sleeves, means for securing said sleeves in different telescopically adjusted positions with respect to one another, a clamp nut threaded on the outer end of each of said sleeves, and an elastic liner within said casing detachably connected at its ends with the outer ends of said sleeves, respectively, by said clamp nuts.

1,620,917. INTERNAL-COMBUSTION ENGINE. CHARLES W. PENDOCK, West Allis, Wis., assignor to Le Roi Company, West Allis, Wis. Filed May 24, 1923. Serial No. 641,146. 19 Claims. (Cl. 123—173.)

1. The combination with an evaporation-cooled internal combustion engine having a cylinder and a jacket, of a reservoir unit provided above the normal level of coolant with an opening affording free communication with the atmosphere and, removably connected with said jacket in communication with the space between the jacket and cylinder, and a removable cylinder head connected with said reservoir unit for attachment and removal therewith.

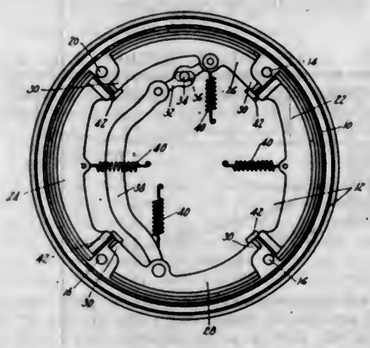
1,620,918. GUARD FOR REELS. ANTON J. PLOTZ, Chicago, Ill. Filed July 6, 1925. Serial No. 41,587. 7 Claims. (Cl. 242—157.)

1. The combination with a hanger support having inwardly bent terminals, of a reel comprising a central portion with flanged ends and rotatably supported on said terminals, and a guard for said reel, said guard comprising a pair of arcuate end members, said arcuate end members lying in the plane of said reel flanged ends and being supported thereon, cross members connecting said end members, and means connected with said arcuate members for retaining said guard in said hanger support.



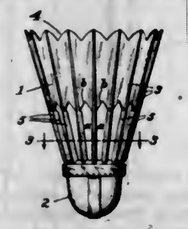
1,620,919. CARRIER FOR PAILS AND THE LIKE. GEORGE POLHAMUS, Toledo, Ohio. Filed June 23, 1926. Serial No. 117,906. 1 Claim. (Cl. 224—45.)

A pail carrier composed of a pair of U-shaped members having their bases secured together to form a seat for the pail bottom and to provide a series of legs which latter engage the pail sides, the upper free ends of each of the legs of one of the members being extended outwardly at an incline for a distance so as to have a relatively divergent relationship thereby to effect automatic outward spreading upon engagement with the bottom of a pail in applying the device to the pail, and a carrying bail secured at its ends to the free extremities of the inclined portions of the legs of said members whereby upon lifting of the bail, the inclined portions will be moved inwardly so that the inner ends thereof fulcrum against the top of the pail thereby to firmly grip the latter.



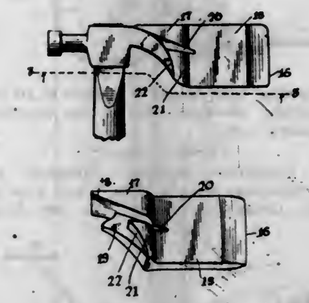
1,620,920. IMPLEMENT FOR RESHAPING DISTORTED ELEVATOR BUCKETS. CHARLES FRANCIS PORTER, Flat Rock, Ind. Filed Jan. 23, 1925. Serial No. 4,289. 2 Claims. (Cl. 81—15.)

1. An implement of the class described including a pair of thrust bars movable approximately in relatively opposite directions, an actuating lever operatively connected with said thrust bars, and a work-engaging element carried by one end of each thrust bar and consisting of a



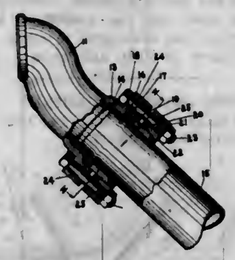
body having a right-angular head adapted to engage either the inner or the outer faces of diagonally opposite corners of an elevator bucket.

1,620,921. BRAKE. ROY S. SANFORD, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 7, 1926. Serial No. 100,287. 18 Claims. (Cl. 188—78.)



1. A brake comprising, in combination, a drum, a pair of servo shoes engageable with opposite sides of the drum, and an additional plurality of shoes, part forced against the drum by one servo shoe and part by the other and anchoring at opposite ends when the drum is turning in opposite directions.

1,620,922. SHUTTLE FOR BADMINTON AND THE LIKE. ADDISON T. SAUNDERS, Akron, Ohio, assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed July 1, 1926. Serial No. 119,884. 9 Claims. (Cl. 273—106.)

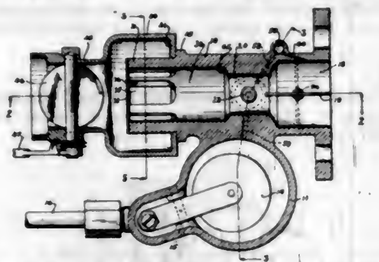


2. A shuttle for the game of badminton and the like comprising a head and a featherless vane or tail member attached thereto of cone-like form and adapted to substitute the usual feathers and to extend away from the head to the same extent as said usual feathers, said vane having spaced stem portions at its end adjacent the head, and the vane surface being continuous at the other end.

1,620,923. TOOL ATTACHMENT FOR HAMMERS. LESTER W. SHAVER, San Diego, Calif. Filed Jan. 5, 1926. Serial No. 79,409. 2 Claims. (Cl. 7—8.)

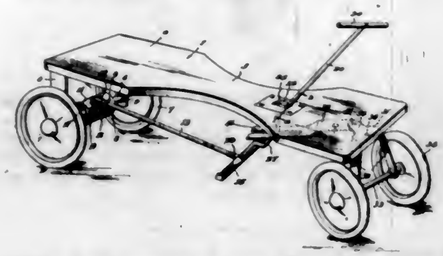
1. A tool attachment for claw hammers, having means adapted for engagement with the curved claws of a hammer, and means adapted for engagement with the straight claws of a hammer, both of said means being operable with the respective claw to secure the attachment in operative position on the hammer.

1,620,924. COUPLING FOR PIPES. LYLE K. SNELL, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 25, 1920. Serial No. 419,329. 2 Claims. (Cl. 285—136.)



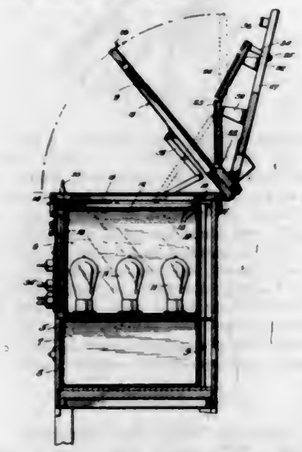
1. In a device of the class described, a pipe having a counterbore at one end thereof, a second pipe of substantially uniform diameter telescoping within said first pipe and having a bearing therewith beyond said counterbore, an annular rib formed on said second pipe and spaced from the end thereof, a packing ring fitting in said counterbore and adapted to be engaged by said rib when said pipes are drawn together and means including a holding ring slidably mounted on said second pipe engaging said rib and fitting in said counterbore for drawing said pipes together and radially supporting said second pipe within the counterbore, said holding ring being slipped longitudinally upon the second pipe past said annular rib.

1,620,925. CARBURETOR. ROY MORTIMER TANGYE, Denver, Colo. Filed Dec. 9, 1924. Serial No. 754,789. 4 Claims. (Cl. 261—79.)



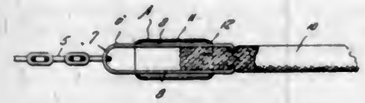
1. A carburetor comprising a casing having a float chamber and having a transverse member at one side

thereof, said transverse member having an axial bore therethrough, one end of said transverse member com-



prising a tubular body having a closure at its outer end and tangentially arranged slots in the peripheral wall of said tubular body.

1,620,926. COASTER WAGON. HERBERT A. TRULLINGER, Clackamas County, Oreg. Filed June 25, 1926. Serial No. 118,549. 4 Claims. (Cl. 208—35.)



1. A wagon comprising a body, propelling and steering wheels thereon, a rocking element, an operating lever pivotally mounted in the rocking element and having a crank portion, connecting means between the crank portion of the lever and the steering wheels, connecting means between the said lever and the propelling wheels, and a foot bar carried by the said lever to admit of the latter being operated both by foot and hand.

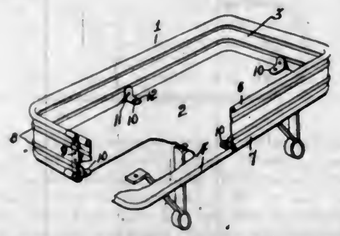
1,620,927. PHOTO-PRINTING CABINET. JOHN USNIK, Los Angeles, Calif. Filed May 16, 1925. Serial No. 30,816. 1 Claim. (Cl. 95—73.)

A photographic printing cabinet including a body portion, said body portion being divided into an upper lamp chamber and a lower compartment, lamps in the lamp compartment, a pair of contact members extending upwardly from the body portion, a master switch, wires for providing circuits between the contact points, master switch and lamps, a movable frame for supporting articles to be printed, mounted at the upper portion of the body portion and having an opening through which the contact points extend, backing members adapted to engage an article supported by the frame, to engage the articles and hold them to the frame, a pivoted arm for engaging the backing members to hold the backing members tightly against the frame, and a contact member carried by the arm and adapted to engage the contact points to complete circuits to the lamps.

1,620,928. CLOTHESLINE CONNECTION. SAMUEL J. WALASCHEK, New York, N. Y. Filed Dec. 15, 1926. Serial No. 154,968. 2 Claims. (Cl. 24—123.)

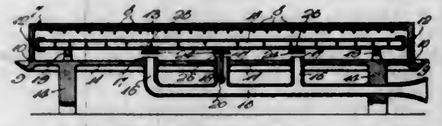
1. A device of the class described including a U-shaped engaging clamp having inturned extremities and legs normally diverging outwardly towards their extremities, and a cylinder having inturned feathered edges at both ends slidably mounted over the legs of the clamp.

1,620,929. HEAT-THERAPY METHOD AND MEANS. GEORGE W. WALLERICH, Chicago, Ill. Filed Feb. 5, 1925. Serial No. 6,965. 2 Claims. (Cl. 174—177.)



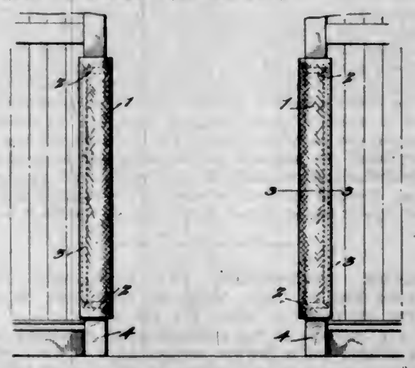
1. In an electro-therapeutic device, a glass tube thermometer, an electrode comprising a thin coating of copper formed on the surface of the sensitive end of the glass thermometer tube, and an insulating tube covering the thermometer and electrode with tip of said end exposed.

1,620,930. HOLDER FOR FOUNTAIN PENS AND THE LIKE. PURCELL THOMAS WEBB, Christchurch, New Zealand. Filed Mar. 28, 1925, Serial No. 19,060, and in New Zealand Sept. 9, 1924. 2 Claims. (Cl. 24—3.)



1. A holder for pens, pencils and the like, comprising an inverted U-shaped member of spring metal formed integral with a tubular receptacle having spring portions adapted to receive and grip the pen, pencil or the like; and a lever pivotally mounted upon said holder and constructed so as to compress said inverted U-shaped member when actuated.

1,620,931. JUVENILE-WAGON BODY. JOHN WEBBER, Toledo, Ohio, assignor to The American-National Company, Toledo, Ohio, a Corporation of Ohio. Filed June 28, 1924. Serial No. 722,902. 3 Claims. (Cl. 296—28.)

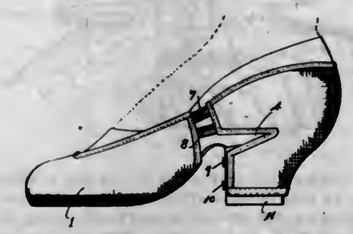


1. A juvenile wagon body having a rectangular sheet metal side wall and platform part, a curved trough formed on each side of said platform part, a roll formed on the lower edge of said side wall and fitting into said trough serving to reenforce said platform part, providing a support for said side wall part and preventing bulging of said side wall part in both directions, and means for detachably connecting and maintaining said parts in assembled relation and for permitting bodily removal of said side wall from said platform part.

1,620,932. LIQUID-FUEL BURNER. OSCAR WHITE, St. Louis, Mo. Filed May 4, 1926. Serial No. 106,759. 4 Claims. (Cl. 158—53.)

1. A liquid fuel burner comprising a horizontally elongated hollow tube-like body having a perforated upper portion and having its lower portion provided with an out-standing drip and pre-heating trough, said body having one or more perforations near its bottom for discharging fuel into said trough for pre-heating purposes, a perforated fuel pipe mounted in and extending longitudinally of said body above its bottom, fuel supply means leading to said pipe, air inlet means through the bottom of said body, and guard means around said air inlet means to prevent outflow of fuel therethrough.

1,620,933. CASING PROTECTOR. JOSEPH T. WILCOX, Seattle, Wash. Filed Mar. 1, 1926. Serial No. 91,648. 3 Claims. (Cl. 20—100.)

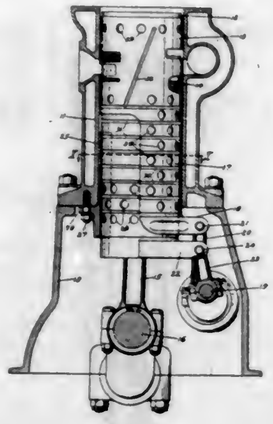


1. A guard or protector comprising an appropriate length of relatively soft fabric, spring clamping members at the respective ends thereof, and stretching members arranged intermediate the clamping members.

1,620,934. DOUBLE-ACTION OIL-WELL PUMP. ARGUS O. ZINN, Los Angeles, Calif. Filed Dec. 3, 1923. Serial No. 678,285. 15 Claims. (Cl. 103—179.)

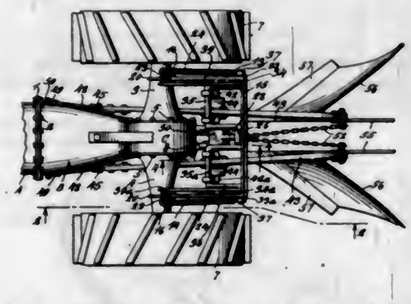
1. In a deep well reciprocating pump, a confined column of liquid of substantially constant length for transmitting an operative impulse in one direction, and a tension device for transmitting an impulse in the opposite direction extending entirely through the confined column.

1,620,935. SHOE OVERALL. TESSIE ARNSBERG, San Francisco, Calif. Filed Sept. 9, 1926. Serial No. 134,356. 2 Claims. (Cl. 36—72.)



1. A shoe protector for automobile drivers comprising a toe covering and a heel covering, elastic tapes connecting the toe covering and the heel covering at each side of the shoe, and other elastic tapes connecting the heel covering at its front edges whereby the heel covering is held in place on the shoe.

1,620,936. INTERNAL-COMBUSTION ENGINE. ARTHUR J. BAKER, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 17, 1923. Serial No. 681,167. 11 Claims. (Cl. 125—75.)

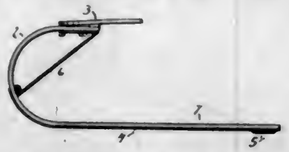


1. In an internal combustion engine, a cylinder, inner and outer sleeves therein, the latter encircling the former at its upper end and having a reduced extension projecting downwardly within the cylinder, said extension being of a length as great as the length of

the encircling portion, a bearing member for said inner sleeve fixed to said cylinder diametrically opposite

to said outer sleeve extension, and driving means operatively connected with said inner sleeve and with the extension of the outer sleeve.

1,620,937. TRACTOR HITCH. EMERY E. BASHOR and EDWARD N. WRAY, Berthond, Colo. Filed May 3, 1926. Serial No. 106,388. 6 Claims. (Cl. 97—47.)

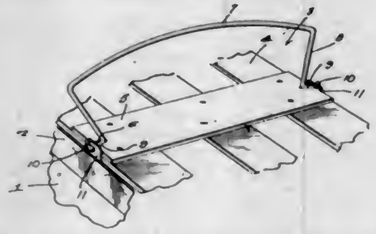


1. In combination with a tractor having a differential housing, an axle housing extending outwardly from each side thereof, a lug extending rearwardly from the differential housing, a U-shaped frame having its ends pivotally secured to the axle housing on opposite sides of the differential housing and a support member secured to the frame and adapted to engage the lug so as to prevent the frame from moving downwardly.

1,620,938. ALTERING VISCOSITY OF CELLULOSE-CONTAINING MATERIALS. HARRY P. BASSETT, Cynthiana, Ky. Filed Dec. 19, 1923. Serial No. 681,654. 6 Claims. (Cl. 260—146.)

1. The herein described steps in the process of producing a cellulose derivative capable of producing solutions of a desired viscosity comprising treating cellulose fibre with a dilute acid containing a percentage of acid having a hydrogen ion content equivalent to a solution of sulfuric acid between approximately .05 and 1 per cent by weight at a temperature above 20° C., and below 100° C., washing the fibre, treating it with a dilute alkali solution, and washing the fibre.

1,620,939. CHILD'S COASTER. JOHN J. BEHM, Grand Haven, Mich. Filed Nov. 23, 1923. Serial No. 676,532. 1 Claim. (Cl. 280—8.)

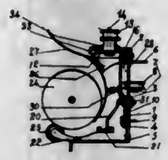


In combination with a child's coaster having a wooden runner bent upwardly and backwardly at the front end, and having a laterally disposed handle secured across the upper end of the curved part of the runner, said runner protected with an iron shoe, and said shoe having a longitudinally disposed depressed rib near the back end of the runner, and a longitudinally adjustable brace in the curve of the runner for adjusting the height of the handle bar to the height of the child using the coaster.

1,620,940. PROCESS OF PRODUCING IMPERVIOUS MATERIAL. WARREN F. BLEECKER, Boulder, Colo. Filed Dec. 28, 1921. Serial No. 525,489. 3 Claims. (Cl. 91—70.)

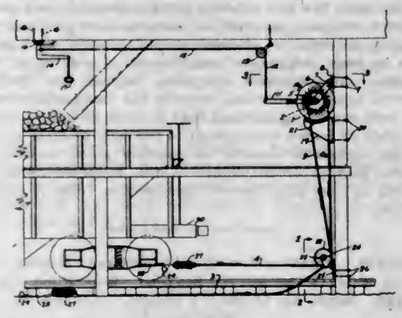
1. The process of producing material of the character described consisting in impregnating a body of artificial graphite with asphalt, baking the impregnated body and repeating the impregnating and baking actions until the voids of the graphite are filled.

1,620,941. BASKET HANDLE. FOREST J. BRAINARD, Brocton, N. Y. Filed June 30, 1926. Serial No. 119,673. 1 Claim. (Cl. 217—125.)



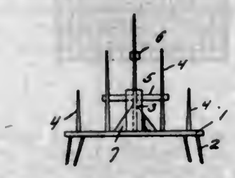
In a basket structure, an open top basket embodying flexible side walls and having a laminated rim at its top, a removable cover for said open top resting upon the upper edge of said rim, said cover including a transverse cleat having V-shaped notches at its opposite ends, bail-retaining plates secured between the plies of said rim and projecting above said rim, the projecting portions of the plates being provided with horizontally disposed elongated slots disposed in registry with the aforesaid notches, and a resilient wire carrying bail, the downwardly directed end portions of which are bent inwardly towards each other, the free ends thereof being bent outwardly at substantial right angles, said right angularly bent portion being disposed in said notches and extending through and beyond said slots and terminating in upturned hooks.

1,620,942. TYPEWRITER. ITALO BHASA, Milan, Italy. Filed Feb. 16, 1925, Serial No. 9,637, and in Italy Feb. 18, 1924. 1 Claim. (Cl. 197—60.)



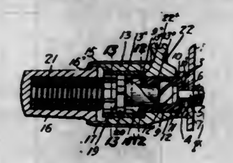
In a carriage of the class described consisting of a bed member and a running member made of sheet metal, T-like turned over projections on the forward edge of said bed member, a plate support for the ribbon device at the forward edge, a turned up portion at right angle at the back edge, a tongue projection for the attachment

of the bell lever, a tongue like projection for supporting a guiding pulley, a tongue projection for the attachment of the escapement spring, a turned down tongue for connecting the escapement mechanism, a rectangular aperture for the working of the escapement mechanism; a lengthwise wedged groove forming a raceway for two rolling balls, a wedged groove in the carriage member, a turned up back edge portion provided with two slots to receive the nut and screw stops for fixing the margins of the writing, turned upwards side triangular edges in said carriage member to form the support for the platen,



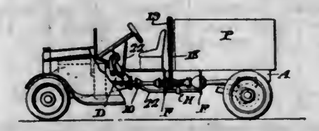
a notch punched down at the back edge of said carriage member to contact with the upper side of the back flange of the bed member, slots on said carriage member to fix the escapement rack, holes in said carriage members to attach the arms of a bar guide for resilient bracket with rollers; two slots to receive lugs projecting from the feeding plate, holes in said carriage to receive coiled springs forming a resilient cushion for said feed plate, said lugs being entertained by wire loops, holes in said bed plate to fix a resilient plate with a roller resting on the back turned up edge of the said carriage member.

1,620,943. CAR RETARDER. WILLIAM BRASACK, Oak Park, Ill. Filed Apr. 28, 1922. Serial No. 557,150. 5 Claims. (Cl. 188—2.)



1. In a brake, a drum, a flexible member adapted to be wound on said drum, and means interposing frictional resistance induced by the pull on said member for retaining said drum against rotation, said means including a stationary brake shoe adapted to support the entire weight of said drum during the braking operation of same.

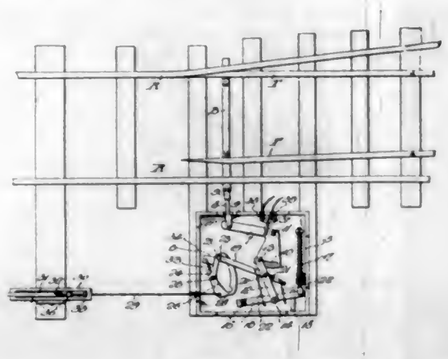
1,620,944. DISPLAY DEVICE. ZELTON D. BRUMBERG, Ironton, Ohio. Filed May 6, 1926. Serial No. 107,186. 2 Claims. (Cl. 211—14.)



1. A display device comprising a support, transverse series of spaced blade-like upwardly tapered uprights connected to and extending upwardly from said support, the central uprights of each series being longer than the other uprights in the series and the intermediate uprights in each series being shorter than the central upright and longer and higher than the end uprights, transverse horizontal bars interposed between and fixed intermediate points of the central upright of each transverse series and the next adjacent uprights at opposite sides of said central upright, and longitudinal bars connected to and connecting the central uprights of the several transverse series at an intermediate point in the height of said uprights.

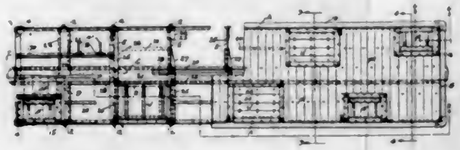
1,620,945. SHOCK ABSORBER. FRANK WESLEY BULL, Oshawa, Ontario, Canada. Filed May 17, 1926. Serial No. 109,751. 5 Claims. (Cl. 267—10.)

1. A shock absorber for vehicles comprising a stationary member secured to a vehicle frame and forming an axial support, an internal threaded cylindrical casing mounted upon such support to revolve therearound, a quadrant formed integral with the casing, a flexible connection adapted to be secured to the quadrant at one end and to a vehicle axle at the other end, a threaded cylinder engaging the internal thread of the support, connecting means whereby the cylinder is turned by the turning of the casing, and resilient means carried within the casing and adapted to resist the outward movement of the threaded cylinder as it is turned within the threaded support.



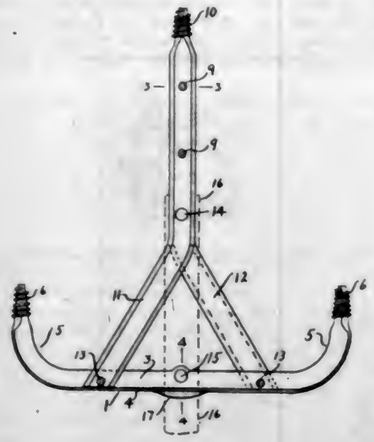
1,620,946. LIGHT MOTOR-TRUCK ATTACHMENT FOR HIGH-PRESSURE SPRAYING. ALBERT F. BURGESS, Melrose Highlands, Mass., dedicated, by mesne assignments, to the People of the United States. Filed July 16, 1925. Serial No. 44,127. 1 Claim. (Cl. 180—53.) (Granted under the act of Mar. 3, 1883, 22 Stat. L. 625.)

The combination of mechanism for operating an automobile and auxiliary devices, including a motor, a drive shaft extending toward the rear of the automobile, a telescoping shaft carrying universal joints at each end thereof attached to the rear end of said drive shaft, a clutch-carrying shaft attached to the rear of said telescoping shaft supported in suitable bearings and carrying near its rear end a double-faced sliding jaw clutch keyed to said clutch-carrying shaft and adapted to be shifted longitudinally, a driven shaft supported in suitable bearings concentric with and to the rear of said clutch-carrying shaft and having on its forward end jaws adapted to engage with the jaws of the rearward face of the double-faced clutch, a universal joint attached to the rear end of said driven shaft, a shaft adapted to drive the rear axle of the automobile attached at its forward end to the last aforesaid universal joint, a sprocket freely revoluble on the clutch-carrying shaft and having a clutch face toward the rear adapted to be engaged by the front face of the aforesaid double-faced clutch, means for shifting said double-faced clutch for-



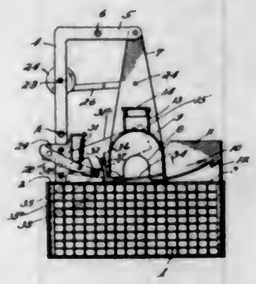
ward and backward so as to engage either or neither of the clutch faces of the sprocket and driven shaft, and a chain carried by said sprocket connecting with another sprocket for operating auxiliary devices.

1,620,947. SWITCH-THROWING MECHANISM. HERMAN NEWTON BURRESS, Matewan, W. Va., assignor of one-half to L. T. Compton, Matewan, W. Va. Filed May 13, 1926. Serial No. 108,904. 6 Claims. (Cl. 246—318.)



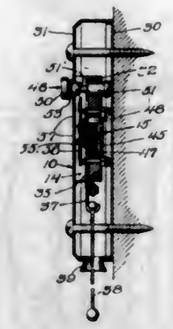
1. A switch throwing mechanism comprising a lever and means for connecting it to a switch tongue, a pivotally mounted link having a shoe at one end, said lever having a curved slot which slidably receives said shoe and extends in opposite directions from an imaginary line between the lever fulcrum and the link pivot, means acting longitudinally on said link to quickly snap it beyond a dead-center position when the link is moved to such position, said means being then active to move the link and lever to a switch-throwing position, and means for moving said lever to said dead-center position.

1,620,948. LOAD-DISCHARGING CAR. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 7, 1925. Serial No. 48,797. 23 Claims. (Cl. 105—244.)



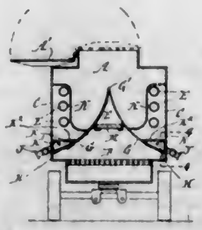
2. In a dump car, the combination with center sill, bolsters and cross beams extending outwardly from said center sill and spaced from each other; a floor disposed above the said center sills and cross beams, metallic beam members on each side of the center sill extending from each end of the car to the adjacent bolster, said beams being disposed outwardly from the center sill of the car; dumping doors forming a portion of the floor, said doors being hinged to said longitudinal beam members; and other dumping doors disposed intermediate said first named doors, said last named doors being hinged adjacent the center sill, the doors on one side of the center sill being alternated with fixed floor sections on the opposite side of the center sill.

1,620,949. CROSS-ARM. CHARLES WELLMAN CASSELS, Hamilton, Ontario, Canada, assignor to The N. Slater Company, Limited, Hamilton, Ontario, Canada. Filed Dec. 6, 1923. Serial No. 678,965. 1 Claim. (Cl. 189—33.)



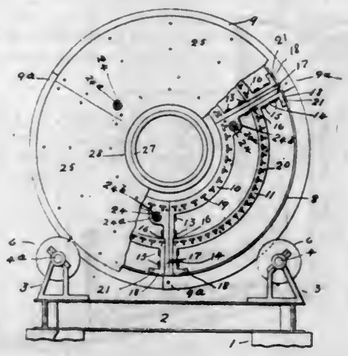
A metallic cross-arm of the class described comprising a horizontal branch and a vertical branch, the horizontal branch formed from a length of metal of T-shaped cross-section with the web or stem portion directed towards the vertical branch, the vertical branch formed from two lengths of metal of channel shaped cross-section placed back to back and secured together for a portion of their lengths, said channels extending beyond the aforesaid secured together portions towards the horizontal branch, and said extending portions bent to form divergent braces, the ends of which are secured to the web or stem portion of the horizontal branch on opposite sides thereof, the central portion of the flange of the T-shaped horizontal branch on one side thereof deformed to form a concave seating.

1,620,950. TRAP. SAMUEL M. COFFMAN, Kansas City, and WILLIAM M. ELDER, Braymer, Mo. Filed Apr. 5, 1926. Serial No. 99,866. 7 Claims. (Cl. 43—73.)



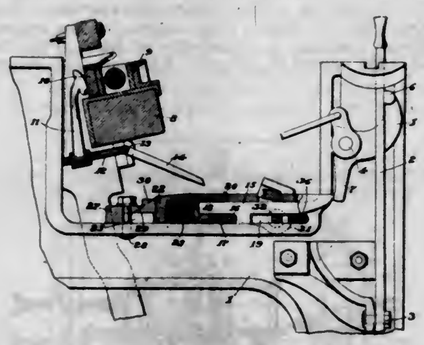
1. In a trap, a cage provided with a normally closed entrance opening, a horizontally movable container for forcibly propelling an animal through said opening into the cage, power means for operating said container, and a trip for normally retaining said power means against operation.

1,620,951. CALL SWITCH FOR HOSPITAL SIGNAL SYSTEMS. WILLIAM P. CROCKETT, Chicago, Ill. Filed Apr. 14, 1923. Serial No. 631,993. 7 Claims. (Cl. 200—16.)



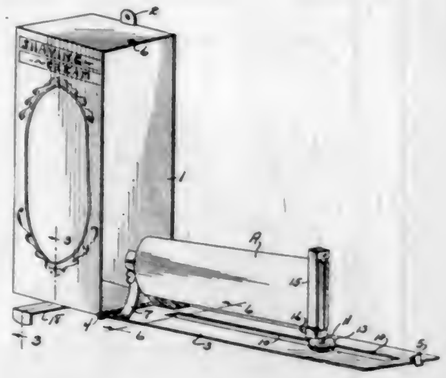
1. Electrical signal-initiating switch-means of the character described, comprising in combination, a shallow casing adapted to be secured to a vertical wall, said casing carrying therein an insulating base, a movable contact-member slidably mounted on said base for vertical movement relative thereto, fixed contact members for inclusion in signaling circuits mounted on said base for coaction wtih said movable contact member in one position of the latter, a spring acting on said movable contact to elevate it to circuit-opening position, manual means for depressing said movable contact member to circuit-closing position, and mechanical means for latching said movable contact member in circuit-closing position comprising a finger-piece extending through the front of said shallow casing for rearward movement to release the latch.

1,620,952. BITUMEN BOILER. FREDERICK ALBERT DAVIES, Auckland, New Zealand, assignor to The Steel Construction Company Limited, Auckland, New Zealand, Filed Nov. 19, 1925. Serial No. 70,106. 5 Claims. (Cl. 126—343.5.)



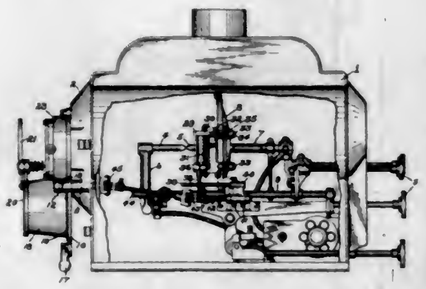
1. In a bitumen boiler, a casing providing a bitumen holder and a furnace having a comon wall which constitutes the bottom of the holder and the crown of the furnace; said wall being shaped to form a single central peak of narrow or acute angular section extending longitudinally thereof from end to end and a sediment-collecting sump or gutter at each side of such peak, said peak projecting upward into the central portion of the holder for a considerable distance and terminating in a sharp upper edge which is disposed a slight distance below the top of the holder so as to support temporarily on its said sharp edge large lumps of bitumen introduced into the holder and to cut said lumps while so supported.

1,620,953. MACHINE FOR SCALING AND GRADING FISH. FRANCIS HARLEY DAVIS and JOHN W. KLOHE, Monterey, Calif.; said Klohe assignor to said Francis H. Davis. Filed Apr. 30, 1925. Serial No. 26,974. 22 Claims. (Cl. 17—5.)



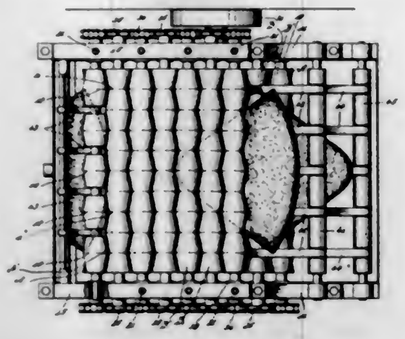
1. A grader comprising a revoluble body, a central intake and a plurality of outlets, the intake being higher above the horizontal plane than the outlets, the said body having a plurality of inner segmental forms disposed in planes at right angles to the longitudinal axis of the body, the said body and the interior forms being adapted for assemblement and dismemberment in longitudinal segmental sections, substantially as described.

1,620,954. LOOM FROG. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 2, 1926. Serial No. 139,088. 4 Claims. (Cl. 139—346.)



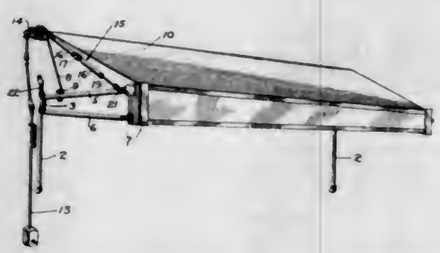
1. A protector mechanism for looms, comprising a frog support, a recessed frog having an open bottom and back wall and slidably mounted upon the frog support, a frog stop and guide secured to the loom frame and overlying portions of the frog, a fixed thrust wall within the recess of the frog, and a block of rubber material coextensive with the space between the thrust wall and back wall of the frog when the latter is in its rearward position that the full section of such material may be effective in cushioning the frontward movement of the frog, a safety pin carried by the frog, and an elastic stop of less elasticity than the block of rubber material to stop the frog before the lay completes its frontward movement.

1,620,955. TUBE HOLDER AND PASTE EJECTOR. FRANCIS PIERCE DROHAN, Jacksonville, Fla. Filed Apr. 9, 1926. Serial No. 100,953. 1 Claim. (Cl. 221—60.)



A device of the class described comprising a cabinet having a hinged side and an opening in its bottom, a slide closing the opening, a bracket on the hinged side having a spring loop portion for engaging the mouth of a tube, means for contracting the loop portion around said mouth of the tube, a member rotatably and slidably arranged in the slot with a handle part arranged on the outer face of the hinged side, a second member hinged to the first and arranged to clamp the flat end of a tube between itself and the first member, and a latch member for holding the members in clamping relation.

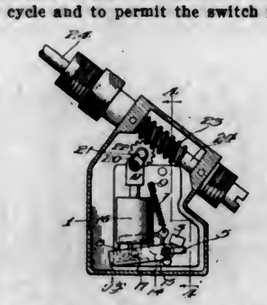
1,620,956. PROJECTION APPARATUS FOR STEREOPTICON VIEWS AND CINEMATOGRAPHIC FILMS. CECIL M. FOX, Toledo, Ohio, assignor to The Rollaway Motor Company, a Corporation of Ohio. Filed May 17, 1926. Serial No. 109,467. 9 Claims. (Cl. 88—24.)



2. In a projection apparatus having a housing and a source of light within said housing, a muzzle connected to said housing and provided with a pair of openings, means for pivotally connecting said muzzle to said housing, means associated with said source of light for directing light rays through one of said openings, and means operable by movement of said muzzle for moving said light directing means away from said source of light.

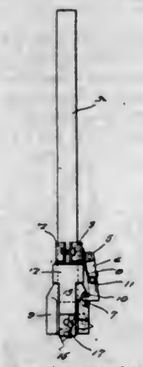
1,620,957. METHOD OF AND APPARATUS FOR SHRINKING AND FELTING FELT ARTICLES. HOMER A. GENEST, Hartford, Conn., assignor to United States Hat Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Feb. 1, 1924. Serial No. 689,940. 37 Claims. (Cl. 28—6.)

2. The process of shrinking hat bats and the like which consists in progressing checkerboard-like arranged depressions and elevations throughout the bat.



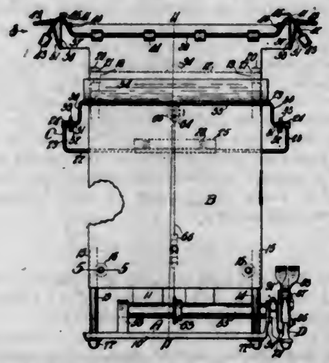
1,620,958. AWNING FRAME. THOMAS C. GIRTON and FREDERICK J. P. KUHLMANN, San Francisco, Calif., assignors to H. M. Goldberg Co., a Partnership consisting of Harry M. Goldberg, Milton Birnbaum, and H. S. Batchelder, all of San Francisco, Calif. Filed Mar. 25, 1926. Serial No. 97,191. 7 Claims. (Cl. 156—44.)

1. An awning frame comprising the combination of two relatively spaced side arms having the inner ends pivotally connected to a supporting structure, whereby the arms can swing vertically thereabout, means connecting the free ends of the arms, an awning roller on the supporting structure above the said pivot connections and adapted to carry an awning connected to the said means, and means including resilient means forming a connection between the supporting structure and the first said means, the second named means acting as a shock absorber when lowering the frame, acting to support the frame in the lowered position and assisting in raising the frame.



1,620,959. DEVICE FOR CAUSING VEHICLE SIGNAL LIGHTS TO FLICKER. STEFAN GOBOS, Chicago, Ill. Filed Feb. 9, 1925. Serial No. 7,779. 4 Claims. (Cl. 200—30.)

2. A mechanism for controlling a circuit comprising a switch, a member adapted to be moved from a position of rest through successive predetermined cycles, means associated with said member to cause the switch to open during each cycle and to permit the switch to close when

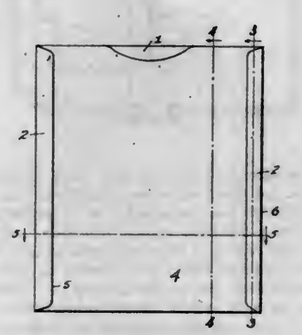


said member comes to rest at any point in said cycle, and means yieldingly acting on the switch and tending constantly slowly to close the same.

1,620,960. NUT-APPLYING DEVICE. ARTHUR GOETTING, Buckley, Ill. Filed May 6, 1923. Serial No. 107,302. 4 Claims. (Cl. 81—125.)

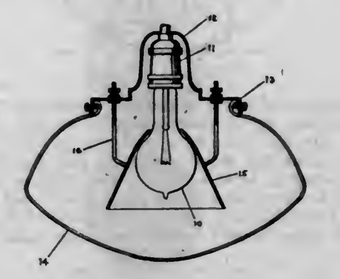
1. In combination, a socket member adapted to receive a nut and to turn the same, and a movable nut retainer carried by said socket member; the said nut retainer being yieldingly maintained in front of the nut and in the path thereof and being shaped to be moved out of said path by contact with an object relative to which the socket member is rotated.

1,620,961. COPYHOLDING APPARATUS. PETER GRABLER, Rocky River, Ohio, assignor of one-half to Charles E. Day, Lakewood, Ohio. Filed Jan. 16, 1925. Serial No. 2,720. 21 Claims. (Cl. 120—29.)



1. A copy holding apparatus comprising, a movable copy support plate, means for moving said plate, and, means normally locking said plate against movement in one direction and in any position into which said plate may be moved.

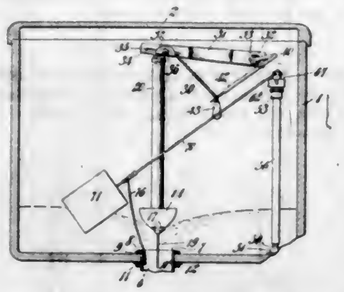
12. A copy holding apparatus comprising, a copy support plate movable longitudinally and pivotally, means for moving said plate longitudinally, and said moving means concentric with the axis of the pivot of said plate.



19. A copy holding apparatus comprising, a copy support plate movable longitudinally and pivotally, and means for cushioning the longitudinal movement of said plate in any pivoted position thereof.

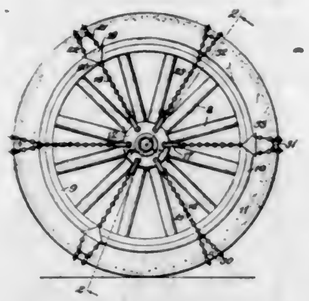
1,620,962. PYRALINE DOCUMENT-HOLDING ENVELOPE. CHARLES J. GUTBERLET, Philadelphia, Pa. Filed Dec. 31, 1928. Serial No. 683,833. 2 Claims. (Cl. 229—71.)

1. A document holding envelope of sheet pyraline, the two side walls of the envelope being formed of a single sheet folded at the bottom of the envelope and one of the side walls being provided with flaps folding over toward the inner side of the side wall of the envelope to which they are attached and forming pockets between them and this wall, in which the outer edges of the other wall fit and in which they slide freely, the said flaps holding their position entirely by the resiliency of the pyraline fabric, and their turned over portions being free from the wall of the envelope to which they are attached, and being entirely free from and unattached to the wall of the envelope inserted in the pockets formed by these flaps.



1,620,963. LIGHTING FIXTURE. EDWIN F. GUTH, St. Louis, Mo. Filed July 5, 1921. Serial No. 482,355. 2 Claims. (Cl. 240—78.)

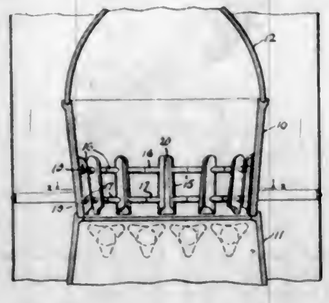
1. A lighting fixture comprising a canopy, a light source and inclosing bowl and a reflector within the bowl, said reflector having an opening in its top slightly larger than the neck of the light source and extending downwardly



below the light source and flaring outwardly so as to surround the light source; said reflector being also mounted for vertical adjustment from the canopy of the fixture.

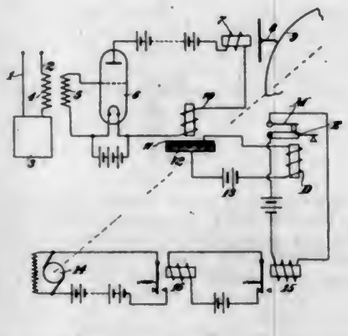
1,620,964. FLUSHING-VALVE MECHANISM. PHILIP HAAS, Dayton, Ohio. Filed Mar. 16, 1926. Serial No. 95,007. 6 Claims. (Cl. 4—58.)

1. The combination with a flush tank provided with a water inlet and inlet valve for controlling the same, and a flushing outlet and valve seat, of a vertically movable flushing valve adapted to engage said seat, and means for operating said valve, a float operated lever for the inlet valve, and provided with an aperture therein, of a depending after-drill device comprising a section of ball chain, the balls of which are of substantially the same diameter as said aperture, whereby, by drawing said chain through said aperture, the effective length of the after-fill device will be adjusted, and by permitting the chain to hang on opposite sides of the lever, it will be locked in adjusted position.



1,620,965. ANTISKID DEVICE. FRANK MARTIN HAMANN, Dunkirk, N. Y. Filed Feb. 19, 1925. Serial No. 10,240. 4 Claims. (Cl. 152—14.)

1. An antiskid device comprising a plate adapted to be held centrally of a vehicle wheel, a spreader plate arranged adjacent the side of the tire of said wheel, a radially extending chain connecting said plates, a plurity of antiskid chains secured to said spreader plate and adapted to extend around the outer side of said tire and means for detachably securing the outer ends of said antiskid chains to said radially extending chain.

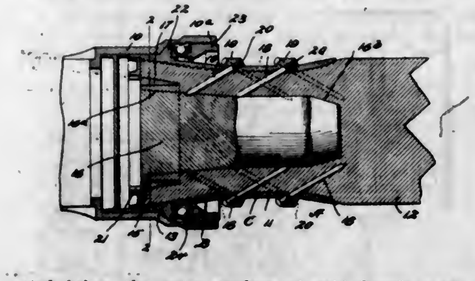


1,620,966. FURNACE CARBURETOR. ROYAL J. HANSEN, Milwaukee, Wis. Filed Jan. 20, 1926. Serial No. 82,591. 4 Claims. (Cl. 126—146.)

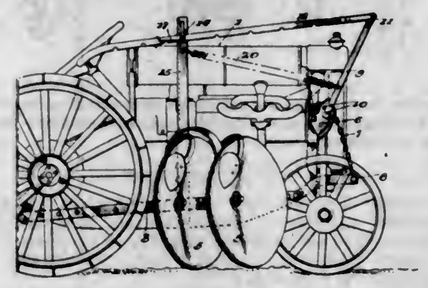
1. In a furnace, the combination of a fire-pot and a carburetor therein, the said carburetor being composed of a plurality of like parts arranged interiorly about the fire-pot, and provided with channels for conducting air to

the combustion chamber, the said parts being also provided with lateral arms which space the said parts in the arrangement described.

1,620,967. ELECTRIC-CIRCUIT MAKING AND BREAKING RELAY. RUDOLF HASE, Berlin, Germany, assignor to The Naamlooze Vennootschap Finanzieele Maatschappij "Driebergen," Amsterdam, Netherlands. Filed July 5, 1921, Serial No. 482,629, and in Germany Aug. 24, 1920. 5 Claims. (Cl. 179—171.)



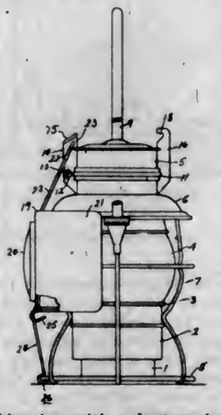
1. A device for automatically making and breaking an electric circuit with the commencement and ceasing of speaking currents, and similar electric oscillations, comprising an electro-magnet, a permanent magnet polarizing said electro-magnet, an armature for said electro-magnet consisting of an iron member rotatably mounted at one end and having a resilient tongue, permanently resting on a fixed abutment at its other end, a pivoted hammer loosely resting on the armature and free to be swung away therefrom under the influence of speaking currents, and to return to its normal position under the influence of its own weight, an electric contact between the hammer and the armature adapted to close the circuit to be influenced by contact between said hammer and said armature and to break said circuit on said hammer being raised from said armature.



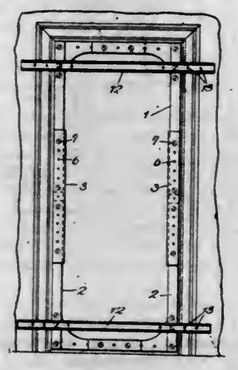
1,620,968. PROPELLER BLADE MOUNTING. SPENCER HEATH, Baltimore, Md. Filed Oct. 8, 1923. Serial No. 667,389. 12 Claims. (Cl. 170—173.)

1. In a propeller blade mounting, the combination of a ferrule, a blade shank inserted therein, a plurality of fastening devices extending thru the wall of the ferrule and into the material of the shank, certain of said devices

being arranged at an acute angle to the axis of the shank and projecting toward the inner end of the shank, the outer ends of said inwardly projecting devices being located below the outer surface of said ferrule, and a screw plug inserted in the ferrule engaging the outer end of each of said inwardly projecting devices.



1,620,969. PLOW. LEVI C. HESTER, Jacksonville, Fla. Filed June 24, 1926. Serial No. 118,291. 3 Claims. (Cl. 97—47.)



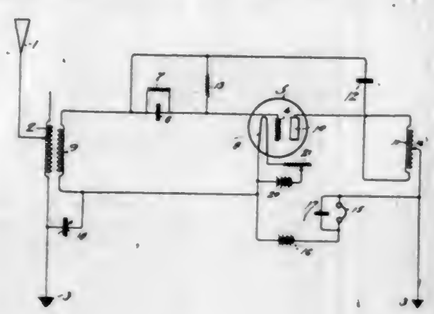
1. A plow for use on tractors comprising a push bar having its rearward end connected to the body of the tractor, a plow assembly mounted on the said push bar, a lift support secured to the body of the tractor, a sector pivoted to said support, means for rocking said sector, and a chain between the sector and the push bar.

1,620,970. LANTERN. GUY F. HITCHCOCK, Houston, Tex. Filed June 1, 1926. Serial No. 112,847. 6 Claims. (Cl. 240—15.)

1. The combination with a lantern having a frame, a globe and a dome, of a band adapted to be releasably clamped, round the dome, an anchor upstanding from said band at one side, a bar upstanding from the other side of said band, a lens frame and a lens capable of movement into active position in front of the globe and into inactive position above the dome, a link connecting said lens frame to said bar, a link one end of which is connected to said lens frame and is formed with a hook and whose other end is formed to engage the bottom of said lantern frame when the lens is in active position, said anchor having a notch to engage the edge of said lens frame and said bar having a bend adapted to be engaged by said hook, when the lens is in inactive position.

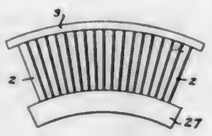
1,620,971. DEVICE FOR FACILITATING THE FITTING AND HANGING OF DOORS. GERD HOBBISIEFKEN, Burlington, Iowa. Filed Apr. 14, 1926. Serial No. 102,012. 2 Claims. (Cl. 33—197.)

1. A device to facilitate the fitting and hanging of doors, comprising a skeleton like rectangular form of light portable nature and having rigid side frame bars and upper and lower flexible frame bars adjustable for length to precisely fit the doorway, and upper and lower rigid unitary abutment and stiffening bars carried by and having adjustable bolt connection with said side bars and extending each the full breadth of said form and beyond the same at the ends, said abutment and stiffening bars having plane inner faces located in the same plane as the outer faces of said side bars.



1,620,972. FISH LURE. FRANKLIN W. HOBBS, Bangor, Me. Filed Apr. 22, 1926. Serial No. 103,899. 1 Claim. (Cl. 43—45.)

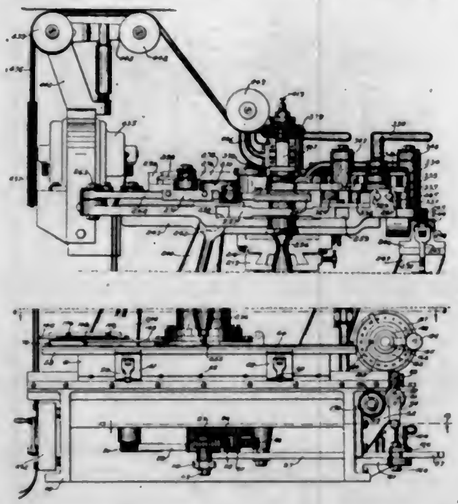
A fish lure comprising a rod, a spherical bearing rotatable on the rod and a spinner on the rod constructed from a disk of metal provided with a pair of slits extend-



ing from the center of the disk through the marginal edge thereof to form an arm curving away from the rod with the free end bent at an angle and provided with a hole for freely receiving said wire, said disk further having wings on opposite sides of the arm and having a marginal portion offset and provided with a hole in alignment with said first hole to receive said wire, said marginal offset portion being curved to conform to a portion of the curved surface of said bearing to form a seat therefor.

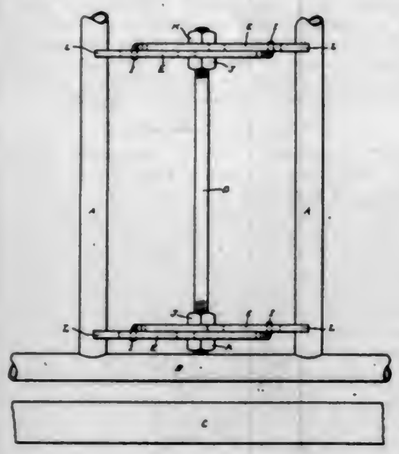
1,620,973. RADIO RECEIVING CIRCUIT. WOLFF KAUFMAN, Paterson, N. J. Filed Apr. 14, 1923. Serial No. 631,988. 5 Claims. (Cl. 250—27.)

1. In a radio signaling system, the combination with an audion, having a grid-filament circuit, of a circuit including an inductance coil connecting the plate electrode of the audion with the grid electrode thereof, and a variable connection between said coil and the filament electrode of the audion independently of said grid electrode connection.



1,620,974. METHOD OF MANUFACTURING TURBINES. GEORGE KLENK, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Mar. 29, 1924. Serial No. 702,783. 5 Claims. (Cl. 22—203.)

1. The method of manufacturing a turbine blade segment, which comprises, rigidly permanently uniting a plurality of blades at one end, partially filling the spaces between the successive end united blades with noncombustible material, placing only the end united blades with the filling therebetween in a mold, and casting a permanent foundation segment upon the opposite ends of the blades.

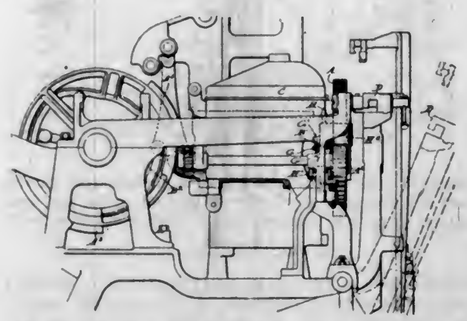


1,620,975. ENGRAVING MACHINE. EDWARD H. KUHLMAN, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Mar. 18, 1922. Serial No. 544,838. 30 Claims. (Cl. 90—13.1.)

1. In a machine of the class described, the combination of a frame, a master plate holder and a work piece supporting member supported by said frame, a swinging member pivoted to said frame, a tracing pin member and a

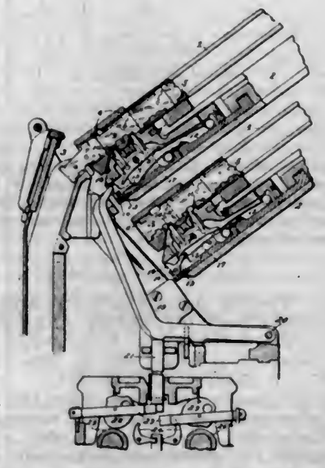
cutting tool member supported by said swinging member, and manipulative means for retaining said swinging member in operative position.

1,620,976. FILLER FOR THE PANELS OF ANIMAL PENS. CHARLES O. LESHER, Fairfield, Iowa, assignor to The Louden Machinery Company, a Corporation of Iowa. Filed Aug. 2, 1926. Serial No. 126,393. 6 Claims. (Cl. 256—24.)



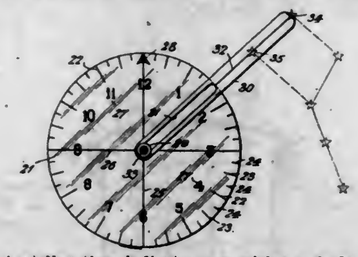
1. In fillers for the spaces between the vertical bars in the panels of animal pens, the combination of a vertically disposed centrally located member, horizontally disposed arms arranged in pairs and adjustably connected to the upper and lower ends of the centrally located member, said arms having their outstanding ends adapted to contact with the adjacent vertical bars of the panel, and means to hold said pairs of arms securely on the upper and lower ends of the central member and also in rigid contact with the adjacent vertical bars.

1,620,977. CELLULOSE COMPOSITION. WILLIAM G. LINDSAY, Newark, N. J., assignor to The Celluloid Company, a Corporation of New Jersey. Filed June 2, 1924. Serial No. 717,219. 6 Claims. (Cl. 134—79.)



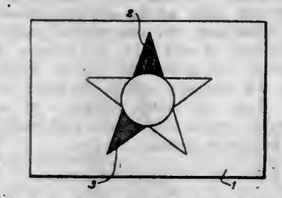
1. A composition containing $\beta\beta'$ di-chlor-ethyl ether and a cellulose derivative of the ether-ester class with which said ether has a solvent action.

1,620,978. SLUG-CASTING MACHINE. JAMES G. MCNAMARA, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Mar. 21, 1924. Serial No. 700,807. 11 Claims. (Cl. 199—56.)



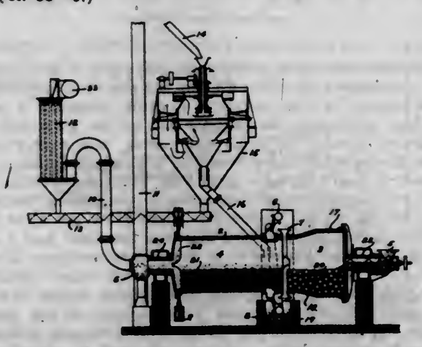
6. In a linotype machine, the combination of a mold slide provided with a laterally extending support formed with a bearing opening passing through it from front to rear, a mold disk located at the front of the support, a journal stud on the mold disk removably mounted in the bearing opening and projecting beyond the rear face of the suport, the projecting end of the stud being formed with an annular groove, a locking device movably mounted on the rear face of the support and engaging in the stud groove to confine the mold disk thereon, and means for disengaging said locking device from the stud groove to permit the removal of the mold disk.

1,620,979. TYPOGRAPHICAL COMPOSING MACHINE. JAMES G. MCNAMARA, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Apr. 30, 1924. Serial No. 709,970. 7 Claims. (Cl. 199—18.)



1. In a typographical composing machine, the combination of an escapement lever provided with matrix engaging pawls, a spring acting on the escapement lever to rock it in one direction, a pivoted actuating lever disconnected from but adapted to directly engage the escapement lever and rock it in the opposite direction, a spring for operating said actuating lever and of a strength greater than that of the other spring, and means for controlling the operation of the actuating lever.

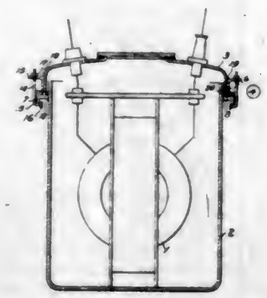
1,620,980. DEVICE FOR INDICATING TIME. FREDERICK C. MEACHAM, Garden City, N. Y. Filed Apr. 27, 1926. Serial No. 104,937. 5 Claims. (Cl. 33—62.)



1. A stellar time indicator comprising a body provided with a plane surface having a scale thereon whose divisions represent fractions of a day and provided with means for sighting and coordinating with said scale, one of the stars being observed, means carried on said body for sighting and determining the radial direction of another of said stars with reference to the divisions of said scale, and means for indicating the required fixed position on which said scale is to be placed with reference to said stars.

1,620,981. TRANSFER SHEET. TALLY W. MORSE, New York, N. Y. Filed Dec. 11, 1925. Serial No. 74,771. 2 Claims. (Cl. 134—36.)

1. An ink for printing transfer sheets consisting of, cocoa butter, mutton tallow, paraffine, rosin and a mineral pigment proportioned to give a printing viscosity at ordinary temperature.



1,620,982. COMMINUTING MILL. RAY C. NEWHOUSE, Chicago, Ill., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 15, 1926. Serial No. 102,120. 9 Claims. (Cl. 83—9.)

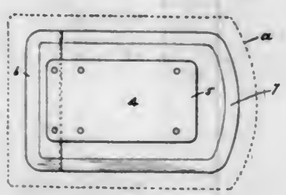
1. In a comminuting mill, a cylindrical shell portion forming a preliminary reduction chamber, a cylindrical

shell portion of smaller diameter forming a final reduction chamber, a tapered shell portion connecting said cylindrical shell portions, and freely tumbling comminuting bodies located within each of said shell portions.

1,620,983. TRANSFORMER CASING. LOUIS C. NICHOLS, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 13, 1922. Serial No. 552,433. 5 Claims. (Cl. 220—46.)

1. A casing in which high fluid pressures are apt to develop comprising a tank, a cover therefor, a gasket between said cover and tank, and means for preventing said gasket from being blown out by high pressure within said casing including the provision on the outer periphery of said tank of an annular recess in which said gasket is disposed, the top of said gasket being below the upper edge of said tank, the portion of the cover in contact with said gasket having an inside diameter greater than the adjacent outside diameter of said tank and greater than the inside diameter of said gasket whereby pressure originating within said casing will force said gasket into said recess.

1,620,984. TRANSFER HOLDER. THOMAS EDGAR REESE, Baltimore, Md. Filed Jan. 8, 1925. Serial No. 1,291. 1 Claim. (Cl. 211—37.)

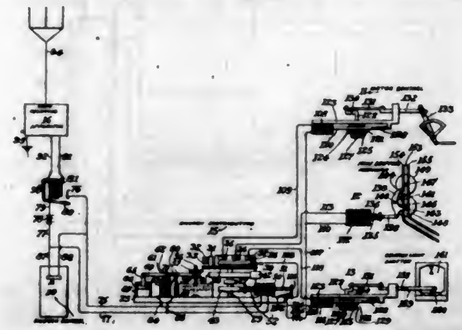


A holder of the class described comprising a body plate, an outstanding lug carried by an end portion of the plate, and having its free extremity inwardly disposed, a pair of lugs carried by the opposite end of the plate and at opposite sides of its transverse center, said second lugs also having their free extremities inwardly disposed, outstanding guard flanges carried by the side portions of the plate at the central part thereof, additional ontstanding flanges carried by the side portions of the plate adjacent to the end provided with the two lugs, and a retractile member adapted to be disposed transversely across the plate and engaged with said second named flanges, the body plate at the opposite end portions thereof and at substantially its transverse center having struck therefrom oppositely directed tongues, the free end portions of said tongues being outwardly disposed to provide an attaching medium.

1,620,985. COMBINED SOCKET AND JAR. HARVEY R. STANDLEE, Tulsa, Okla., assignor to Paul Arbon & Company, Tulsa, Okla., a Corporation. Filed Oct. 21, 1924. Serial No. 744,910. 7 Claims. (Cl. 255—26.)

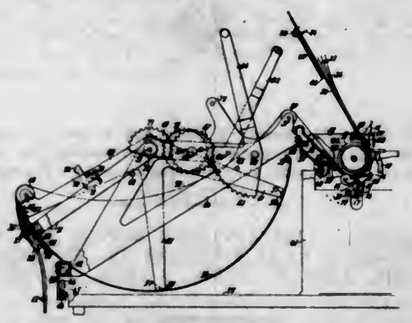
1. In a socket, a body member formed with a longitudinal bore and a lateral opening being of spiral formation at its upper end and shaped to accommodate passage of a swivel therethrough at its lower end, and a jar member arranged for longitudinal movement in the bore of said body.

1,620,986. CREASING AND FOLDING MACHINE. FREDERICK THOMAS, Philadelphia, Pa. Filed June 19, 1924. Serial No. 721,094. 1 Claim. (Cl. 223—15.)



A machine of the class described having a sectional die of which the one section is marginally flanged to provide a rib, a plate for immovably holding the sections in respect to each other, and a table having a groove for co-operation with the rib.

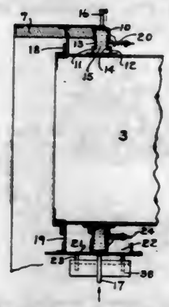
1,620,987. SYSTEM OF CONTROL BY IMPULSES OF PREDETERMINED DIFFERENT DURATIONS. ALBERT D. TAENZER, New York, N. Y., assignor to John Hays Hammond, jr. Filed Aug. 12, 1920. Serial No. 403,167. 7 Claims. (Cl. 177—353.)



1. The combination with a main device of a subsidiary device, means responsive to impulses of energy and operative to control said main device as a result of each impulse received, and operative to control only said main device in response to a comparatively short impulse, selector means interposed between said devices to control said subsidiary device in response to an impulse of longer

predetermined duration, said selector means including a gear wheel for driving said selector means, and a clock mechanism intermittently connected to said gear wheel for

driving said gear wheel at a predetermined rate of speed, said gear wheel having its movement initiated and terminated under control of said impulse responsive means.

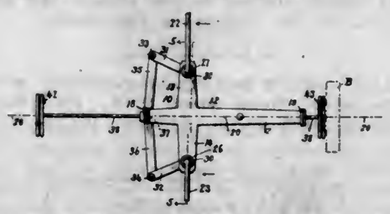


1,620,988. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 14, 1923. Serial No. 657,291. 30 Claims. (Cl. 197—126.)

1. In a typewriting machine, a revoluble platen, means for holding work-webs, composed of a succession of forms, and carbons interleaved therewith, for line-space feed with the platen, a holder to which the carbons are anchored at their rear, means for supporting the composite web in such wise as to provide a slack in the untyped part thereof when the web is in position for commencement of typing on one of its form-lengths, such slack being sufficient to permit of line-feed of the composite web in the typing of a form-section without pull on the carbon-holder, means for conditioning the web for shift of the carbons to an untyped form-section of the webs, comprising means for drawing upon the web in a crosswise direction between the carbon-holder and the platen, means for holding the web against rearward displacement on the platen while so drawing upon the web, and a carrier for the carbon-holder mounted for free movement with the web as the latter is drawn upon as aforesaid.

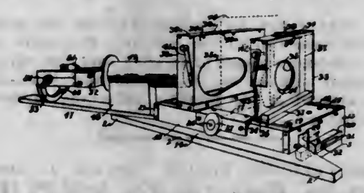
1,620,989. PACKING. FREDERICK T. AGTHE, Catasauqua, Pa., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed June 14, 1926. Serial No. 116,025. 8 Claims. (Cl. 263—32.)

1. In combination, a drum rotatable about an axis to transport material therethrough, means forming an annular surface rotatable with said drum and extending transversely of said axis, a member cooperating with said surface to provide an annular chamber surrounding said



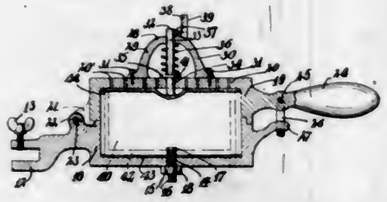
axis, and means for admitting liquid to said chamber to provide an air-tight joint between said drum and said member.

1,620,990. DENTAL APPARATUS. EDWIN S. BROTHERS, Brooklyn, N. Y. Filed June 9, 1925. Serial No. 35,855. 5 Claims. (Cl. 32—10.)



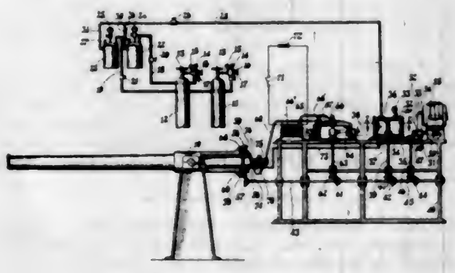
1. A dental tool comprising a suitable spindle, a yielding core surrounding the spindle and a soft rubber sleeve embracing the core.

1,620,991. TROLLEY FOR KITES. WILLIAM L. BROWN, 4th, Philadelphia, Pa. Filed May 19, 1926. Serial No. 110,130. 7 Claims. (Cl. 244—24.)



1. A trolley adapted to travel upon an inclined member between stops secured upon the latter, a wing upon the trolley adapted for moving the latter up said inclined member by wind pressure, and mechanism upon the trolley adapted for shifting the wing into and out of wind engaging position alternately upon impact with said stops.

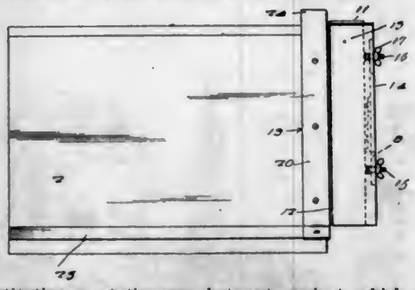
1,620,992. STEREOSCOPIC PHOTOGRAPHY. JAMES B. BULLITT, near San Jose, Calif. Filed Jan. 16, 1926. Serial No. 81,705. 7 Claims. (Cl. 250—34.)



1. A device of the character described comprising a clamp for the human head, photographic plate holding means arranged in each jaw of said clamp, and an X-ray tube holder operatively positioned relative to said plate holders.

1,620,993. FREEZING PRESS. JULIUS G. BURNS and HERBERT S. DAVIS, New York, N. Y., assignors to Purecold Products of America, Inc., a Corporation of Delaware. Filed Feb. 23, 1926. Serial No. 90,091. 4 Claims. (Cl. 62—121.)

1. A refrigerating press, comprising a lower press member of hollow cylindrical construction, a jaw-shaped element depending from said lower press member, an adjustable member engaged in said jaw shaped element, a connecting element threadedly engaged in said lower press member, an upper press member hingedly connected to said lower press member, a handle depending from said upper press member, said handle being positioned directly opposite the hinge of said press members, a latch pivoted to said handle, a catch depending from said lower press member, and engageable with said latch, said upper press member being formed with a plurality of apertures, a support having downwardly extending elements attached to said upper press member, a plunger having its upper portion engaged in said support, the lower portion of said plunger extending through said upper press member, an enlarged portion on said plunger to limit the downward motion of said plunger, a superimposed spring on said plunger, normally urging said plunger downward, a pointer depending from the upper portion of said plunger, and an arm with graduations thereon attached to said support, and extending along the line of motion of said pointer.

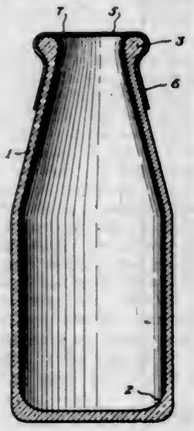


1,620,994. DEVICE FOR FIRING CANNONS. EDUARDO BUSTAMANTE, Staten Island, N. Y. Filed Jan. 22, 1926. Serial No. 83,016. 4 Claims. (Cl. 89—7.)

1. A firing device for cannons and the like comprising tanks, connected to the cannon a disc valve and a contact arm and a means of rotating said disc valve and said contact arm so as to fire the said cannon said tanks connected to low pressure tanks and to the disc valve chamber.

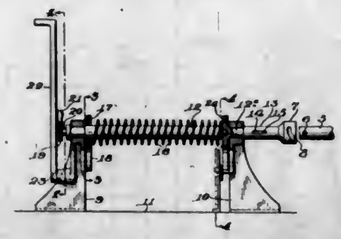
1,620,995. SLICING DEVICE. ARTHUR J. CARLSON, Vernon, Tex. Filed July 23, 1926. Serial No. 124,450. 3 Claims. (Cl. 146—150.)

1. In a structure of the class described, a table top, a metallic strip at one end of said top, said strip being bent upon itself at a point between its ends to provide upper and lower arms, the upper arm being attached to the upper side of the top and the lower arm to the lower side of said top, the bight portion extending beyond one longitudinal edge of said top, said strip



constituting a stationary abutment against which the blade of a knife is adapted to bear during the slicing operation.

1,620,996. THIMBLE. CECIL P. CAULKINS, New London, Conn. Filed Apr. 28, 1926. Serial No. 105,057. 8 Claims. (Cl. 223—51.)

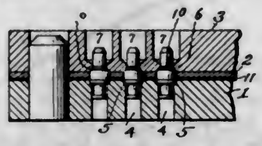


1. A thimble having a body and a pair of spaced rigid lugs having parallel lips overhanging the outer surface of the body and arranged to engage a needle.

1,620,997. SANITARY MILK BOTTLE AND CAP. CHARLES J. CHASE, Philadelphia, Pa. Filed Apr. 25, 1924. Serial No. 709,063. 1 Claim. (Cl. 215—1.)

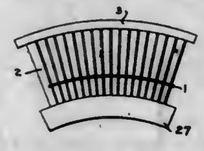
As a new article of manufacture, a bottle being free from angular portions at all parts of its inner surface and gradually curving outwardly in uniform transverse curvature at its mouth to provide an annular bead free from angular portions, and a cap shaped to snugly fit over the mouth of the bottle and house a portion of the bottle below its mouth.

1,620,998. STARTING DEVICE FOR INTERNAL-COMBUSTION ENGINES. VIRGIL R. CLARK, Philadelphia, Pa. Filed July 16, 1926. Serial No. 122,885. 4 Claims. (Cl. 185—41.)



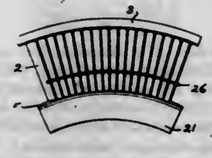
1. The combination of a rotatable shaft, a head rotatably attached by a journalled connection to said shaft and adapted to engage the shaft of an internal combustion engine, a ratchet and pawl connected to said head, a ratchet and pawl connected to said shaft, a coil spring extending between and connected to said shaft and said head, a pinion also carried by said shaft, a pawl connected to prevent relative rotation between said pinion and said shaft in one direction and an oscillatable rack pivotally supported and co-operating with said pinion to rotate said shaft and tension said spring while the pawls engage the respective ratchets.

1,620,999. VANITY BOX. CLARENCE P. COOK, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Dec. 26, 1922. Serial No. 608,878. 11 Claims. (Cl. 132—83.)



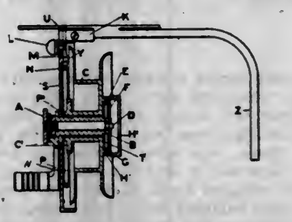
1. A box for holding toilet accessories comprising a bottom and a cover pivotally associated therewith, one of these members being provided with separated compartments lying side by side in substantially the same horizontal plane, the powder compartment being of greater dimensions than the compartment for holding the rouge, the area of the two compartments being substantially that of the member in which they are provided.

1,621,000. METHOD AND APPARATUS FOR VULCANIZING RUBBER PACKING UPON A CYLINDRICAL ARTICLE. JOHN C. CROWLEY, Cleveland, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 4, 1924. Serial No. 753,862. 6 Claims. (Cl. 18—59.)



1. The method of forming a rubber packing on a cylindrical member provided with a groove which consists in placing the cylindrical member in a mold, surrounding the groove in the cylindrical member with a part forming a definite confining chamber, forcing unvulcanized rubber into the groove and confined by the said mold part, vulcanizing the rubber while in place, and after vulcanization ejecting the cylindrical member from the mold with the mold part which has confined the rubber in the groove acting as a die to shear any rubber which adheres to the part molded in the groove in the cylindrical member.

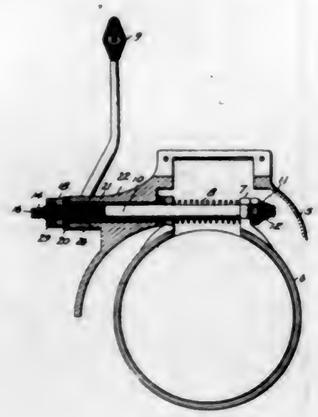
1,621,001. METHOD OF MANUFACTURING TURBINES. PAUL C. DIMBERG, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Mar. 29, 1924. Serial No. 702,782. 9 Claims. (Cl. 22—203.)



1. The method of manufacturing a turbine blade segment, which comprises, definitely positioning a plurality of blades to produce proper working passages therebetween, rigidly permanently attaching a shroud segment to the corresponding ends of said blades, and permanently attaching a foundation segment to the opposite ends of said blades by fusion of metal.

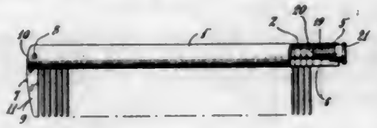
1,621,002. METHOD OF MANUFACTURING TURBINES. PAUL C. DIMBERG, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 9, 1924. Serial No. 705,182. 7 Claims. (Cl. 22—203.)

1. The method of assembling turbine blades, which comprises, providing a strip having perforations slightly larger than the cross-sectional area of the blades, assembling the blades in said strip, permanently attaching a shroud to corresponding ends of the blades, and casting a foundation segment around the root ends of the assembled blades and in the space between said perforations and said blades.



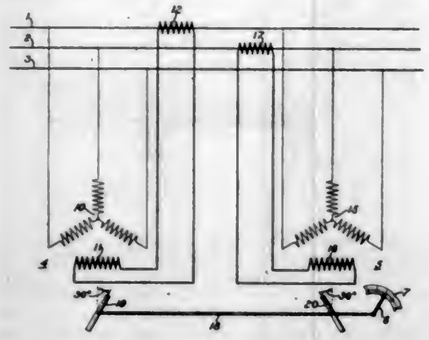
1,621,003. CASTING REEL. JAMES DODD, Brisbane, Queensland, Australia. Filed Sept. 13, 1926, Serial No. 135,153, and in Australia Sept. 7, 1925. 7 Claims. (Cl. 242—84.5.)

7. In a fishing reel, a carrier plate having a laterally-projecting sleeve; means, including a turntable connection, for attaching said plate to a fishing rod; a movable locking pin carried by said plate for releasable engagement with said turntable connection to hold it against opera-



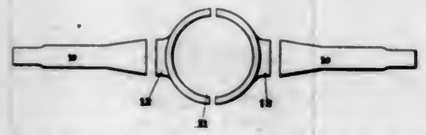
tion; a barrel rotatably mounted on said sleeve; a fixed ratchet on said barrel; a detent pivoted to the plate and normally engaged with said ratchet to hold said barrel against rotation; means for releasing said detent from such engagement; a brake drum fixed to the barrel; a winding shaft mounted within said sleeve; and a friction clutch for releasably connecting said shaft with the brake drum.

1,621,004. BRAKE-BAND-ADJUSTING DEVICE. JOHN A. DOMMER, Euclid, Ohio. Filed Aug. 4, 1925. Serial No. 48,157. 4 Claims. (Cl. 188—196.)



1. The combination of a transmission cover having a boss, a bushing of elongated formation extended through the boss and having the outer end thereof provided with an annular flange, a pedal having a hub rotatably mounted on the bushing between said boss and said flange, a shaft rotatably extending through said bushing and terminating beyond opposite ends of the same, and a nut threaded on said shaft and engaged with said annular flange of the bushing.

1,621,005. COMB. ANTHONY A. ELNETT, New York, N. Y. Filed Oct. 15, 1926. Serial No. 141,718. 4 Claims. (Cl. 132—16.)

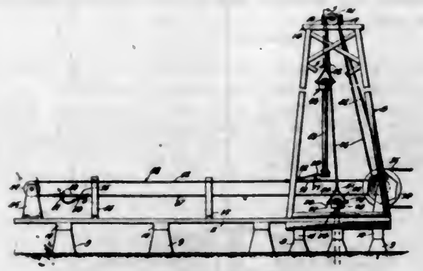


1. A comb having a frame provided with a fixed tooth forming a fixed end piece, there being in said frame a longitudinal slot having an enlarged inner longitudinal recess extending from said end piece to the other end of said frame, said other end of the frame being internally threaded, a plurality of teeth having enlarged heads, the enlarged heads of said teeth being slipped into place in said enlarged recess by entering through the internally threaded end of said frame with the teeth shanks projecting through said longitudinal slot, and a screw engaging said internally threaded end of said enlarged recess and abutting against the outermost tooth head and operable to urge said tooth heads against one another and against said end piece.

1,621,006. POWER-FACTOR METER. ROBERT D. EVANS, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 7, 1921. Serial No. 520,614. 7 Claims. (Cl. 172—245.)

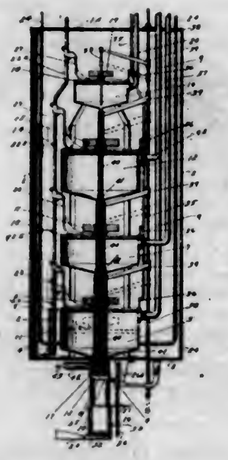
1. A measuring instrument for a polyphase circuit comprising a plurality of sets of co-operating coils connected to each phase of the circuit and a plurality of mechanically connected magnetizable elements respectively influenced by said sets of coils and displaced by a predetermined angle.

1,621,007. METHOD OF MAKING AXLE HOUSINGS. HENRY FORD, Dearborn, Mich. Filed July 6, 1925. Serial No. 41,530. 2 Claims. (Cl. 29—153.)



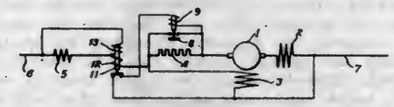
1. The method of forming an axle housing of the banjo type consisting of forming substantially hollow cylindrical end portions, forming a central portion of generally ring shape and of channel cross section and provided with opposed registering hollow tubular extensions, and then welding the end portions to such tubular extensions.

1,621,008. CLASP. ANTHONY FRICKER, Lakewood, Ohio. Filed June 4, 1923. Serial No. 643,282. 3 Claims. (Cl. 24—259.)



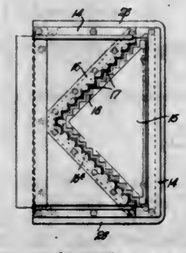
1. A clasp having two spring metal arm portions contacting at separated regions one intermediate their ends and another near the outer free end of one of said arm portions, said arm portions being so formed as to provide between said separated contacting regions and adjacent the outer one thereof and remote from the other a region where the arm portions do not contact, whereby articles passed between the outer contacting arm portions may be readily moved betwen the non-contacting arm portions to the inner contacting arm portions.

1,621,009. WELL RIGGING. WALTER D. GILES, Leesville, La. Filed Feb. 12, 1926. Serial No. 87,964. 8 Claims. (Cl. 214—1.)



1. A well rigging of the class described including means for simultaneously raising and lowering sections of rods or tubing, and means operated by the first mentioned means for carrying away the section being lowered.

1,621,010. CONFECTION-FILLING MACHINE. CHARLES G. HALL, Portland, Oreg., assignor to Novelty Food Corporation, Boise, Idaho, a Corporation of Idaho. Filed May 20, 1924. Serial No. 714,597. 4 Claims. (Cl. 107—1.)



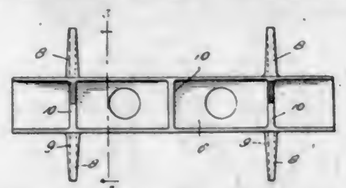
3. A confection filling machine, comprising a base, a shell closure supported on said base, a top for said shell closure, a series of hoppers disposed in storied arrangement upon said base and within said shell closure, and adapted to the retention of confection filler material, concentrical cylindrical outlets disposed from said hoppers, and adapted to deliver concentrical cylindrical confection, means disposed on said outlets to measure out a predetermined amount of confection material, means within said hoppers adapted to force the confection material into said outlets, plungers slidably maintained within said outlets and adapted to force the material therein contained a predetermined distance, and means to regulate the temperature adjacent the hoppers.

1,621,011. MOTOR-CONTROL SYSTEM. ALBERT L. HARVEY and NIELS K. ANDERSEN, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 20, 1923. Serial No. 620,290. 3 Claims. (Cl. 175—294.)

2. The combination with a motor having an armature and current-limiting means therefor, of a Wheatstone bridge comprising resistance and reactance and electro-responsive means therein for controlling said current-limiting means, said bridge being in shunt relation to the armature.

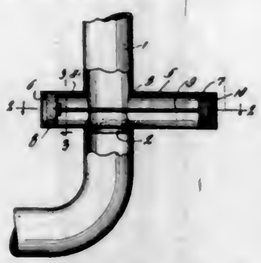
1,621,012. APPARATUS FOR CUTTING SWEETMEATS. RONALD HEAD and WILLIAM EDWARD PRESCOTT, London, England, assignors to Baker Perkins Company, Incorporated, White Plains, N. Y., a Corporation of New York. Filed Nov. 14, 1925, Serial No. 69,107, and in Great Britain Dec. 19, 1924. 8 Claims. (Cl. 146—155.)

1. A knife for candy-cutting apparatus, bent transversely to form, in horizontal section, a zigzag line and embodying two coordinate portions which are disposed substantially at right angles to each other.



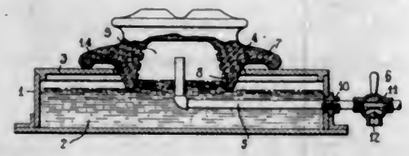
1,621,013. WATER HEATER. BENJAMIN DORIS HODGES and CHARLES EDWARD OWEN, Waco, Tex., assignors of one-fourth to Z. A. Booth and one-fourth to Homer J. Fowler. Filed Dec. 29, 1924. Serial No. 758,738. 1 Claim. (Cl. 122—16.)

In a heater of the class described a tank adapted to be placed with its lower end over a heater, and a heating chamber in the lower portion of the tank, of a false



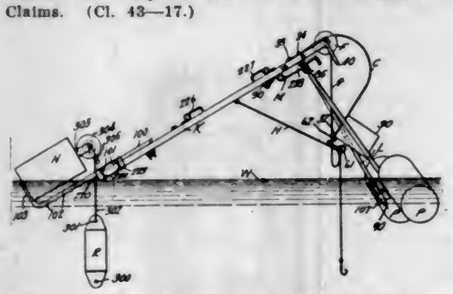
bottom within the tank and spaced from the top of the heating chamber by a dead air space, a water flue extending upwardly from the top of the heating chamber and discharging at its upper end into the upper portion of the tank, water conducting tubes extending through the false bottom and opening into the lower portion of the heating chamber, said tubes being extended through but out of communication with the dead air space, a heat conducting flue extending throughout the length of the tank and opening through the ends thereof, said flue being extended through but spaced from the water flue, a hollow superheater in the form of a baffle supported over and spaced from the upper end of the tank, a pipe connection between said super-heater and the heating chamber, said connections being located within the heat conducting flue, a water outlet pipe in communication with the upper portion of the tank and super-heater, and a water supply pipe opening into the lower portion of the tank but above the false bottom.

1,621,014. CAST-STEEL FREIGHT-CAR SPRING PLANK WITH BRAKE-BEAM SAFETY DEVICE. JAMES E. HUNTER, Monaca, Pa. Filed Dec. 16, 1925. Serial No. 75,766. 1 Claim. (Cl. 105—208.)



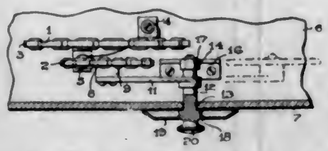
In combination with a pair of side frames including the usual bolster springs, the brake beams extending transversely of the trucks, and the suspension means therefor; of a channeled plank extending transversely across the side frames and fitting snugly in the openings formed in the side frames for supporting all of the springs arranged in the openings below the bolster, a straight arm extending laterally from each of the upstanding sides of the channeled plank adjacent each end thereof, said arms being normally disposed below the brake beams in spaced relation thereto, the arms acting as a temporary support for the brake beams when the suspension means therefor becomes accidently broken, reinforcing ribs extending between the sides of the channeled plank, additional reinforcing ribs extending across the bottom of the plank and said laterally extending arms, said arms and said ribs being formed integral with the plank.

1,621,015. DRAIN STRAINER. ANGEL IZQUIERDO, New Orleans, La. Filed Jan. 25, 1924. Serial No. 688,582. 1 Claim. (Cl. 210—167.)



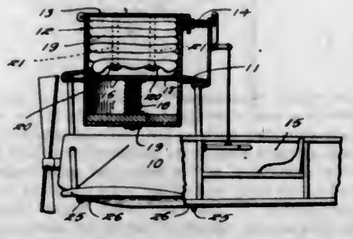
In combination, a drain pipe, a strainer in said drain pipe, said drain pipe provided with diametrically opposed openings immediately above the strainer, pipe sections communicating with said openings, one of said sections having a closed end and the other provided with a threaded open end, and a brush element including a brush proper, a rod extending therefrom and a threaded cap on the rod, said brush adapted to be normally disposed within the pipe section having the closed end while the threaded cap normally engages the threaded opening of the other section.

1,621,016. METHOD OF AND MEANS FOR COATING INNER SURFACES OF HOLLOW BODIES. RAY P. JACKSON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 4, 1923. Serial No. 643,143. 7 Claims. (Cl. 91—68.)



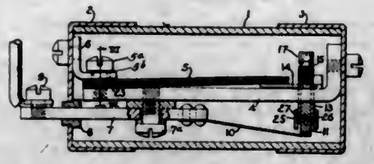
7. The method of coating the interior surface only of a member of substantially cup-shape having imperforate walls, comprising placing the mouth of the cup in inverted position over a body of coating liquid so that the liquid seals said mouth and in withdrawing air from the cup.

1,621,017. FISH TRAP. PETER M. JOYAL, Methuen, Mass. Filed May 15, 1926. Serial No. 109,339. 9 Claims. (Cl. 43—17.)



9. In a trap for ice fishing, the combination of a body having an open fork in which is pivoted a manually operable reel; with an elastic signal having a loop adapted to extend beyond the reel; and a trigger having at its free end a line loop and a signal hook so hung under the body as to be adapted to engage the signal loop when the elastic signal is bent around and in contact with the reel, and to hold it in contact therewith.

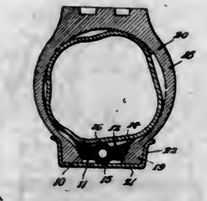
1,621,018. CONTROL FOR PANCAKE-TYPE VARIOMETERS. VERNON D. LANDON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 15, 1923. Serial No. 668,548. 3 Claims. (Cl. 171—119.)



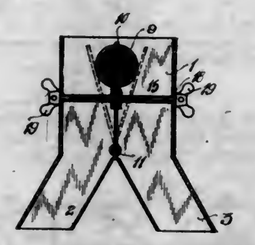
1. In a device of the class described, a flat coil, stationary means for mounting said coil, a shaft rotatably mounted at right angles to the plane of said coil, an arm carried by said shaft and a second flat coil at the end of said arm parallel to the first named coil, whereby rotation of the shaft will move the movable coil in a plane parallel to the stationary coil and thereby alter the mutual inductance of said coils, said stationary coil being beyond the end of said shaft whereby said stationary mounting means may be located to provide any desired change of degree of overlapping of said coils in half a revolution of said shaft.

1,621,019. AEROPLANE. CLARENCE E. LYKINS, Shawnee, Okla., assignor of one-half to H. D. Hewlett, Shawnee, Okla. Filed Oct. 19, 1926. Serial No. 142,702. 3 Claims. (Cl. 244—21.)

1. In combination with an aeroplane embodying a wing structure and a fuselage having the usual cock pit, a casing carried by the wing structure centrally thereof, a parachute within the casing, means normally urging the parachute from the casing, a latched lid for the casing, means within the cockpit for releasing the latch of said lid, bars rigidly secured to the fuselage and extending transversely thereof, the ends of said bars having upturned portions provided with eyes, the casing having slots in the side wall thereof and guy wires connected at their outer ends to the eyes of said supports and at their inner ends to members slidable in said slots and connected with said parachute.



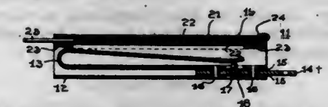
1,621,020. THERMAL RELAY. HOWARD D. MATTHEWS, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1924. Serial No. 686,691. 9 Claims. (Cl. 200—113.)



1. A thermal relay for electrical apparatus comprising a bimetallic member, one end of which is freely movable through a definite path, a relatively movable contact member supported by the bimetallic member, a resiliently mounted contact member which remains in engagement with the first contact member during a certain part of its movement, and means whereby engagement of the two contact members is positively precluded when the first contact member is actuated with a snap action.

1,621,021. TIRE FLAP. FRED V. MEDYNSKI, Medford, Oreg. Filed Aug. 11, 1926. Serial No. 128,685. 5 Claims. (Cl. 152—20.)

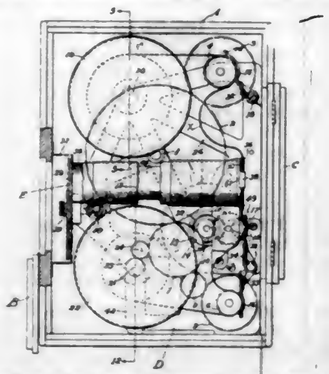
5. A tire flap including an annular band having side portions provided with concave side edges, flat inner faces and concave outer faces, the said side portions having upwardly and laterally divergent wings and being joined by an intermediate laterally extensible tubular spreader having an inner convex portion extending below the flat inner faces of the side portions and an outer convex portion extending above the outer concave faces of the side portions.



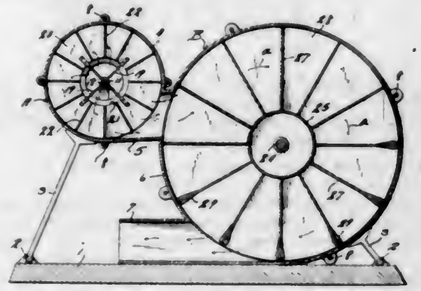
1,621,022. FEED REGULATOR. GLEN G. MERCHEN, Spokane, Wash. Filed Feb. 25, 1926. Serial No. 90,542. 6 Claims. (Cl. 83—44.)

1. The combination with a feed hopper and a pivoted gate therein, of a floating nut loosely carried by the gate, a screw bar journaled in the hopper and passed through said nut, and means for turning the bar.

1,621,023. THERMOSTAT. GEORGE T. NEWELL, Jr., Beverly, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 12, 1923. Serial No. 674,137. 4 Claims. (Cl. 236—68.)



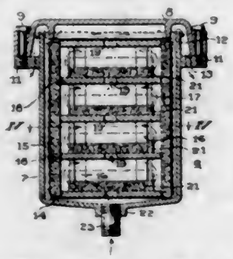
2. A temperature-controlling structure comprising a thermostatic electric switch, a metal casing therefor, and means on said casing for causing the temperature of the thermostatic switch to be substantially the same as the temperature outside of the casing during its operative period, said means being parallel to said switch.



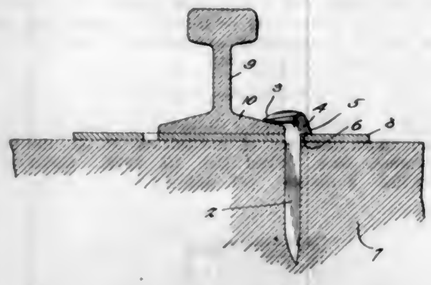
1,621,024. MOVING-PICTURE CAMERA AND PROJECTOR. FRANK E. OILER, Detroit, Mich. Filed Mar. 27, 1924. Serial No. 702,285. 15 Claims. (Cl. 88—17.)

1. In a combined moving picture camera and projector of the character indicated, the combination of a casing, a pair of reels in spaced relation, means to support the reels within said casing for the unwinding of the film from one reel and taking up the same on the other, a rotating shutter and a lens tube within said casing, the tube being mounted intermediate the said reels, means for actuating the film from one said reel to the other, means including a pair of apertured plates for guiding the said film across the end of said tube remote from said shutter, means for actuating the shutter for movement across the other end of the tube and doors in the wall of said casing adjacent

the ends of said tube, whereby the shutter door may be open and the opposite door closed when taking pictures upon the film, and the film door may be opened for presenting artificial light in the vicinity of the film when it is desired to project pictures upon a screen beyond the shutter end of the tube.

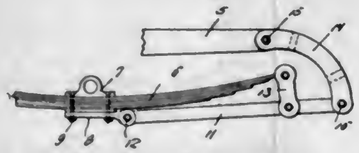


1,621,025. TRAIN-AIR-BLOWING MACHINE. JOSHUA MILLER POTTER, Binghamton, N. Y. Filed July 1, 1925. Serial No. 40,777. 7 Claims. (Cl. 230—11.)



1. An air blowing machine comprising a fan and a smaller fan directing an air blast upon the first named fan for operating the same.

1,621,026. SEPARATING DEVICE FOR CIRCUIT INTERRUPTERS. THOMAS STENSEN PUKERUD, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 24, 1923. Serial No. 641,073. 3 Claims. (Cl. 183—44.)

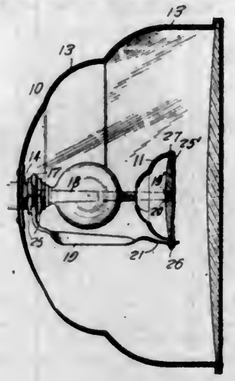


1. In a separating structure, a casing, a lining therefor comprising an absorbent material, an inner casing provided with a perforated surface, perforated baffle members mounted in said casing, and cushions of absorbent material associated with said baffle members.

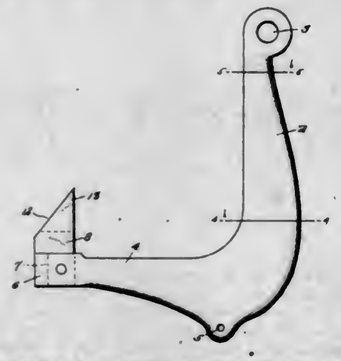
1,621,027. RAIL SPIKE. JAMES W. REYNOLDS and CARL LEON BALL, Chester, Nebr. Filed Sept. 1, 1925. Serial No. 53,846. 1 Claim. (Cl. 85—28.)

A spike which is a product of a standard automatic single-operation spike-making machine, the spike comprising a body provided with a head of approximately oval outline and thinned toward its periphery to afford a claw-bar hold on either side of the body, the spike including a heel joined to the body and of the same width as the body, the under surface of the heel being plane throughout its entire length, the length of the under surface of the heel, measured from the body outwardly to the extremity of said surface, being appreciably less than the distance between said surface and the place where the outer surface of the heel joins the head, measured in a direction parallel to the length of the body, the outer surface of the heel having a continuous slope from the upper surface of the head to the extreme outer end of the under surface of the heel.

1,621,028. SPRING SHACKLE STRUCTURE. WILLIAM ALBERT JULIUS RIECK, Tyler, Tex. Filed July 9, 1925. Serial No. 42,468. 1 Claim. (Cl. 267—19.)



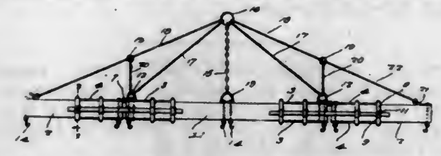
An attachment for an automobile; wherein the automobile includes among other elements a frame and a semi-elliptical spring associated with the frame; comprising a bracket attached to the under surface of the intermediate portion of the spring and extending toward one end thereof, a bar pivoted to the bracket and normally extending in substantial alinement therewith, a shackle pivoted at one end to the frame and extending downwardly thereto and pivoted at its other end to the bar, and a second shackle pivoted to the end of the spring and extending downwardly and pivoted to an intermediate portion of the bar.



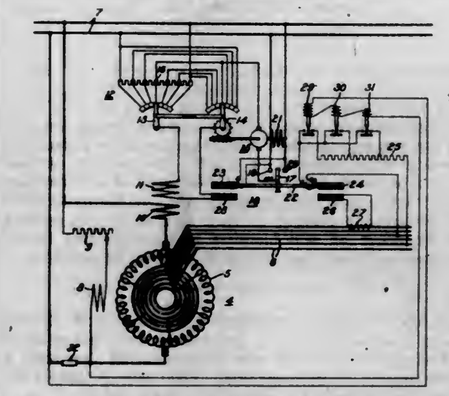
1,621,029. LIGHT-REFLECTING MEANS. CARL B. ROZEKEN, Washington, D. C. Filed Dec. 1, 1925. Serial No. 72,502. 2 Claims. (Cl. 240—41.)

1. A lighting structure including an outer reflector, a socket arranged centrally within the outer reflector, a light source in said socket, an inner reflector arranged within the outer reflector and in advance of the light source, said inner reflector being formed with an opening to permit the passage of light rays through the inner reflector, a lens carried by the inner reflector, and means for supporting the inner reflector from said socket and

movable longitudinally of said socket to permit the adjustment of the inner reflector to and from the light source, said means including a pivotal support for the inner reflector to permit a tilting thereof on an axis fixed in the plane of the lens and an element for fixing the inner reflector in tilting adjustment.



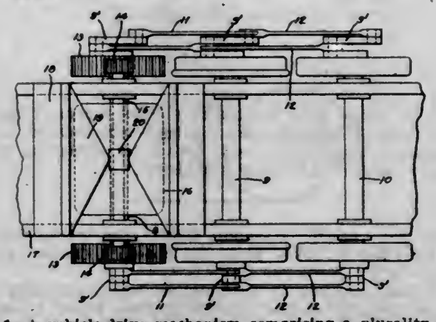
1,621,030. LOG-LOADING HOOK. WILBUR SALISBURY, Craigmont, Idaho. Filed Mar. 17, 1926. Serial No. 95,327. 1 Claim. (Cl. 284—78.)



A log loading hook of the class described comprising a shank portion having an eye formed at one end thereof, a right angularly disposed foot formed at the opposite end thereof, the outer free end of said foot being enlarged and provided with a vertical opening, the bore of which is substantially rectangular, a tooth, a substantially rectangular tongue depending from the bottom face of the tooth and adapted to be disposed within said rectangular opening, whereby the bottom face of the tooth will rest on the upper face of the enlarged portion of the foot, a pin extending transversely through the enlarged outer end portion of the foot and through said tongue for detachably securing the tooth in said opening, the outer face of the tooth being beveled, said tooth being bifurcated to provide a pair of prongs, the inner opposed faces thereof being beveled to provide sharpened upper points.

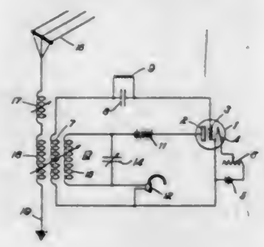
1,621,031. DRAWBAR FOR DRAGS. DIEDRICK SCHMIDT, Alta, Iowa. Filed June 22, 1926. Serial No. 117,777. 1 Claim. (Cl. 55—84.)

In a draw bar, a central section, a pair of end sections hingedly connected to the ends of the central section, means for holding the sections in horizontal alinement, and a draft appliance and equalizing device embodying a central ring, inner and outer pairs of rods connected at their inner ends to said ring, the rods of each pair diverging from each other in a direction toward the ends of said central section, the rods of the inner pair being connected at their outer ends to the corresponding ends of said central section, small rings carried by the outer ends of the outer rods, link connections between the small rings and the ends of the central section, adjustable brackets connected to the outer ends of the end-sections, and connections between the small rings and said brackets.



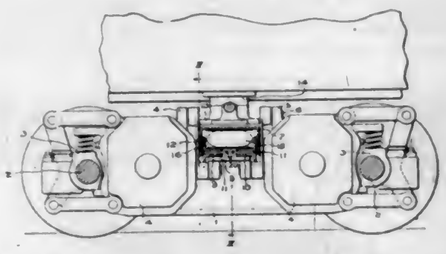
1,621,032. COMMUTATION OF SYNCHRONOUS CONVERTERS. ERROL B. SHAND, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 11, 1922. Serial No. 551,538. 38 Claims. (Cl. 171—123.)

6. The method of improving the commutation of a rotary converter which consists in providing a component of commutating field ampere-turns and varying said component in a predetermined manner to compensate for variations in the angular displacement of the rotating field of the armature member relative to the field member.



1,621,033. DRIVE MECHANISM. EARL A. SLATER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 20, 1923. Serial No. 681,787. 5 Claims. (Cl. 105—122.)

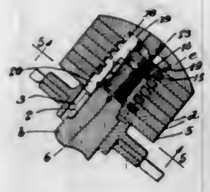
1. A vehicle-drive mechanism comprising a plurality of wheeled axles journalled to rotate with their axes in substantially parallel relation, and a plurality of rods, said



axles being adapted to be cooperatively associated by means of said rods respectively connecting the corresponding ends of said axles and a jack shaft operatively connected to one of said axles, said axles and jack shaft being in balanced relation.

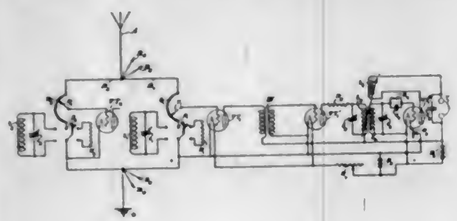
1,621,034. WIRELESS RECEIVING SYSTEM. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 13, 1922. Serial No. 528,969. 2 Claims. (Cl. 250—27.)

1. The method of operating an intermittently oscillating regenerative-feed-back circuit for amplifying electrical currents which consists in causing electrostatic charges to be alternately built up and dissipated in a controlling circuit at a super-audiofrequency whereby the oscillations are periodically blocked at such frequency, and causing the frequency of said blocking to be modulated in accordance with said currents which are to be amplified.



1,621,035. VEHICLE STRUCTURE. NORMAN W. STORER and THOMAS S. SCOTT, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 4, 1925. Serial No. 27,695. 8 Claims. (Cl. 105—190.)

1. A vehicle truck comprising a frame journaled upon a plurality of wheeled axles, a swing bolster therefor, and pneumatic means within said bolster for supporting the load to which said bolster is subjected.



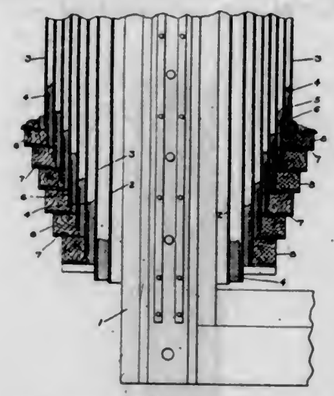
1,621,036. LOCK. MASUICHI SUZUKI, Los Angeles, Calif. Filed May 11, 1925. Serial No. 29,448. 4 Claims. (Cl. 70—53.)

1. Improvements in permutation locks, including a screw-threaded member, a split bushing keyed to said screw-threaded member, a key within the split portion of said bushing and in screw-threaded engagement with the screw-threaded member, tumblers surrounding the key and bushing, said tumblers being annular in formation and provided with annular flanges, said key being provided with spaced notches, and said annular flanges of said tumblers being adapted to be received in said

spaced notches when the key is in a given position, one of said tumbers being fixed against rotation, a cap member secured to the said screw-threaded member and the other of said tumbers being interposed between said fixed tumbler and the said cap.

1,621,037. RECEIVING SYSTEM FOR HIGH-FREQUENCY ELECTRICAL OSCILLATIONS. ALBERT H. TAYLOR and LEO C. YOUNG, Washington, D. C. Filed Jan. 19, 1924. Serial No. 687,255. 2 Claims. (Cl. 250—9.)

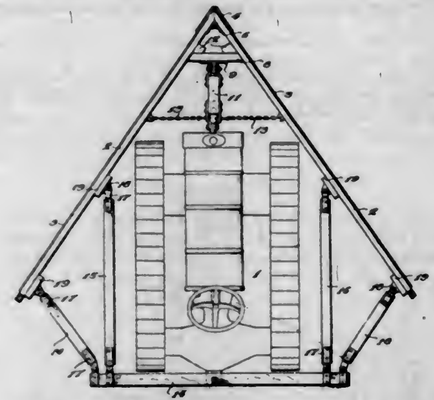
1. In a system for receiving high frequency oscillations the combination of a collector for said oscillations, a plurality of branch circuits connected in series with said collector and in parallel with each other, each branch circuit containing a high resistance and a parallel tunable circuit in series with said resistance, and a receiver connected to each of said branch circuits in a position in shunt with said parallel tunable circuits and any selected portion of said high resistances.



1,621,038. PROCESS OF RECOVERING VANADIUM. KARL B. THEWS, Sawpit, Colo., assignor to Colorado Vanadium Corporation, New York, N. Y., a Corporation of Colorado. Filed Oct. 29, 1920. Serial No. 420,480. Renewed Aug. 9, 1926. 1 Claim. (Cl. 23—22.)

In a process of recovering vanadium, adding an oxidizing agent to a solution of soluble vanadates contaminated with iron and aluminum compounds, and adding a calcium reagent and keeping the solution non-alkaline to precipitate calcium vanadate.

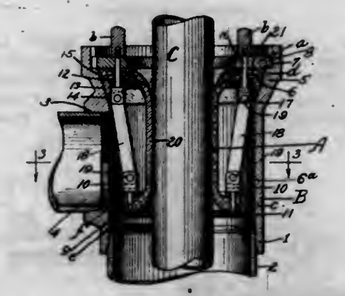
1,621,039. ANGLE RING FOR TRANSFORMERS. ARTHUR W. THOMPSON, East McKeesport, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 14, 1921. Serial No. 437,131. 4 Claims. (Cl. 175—356.)



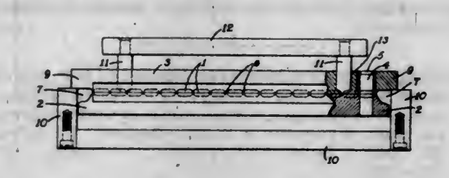
1. A spacing member for transformer coils comprising a plurality of superposed layers of insulating material, the extremities of certain of said layers extending beyond the

extremities of the adjacent layers and having slits therein whereby said member is adapted to be bent into substantially annular form with the elements formed by the slits

in the extremities of said layers arranged in staggered relation whereby the joints between elements in one layer are covered by the elements of an adjacent layer.



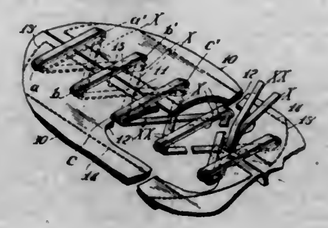
1,621,040. SNOWPLOW. FRANK E. THOMPSON, Pierson Station, Ill. Filed Nov. 16, 1925. Serial No. 69,454. 1 Claim. (Cl. 37—44.)



The combination with a tractor, of clearer blades at the sides thereof and forwardly attached to the cross bar and having a vertical rib in which a vertical series of openings is formed, a push bar adjustably connecting the front end of the tractor with the rib of said clevis, flexible elements adjustably connecting the rear end of the push bar with the clearer blades, a cross bar connected to the rear end of the tractor, longitudinal stay bars at the sides of the tractor connecting the outer ends of the rear cross bar with intermediate portions of the said blades, and forwardly diverged stay bars connecting the ends of the rear cross bar with the rear ends of the said blades.

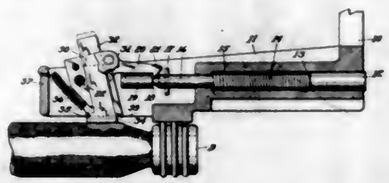
1,621,041. BLOW-OUT PREVENTER. WILLIAM A. TROUT, Los Angeles, Calif. Filed Oct. 15, 1923. Serial No. 668,697. 6 Claims. (Cl. 285—22.)

1. A blow-out preventer, including a circulating head for well casing provided with a circulation system outlet and adapted to receive tubular drill-operating means; and flexible packing means disposed within said circulating head and extending in part vertically therein and adapted to contact with and surround such drill-operating means when subjected to fluid pressure exerted within such circulating head to direct such fluid under pressure to said outlet; means being provided for supporting said packing means at upper and lower portions thereof.



1,621,042. METHOD OF MOLDING STRAIN INSULATORS. FRANK H. TUPPER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 29, 1924. Serial No. 702,726. 8 Claims. (Cl. 18—56.)

1. The process of forming a plurality of articles in one operation which comprises compressing felted sheet material impregnated with a binder capable of being cured under heat and pressure in a mold, segregating said articles in said molding operation and applying heat and pressure to harden said binder.



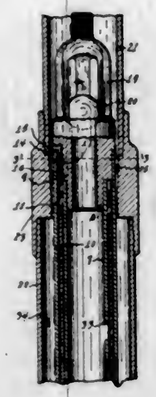
1,621,043. INFLATABLE BALL. ARCHIBALD J. TURNER, Chicago, Ill., assignor to Wilson-Western Sporting Goods Company, Chicago, Ill., a Corporation of Delaware. Filed May 29, 1926. Serial No. 112,427. 4 Claims. (Cl. 273—65.)

1. In an inflatable ball, a cover provided with a slit constituting a bladder insertion opening, a row of spaced apertures in each of the margins of said slit, each of said apertures being paired with and located directly opposite an aperture of the other row, and a lace passing through said apertures and comprising a plurality of portions, each consisting of two flat plies superposed, ex-

tending across said slit exteriorly of the cover, and a plurality of one-ply crossing portions on the interior of the cover maintaining the parallelism of the exterior two-ply portions aforesaid.

1,621,044. COMBINED LATCH AND WEFT DETECTOR FOR LOOM TRANSFERRERS. KENNETH J. UNWIN, Shrewsbury, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 21, 1926. Serial No. 124,044. 8 Claims. (Cl. 139—271.)

1. In a weft detector for a loom having a transferrer arm receiving a regular movement at periodic intervals toward a weft surface to be detected, a controller on the transferrer arm, a latch normally holding the controller in inoperative position, and a weft detector mounted on the latch and having an operative movement each time the transferrer arm moves toward the surface to be detected and tending to move the latch to a position to release the controller.



1,621,045. MULTIPLE-WEAVE MOTION FOR LOOM DOBBIES. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed June 21, 1926. Serial No. 117,291. 7 Claims. (Cl. 139—323.)

1. In a multiple weave motion for pattern mechanism, a main pattern chain, a main set of levers therefor, a second pattern chain, a second set of levers therefor, flexible connections between certain of the first named levers and certain of the second named levers, and means to tighten or slacken said connections to render the second levers effective or ineffective, depending upon whether the connections are tight or slack, to control the first named levers.

1,621,046. DEEP-WELL PUMP. IRWIN B. WINSOR, Los Angeles, Calif., assignor to Singer Pump Company, a Corporation of Delaware. Filed July 24, 1924. Serial No. 728,044. 5 Claims. (Cl. 103—179.)

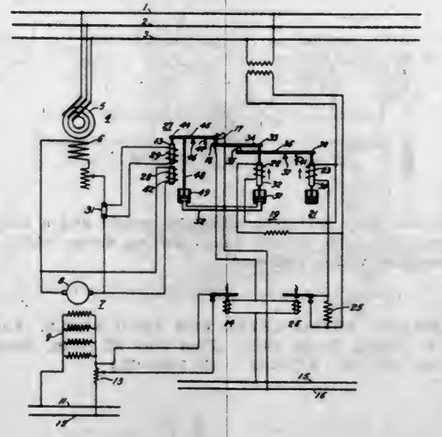
1. In a pump, a single-walled member and a double-walled member relatively reciprocal and providing an internal central fluid space and an elongated annular space externally coaxial to said fluid space and separated therefrom, a check valve for said single-walled member, a check valve in said double-walled member at one end of said central fluid space, said double-walled member having discharge passages leading from said central fluid space and said annular space, one of said discharge passages extending through the end of said double-walled member and the other extending laterally through the side of said double-walled member to the exterior thereof.

1,621,047. CASEMENT HINGE. FREDERICK W. YOUNG, Safety Harbor, Fla. Filed Sept. 21, 1925. Serial No. 57,623. 2 Claims. (Cl. 16—143.)

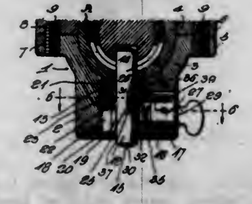
1. In a structure of the class described, a window frame, a casement, hinges for mounting the casement in the window, each hinge including a pair of leaves, one leaf having a pintle provided with a lug intermediate its ends, the other leaf provided with a split sleeve for receiving the pintle and the lug, said split sleeve being of less length than the pintle and of greater length than the distance between the lug and the bottom of the pintle.

1,621,048. PENCIL. FRANK B. ACKERMANN, WILLIAM C. STEFFAN, and WALTER J. GREINER, Chicago, Ill. Filed Sept. 7, 1923. Serial No. 661,491. 4 Claims. (Cl. 120—18.)

2. In combination a sleeve threaded internally at its lower end, a feeding sleeve including a coupling member at its lower end and threaded externally at its upper end portion for threaded engagement with the internal threads of the sleeve and including a reduced thread bearing end portion, means operable by the feeding sleeve for feeding a length of pencil lead through the feeding sleeve, and a tip having an internally threaded portion adapted for threaded engagement with the reduced end portion of the coupling member.



1,621,049. PROCESS OF MAKING PAPER BAGS. DANIEL APPEL, Cleveland, Ohio, assignor to The Cleveland-Akron Bag Company, Cleveland, Ohio, a Corporation. Filed Sept. 18, 1924. Serial No. 738,536. 10 Claims. (Cl. 93—35.)

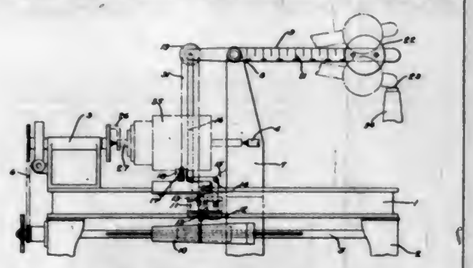


2. A process of making paper bags, comprising the steps of drawing a plicated tube having partly severed portions through a stationary intercepting and folding device and forming triangular folds in the partly-severed plicated portions of the tube by sliding engagement of the tube with said device.

1,621,050. REGULATOR SYSTEM. JOHN H. ASHBAUGH, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 28, 1925. Serial No. 33,339. 9 Claims. (Cl. 171—229.)

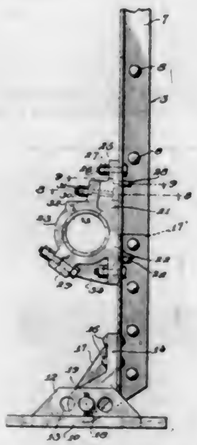
1. An electric regulator comprising a pair of cooperating contact members, two levers for actuating one of said members, one of which levers is fulcrumed upon the other, actuating electromagnets for said levers, a third lever for actuating the other of said contact members, an electromagnet for actuating the last-named lever, and a yielding connection between certain of said electromagnets.

1,621,051. STEERING-WHEEL LOCK. HANA F. AYOUB, El Paso, Tex. Filed Jan. 11, 1926. Serial No. 80,595. 3 Claims. (Cl. 70—129.)



1. In a lock, a lock body having a shackle portion and a casing portion, the latter being provided with a bolt-passage and a chamber arranged at right angles to each other and separated by a wall having a slot affording communication between said passage and chamber, a spring-retracted, manually-projectible bolt movable in said passage and having a flattened side bearing on said wall and provided with a notch exposed at said slot to said chamber, a cylinder mounted in the chamber, a spring-pressed latch carried by said cylinder and movable through said slot to engage said notch when the bolt and latch are in coactive relationship for a bolt locking action, and key-controlled means carried by the cylinder for shifting the latch into and out of bolt engaging position.

1,621,052. BANDING MACHINE. VIRGIL D. BARKER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 14, 1923. Serial No. 645,473. 6 Claims. (Cl. 242—8.)

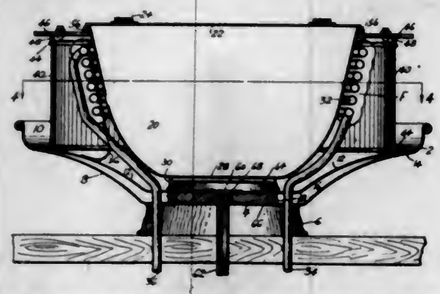


1. A wire-banding device, comprising means for rotatably mounting a body to be banded, wire supply means

associated therewith, guide means for said wire including a feed cone, and tension adjusting means comprising a

fulcrum lever having an adjustable weight and a linked connection with a wire guide shifting device which is associated with a feed cone.

1,621,053. SWING LEVER FOR SAND REELS. CARL H. BESSE, Tulsa, Okla. Filed May 27, 1926. Serial No. 112,110. 8 Claims. (Cl. 308—61.)



3. A swing lever comprising a metal body having a plurality of relatively spaced series of openings formed longitudinally of the same, means for pivotally supporting one end of such lever, a bearing box, pins fixedly carried by said bearing box and extended therefrom engageable in certain of said openings, and fastening means passed through portions of said bearing box engageable in others of said openings.

1,621,054. TRANSPORT TABLE FOR ROLLED SHEET GLASS. MAX BICHEROUX, Herzogenrath, near Aix-la-Chapelle, Germany. Filed July 1, 1925, Serial No. 40,931, and in Germany July 10, 1924. 1 Claim. Cl. 49—14.)

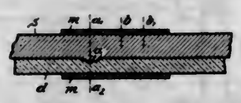
A metallic transport table for receiving plate glass from a forming machine, having on its upper surface a series of sharp glass contracting and supporting projections separated from each other.

1,621,055. PUNCH BOWL. BERYL V. BOOTH, Akron, Ohio. Filed July 13, 1923. Serial No. 651,207. 15 Claims. (Cl. 62—95.)

15. A liquid chilling device having a receptacle for the storage of liquid, an enclosure surrounding the receptacle but spaced therefrom to provide a cooling compartment, and coils located within the compartment, said coils being adapted for the circulation of a refrigerant, there being provided means to maintain a humid gas in the interior of the compartment whereby a frost bank will be formed upon the exterior of the coils.

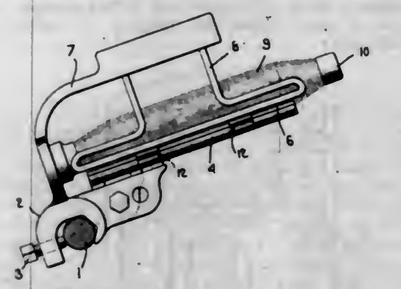
1,621,056. THERMAL RELAY. WILLIAM M. BRADSHAW, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 5, 1923. Serial No. 672,831. 6 Claims. (Cl. 200—113.)

1. A thermal relay for electrical apparatus comprising a bimetallic member freely movable through a definite path, a relatively movable contact member, and magnetic means co-operating with the contact member to cause the bimetallic member to actuate the contact member with a snap action when it reaches substantially either end of its path of free movement, corresponding to a predetermined temperature of the bimetallic member.



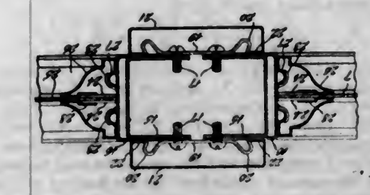
1,621,057. GOLF GAME. HAROLD D. BREWER, Oklahoma City, Okla. Filed Sept. 28, 1926. Serial No. 137,352. 1 Claim. (Cl. 273—87.)

A game of the class described, including a game board ruled to simulate a golf course, a game piece including a supporting rod having a base and having its upper end



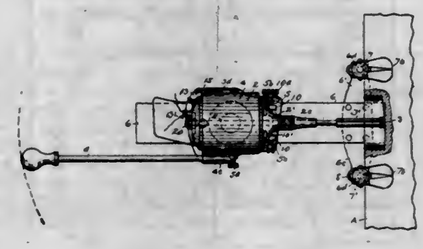
extended downwardly, a tubular flexible member adapted to be positioned over the downwardly extended end of the supporting rod, a club having a head, said club adapted to be extended into the tubular member to connect the supporting rod and club, and a puck adapted to be hit by the club and moved over the game board.

1,621,058. ELECTRIC CONDENSER. OSWALD BURGER, Berlin-Charlottenburg, Germany, assignor to Westinghouse Electric & Manufacturing Company, New York, N. Y., a Corporation. Filed Feb. 10, 1925, Serial No. 8,276, and in Germany Feb. 12, 1924. 4 Claims. (Cl. 175—41.)



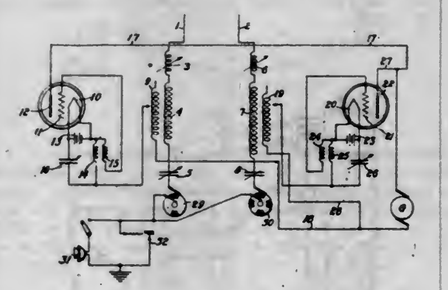
1. In an electric condenser, the combination of a dielectric layer, conducting layers at both sides of said dielectric layer and a layer of semi-conducting protective material between said dielectric and one of said conducting layers, said layer of protective material being of considerably greater thickness than said dielectric layer.

1,621,059. SPOOLER BOBBIN HOLDER. HARRY H. BURTON, New Bedford, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Sept. 3, 1926. Serial No. 133,488. 4 Claims. (Cl. 242—132.)



1. A bobbin-holder for spooler frames comprising a support presenting a plurality of concave yielding rests extending transversely of and longitudinally spaced along the support to hold the bobbin during the spooling operation.

1,621,060. METAL PARTITION. ROBERT F. CARPENTER and THOMAS F. ANDERSON, Cleveland, Ohio, assignors to The Sanymetal Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 1, 1921. Serial No. 488,931. 12 Claims. (Cl. 189—34.)

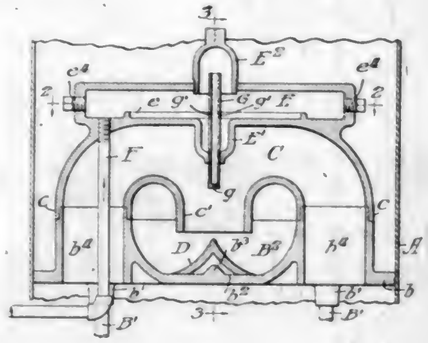


1. In a structure of the class described, a sectional post, means for securing the sections of said post directly to a wall or the like and having a portion located outside of said post sections, and complementary mouldings detachably secured opposite each other along one side of said post and forming a groove for a partition panel, said mouldings being so constructed and arranged as to cover the portion of said securing means which is located outside of said post sections.

1,621,061. DOOR-MORTISING MACHINE. RAY L. CARTER, Phoenix, N. Y. Filed Dec. 2, 1925. Serial No. 72,722. 9 Claims. (Cl. 144—70.)

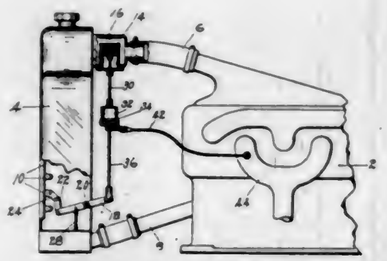
1. In a mortising machine, a motor, a holder for the motor, a tool driven by the motor, a handle for oscillating the motor and tool, a roller carried by the holder, and a sleeve having a cam portion in constant engagement with the roller, said cam portion being arranged to effect variable forward movements of the tool during each oscillation of the motor.

1,621,062. RADIO SYSTEM. LEWIS WARRINGTON CHUBB, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 17, 1920. Serial No. 389,580. 11 Claims. (Cl. 250—10.)



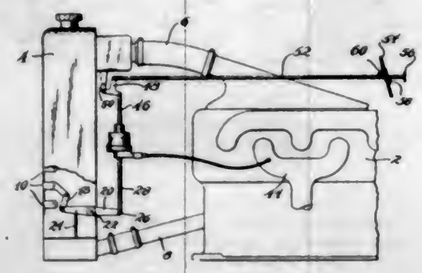
1. In a system for wireless communication, the combination of means for propagating a plurality of wave trains of different radio-frequency and different train frequency, with means for receiving the wave trains, means for causing the wave trains to interact to produce a beat of audible frequency, and means for receiving the beat.

1,621,063. OIL BURNER. ADELBERT R. CLIZBE, Plymouth, Ind. Filed June 16, 1924. Serial No. 720,152. 10 Claims. (Cl. 158—64.)



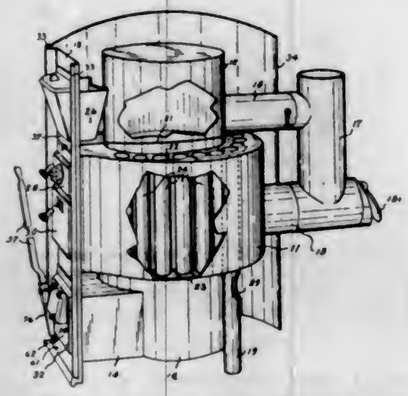
10. An oil burner of the character described comprising a combustion chamber formed as a casting and with in-

let passages at its sides, a mixing chamber resting thereon and located above the combustion chamber, said mixing chamber having outlets extending into the combustion chamber for delivering vapor thereto and having inlet portions coinciding with and fitting reduced portions of the inlet passages at the sides of the combustion chamber, and



an elongated vaporizer extending diametrically across the mixing chamber and having a vertically adjustable and removable discharge tube for vapor extending into the outlet of the mixing chamber, there being an opening in the top of the vaporizer over the discharge tube and a cap over said opening.

1,621,064. TEMPERATURE-CONTROLLING APPARATUS FOR INTERNAL-COMBUSTION ENGINES. FREDERICK M. FURBER, Revere, Mass.; Samuel R. Cutler, Revere, Mass., administrator of said Frederick M. Furber, assignor to Charles A. Pipenhagen, Chicago, Ill., and James F. Raleigh, River Forest, Ill. Filed Feb. 16, 1918. Serial No. 217,689. 15 Claims. (Cl. 123—174.)

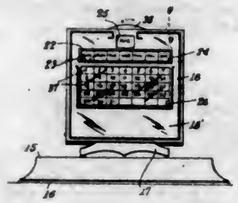


1. In combination with an engine and shutters for regulating the flow of air to cool said engine, spring means for actuating said shutter to closed position, actuating means for actuating said shutters to open position, and a connecting member between said shutters and said actuating means, comprising a pair of axially disposed longitudinally movable rods and suction means responsive to the running condition of the engine for connecting the same to move together.

1,621,065. TEMPERATURE-CONTROLLING APPARATUS FOR INTERNAL-COMBUSTION ENGINES. FREDERICK M. FURBER, deceased, late of Revere, Mass., by Samuel R. Cutler, administrator, Revere, Mass., assignor to Charles A. Pipenhagen, Chicago, Ill., and James F. Raleigh, River Forest, Ill. Original application filed Feb. 16, 1918, Serial No. 217,689. Divided and this application filed May 7, 1926. Serial No. 107,360. 19 Claims. (Cl. 123—174.)

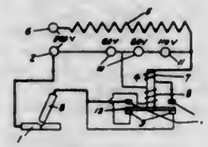
1. The combination with a shutter for the radiator of an internal combustion engine, manually controlled means for opening said shutter, and automatic means for causing the shutter to close when the engine stops.

1,621,066. FURNACE. FRANK E. GRUNWALDT, Seattle, Wash., assignor to Gabriel Tubular Furnace Co. Inc., Tacoma, Wash., a Corporation of Washington. Filed Oct. 2, 1926. Serial No. 139,204. 7 Claims. (Cl. 126—109.)



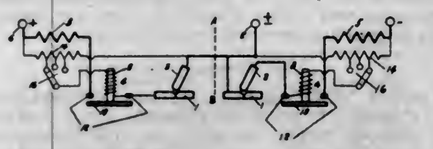
1. In a furnace, a fire-box having a smoke outlet and a plurality of heat tubes between said fire box and said smoke outlet, the tubes adjacent said smoke outlet being close together and the tubes further removed from said smoke outlet being spaced apart.

1,621,067. PERPETUAL CALENDAR. WILLIAM C. HIERING, Newark, N. J., assignor to J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed July 3, 1926. Serial No. 120,274. 5 Claims. (Cl. 40—118.)



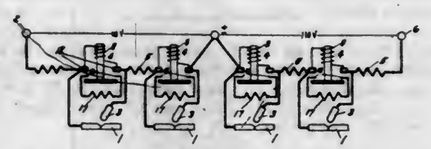
1. In a perpetual calendar, a casing having front and rear walls, a panel raised from the front wall bearing the days of the week, a scroll bearing the days of the month adjustable across an opening in the front wall, a guide for said scroll, means for actuating the scroll, a tubular boss on said guide, a disc rotatably mounted on said boss, said disc bearing the names of the months to appear

through a recess in said front plate, the upper edge of said disc extending through the top of said casing to facilitate rotation, said disc having perforations corresponding to



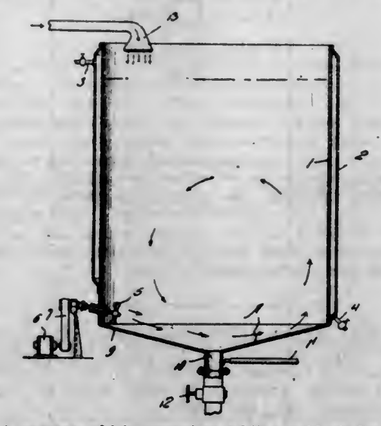
the names borne thereby, a spring tongue sheared from said guide, and a detent on said tongue engageable in any of the mentioned perforations whereby said disc is held in adjustment.

1,621,068. ELECTRIC-ARC WELDING AND CUTTING SYSTEM. CLAUDE J. HOLSLAG, South Orange, N. J., assignor to Electric Arc Cutting & Welding Company, Newark, N. J. Filed Feb. 9, 1923. Serial No. 617,919. 10 Claims. (Cl. 219—8.)



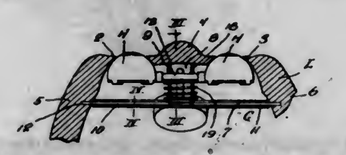
1. In an arc welding and cutting system, a main source of current for the arc, a resistance and a reactor having a magnetic core normally opened, but adapted to be closed and having a series and shunt winding, said series winding adapted to be connected with the arc and said resistance but normally in an open circuit, said shunt winding being normally connected across the arc electrodes through a portion of a potentiometer circuit and adapted when the electrodes are brought together, to close the welding circuit through said series winding and to close said core.

1,621,069. ELECTRIC-ARC WELDING AND CUTTING SYSTEM. CLAUDE J. HOLSLAG, South Orange, N. J., assignor to Electric Arc Cutting & Welding Company, Newark, N. J. Original application filed Feb. 9, 1923, Serial No. 617,919. Divided and this application filed Oct. 8, 1924, Serial No. 742,497. Renewed Sept. 18, 1926. 8 Claims. (Cl. 219—8.)



1. In an arc welding and cutting system, a main source of current for the arc, a steadying resistance in the arc circuit, a potentiometer resistance connected to said source of supply and a relay for closing the arc circuit having a single winding continuously connected in the same relationship across one arc electrode and the potentiometer resistance intermediate its ends.

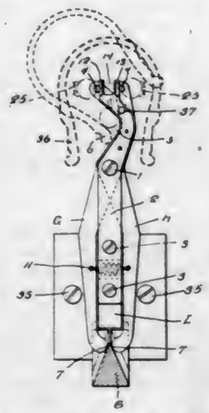
1,621,070. ELECTRIC-ARC WELDING AND CUTTING SYSTEM. CLAUDE J. HOLSLAG, South Orange, N. J., assignor to Electric Arc Cutting & Welding Company, Newark, N. J. Original application filed Feb. 9, 1923, Serial No. 617,919. Divided and this application filed Oct. 25, 1924. Serial No. 745,732. 6 Claims. (Cl. 219—8.)



2. In an arc welding and cutting system, a source of D. C. current of relatively high voltage, means for operating a plurality of arcs across said source consisting of; a relay, a steadying resistance in series with the relay and a compensating resistance for each pair of arc electrodes; said relay having contacts which coact on actuation of the relay to introduce said compensating resistance into parallel relationship with said relay winding and into the welding circuit if one of said arcs goes out or becomes too long for good welding.

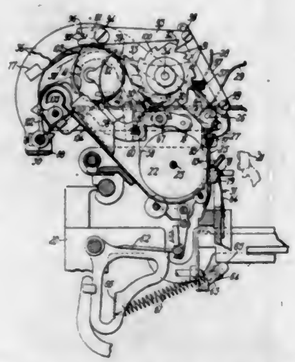
1,621,071. PROCESS OF TREATING ACID SLUDGE TO PROVIDE A FUEL. WILLARD DUGLAS KINKADE and CHARLES JOEL BAUGH, Barnsdall, Okla. Filed Jan. 8, 1927. Serial No. 159,995. 9 Claims. (Cl. 44—1.)

1. A process which comprises adding acid sludge from petroleum refining to a fuel oil, heating the same sufficiently to reduce the viscosity, mixing with amounts of soda and lime far less than the amounts thereof which would be necessary for neutralization of the acidity of the sludge, and well agitating the mixture, whereby an oil mixture suitable for use as a fuel is produced.



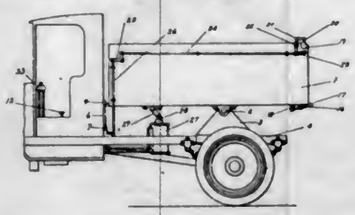
1,621,072. EYE SET. ALEXANDER KONOFF, New York, N. Y., assignor to Overland Metal Novelty Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 17, 1926. Serial No. 95,198. 11 Claims. (Cl. 46—40.)

9. In an eye set comprising a pair of eyes and a supporting carrier therefor upon which the eyes are movably



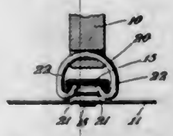
supported, a cross rod extending between and connecting the eyes together, and resilient means engaging the cross rod to resiliently urge the eyes against their seats in a doll head, the combination therewith of attaching means comprised in said carrier adapted to engage the doll head at points adjacent the eye seats respectively to thereby attach the eye set within the doll head.

1,621,073. MEANS FOR ATTACHING DOLL EYES. ALEXANDER KONOFF, New York, N. Y., assignor to Overland Metal Novelty Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 15, 1926. Serial No. 102,146. 16 Claims. (Cl. 29—84.)



1. In a tool for attaching an eye-set within doll heads said eye-set having attaching parts movable away from each other into attaching position, supporting means for supporting the eye-set in position to receive the doll head relatively thereover, the attaching parts of the eye-set each having an aperture therein, and said supporting means including lugs for engaging within said apertures and means to move said lugs to thereby move said attaching parts to attaching position.

1,621,074. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 31, 1924. Serial No. 746,951. 11 Claims. (Cl. 197—135.)

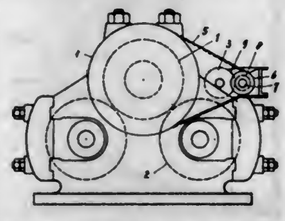


1. In a stencil-cutting device, in combination, a typewriting machine having a shift-frame, a shift-key and a compensating spring for said shift-frame for facilitating the operation of said shift-key, a stencil-card-holding mechanism detachably mounted on said shift-frame and pivoted in the rear thereof for presenting a stencil-card in operative position in said device, and a readily operable pivoted finger-lever device for increasing the tension of said spring for counterbalancing the added weight of the mechanism on said shift-frame.

1,621,075. AUTOMATIC DUMPING CAR. WILLIAM H. LARKIN, Pittsburgh, Pa. Filed Jan. 13, 1923. Serial No. 612,469. 1 Claim. (Cl. 298—17.)

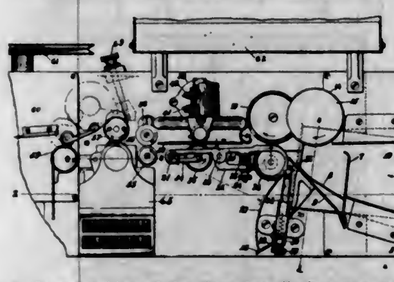
In a dumping car a pivoted body having the lesser weight thereof on the discharge side of the pivotal point thereof, said body being so arranged that the weight of a normal load therein overbalances the distribution of weight of the body as a whole and the distribution of weight of the body as a whole tends to return the body to carrying position when unloaded; a fluid containing cylinder having a piston, and conduits leading to said cylinder on both sides of said piston and interconnected by way of a suitable control valve, whereby the cylinder permits swinging movement of the body in accordance with the freedom of fluid circulation by way of said conduits.

1,621,076. BAG-HANDLE CONNECTION. WILLIAM A LOTZ, Newark, N. J., assignor to The T & L Co., Inc., Newark, N. J., a Corporation of New Jersey. Filed Jan. 31, 1924. Serial No. 689,792. 2 Claims. (Cl. 190—57.)



1. A bag frame handle connection comprising a bracket formed of sheet metal in the shape of an oblong rectangle having a curved centrally raised transverse portion, flanged side and end walls formed on said plate, said side walls having open recesses extending into the raised portion, prongs on the end walls suited to engage openings in the bag frame and be clinched thereto, and wire loops engageable with the handle, the ends of said loops being inturned to engage in the mentioned recesses and upturned within the raised portion of said bracket clear of the upper wall thereof whereby the loops are seated in the recesses and prevented from spreading.

1,621,077. THREE-ROLLER SUGAR-CANE MILL WITH A PARTICULARLY ARRANGED FEED ROLLER. ABRAHAM MARIE JAN MEESTERS, Djokjakarta, Java, Dutch East Indies, assignor to N. V. Constructie Atelier der Vorstenlanden, Djokjakarta, Netherlands, East Indies. Filed Sept. 7, 1926, Serial No. 133,768, and in Netherlands East Indies Mar. 24, 1925. 1 Claim. (Cl. 100—47.)

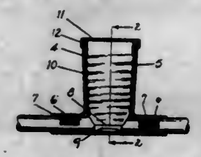


In a three-roller sugar-mill, the combination, with the top mill roller and the front mill roller, of an auxiliary feed roller disposed above the front roller and over which the material is fed to the mill, said auxiliary feed roller

being arranged sufficiently close to the front roller to prevent the passage of any material therebetween and being spaced relatively to the top roller so that the adjacent surfaces of said rollers coact for a feed action on the material and to provide a feed passage for the downward and forward travel of the material to the biting surfaces of the top and front rollers, and means for driving said

feed roller in the same direction as the front roller and at a higher circumferential speed than the top roller, whereby through the variation of speed between the top roller and the auxiliary feed roller the material is fed with a differential downward and forward force-feed pressure to and between the biting surfaces of the top and front rollers.

1,621,078. MOISTENER AND SEALER DEVICE. JOHN A. MITCHELL, Newark, N. J., and LAWRENCE J. ZAHN, Long Island City, N. Y., assignors to International Postal Supply Company, Brooklyn, N. Y. Filed Nov. 7, 1924. Serial No. 748,378. 26 Claims. (Cl. 120—6.)

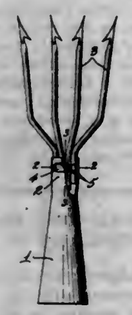


1. In a machine of the class described, a separator mechanism including a feed roll, a lever having associated therewith a plurality of rolls one of which cooperates with said feed roll and another acting as a moisture device feed roll, a spring acting to carry said lever toward the first mentioned feed roll and a spring controlled member acting to force the lever away from said feed roll substantially as described.

1,621,079. MACHINE FOR STRAIGHTENING AND GROOVING CANS. BERNHARD A. MOHR, New York, N. Y. Filed July 30, 1926. Serial No. 125,972. 9 Claims. (Cl. 153—39.)

1. In a machine of the character described, a relatively fixed jaw, a movable jaw fulcrumed to move toward and from the fixed jaw, a support for a can angularly movable intermediate between and in the plane of said jaws, said support being formed with a slot, and a grooving blade carried by one of said jaws and cooperating with said slot to form a groove in the can.

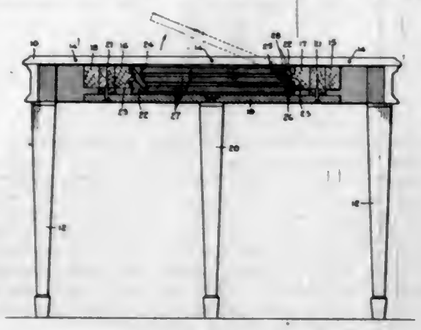
1,621,080. HANDLE SOCKET FOR CARPET SWEEPERS. IRA J. OWEN and BERNARD J. BOUWMEESTER, Grand Rapids, Mich., assignors, by mesne assignments, to Bissell Carpet Sweeper Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Nov. 8, 1923. Serial No. 673,488. 1 Claim. (Cl. 306—1.)



In a carpet sweeper handle socket the combination of a socket member made up of an outer shell formed of symmetrical halves of sheet metal, with tubular cross extension lugs at each side, a screw threaded sheet metal socket lining between the said symmetrical halves, a retaining collar around the ends of said socket casing flanged to clamp the same together and retain the lining in position, and a rod bail member with central swaged depression conformed to receive said socket lining and fit the bottom of said shell and disposed and spot welded to the tubular cross extension of said shell.

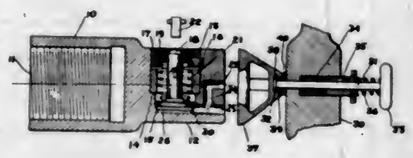
1,621,081. AUTOMOBILE BUMPER. WILLIAM G. PANCOAST, Winnetka, Ill., assignor to Bifiex Products Company, Waukegan, Ill., a Corporation of Delaware. Filed May 22, 1926. Serial No. 110,907. 2 Claims. (Cl. 293—55.)

1. A bumper comprising resilient bars spaced apart transversely throughout the length thereof, and having their end portions bent in the form of eyes adapted to fit one within the other for pivotal movement, discs mounted above and below said end portions and having annular projections fitting in the ends of the innermost eyes, and a connecting member extending between said discs.



1,621,082. FROG SPEAR. CHARLES T. PFLUEGER, Akron, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 24, 1922. Serial No. 584,030. 1 Claim. (Cl. 43—6.)

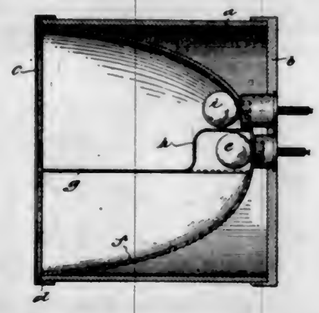
In an article of the class described, a plurality of tines divergently arranged in a common plane and having parallel contacting shank portions, a ferrule having a



flattened socket portion receiving said tine shank portions, said tine shank portions being provided with aligned deformations, said ferrule socket portion being provided with a transversely extending deformation interlocking with said shank deformations, and said tines and said ferrule being joined at said interlock, as by welding, whereby said tines are permanently secured in said described arrangement.

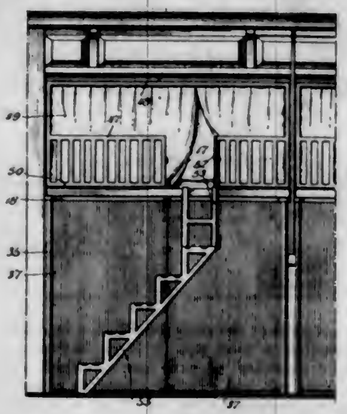
1,621,083. EXTENSION TABLE. ABRAHAM RASSNICK, Elmhurst, N. Y. Filed July 6, 1925, Serial No. 41,486. Renewed Nov. 24, 1926. 8 Claims. (Cl. 45—112.)

1. Means for supporting extension table leaves comprising spaced members mounted beneath the top of an extension table having complementary juxtaposed steps throughout their lengths to receive and support the leaves therebetween.



1,621,084. AUTO STOP GOVERNOR. JOHN P. RIGSBY, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 9, 1920, Serial No. 387,520. Renewed Dec. 28, 1923. 16 Claims. (Cl. 264—17.)

1. An auto-stop governor comprising a rotary element, a trip element carried by the rotary element and capable of moving to tripping position in response to centrifugal force, adjusting means cooperating with the trip element to secure tripping at a predetermined speed, and centrifugal fluid-pressure-developing means to render the trip element operative at a speed below the predetermined speed and including means to control the operation of the pressure-developing means.

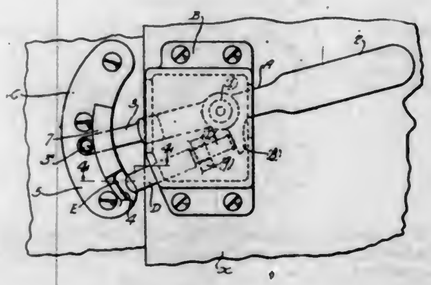


1,621,085. HEADLIGHT. OTTO RITZ, Brooklyn, N. Y. Filed Mar. 24, 1926. Serial No. 96,933. 1 Claim. (Cl. 240—48.2.)

In a headlight, a reflector, a source of light comprising an electric bulb at substantially the focal point thereof, a horizontal partition mounted in the reflector and below the lowest portion of the bulb, a hood on the partition to conceal the light source from the region above the partition and being in close proximity to the bulb at its top portion, and a second source of light secured in the reflector above the hood and in close proximity to the top thereof, whereby direct rays from the first bulb will be

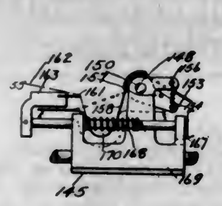
screened from all points in front of and substantially below the horizontal and the two bulbs will be clustered substantially at the focal point of the reflector.

1,621,086. SLEEPING CAR. AGNES R. ROSSMAN, Scotch Plains, N. J. Filed Feb. 5, 1926. Serial No. 86,126. 1 Claim. (Cl. 5—331.)



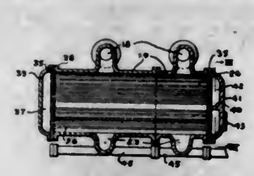
In a sleeping car construction, a berth including a bunk, a guard rail pivoted to said bunk along the bottom edge thereof and capable of being folded inwardly to a position in the bunk when the latter is in inoperative position, said guard rail including a frame having end members extending upwardly from the ends of the guard rail, a supporting member connecting the upper ends of said end members, the height of the guard rail and frame inclusive of the supporting member being substantially equal to that of the berth, and a curtain suspended from said supporting member and extending to the bottom of said guard rail to form a closure for said berth.

1,621,087. SPRINGLESS FASTENER. ADOLPH RUBIN, St. Louis, Mo., assignor, by mesne assignments, to Arcade Manufacturing Company, Freeport, Ill., a Corporation of Illinois. Filed July 17, 1924. Serial No. 726,527. 8 Claims. (Cl. 292—241.)



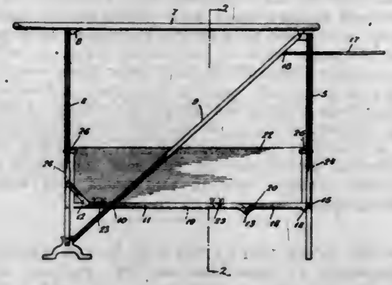
1. In a swinging door fastener, the combination of a hinged door, a latch mounted on said door in such a manner that gravity tends to hold said latch in an inactive position with relation to the keeper when the door is open, an actuating member for said latch mounted on

the door, and a stationary part associated with the keeper and arranged so that the movement of the door towards its closed position causes said stationary part to impart



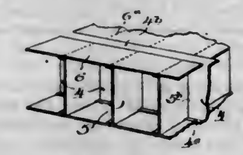
movement to said actuating member and cause said member to positively move the latch into locking engagement with the keeper.

1,621,088. CIGAR-BUNCHING MACHINE. WALTER H. SCHUSSLER, Philadelphia, Pa., assignor to The Schussler Tobacco Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 8, 1924. Serial No. 684,944. 4 Claims. (Cl. 131—42.)



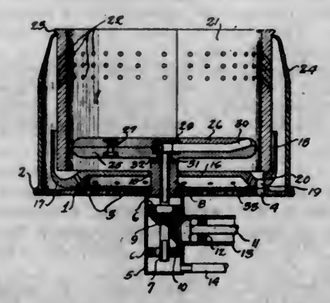
1. In a cigar bunching machine, the combination with the rolling apron and the apron roller, of a shield in proximity to said apron roller and capable of limited movement in the direction of the movement of the apron.

1,621,089. CONDENSER. JOHN H. SMITH, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed Feb. 1, 1922, Serial No. 533,288. Divided and this application filed Apr. 10, 1924. Serial No. 705,599. 5 Claims. (Cl. 257—33.)



1. In varying size condensers of the character designated, shell members each having open ends and fluid inlet and outlet ports, standard end closures for the shell members, the parts being so constructed that any number of standard shell members may be assembled between the standard end closures to form condensers of varying capacities, and means common to the shell members for delivering fluid to each shell member and discharging fluid therefrom.

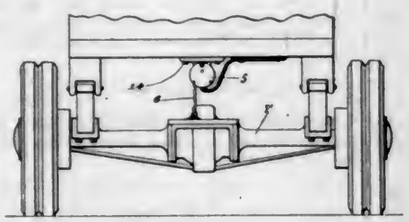
1,621,090. RECEPTACLE FOR IRONING BOARDS. ABRAHAM SONDACK, Bronx, N. Y. Filed May 22, 1926. Serial No. 110,889. 5 Claims. (Cl. 68—10.)



1. An ironing board including a foldable supporting framework, comprising standards and braces connecting the same, a collapsible receptacle carried by said framework and including side, end and bottom wall members, the side members being hinged to said bottom member and the end members of said receptacle being fixedly secured to said standards.

1,621,091. SPRING-CUSHION CONSTRUCTION. SAMUEL SUKKOFF, Chicago, Ill. Filed July 6, 1925. Serial No. 41,466. 3 Claims. (Cl. 5—353.)

1. A method of constructing spring cushions, consisting of providing two pieces of material, connecting them by a series of parallel strips extending at right angles to said pieces, holding said assembled pieces taut and cutting one of said pieces and said strips along parallel lines transverse to said strips and down to the other piece, and applying a piece corresponding to said unsevered piece over said severed piece and sewing one edge of the strips of said severed piece to said last mentioned piece.

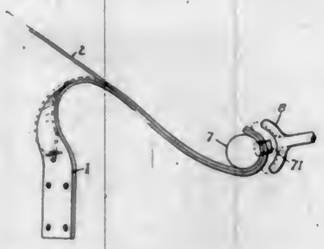


1,621,092. BURNER. OLOF A. TOFTEEN, Chicago, Ill. Filed July 6, 1925. Serial No. 41,501. 10 Claims. (Cl. 158—77.)

6. A burner comprising a hollow support, a fuel pipe journalled therein and projecting therefrom, means for rotating said fuel pipe, a fuel supply pipe connected with

said support for delivering fuel to said first mentioned fuel pipe, an apertured base member on said support, an outer casing seated on said base member, a sleeve resting on said support and surrounding a portion of the projecting part of said first mentioned fuel pipe, an apertured and grooved inner plate supported on said base member, said inner plate having an integral flange spaced from the inner walls of said outer casing, a sectional inner casing supported on said inner plate and spaced from said flange, said inner casing being constructed of a carborundum product and having a plurality of air passages therein, a union secured on the upper projecting end of said first mentioned fuel pipe, a plurality of fuel distributing pipes connected with said union, and a carborundum product covering said union and said distributing pipes.

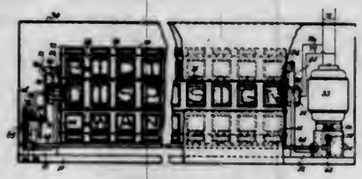
1,621,093. LOAD INDICATOR FOR MOTOR VEHICLES. FREDERICK J. TROLL, Towson, Md., assignor to The Loadometer Company, Baltimore County, Md., a Corporation of Delaware. Filed June 25, 1920. Serial No. 391,753. 4 Claims. (Cl. 177—351.)



1. In combination with a vehicle body or frame, front and rear axles and resilient means for supporting the body on said axles; a source of electricity; a circuit energized from said source of electricity; contacts at intervals in said circuit, arranged in a predetermined path; two brushes, each mounted to move over part of said contact points; means for actuating said brushes, comprising with the brushes a mechanical connection between the body and the front and rear axles respectively, the position of one being determined by the relation of the body or frame to the front axle, and the other by the relation of the body or frame to the rear axle; and a voltmeter connected through both of said brushes in parallel to a portion of the circuit the resistance of which portion is thus varied in proportion to the load, so that the instrument may be read in terms of the total load.

1,621,094. N-BUTYL ETHYL BARBITURIC SUBSTANCE. ERNEST H. VOLWILER, Chicago, Ill., assignor to Abbott Laboratories, Chicago, Ill., a Corporation of Illinois. Filed July 18, 1923. Serial No. 652,454. 1 Claim. (Cl. 260—33.)

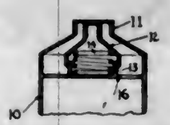
The new hypnotic substance formed by the reaction of n-butyl-ethyl barbituric acid with diethyl-amine, which is a white solid, melting at about 60° C., being soluble in water and having an ammonia-like and slightly bitter taste.



1,621,095. SPRING AND METHOD OF MANUFACTURING THE SAME. EBEN B. UTTER, Kalamazoo, Mich., assignor to Root Spring Scraper Company, Kalamazoo, Mich. Filed Aug. 21, 1926. Serial No. 130,696. 6 Claims. (Cl. 29—173.)

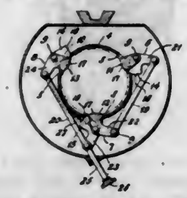
1. The method of manufacturing a blade spring having a main curved spring blade and an auxiliary reinforcing blade embracing the same consisting in forming the main spring, allowing it to cool, heating the reinforcing blade, bending the same to the form of the main spring blade while hot, clamping it in place, and quenching the hot spring in an oil bath to temper the same and shrink it to place, as specified.

6. A spring comprising a curved main blade, and a reinforcing blade wrapped and shrunk thereon when hot, as specified.



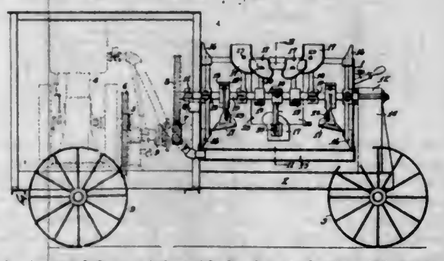
1,621,096. ADVERTISING DISPLAY SIGN. CHARLES D. WINTERS, Asbury Park, N. J., assignor of one-half to Charles G. Stockton, Ocean Grove, N. J. Filed Feb. 23, 1924. Serial No. 694,634. 21 Claims. (Cl. 40—33.)

1. In combination, a rotary drum having a plurality of removable sides having each a row of openings therein; individual character frames removably seated in said openings; a wall having a window in front of a row of said frames; and means for rotating said drum.



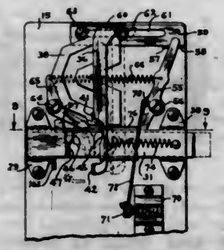
20. In combination, a rotatable drum; means for rotating the drum; means comprising a pawl for providing step by step movement of the drum during rotation; an electric lamp; brushes to light the lamp; a gear wheel having an electric contact member engageable with the brushes to light the lamp on the back stroke of the pawl while the drum is stationary and disengageable from the brushes for extinguishing the lamp during the active stroke of the pawl and while the drum is moving; and means for operatively connecting the pawl and gear wheel.

1,621,097. COLLAPSIBLE TUBE. SALVATORE J. ZAMMATARO, Brooklyn, N. Y. Filed Oct. 8, 1925. Serial No. 61,176. 1 Claim. (Cl. 221—60.)



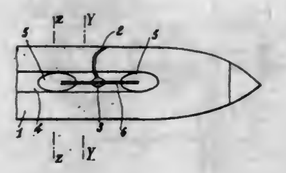
In combination, a tube having an opening in its head, a plunger, a transverse partition in said tube, a spring seated on said partition and engaging said plunger to force the same against said opening, said partition having perforations near its periphery providing a passage for the contents of the tube, and means carried by said partition and plunger for preventing access of the tube contents to the under side of said plunger.

1,621,098. CUP DISPENSER. JAMES W. ANDERSON and WILLIS B. RICE, New York, N. Y., assignors, by mesne assignments, to Vortex Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 1, 1924. Serial No. 747,152. 2 Claims. (Cl. 211—8.)



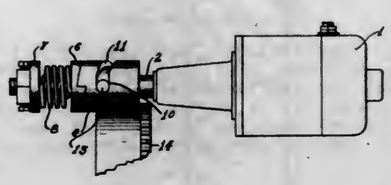
1. A cup dispenser comprising a container, a support therefor having a plurality of openings therein, a plurality of escapements pivotally mounted on said support and adapted to be projected through said openings, links pivotally connecting said escapements, a handle on one of said links for actuating the links and the escapements, and resilient means connected with one of said links for returning the escapements and links to normal position after an operation thereof.

1,621,099. MACHINE FOR MIXING ROAD MATERIAL AND THE LIKE. THOMAS J. BARRETT, Bordentown, N. J. Filed Nov. 2, 1921, Serial No. 512,394. Renewed Nov. 21, 1925. 7 Claims. (Cl. 83—73.)



1. A revolving mixing blade for a horizontal mixing chamber, comprising a hollowed body with an open outer edge for the mixing chamber periphery and a raised margin around the rest of its perimeter.

1,621,100. COIN-CONTROLLED LOCK. HAROLD C. BEEBE, New Haven, Conn. Filed Jan. 14, 1922. Serial No. 529,223. 12 Claims. (Cl. 194—78.)

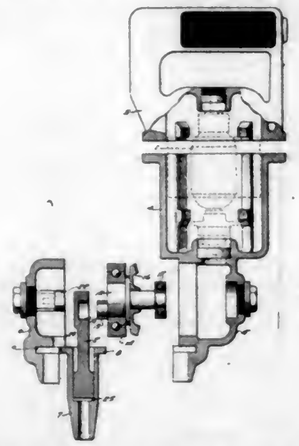


1. In a coin controlled lock, a bolt, means providing a coin slot, a manually operated member, slot closing means, an operating slide for said means, means for positioning a coin between the manually operated member and the bolt and slide, whereby when the coin is moved by the manually operated member it will act against and move the bolt and slide, means upon said slide to move the coin out of engagement with the slide upon the return of the bolt to protracted position, means for maintaining the slide in slot closing position, and a spring to return it to normal position upon its release.

1,621,101. SHUTTLE PROVIDED WITH A HAND OR AUTOMATIC THREADING DEVICE. CONSTANT BOURGEOIS, Rouen, France. Filed Oct. 20, 1925, Serial No. 63,587, and in France Nov. 6, 1924. 2 Claims. (Cl. 139—222.)

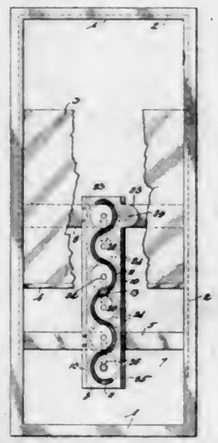
1. A shuttle for weaving looms having a longitudinal slot in one cheek and a lateral guide slot communicating with the first named slot and terminating at its outer end in an outlet eye for the yarn, said cheek also having recesses formed therein on opposite sides of said eye and within said longitudinal slot, and said cheek further having a longitudinal groove extending through and on opposite sides of said eye and into said recesses, said groove being of a width substantially equal to the thickness of the yarn so as to receive said yarn as it issues from said eye, and being of a depth such that the bottom of the groove will be at the level of the bottom of said recesses.

1,621,102. ENGINE STARTER. ODILON BRISBOIS, Chicago, Ill. Filed June 18, 1923. Serial No. 646,035. 2 Claims. (Cl. 74—7.)



2. In an engine starter, comprising a motor shaft, a driven member mounted thereon, a sleeve surrounding said shaft and driven member and having a spiral guideway, said driven member having a stud projecting into said guideway, said sleeve having laterally extending inclined parts, a co-operating member having coacting inclined parts, and a spring connecting said shaft and co-operating member.

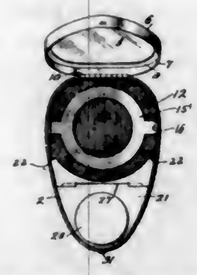
1,621,103. POWER-DRIVEN HAMMER OR RIVETER. HENRY P. BRUMELL, New York, N. Y., assignor to Ajax Electric Hammer Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 20, 1926. Serial No. 82,466. 10 Claims. (Cl. 78—13).



1. In a power driven hammer including a reciprocable hammer element and a drive mechanism directly connected therewith, a nozzle-like guide for the reciprocating

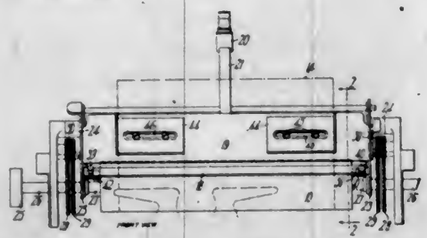
hammer element and a pair of mating casing members adapted to enclose the drive mechanism for the hammer element and being of a construction to firmly grip and

rigidly hold said guide in operative alined position with respect to the reciprocable hammer element when the casing parts are fastened together.



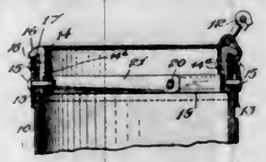
1,621,104. SASH-REGULATING DEVICE. ORSON G. BURCH, Detroit, Mich. Filed June 24, 1922. Serial No. 570,609. 5 Claims. (Cl. 268—122.)

1. A sash regulating device comprising a casing, a train of gear wheels in said casing, a traveler supported by said casing and adapted to be shifted by said train of gear wheels and shifted from one gear wheel to another, said traveler engaging the sash to be raised or lowered, and a winding arbor adapted to be turned to operate the train of gear wheels.



1,621,105. VANITY BOX. CLARENCE P. COOK, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Dec. 27, 1922. Serial No. 609,173. 6 Claims. (Cl. 132—83.)

1. A box for holding toilet accessories comprising bottom and cover members, wider at one end than the other the bottom member being divided by a partition into powder and rouge compartments lying side by side in substantially the same horizontal plane, the powder compartment being of greater dimensions than the rouge



compartment, the two compartments being of substantially the area of the bottom member and means co-operating with the sides of the box for holding powder and rouge compacts in the compartments.

1,621,106. TYPEWRITING MACHINE. HARRY E. CRIPE, Chicago, Ill., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 2, 1925. Serial No. 41,016. 1 Claim (Cl. 197—126.)

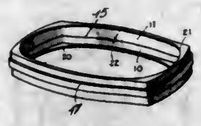
A typewriting machine for selectively typing either upon a work-web or a work-sheet, including, in combination, a platen, a platen-displacing frame, the latter having side plates and a delivery table extending between the plates, a pair of oppositely-disposed side-edge gages carried by said table for gaging the work-sheet, a leading-edge gage for the work-web, and a web-severing knife disposed between the side-edge gages and the printing line of the platen, said knife being manipulatively detachable from the machine.

1,621,107. GOLF BAG. ALEXANDER D. CROSS, Irvington, N. J. Filed Nov. 19, 1925. Serial No. 69,966. 2 Claims. (Cl. 150—1.5.)

1. A golf bag comprising a tubular body portion having a stiffened top end, a collar with a flange on its outer face, the flange having an undercut face to receive the said end, said collar having an inside reduced portion forming a shoulder, a flexible strap secured at its ends to one side under said shoulder, and a bumper secured at the other side under said shoulder to act as a fender for the shafts of clubs.

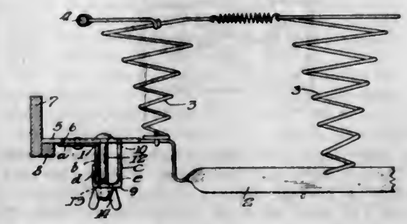
1,621,108. CLOTHES PEG. HENRY JAMES DREW, Brunswick, JOHN ALFRED HUGHES DREW, Elsternwick, and JOHN FRANCIS GARDINER, Gardenvale, Victoria, Australia, assignors to Wing Clothes Peg Proprietary, Limited, Elsternwick, Australia. Filed Apr. 1, 1926, Serial No. 98,956, and in Australia Apr. 7, 1925. 4 Claims. (Cl. 24—137.)

1. A clothes peg comprising a pair of separately formed jaws having longitudinally disposed recesses in the corresponding gripping ends thereof, and a loop of resilient wire having its central part extending through and engaged by the recesses and its ends bearing against and pressing the jaws together.



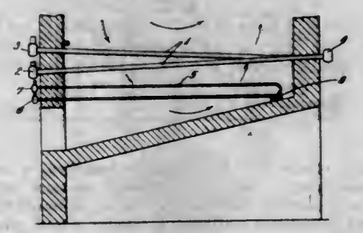
1,621,109. GREASE AND OIL PUMP FOR MOTOR CARS AND MACHINERY. HENRY EDWARD MANSFIELD DRUMMOND, Frankton Junction, New Zealand. Filed Oct. 2, 1925. Serial No. 60,011. 7 Claims. (Cl. 221—47.3.)

1. A grease and oil pump, including a cylinder capable of receiving in one end thereof a cartridge having a closed end, a piston in said cylinder for entering said cartridge to force the contents therefrom, means for operating said piston, and means carried by the last named means for penetrating the closed end of said cartridge to form an outlet opening therein.



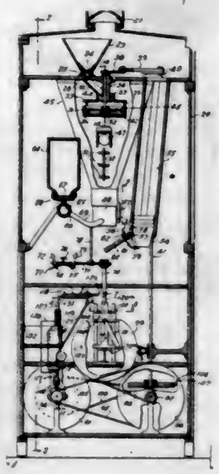
1,621,110. WATCHCASE CENTER. NATHAN GREENBERG, New York, N. Y. Filed Apr. 24, 1925. Serial No. 25,492. 4 Claims. (Cl. 58—92.)

1. A watch case center comprising two members adapted to be assembled in overlapping relationship, said members being in the form of sheet metal annuli, one of said members being widened intermediate its edges for a distance



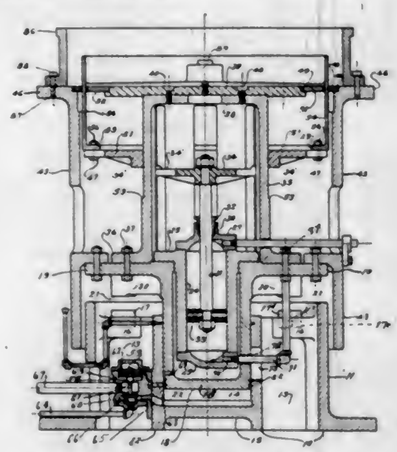
equal to the thickness of a wall of the annulus so as to form a shoulder on its inner surface and an oppositely directed shoulder on its outer surface.

1,621,111. BED-SPRING SUPPORT. DARWIN HANAUER, La Grange, Ill., assignor to Kinney-Rome Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 25, 1922. Serial No. 603,173. 6 Claims. (Cl. 5—209.)



1. Supporting means for bed-springs comprising, in combination with the angle-bar side-rail of a bed-spring, an adjustable horizontal member engaging and extending across the upper face of said side-rail, a vertical member spaced from the inner face of said rail and having an outwardly projecting hook engaging the depending flange thereof, and a vertical bolt arranged adjacent the inner face of said rail for clamping said members thereto and for holding said horizontal member in adjusted position, said vertical member having means for holding said horizontal member against rotation about said bolt, substantially as described.

1,621,112. SUPERHEATING ARRANGEMENT FOR WATER-TUBE BOILERS. JOHN NELSON DUNDAS HEENAN, Aldwych, London, England, assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed June 19, 1925. Serial No. 38,145, and in Great Britain Sept. 24, 1924. 4 Claims. (Cl. 122—481.)

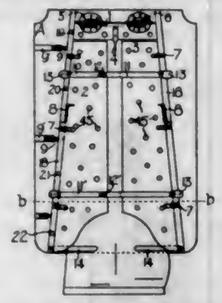


1. In a boiler furnace burning pulverized fuel and having a screen of water tubes in the path of the precipitated ash, the provision of a superheater interposed between the water tubes and the ashpit, substantially as and for the purpose set forth.

1,621,113. CORN-POPPING MACHINE. FRANK A. HILL, Dixon, Ill., assignor of one-half to Edward C. Fritz, Dixon, Ill. Filed Feb. 26, 1926. Serial No. 90,761. 26 Claims. (Cl. 53—4.)

1. A corn popping machine embodying popping mechanism, butter delivering mechanism, a carton receiving mechanism, a package delivery opening, and means for operating the said receiving mechanism to carry the carton successively to the popping mechanism, butter delivery mechanism and package delivery opening.

1,621,114. MOLDING MACHINE. WALTER J. IRVIN, Akron, Ohio. Filed June 20, 1921. Serial No. 478,803. 8 Claims. (Cl. 22—45.)



1. In a device of the character described, a suitable base embodying a vertically disposed pressure cylinder, a hollow cylindrical member operatively mounted therein, an outer cylindrical wall and a tubular center post supported thereby, a table comprising a flange on said wall and a circular plate on said post, a cylindrical pattern concentrically arranged between said post and said flange, means to raise and lower said pattern so that a portion thereof will project above said table and means to utilize fluid pressure to cause a vertical jolting movement of said cylindrical member in said cylinder

1,621,115. IGNITION TIMER. HAROLD L. JOYCE, East Orange, N. J., assignor to Tiffany Manufacturing Company, Newark, N. J. Filed Jan. 23, 1926. Serial No. 83,216. 10 Claims. (Cl. 200—26.)

2. A timer including a housing, a ring of insulating material supported within said housing, said ring being of substantially uniform thickness but having a plurality of tracking surfaces and sectors alternately offset therefrom, contact plates positioned between said tracking surfaces over said offset sectors and flush with said surfaces and terminal studs for said contact plates extending through the ring and beyond the outer surface of the housing but insulated from the housing, said housing having means fitting between said offset sectors for the purpose described.

1,621,116. GARMENT PRESSER. ORA L. LANCE, Fulton, Calif. Filed Feb. 6, 1922. Serial No. 534,530. 3 Claims. (Cl. 100—57.)

1. A garment press comprising a base member having an opening therein covered with porous material and provided with means to tighten same, a cuff receiving member and means to normally hold same closed, curved pressure leaves adapted to close thereon, means to fasten same when closed and spring means to open same when not in use.

1,621,117. MODIFIED PNEUMOCOCCIC ANTIGEN, ANTIPNEUMOCOCCIC SERUM, AND PROCESS OF PRODUCING THE SAME. WINFORD P. LARSON, Minneapolis, Minn. Filed Aug. 27, 1925. Serial No. 52,964. Renewed Jan. 7, 1927. 22 Claims. (Cl. 167—7.)

1. The process of producing anti-pneumococcic serum, comprising treating pneumococci, and/or their products or toxins with a soluble salt of an organic acid which is a surface-tension depressant; injecting such treated material into an animal; and obtaining blood serum from said animal.

7. The process of producing anti-pneumococcic serum, comprising treating pneumococci, and/or their products or toxins with castor oil soap; injecting such treated material into an animal; and obtaining blood serum from said animal.

12. An anti-pneumococcic serum obtained from an animal which has received one or more injections of pneumococci, and/or their products or toxins previously treated with a surface-tension depressant comprising a soluble salt of a higher unsaturated fatty acid containing one or more hydroxyl groups.

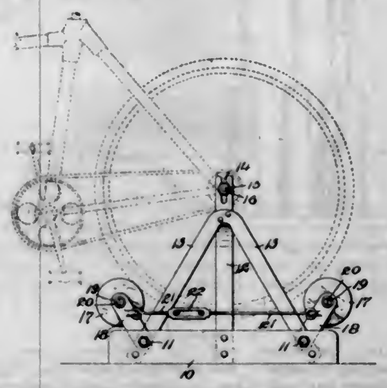
21. A composition of matter, comprising a mixture of pneumococci, and/or their products or toxins, and a soluble salt of ricinoleic acid.

1,621,118. MODIFIED BACTERIA AND TOXINS, IMMUNIZING SERUMS AND METHOD OF PRODUCING THEM. WINFORD P. LARSON, Minneapolis, Minn. Filed Nov. 4, 1925, Serial No. 66,864. Renewed July 30, 1926. 55 Claims. (Cl. 167—7.)

1. The process of treating bacteria, and/or their products and toxins, to render them non-disease-producing and non-poisonous, which consists in applying thereto surface tension depressants consisting of soluble salts of the higher fatty acids which are adsorbed on the surfaces of the bacteria and the toxin molecules, substantially as herein described.

4. The process of treating bacteria, and/or their products and toxins, to render them non-disease producing and non-poisonous, which consists in applying thereto castor oil soap.

30. Immunizing material consisting of bacteria, and/or their products or toxins, rendered non-disease-producing and non-poisonous by having applied thereto surface-tension depressants consisting of salts of the higher unsaturated fatty acids containing one or more hydroxyl groups, which are adsorbed on the surfaces of the bacteria and/or the toxin molecules, substantially as herein described.



46. Serums for therapeutic use obtained from animals which have received injections of bacteria, and/or their products and toxins, previously treated with castor oil soap, substantially as herein described.

1,621,119. SCARLÆT FEVER ANTIGEN. WINFORD P. LARSON, Minneapolis, Minn. Filed Jan. 27, 1926, Serial No. 84,168. Renewed Nov. 26, 1926. 7 Claims. (Cl. 167—7.)

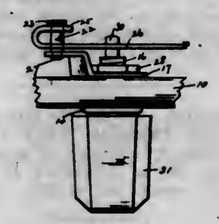
1. A composition of matter, comprising a mixture of scarlet fever streptococci, and/or their products or toxins, and a soluble salt of an organic acid which is a surface-tension depressant.

7. A composition of matter, comprising a mixture of scarlet fever streptococci, and/or their products or toxins, and castor oil soap.

1,621,120. HOME TRAINER. ROBERT E. LEE, Hillside, N. J. Filed Sept. 10, 1925. Serial No. 55,453. 3 Claims. (Cl. 272—73.)

1. A home trainer comprising a stand having means for securing the axle of a bicycle wheel, arms pivoted to the stand, rollers on said arms, and a connection to hold the rollers at various adjustable distances apart to vary their pressure on the tire of the wheel.

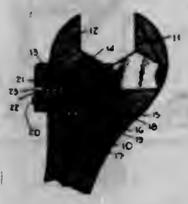
1,621,121. ARSENICAL SOLUTIONS AND METHOD OF PREPARING SAME. OTTO LOWY, Newark, N. J., assignor, by mesne assignments, to Steneck Trust Company, trustee, Hoboken, N. J., a Banking Corporation of New Jersey. Filed Dec. 20, 1920, Serial No. 432,081. 19 Claims. (Cl. 167—7.)



1. The method which comprises adding to an arseno-benzol derivative an amount of caustic alkali at least sufficient to convert an arseno-benzol derivative into a solution of the di-alkali salt, and thereafter permitting the resulting solution to age in the absence of oxygen for a length of time sufficient to cause the reaction resulting in the formation of the di-alkali salt to become complete.

10. The method of manufacturing a prophylactic compound which comprises adding to arsphenamine an amount of caustic alkali at least sufficient to convert the arsphenamine into a solution of the di-alkali salt, and sealing the same in an ampule in the presence of nitrogen.

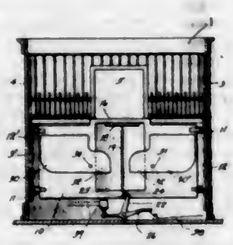
14. The method which comprises adding to the dihydrochloride of diamino-dihydroxy-arseno-benzol an amount of caustic alkali at least sufficient to convert said di-hydrochloride into a solution of di-alkali salt, sealing said solution in an ampule in the presence of inert gas, and permitting the same to age until all of the mono-alkali salt formed as an intermediate product is converted into the di-alkali salt.



19. The method which comprises adding to the dihydrochloride or diamino-dihydroxy-arseno-benzol under non-oxidizing conditions from about four and one-third to about eight gram-molecules of caustic soda, sealing the resulting solution in an ampule in the presence of nitrogen, and permitting the same to age until all of the mono-sodium salt formed as an intermediate product of the reaction is converted into the di-sodium salt.

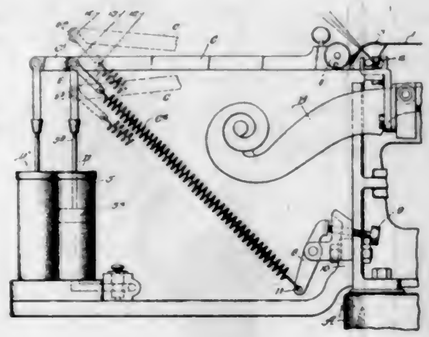
1,621,122. TANK LEVER. HARRY MACMILLAN, Philadelphia, Pa. Filed May 11, 1926. Serial No. 108,236. 6 Claims. (Cl. 4—67.)

1. A tank lever including a fulcrum bracket; a lever; a pin having a head on one end while the other end is reduced in diameter, said pin passing through the lever and fulcrum bracket with an enlargement swaged from the reduced end.



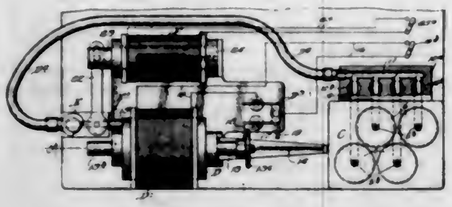
1,621,123. WRENCH ADJUSTMENT. JAMES MCCONVILLE, Montreal, Quebec, Canada. Filed Dec. 7, 1925. Serial No. 73,801. 1 Claim. (Cl. 81—165.)

A wrench comprising a fixed jaw and a handle, the latter having a worm recess and spindle bearings at either end of said recess, a spindle journaled in said bear-



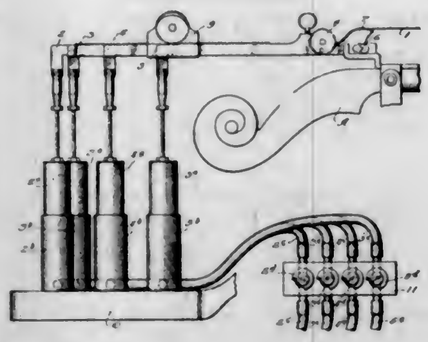
ings and having a threaded end projecting beyond one side of the handle, a worm fixedly mounted on said spindle within said recess, a movable jaw having a rack coacting with said worm and sliding into said fixed jaw and thereagainst, a knurled lock-nut threaded on the threaded end of said spindle, and a spring washer introduced between said lock-nut and the side of the handle.

1,621,124. CASHIER'S CAGE. JAMES C. MCCORMACK, Monroe, Wash. Filed June 13, 1925. Serial No. 36,938. 3 Claims. (Cl. 268—2.)



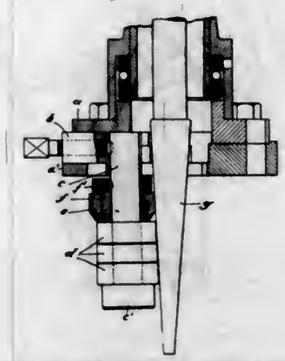
1. The combination with a cage of the character described comprising a wall having a closed lower section and an unprotected upper section, of a screen support intermediate said sections, a protective screen normally disposed within the cage adjacent the closed wall section and adapted to be raised to close the upper section, and having an opening therein, the screen support being within said opening, a latch engaging the screen to normally retain it in lowered position and releasable from within the cage, a spring attached to the screen whereby it may be lifted when the latch is released and normally open door section mounted on the screen and adapted to be moved by engagement with the screen support when the screen is raised to cover the opening in the screen.

1,621,125. METHOD AND MEANS FOR CONTROLLING TENSION AND TREMOLO EFFECTS. BERTIE E. MILLS, Oak Park, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 3, 1926. Serial No. 92,002. 10 Claims. (Cl. 84—11.)



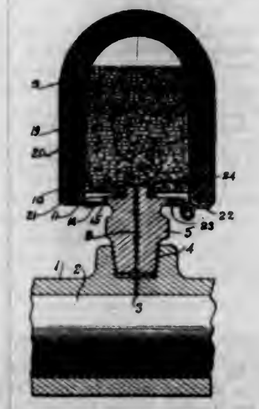
5. In a tremolo device for stringed instruments, a tensioning-lever connected with an end-portion of a string and extending away from said string, a pulsating device connected with said lever, and a coil-spring connected with said lever and serving as the normal principal tensioning means for the lever, said lever and spring being so related that the effective lever-arm will vary inversely with the tension of said spring when the lever is vibrated.

1,621,126. TREMOLO DEVICE. BERTIE E. MILLS, Oak Park, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 24, 1926. Serial No. 96,983. 11 Claims. (Cl. 84—11.)



4. In combination with a pulsating-device for actuating a string-tensioning device, pumping means comprising a cylinder equipped with a solenoid, a pump-piston within said cylinder actuated by said solenoid, a conduit leading from said cylinder and serving said pulsating-device, an electric circuit for said solenoid, and an oscillating circuit-maker and breaker actuated in both directions by said piston.

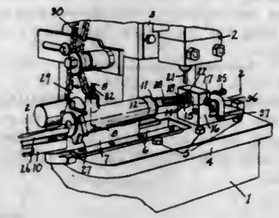
1,621,127. TREMOLO DEVICE FOR VIOL MACHINES. HERBERT S. MILLS, Oak Park, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 29, 1926. Serial No. 98,219. 3 Claims. (Cl. 84—11.)



3. In combination with the tensioning levers of a musical instrument of the viol class; a series of pistons connected with said levers, cylinders telescopically receiving said pistons, conduits serving said cylinders, valves controlling said conduits, a pair of double acting pumps serving said conduits, and an electric motor provided with a shaft having its opposite ends equipped with gear mechanism connected with the pistons of said pumps.

1,621,128. TUBE BEADER. EMIL MÖHRLIN, Stuttgart-Degerloch, Germany, assignor to the Firm Möhrlin G. m. b. H., Stuttgart, Germany. Filed Mar. 6, 1925, Serial No. 13,487, and in Germany Mar. 10, 1924. 3 Claims. (Cl. 153—82.)

1. Tube beader comprising a head, a radial guide on said head, a slide adapted to be displaced in said guide, an expanding roller and a beading roller rotatably carried on said slide, said beading roller being mounted eccentrically with regard to said expanding roller, and means for transversely displacing said rollers and said slide.



1,621,129. LUBRICATING CUP. JOHN G. MUELLER, CARL A. GRANZOW, and HENRY M. GRANZOW, Dayton, Ohio. Filed Apr. 20, 1923. Serial No. 633,406. 2 Claims. (Cl. 184—69.)

1. A lubricating device comprising an air-tight oil cup having a discharge orifice at its base, a plug having an oil passage therethrough adapted to receive oil from the cup and deliver it to a bearing, and a hinge connection between the plug and cup by which the plug is detachably secured in place in the cup.

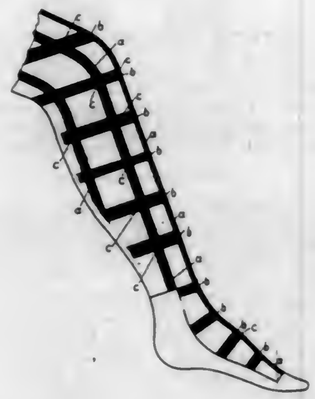
1,621,130. PUNCHING MACHINE. EARL A. MUNGER, Kalamazoo, Mich., assignor to Acme Machine Products Company, Kalamazoo, Mich. Filed May 17, 1926. Serial No. 109,611. 9 Claims. (Cl. 10—72.)

1. In a punching machine, the combinaiton of a reciprocating punch, an anvil provided with an upwardly facing segmental work rest, a slotted die projecting from said anvil above said rest, the rear wall of the slot of the die being rearwardly inclined, said anvil having a slot extending upwardly from said slot in said punch, a reciprocating work carriage adapted to position the work carried thereby upon said work rest with said die entering the work, a work holder rotatably mounted on said

carriage, said work holder having a spindle with a longitudinal opening permitting the discharge of slugs therethrough, means for rotating said work holder comprising a star wheel on the spindle of the work holder, a tappet coacting with said star wheel when the carriage is in its advanced position, and a friction brake coacting with said work holder spindle to prevent overthrow thereof.

1,621,131. METHOD OF TREATING LIVESTOCK. CHARLES O. NELSON, Greeley, Nebr., assignor to United Fly Salt Company, Omaha, Nebr., a Corporation of Nebraska. Filed May 22, 1926. Serial No. 111,032. 3 Claims. (Cl. 167—10.)

1. The method of treating livestock to produce upon the skin thereof exudate and excretions of a nature obnoxious to insect pests and parasites, which comprises regularly and periodically supplying to such livestock sulfur in amounts proportioned to the weight of the animal corresponding to at least 0.3 pounds per month for an average full grown beef animal for a period sufficient to establish the desired type of exudate on the skin of the animal and in maintaining such exudate by a like continuous and regular supply of sulfur over the desired period.



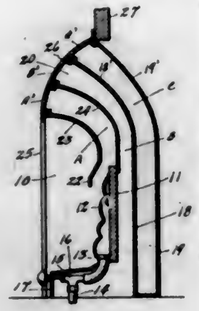
1,621,132. METHOD AND APPARATUS FOR SEALING FRUIT JARS. FRANK REINBOLD, Sheboygan, Wis. Filed Jan. 2, 1925. Serial No. 249. 2 Claims. (Cl. 215—56.)

1. In combination, a fruit jar cover provided in its top with a circular recese and a central inwardly beveled concentric opening in the bottom of the recess, a rela-

tively thin cap providing an air tight seal for said opening and held in place by virtue of a vacuum created in the jar by a removable means extended into said recess for exhausting the air through said opening, said cap being of less diameter and of less thickness than the depth of said recess and said cap further of a diameter to fit in said means during the formation of the vacuum, said cap mounted on the bottom of the recess, and said opening extending from the bottom of the recess to the inner face of the cover.

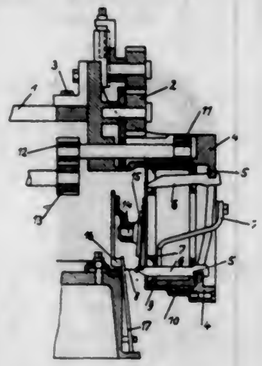
1,621,133. STOCKING WITH LONGITUDINAL AND TRANSVERSE REENFORCEMENTS. OSWIN ROTTLOFF, Auerbach, Germany. Filed May 22, 1924, Serial No. 715,074, and in Germany Nov. 30, 1923. 1 Claim. (Cl. 66—182.)

A stocking knit with body yarn and having knitted intersecting reenforcing stripes which define therebetween areas knit with body yarn alone.



1,621,134. NIPPLE. ALBERT RUSSO, Pittston, Pa. Filed Feb. 3, 1926. Serial No. 85,764. 1 Claim. (Cl. 128—252.)

As a new article of manufacture, a nipple comprising an enlarged cylindrical attaching portion adapted to fit over the neck of a bottle, a reduced cylindrical neck formed integral with the attaching portion, and a rounded knob formed integral with said neck, said knob being provided with a discharge aperture at its outer end and the reduced cylindrical neck being also provided with a plurality of diametrically disposed minutely formed air vents.

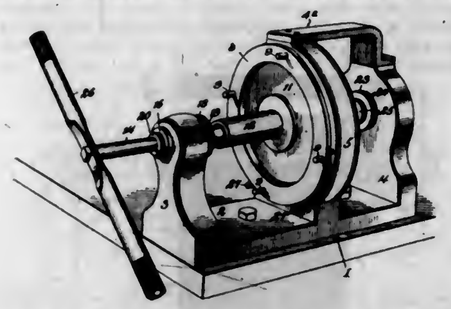


1,621,135. FIREPLACE HEATER. THEODORE A. SALA, Dallas, Tex. Filed July 21, 1925. Serial No. 45,010. 4 Claims. (Cl. 126—121.)

1. In a fire place heater, the combination of an open fire box, a heating element therein, an individual flue having an intake communicating with the rear upper portion of the fire box and discharging into the room, a second flue contiguous to the first flue and having an individual air intake and discharge communicating with

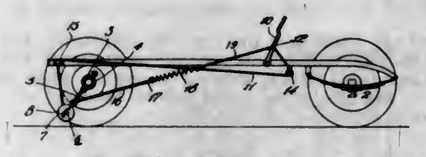
the room, and a third flue contiguous to the other flues and having individual air entrance and discharge communicating with the room.

1,621,136. AXLELESS LOOP WHEEL FOR CIRCULAR-KNITTING MACHINES. ERNST SAUPE, Limbach, Germany. Filed Apr. 30, 1925, Serial No. 27,077, and in Germany May 10, 1924. 1 Claim. (Cl. 66—106.)



A loop wheel for circular knitting machines comprising in combination an annular casing in which the front ends of the sinkers are located, means for rotating said annular casing, a thread distributor removably fixed on the machine frame above said annular casing, a hollow body fixed to said thread distributor, a cam crown in said hollow body said cam crown carrying the sinkers, and a sinker cam fixed on the outer side of said hollow body and extending through said annular casing to press upon the sinkers.

1,621,137. REAMING JIG. MICHAEL I. SEILER, Millersburg, Pa., assignor to Keystone Reamer & Tool Co., Millersburg, Pa., a Corporation of Pennsylvania. Filed Sept. 17, 1921. Serial No. 501,306. 4 Claims. (Cl. 77—62.)

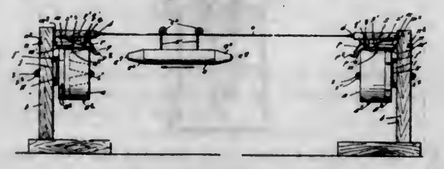


1. In a reaming jig, the combination of a rigid ring-shaped work holder surrounding the part to be reamed and having an interior taper surface with the larger end

threaded, a two-part wedge ring for interposition between the taper-surface of the work holder and the work in advance of threaded end, and a threaded clamping ring

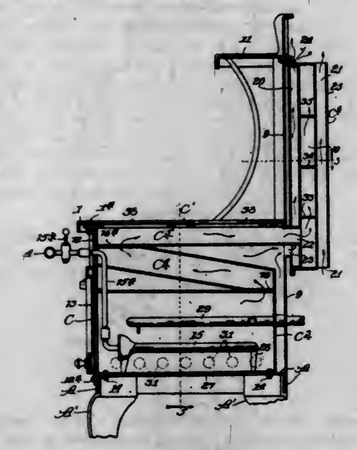
adapted to be screwed into the work holder and engaging with the two-part wedge ring to move the same and clamp the work axially and by radial compression.

1,621,138. ANTISKID DEVICE FOR MOTOR VEHICLES. CHARLES SILVERTHORN, Pontiac, Mich. Filed Oct. 21, 1925. Serial No. 63,882. 1 Claim. (Cl. 188—5.)



The combination with a vehicle wheel supported chassis having a rear axle, of a pair of depending brackets pivotally connected to the rear axle, a shaft connected to the lower ends of said brackets, small antiskid wheels mounted on the last mentioned shaft and adapted to be brought in contact with the pavement, or to be moved away from the pavement, brace rods connecting the brackets, a pulley mounted on the chassis rearwardly of the rear axle, a lever pivotedly mounted on the chassis forwardly of the rear axle, a second pulley mounted on the chassis forwardly of said lever, a cable having one of its ends connected to the lever, and its other end connected to the shaft of the antiskid wheels, said cable passing over the first mentioned pulley and under the second pulley, cable branches connected to said brackets and converging forwardly, a tension spring connected to the forward ends of said branches, and a second cable connecting the spring to said lever.

1,621,139. DOLL'S EYES WITH LOCKING MECHANISM. WALDEMAR SÖRGEL, Waltershausen, Germany, assignor to Kämmer & Reinhardt A.-G., Waltershausen, Thuringen, Germany. Filed Feb. 12, 1926, Serial No. 87,908, and in Germany Mar. 19, 1925. 2 Claims. (Cl. 46—40.)

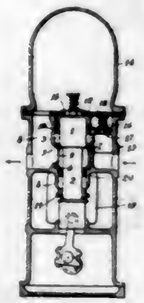


1. In a doll's head with sleeping eyes, in combination with the eyes, a pendulum for operating the eyes, a device in the head for locking and releasing said pendulum comprising a sleeve fixed in the head at right angles to said pendulum and at the rear and one side thereof and having a longitudinal slot, a pin slidably mounted in said sleeve for movement into the path of said pendulum, a cross pin mounted in said slidable pin and engaging with the slot in said sleeve, and a guiding means on said pin for preventing accidental locking of said pendulum.

1,621,140. TOY AND OPERATING MECHANISM THEREFOR. FAYETTE L. THOMPSON, Portland, and CHARLES A. SLOPER, Rainier, Oreg. Filed Feb. 18, 1926. Serial No. 89,095. 15 Claims. (Cl. 46—46.)

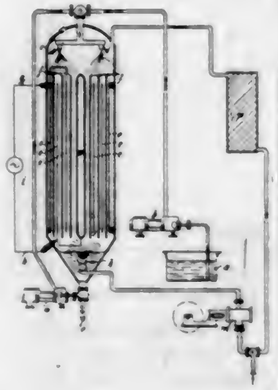
1. The combination of a body, a means by which said body is movably guided along a predetermined path, an abutment at one end of said path for impact by said body, one of said impacting elements being provided with a cavity in which the other fits and into which it is guided by said guiding means, and means for placing a fulminate between said abutment and said body, to be exploded by the impact of the body with the abutment, whereby the force generated by said explosion functions to project said body from said abutment.

1,621,141. STOVE OR RANGE. JOHN J. TOOMEY, Chicago, Ill. Filed Apr. 30, 1925. Serial No. 26,894. 46 Claims. (Cl. 126—39.)



16. A range comprising a cooking-top having a closed top section, a gas-flue disposed below the closed top, a burner-box spaced some distance below said gaa-flue, a flue leading from the rear portion of said burner-box to the front portion of said first-named flue, and a gas-burner located in said burner-box.

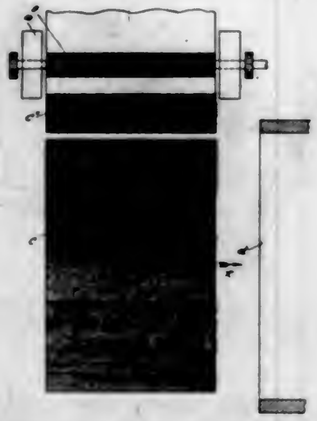
1,621,142. DIFFERENTIAL PISTON PUMP. ERNST VOGEL, Stockerau, near Vienna, Austria. Filed Nov. 24, 1925, Serial No. 71,187, and in Austria Dec. 24, 1924. 4 Claims. (Cl. 103—168.)



1. A pump of the characer described comprising in combination a cylinder, a differential piston operating therein,

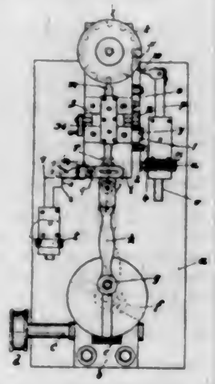
two stuffing boxes one for each part of the differential piston, neck rings capable of acting on one another be-

tween the said stuffing boxes and a single gland for the two stuffing boxes, capable of being tightened from the outside.



1,621,143. PROCESS FOR BRINGING ABOUT PHYSICAL AND CHEMICAL CHANGES IN DIELECTRIC CARBON COMPOUNDS BY MEANS OF IONIZED GASES. HANS EDGAR RICHARD VOGEL, Blankenese, near Hamburg, Germany. Filed Apr. 8, 1925. Serial No. 21,654, and in Germany Mar. 26, 1920. 1 Claim. (Cl. 204—31.)

A process for electrically treating carbon compounds which comprises passing carbon compounds in the form of froth together with a gas through a condenser, the plates of which are separately provided with a dielectric and passing a high voltage, high current density discharge between said plates and through said mixture of carbon compounds and gas to cause molecular changes in the said carbon compounds.

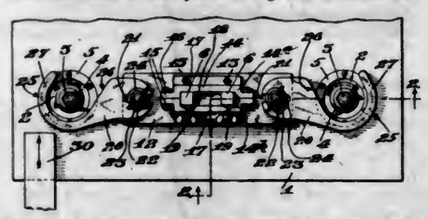


1,621,144. METHOD AND DEVICE FOR MANUFACTURING PLATE GLASS. LAMBERT VON REIS, Herzogenrath, Germany. Filed Apr. 28, 1926, Serial No. 105,320, and in Germany June 11, 1925. 5 Claims. (Cl. 49—33.)

1. The method of manufacturing plate glass, which consists in rolling the glass mass into plates with flutes on at least one of their surfaces, depositing the plates with a fluted surface on a conveyor having a supporting face provided with flutes in a direction different from

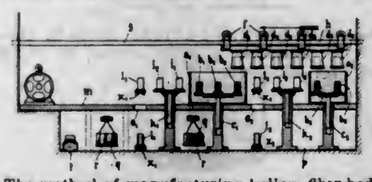
the direction of the flutes on the glass plates, and carrying the latter by means of the conveyor to an annealing kiln.

1,621,145. FEEDING DEVICE FOR GRINDING, MILLING, OR BORING MACHINES AND THE LIKE. CARL OTTO WEBER, Dresden, Germany. Filed Mar. 11, 1925, Serial No. 14,783, and in Germany Oct. 26, 1922. 7 Claims. (Cl. 77—64.)



3. A feeding device for grinding machines and the like comprising a reciprocable slide, means for fixing the work piece mounted on said slide, a dividing plate associated with said piece, a pair of pawls adapted to intermittently feed and lock said dividing plate, said pawls being released and actuated by the reciprocatory motion of the slide, lever mechanism operable by a full rotation of the dividing plate, feeding means interposed between said lever mechanism and said pawls, and means for adjusting the locking pawl in a direction perpendicular to the reciprocating motion of the slide.

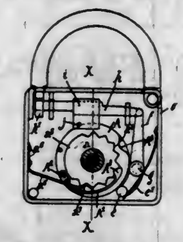
1,621,146. SAFETY DEVICE. WILLIAM WELP, St. Louis, Mo. Filed Jan. 23, 1926. Serial No. 83,306. 2 Claims. (Cl. 144—251.)



1. In a guard of the character described, in combination with the work-table and a cutter rotatable thereon about a vertical axis, a pair of vertical posts on the work-table, a body-plate movable vertically on said

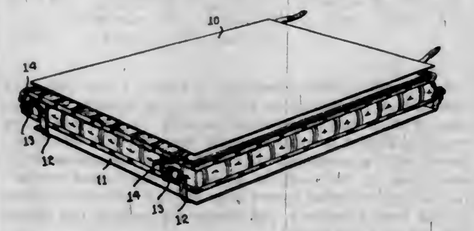
posts, a boxing secured to the top face of said body-plate and having a rectangular opening from top to bottom, the side and end walls of said opening slidably engaging said posts, set-screws in a side wall of said boxing and respectively impinging said posts, a vertical screw-threaded stud on said body-plate having a clamping nut thereon, and a flat plate-like guard element having

a bifurcated inner end portion resting on said body-plate and straddling said screw-threaded stud thereon whereby to be longitudinally and swingably adjustable and being secured in adjusted position by said clamping nut on said stud, the outer end portion of said guard element being hooked to encompass the cutter and paralleling the top face of said work-table.



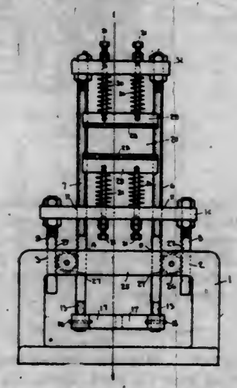
1,621,147. MANUFACTURING HOLLOW BODIES FROM PULP FIBER. PETER ERNST WINNERTZ, Penig, Germany. Filed June 22, 1925, Serial No. 38,898, and in Germany Feb. 16, 1924. 5 Claims. (Cl. 92—54.)

1. The method of manufacturing hollow fiber-bodies and the like, which consists in causing spacedly and parallelly superimposed rows of supporting means and of receiving means to be laterally and axially moved into alignment with each other, immersing certain of the supporting means into fiber-carrying liquids, thereby depositing layers of fiber on said supporting means, superimposing and transferring a certain number of such layers in successive stages to the supporting means, and periodically advancing said supporting means in stages corresponding to the number of layers, transferred to them between each period of their movement, then moving the receiving means in the same direction into alignment with a set of unimmersed supporting means in successive stages, then engaging the layers-containing receiving means with the corresponding unimmersed supporting means and compressing the layers, detaching the compressed fiber-bodies from the receiving means, and receiving them upon other unimmersed supporting means, then returning the rows of receiving means to their initial position, and transferring layers of fibers to the now empty receiving means, and compressing and detaching the compressed layers of fibers in and from the remaining receiving means in successive stages.



1,621,148. KEYLESS COMBINATION-LOCK MECHANISM FOR PADLOCKS, DOOR LOCKS, AND THE LIKE. PHILIPPE ARNATI, Paris, France. Filed Jan. 27, 1925, Serial No. 5,053, and in France Feb. 6, 1924. 5 Claims. (Cl. 70—112.)

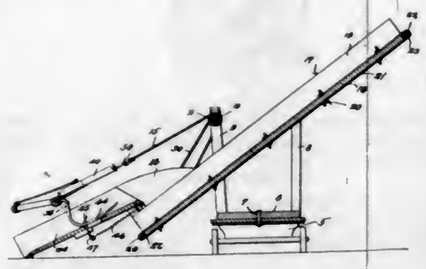
1. A combination lock device, comprising a plurality of juxtaposed cams, a toothed wheel adjacent each cam, a notch upon the periphery of each cam, elastic means connecting each wheel with its adjacent cam and providing for the angular displacement of each wheel upon its cam, an elastic member forming a pawl co-operating with each of the respective wheels and engaging one tooth, a latch, a movable member secured thereto, means whereby the said movable member together with the latch can be displaced only when the notches of all the cams are in line, independent external elements for the separate an-



gular displacement of each wheel and cam unit to form the combination of figures as determined by the audible clicks produced by each unit.

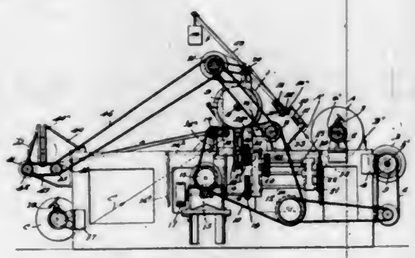
1,621,149. MATTRESS AND BED PROTECTOR. WILLIAM R. BLISSITT, Columbus, Ga. Filed Nov. 10, 1924. Serial No. 749,065. 1 Claim. (Cl. 5—354.)

A device of the character described comprising a mattress, top and bottom protectors therefor with each protector comprising layers of material cemented together; the top protector consisting of a sheet having an upper layer of wool, a lower layer of rubber and an intermediate layer of cotton fabric; the bottom protector comprising center and top and bottom layers of rubber and layers of fibrous material between the center rubber layer and the top and bottom layer of rubber; and adjustable means at the four corners of the top and bottom protectors to detachably secure said protector together on opposite sides of the mattress.



1,621,150. TRACK-SCALE TRIG LOOP. JESSIE H. BRANT, Youngstown, Ohio. Filed July 31, 1925. Serial No. 47,354. 2 Claims. Cl. 265—72.)

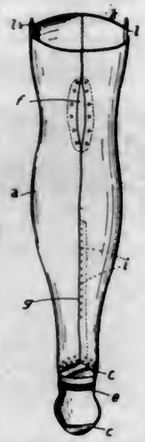
1. In a device of the class described, an upper and lower trig block, coil springs positioned back of said trig blocks for the purpose of cushioning said trig blocks, means



for causing said trig blocks to move against a weighing beam thereby securing said beam in a level position, a lever controlled means for operating said trig blocks, substantially as described for the purpose set forth.

1,621,151. LOADING DEVICE. DANIEL BRIGGLE, Bloomdale, Ohio. Filed Aug. 14, 1925. Serial No. 50,289. 4 Claims. (Cl. 214—93.)

1. A loading device including a truck, a base pivotally mounted on the truck, an inclined chute supported by the base, a chute pivotally connected with the first mentioned chute, a forked member movable over the last mentioned chute, means extending within the last mentioned chute and lying in the path of travel of the forked member for holding material moved over the last mentioned chute by the forked member, and means for moving the forked member over the chute.

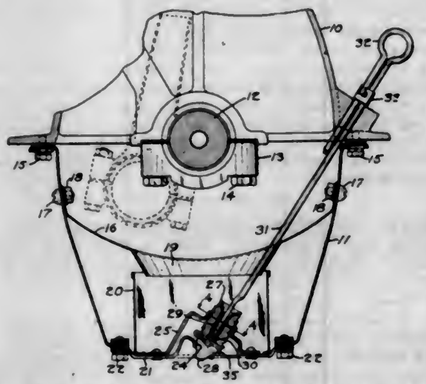


1,621,152. BIAS-CUTTING MACHINE. JAMES W. BRUNDAGE, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 22, 1925. Serial No. 32,086. 14 Claims. (Cl. 164—77.)

1. In a machine of the class described, the combination with a rotatable platen roll and a plurality of equally spaced apart connected cutters movable longitudinally of the roll and adapted to impinge thereagainst, of means for feeding the fabric to the roll including means for applying tension to the fabric.

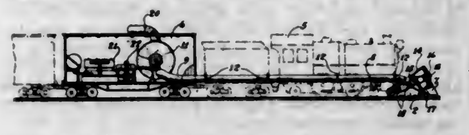
1,621,153. GAITER. HELENE BUNNENBERG, Hanover, Germany. Filed May 18, 1926. Serial No. 109,985, and in Germany Dec. 4, 1925. 1 Claim. (Cl. 36—2.)

Gaiters in the shape of a soleless leg having longitudinal slits at the rear in the hollow of the knee and above the heel and comprising bag-shaped heel and toe portions, a transverse strap of elastic material at the centre portion of the foot, fastening devices for closing said slits,



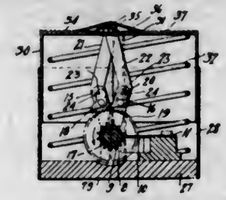
and flaps with button holes upwardly extending from the top edge of the leg and designed to be attached to the underwear.

1,621,154. TIRE-REPAIR DEVICE. DAVID H. COX, Roselle, N. J. Filed Jan. 27, 1926. Serial No. 84,186. 5 Claims. (Cl. 152—26.)



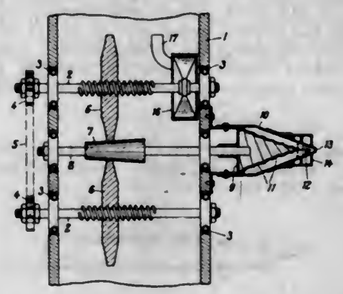
5. A repair device for tires including a base of cured rubber having a flat face and central stem rising therefrom, and a centrally apertured disk of uncured rubber of a diameter less than that of the base disposed on said base and receiving the said stem therethrough.

1,621,155. INTERNAL-COMBUSTION ENGINE. GEORGE R. DAVENPORT, Royal Oak, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed July 3, 1924. Serial No. 723,915. 9 Claims. (Cl. 184—106.)



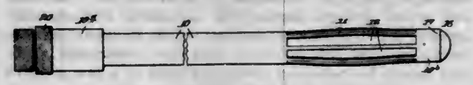
1. In a liquid receptacle, a drain valve and a depth gauge therefor, said depth gauge being insertable in said receptacle to operate said valve and withdrawable therefrom to determine the depth of liquid in said receptacle.

1,621,156. SNOW-CLEANING APPARATUS. JOHN W. DILLAHUNT, Hartford, Conn. Filed Nov. 20, 1925. Serial No. 70,235. 2 Claims. (Cl. 37—25.)



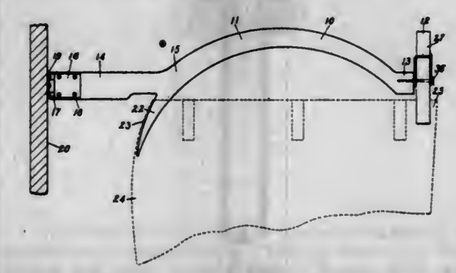
1. In an apparatus of the class described, the combination of a locomotive, a series of pipes extending longitudinally of the locomotive at opposite sides thereof, a series of spaced brackets for supporting the pipes, a hopper sustaining the front ends of the pipes, a wedge-like part between the front ends of the pipes, an adjustable shaft running transversely of the hopper, and provided with a series of fingers thereon, fan casings into which the pipes extend, fans in the casings, and pipes leading from the casings for conducting material therefrom to opposite sides of the track.

1,621,157. MUSICAL DOLL. HARRY D. DU BOIS, West Orange, N. J., assignor to Louis Wolf & Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 23, 1926. Serial No. 143,576. 2 Claims. (Cl. 46—40.)



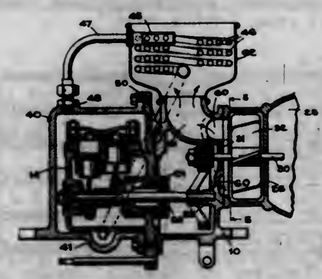
2. A musical doll, comprising a body, a container within the body, comprising a casing and a cover telescopically arranged therewith, a pressure operated musical instrument secured to the base of the casing, instrument operating means in cooperative engagement with the instrument and cover, and means on the casing and cover to prevent relative rotation therebetween.

1,621,158. SPINNING MACHINE. OSKAR EDELMANN, Schlettau, Erzgebirge, Germany. Filed July 8, 1926. Serial No. 121,138, and in Germany May 21, 1926. 4 Claims. (Cl. 118—38.)



1. A spinning machine, comprising in combination a hollow conical spinning body having spiral windings, a funnel open at the front and enclosing said spinning body, a spindle on which said spinning body is mounted, a cone on said spindle, two driving shafts in the shape of screw spindles one at the right and the other at the left of said spindle, a friction wheel loosely mounted on each driving shaft and designed to rotate said cone on said spindle by friction at a very high speed, and means for producing an air eddy in said funnel to suck the fibres into said funnel and to blow them against said spinning cone on which the fibres are twined to form a thread which is delivered through the open point of said funnel.

1,621,159. ABDOMINOSCOPE. ROBERT T. EVANS, Scottsdale, Ariz. Filed Nov. 27, 1925. Serial No. 71,627. 5 Claims. (Cl. 128—6.)



1. In a surgical instrument, a sheath comprising a tube having a series of outwardly bowed spaced longitudinal strips, means for exerting endwise pressure on said strips to cause them to spread by bending between their ends, and means insertable into said sheath for exploring through the slits between said strips the cavity into which said sheath is inserted.

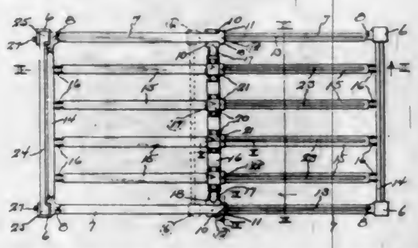
1,621,160. GARMENT HANGER. CLIFFORD H. FISHER, Fort Lauderdale, Fla. Filed May 8, 1925. Serial No. 28,910. 2 Claims. (Cl. 223—67.)

1. A trouser hanger comprising an arcuate body portion having a bracket formed thereon, an arcuate ledge extending from the body portion below the bracket over which the rear portion of a pair of trousers is placed, supporting means carried by the front end of the body portion for receiving the front portion of the trousers, the supporting means being in alignment with the ledge for tautly retaining the waist band of the trousers in a horizontal position, and a hinge secured to the bracket for hingedly mounting the hanger.

1,621,161. REFRIGERATING APPARATUS. ARTHUR GREEN, Coventry, England. Filed Apr. 30, 1926, Serial No. 105,852, and in Great Britain July 4, 1925. 8 Claims. (Cl. 62—115.)

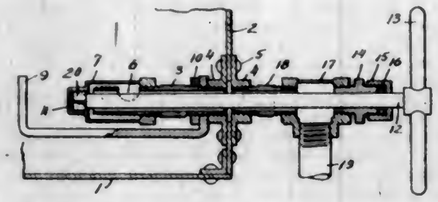
4. In a refrigerating apparatus, the combination of a disc-like casting having a compressor mounted on one side thereof, a compressor shaft extending through said

casting to the other side thereof, a hollow casting mounted on said other side of the other disc-like casting, said hollow casting being formed with a gear chamber and with a through passage isolated from said gear chamber, a fan casing mounted on said hollow casting, a fan mounted on a driven shaft within the fan casing, said fan casing and gear chamber being isolated one from the other by a wall, said driven shaft extending through said wall into the gear chamber, said fan casing having inlet and outlet ports one of which registers with one end of the through passage, a condenser disposed adjacent the other end of the through passage and associated with the compressor outlet, reduction gearing within the gear chamber connecting the driven shaft with the compressor shaft, and means for releasing condensed fluid to a low pressure system associated with the compressor inlet.



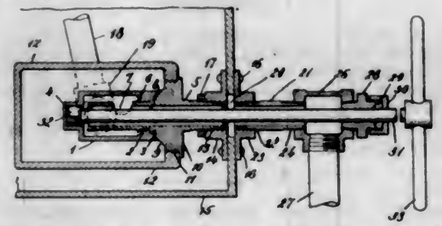
1,621,162. WATER COOLER FOR REFRIGERATORS. FRED C. GREEN, Morrison, Ill., assignor to Illinois Refrigerator Company, Morrison, Ill., a Corporation of Illinois. Filed July 2, 1925. Serial No. 41,094. 21 Claims. (Cl. 62—142.)

10. A water cooling apparatus comprising a refrigerator having adjacent food and ice compartments, and an opening in its top; a cooler having its open upper end registering with said opening, and means for supporting the cooler in the refrigerator beneath the said opening; an air chamber at the upper end of the cooler above the water line; and a duct connecting this air chamber with the ice chamber.



11. In apparatus as set forth in claim 10, the cooler having an angular bottom the apex of which is in the ice compartment, for the purpose specified.

1,621,163. SLIDING BED. MONA MOORE HAMPTON, Kansas City, Mo. Filed Oct. 7, 1925. Serial No. 61,006. 4 Claims. (Cl. 5—175.)

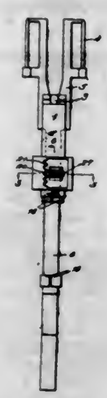


1. A bed comprising a foot and a head piece, slidably interconnected side rails, slidably interconnected slats and supports for said rails and slats extending perpendicularly thereto at a point intermediate said foot and head piece, said slats being supported adjacent their slidably interconnected ends by a transverse member having each end respectively linked to said perpendicular supports by a plurality of coil springs.

1,621,164. DRAIN DEVICE. JOSEPH L. HUTCHINGS, Olean, N. Y. Filed Aug. 15, 1925. Serial No. 50,424. 4 Claims. (Cl. 137—21.)

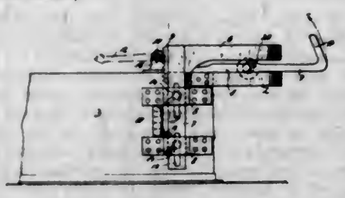
1. A drain device of the non-freezing type which comprises, a threaded stationary member having an axial passage therethrough, a threaded movable member operatively connected to said stationary member, the threads of the stationary and movable members being in engagement with one another and so cut that said threads may be tightly and non-leakably drawn into engagement with one another, a vent leading to the axial passage of the stationary member, and means for rotating the movable member in fixed longitudinal position relative to the stationary member to open and close the vent.

1,621,165. DRAINING VALVE. JOSEPH L. HUTCHINGS, Olean, N. Y. Filed Feb. 2, 1926. Serial No. 85,422. 5 Claims. (Cl. 251—35.)



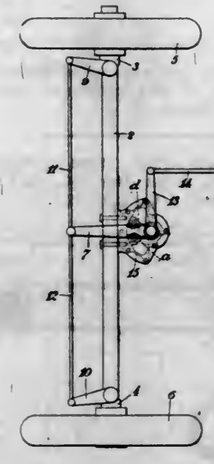
1. A draining valve comprising, a stationary member with an axial passage therethrough, a movable member operatively connected to the stationary member, a vent leading to said axial passage, said members being both threaded and ground seated one to receive the other, and means for moving the movable member relatively to the stationary member to open and close the vent, the ground seats being in engagement when the valve is closed.

1,621,166. FOUNTAIN PEN. MAX KATZ, Providence, R. I. Filed Feb. 15, 1926. Serial No. 88,352. 3 Claims. (Cl. 120—50.)



1. A nonleakable fountain pen, comprising, an ink sack holding barrel portion having a closed upper end and an open lower end, a hollow neck portion having a cap receiving thread on the outer periphery thereof integrally secured to the barrel portion, a tubular feed portion having its central portion of approximately the diameter of the inner periphery of the neck portion, an ink sack receiving shoulder of smaller diameter at the upper end and an internal channel extending from the upper sack end thereof to approximately the lower end thereof having an air inlet opening of substantially smaller diameter than the channel extending from the front surface of said feed portion to said channel and an ink outlet opening of substantially equal size extending from the front surface of said feed portion to said channel below said air inlet opening, an ink sack having a lower open end attached to the shoulder on the upper end of said feed portion and a pen nib having the upper end thereof secured to said pen between said neck portion and said central portion of said feed portion, a downwardly projecting split writing end and an air inlet opening approximately centrally thereof substantially in register with the said air inlet opening in the feed portion.

1,621,167. RIBBON GUIDE FOR TYPEWRITERS AND THE LIKE. CALVIN I. KEPHART, Portland, Oreg. Filed Apr. 12, 1926. Serial No. 101,365. 5 Claims. (Cl. 197—170.)



1. A device of the character described comprising a ribbon guide, a sectional supporting stem therefor, the sections of said stem being telescopically arranged, one of said sections being apertured, the wall of said aperture being provided with a rack, a bolt member carried by the other section and being disposed within the aperture of the first section, and spring means urging said bolt into engagement with the rack to maintain the sections in an adjusted position.

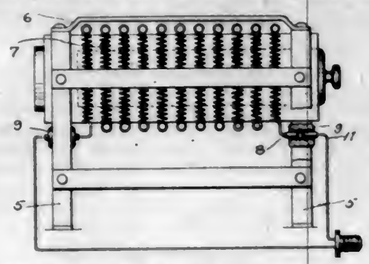
1,621,168. TOWING DEVICE WITH SAFETY DEVICE AGAINST CAPSIZING FOR TUGS. THEODOR KLÜVER, Cuxhaven, Germany. Filed Apr. 12, 1926, Serial No. 101,474, and in Germany Feb. 17, 1926. 4 Claims. (Cl. 114—235.)

1. A towing device on tug-boats with safety device against capsizing, comprising in combination with a towing bow, a towing hawser, a guiding bow, a towing hook having a nose which extends in a straight line, a safety bow adjustably arranged above said guide bow and curved in accordance with the horizontal path of movement of said towing hook and designed to press upon said towing hook if the tug-boat stands at a predetermined angle of inclination and which presses said towing hook down as soon as this angle of inclination is exceeded in the direction of said stretched towing hawser said nose of said towing hook assuming with regard to said towing hawser a position at such an acute angle that said towing hawser is automatically unhooked from said hook by the action of its pulling force.

1,621,169. STEERING MECHANISM OF ROAD VEHICLES. FREDERICK WILLIAM LANCHESTER, Moseley, Birmingham, England. Filed Sept. 9, 1926, Serial No. 134,557, and in Great Britain Oct. 3, 1925. 4 Claims. (Cl. 280—90.)

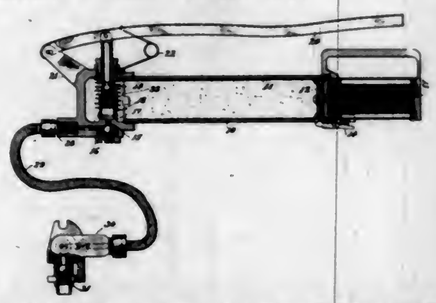
1. Hydraulic steering damping mechanism including in combination a damper piston, a cylinder therefor, a duct through said piston, a pair of damping release valves controlling said duct, hydraulic power operating means on said piston for each of said valves, an auxiliary valve on said piston associated with each of said hydraulic power operating means and means for manually actuating said auxiliary valves alternatively as required.

1,621,170. FISHWAY. WILLIAM CHARLES LANDAU, Lancaster, Pa. Filed July 17, 1925. Serial No. 44,404. 9 Claims. (Cl. 61—21.)



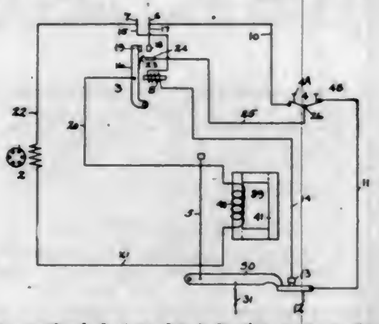
1. A fishway comprising a channel through which water may flow, means in the fishway to provide a plurality of lowering water-levels progressing in the direction of the flow of water through the fishway, and means for directing the flow to the bottom of each level so as to prevent sediment from collecting on the bottom of the fishway.

1,621,171. ELECTRIC HEATER AND STOVE. JOHN J. LIBI, San Francisco, Calif. Filed July 8, 1924. Serial No. 724,873. 1 Claim. (Cl. 219—35.)



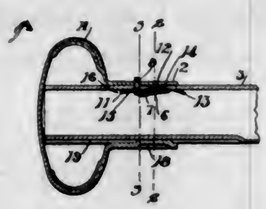
A cooker of the class described, consisting of a cooking chamber formed of heat retaining material, a wire of high resistance spirally wound upon itself to form a coil of many turns, said wire coil being formed in a plurality

of loops and surrounding said chamber, said wire being free from said chamber, and a metal frame forming a combined guard and stand for the cooking chamber, said



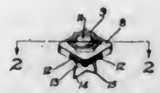
frame being formed with sockets for detachably connecting the terminals of said resistance element with a source of current supply.

1,621,172. GREASE GUN. PHILIP MACKENZIE, San Francisco, Calif. Filed Mar. 14, 1923. Serial No. 624,912. 3 Claims. (Cl. 221—47.3.)



1. A grease gun comprising a reservoir having a discharge outlet, a sleeve overlying the outlet and forming a seat therewith, a plunger in the sleeve, an operating lever arranged upon the exterior of the reservoir and connections between the operating lever and plunger and sleeve whereby the sleeve and plunger will be raised simultaneously by the lever, spring means to return the sleeve to its seat to entrap a quantity of grease, the plunger thereafter being depressed by the lever to expel the entrapped grease.

1,621,173. OVERLOAD DEVICE FOR ALTERNATING-CURRENT MOTORS. CHARLES H. RIPPL, East Cleveland, Ohio, assignor to The Clark Controller Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 18, 1926. Serial No. 130,089. 4 Claims. (Cl. 172—289.)

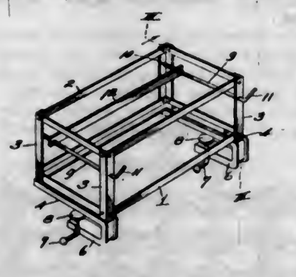


1. In overload devices for induction motors, the combination of a motor circuit including a main magnetic contactor switch, an expansive hot wire and circuit breaker in said motor circuit, and a reactor in parallel with said hot wire, said reactor being so wound as to permit normal overload starting currents to divide between said reactor and said coil in such proportion as to provide sufficient time to bring the motor to normal speed without breaking the circuit, but being so arranged as to divide other overload currents in such proportion as to force said expansive wire to operate said circuit breaker in the desired times for such other overloads.

1,621,174. DOORKNOB FASTENER. WALTER R. SCHLAGE, San Francisco, Calif. Filed Aug. 2, 1923. Serial No. 655,219. 3 Claims. (Cl. 292—353.)

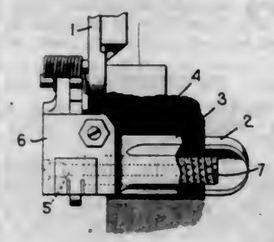
1. A device of the character described, comprising a tubular spindle having a slot formed therein transversely of the longitudinal axis of the spindle, a radially movable locking plate carried by the spindle and guided in the slot, a knob adapted to be received by the spindle, said knob having a slot formed therein adapted to register with the slot in the spindle, and a spring disposed longitudinally of the tubular spindle and interiorly thereof and adapted to force the locking plate radially outward through the spindle and into the slot in the knob to secure the knob.

1,621,175. DENTAL FASTENING MEANS. ALFRED K. SIMMONS, Faribault, Minn. Original application filed Aug. 24, 1922, Serial No. 584,115, Patent No. 1,589,994, dated June 22, 1926. Divided and this application filed Jan. 21, 1924. Serial No. 687,601. 3 Claims. (Cl. 32—9.)



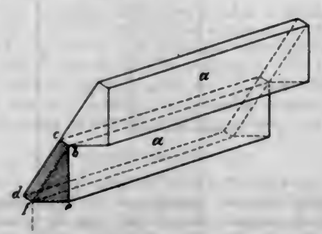
1. In a dental fastening means, the combination of a base having an angular periphery, an abutment projecting from the outer face of the base and adapted to have an artificial tooth or crown secured thereto, said base being adapted to be embedded in a denture, crown or bridge with the abutment extending exteriorly thereof whereby said tooth or crown may be secured to the positioned base, the periphery of the base being recessed adjacent its angle so that when the base is embedded in a plastic material of a denture, crown or bridge the material will extend into said angular recesses and, upon hardening, will assist in preventing relative movement of the base.

1,621,176. REMOVABLE TRUNK HOLDER. SAM SONIN, Kansas City, Mo. Filed Aug. 18, 1926. Serial No. 129,900. 1 Claim. (Cl. 224—29.)



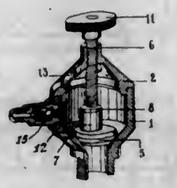
A trunk holder for use on motor car running boards, comprising corner posts, end and side bars connecting the

posts at their upper and lower ends, a screw permanently swiveled to and connecting each pair of end posts and provided with a handle at the outer end, and a bar paral-



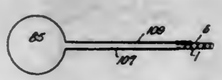
leled to the side bars and threaded on said screws and adapted to be adjusted outwardly or inwardly accordingly as the screws are turned in one direction or the other.

1,621,177. LOOM TEMPLE ROLL. WALLACE I. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 14, 1926. Serial No. 129,122. 5 Claims. (Cl. 139—296.)



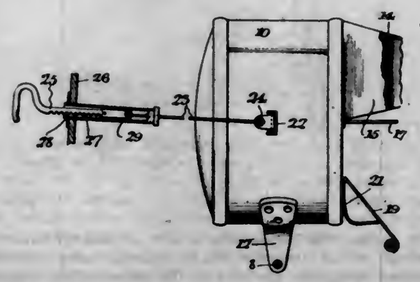
1. A loom temple roll, the periphery of which presents alternating ribs and grooves and pointed pins embedded radially in the roll and spaced centrally along the grooves with the points projecting sufficiently to engage the fabric when pressed against the roll periphery, the grooves being of a width sufficiently greater than the diameter of the pin shanks to enable the ribs to engage the fabric independently of the pin points whereby, when the roll is functioning, both the pin points and the ribs act to hold the fabric.

1,621,178. ROOF-TILE BEAM FOR TOY STRUCTURES. OTTO H. STRUB, Rudolstadt, Germany, assignor to the Firm F. Ad. Richter & Cie. A. G., Baukastenfabrik, Rudolstadt, Thuringia, Germany. Filed Aug. 10, 1923, Serial No. 656,718, and in Germany Dec. 27, 1922. 1 Claim. (Cl. 46—35.)



A toy building block roof comprising a plurality of bars conforming to the length of the roof, said bars each presenting in cross section an unequal sided right angle triangle, and said bars being arranged so that the sides of the parallelogram constitute the thrust surface of the roof.

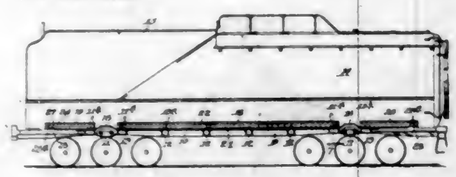
1,621,179. AUTOMATIC INFLATER ARRANGED ON AND ACTUATED BY INTERNAL-COMBUSTION ENGINES. HENRI SUBLEMONT, Verviers, Belgium. Filed Dec. 23, 1924, Serial No. 757,752, and in Belgium Dec. 29, 1923. 3 Claims. (Cl. 277—61.)



1. An automatic inflater to be arranged on and actuated by internal combustion engines, comprising, a housing, an admission port for communication with the upper part of a cylinder of an engine and an inlet port open to atmosphere, positioned in the housing, in line, and in the lower and upper parts of the housing respectively, a delivery port in the side of the housing, a non-return valve controlling the delivery port, and a single valve positioned in the housing for controlling the said admission and inlet ports.

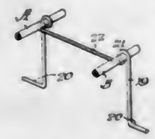
1,621,180. ELECTROMAGNETIC APPARATUS FOR RECORDING SOUND. ADRIAN FRANCIS SYKES, New Barnet, England. Filed Aug. 16, 1926, Serial No. 129,612, and in Great Britain June 22, 1925. 5 Claims. (Cl. 179—100.1.)

1. An electro-dynamic sound recording device comprising a stylus, a working conductor in operative connection with the said stylus, a compensating conductor in series with the working conductor, a floating beam carrying the said conductors, and means for producing a magnetic field, both conductors being immersed in the said field and in parts of the field of substantially the same strength.



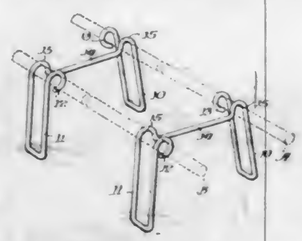
1,621,181. HEADLIGHT SHIELD. FRANK J. TOPPINO, Clifton Forge, Va. Filed June 12, 1926. Serial No. 115,567. 2 Claims. (Cl. 240—45.6.)

1. In a device of the character described, a horizontally disposed supporting shaft, lamps mounted for pivotal movement on the supporting shaft, shields pivotally supported in front of the lamps and having their forward



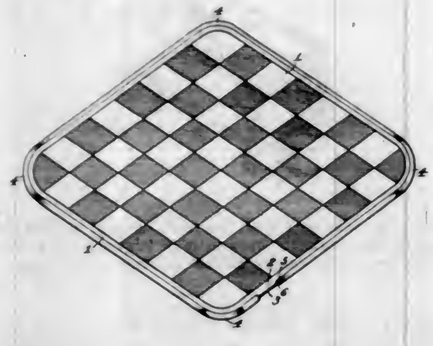
edges resting against the forward edges of the lamps, means for tilting the lamps, and said shields adapted to move over the forward portions of the lamps to shield the forward portions of the lamps when the lamps are tilted.

1,621,182. TANK-EQUIPPED VEHICLE. ROBERT R. WEAVER, Chicago, Ill., assignor to General American Tank Car Corporation, a Corporation of West Virginia. Filed Aug. 20, 1926. Serial No. 130,455. 8 Claims. (Cl. 105—236.)



1. A tank-equipped vehicle comprising an underframe, a tank on said underframe, and a member extending along a side of the tank throughout the greater portion of the length of the latter and located laterally remote from the central portion of the underframe, and rigidly connected with both said tank and underframe and serving to reenforce the tank and anchor it to the underframe.

1,621,183. TWIN CHAIR. WILLIAM E. WHITE, Chicago, Ill., assignor to Kalman Steel Company, Chicago, Ill., a Corporation of Delaware. Filed July 26, 1926. Serial No. 124,973. 2 Claims. (Cl. 94—8.)



1. Means for holding a pair of parallel bars in spaced apart relation, comprising a length of wire bent to provide a connecting member the ends of which underlie said bars, the terminal portions of the wire composing the connecting member being rebent and then bent around said bars and thence downwardly to provide supporting legs.

1,621,184. TWIN-BAR SUPPORT. WILLIAM E. WHITE, Chicago, Ill., assignor to Kalman Steel Company, Chicago, Ill., a Corporation of Delaware. Filed July 26, 1926. Serial No. 124,974. 7 Claims. (Cl. 94—8.)

7. A chair for supporting a pair of parallel bars consisting of an inverted channel-shaped wire structure adapted to engage the bars at the angles of the channel, the connecting member of the structure being composed of a single wire, the wires composing the legs of the structure being bent around the respective bars to permanently secure the chair to the bars.

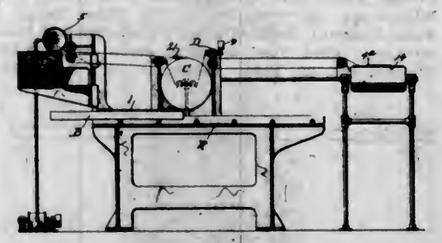
1,621,185. GAME BOARD. BENJAMIN E. BAIN, Pittsburgh, Pa. Original application filed Jan. 24, 1924, Serial No. 688,252. Divided and this application filed Dec. 15, 1924. Serial No. 756,020. 6 Claims. (Cl. 273—136.)

1. As a new article of manufacture, a game board having playing surfaces on opposite sides thereof, and constructed of a single sheet of metal having its marginal edges formed to produce margins raised above the opposite sides.

1,621,186. BOWEL EVACUANT. LEON BARON, Brooklyn, N. Y. Filed Nov. 12, 1926. Serial No. 148,109. 6 Claims. (Cl. 167—7.)

6. A process of producing a bowel evacuant for rectal injection comprising dissolving a gelatinous thickening agent in water, dispersing ox gall therein, and adding the resulting mixture to glycerine to form a semi-liquid or syrupy mass.

1,621,187. BOTTLE CLOSURE. EVA R. BARTLETT, Pasadena, Calif. Filed Dec. 23, 1924. Serial No. 757,633. 7 Claims. (Cl. 215—100.)



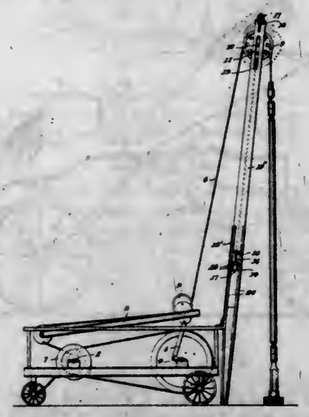
1. A bottle closure comprising an imperforate cap adapted to be secured about the neck of a bottle, a member secured to said cap and extending downwardly within the neck of said bottle when said cap is in applied position, said member presenting a dished surface adjacent its lower end.

1,621,188. PROCESS OF PICKLING FRUIT, ETC. JOHN W. BECKMAN, Oakland, Calif., assignor of sixty per cent to George C. Roeding, Piedmont, Calif. Filed Dec. 8, 1925. Serial No. 74,176. 5 Claims. (Cl. 99—1.)

5. The process of pickling and preserving olives, consisting of opening the pores thereof by treating with a caustic solution, thereafter treating the fruit with a dilute acid, such as hydrochloric acid, which is highly dissociated when diluted, and thereafter treating the fruit to eliminate the hydrochloric acid present therein.

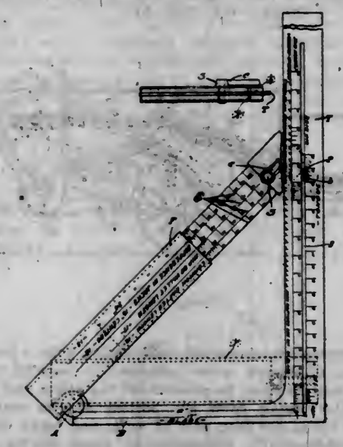
1,621,189. APPARATUS FOR PRINTING AND ASSEMBLING MANIFOLDING BOOKS, PADS, ETC. HORACE P. BROWN, Oakland, Calif. Filed May 14, 1923. Serial No. 638,843. 2 Claims. (Cl. 270—1.)

1. In a printing press of the character described, a cylinder, a bed reciprocally mounted with relation thereto, a plurality of paper feeders mounted adjacent the cylinder, said feeders cooperating therewith and adapted to deliver a plurality of paper sheets in unison, a plurality of type forms carried by the bed, one for each feeding device to permit the plural sheets to be printed in unison and to permit the printed sheets to be discharged in unison, and an endless carrier mounted adjacent the discharge end of the press, said carrier having a continuous movement and the rate of movement being such that the sheets will advance a distance equal to the distance between the type forms carried by the bed during each printing operation.



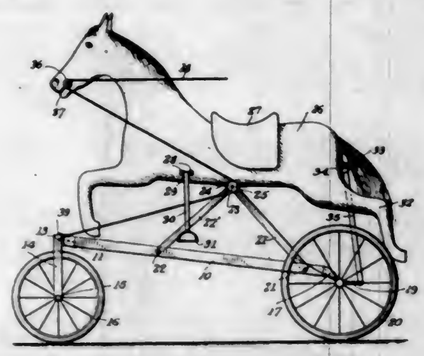
1,621,190. PRECISION CONTRAANGLE PIECE. RAY W. BROWN, Los Angeles, Calif., assignor to The Mechanical Appliances Co., Los Angeles, Calif. Filed Apr. 19, 1926. Serial No. 103,053. 7 Claims. (Cl. 32—11.)

1. A contra-angle hand piece having a housing with a side chamber for a drive means, a barrel in the housing and having a closed end provided with an inside, end thrust seat, a driven box journalled in the barrel and bearing endwise against said seat, a contractive collet in said box for holding an inserted dental tool, and means attached to said box for contracting the collet.



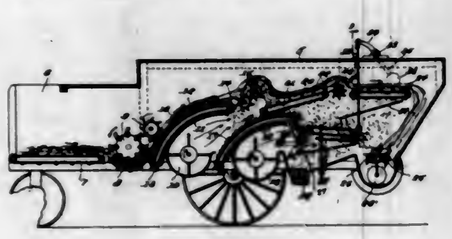
1,621,101. WIRE-CABLE WELL-DRILLING DEVICE. FRANCIS FALCONER DAVIS, San Rafael, Calif., assignor to Francis Harley Davis, San Rafael, Calif. Filed Dec. 19, 1924. Serial No. 756,936. 13 Claims. (Cl. 255—16.)

1. In a well drilling machine of the kind described provided with a derrick-like structure, an elastic cable member supported by the free upper end of structure, a revoluble crown sheave mounted in the derrick-structure beneath said elastic member and adapted for up and down movement between prescribed limits, a rigid spacing means extending from the crown sheave downward toward the lower part of the elastic member, adjustable



regulative means engaging said spacing means with said elastic member for suitably tensing the latter according to requirements when drilling with wire cable, the relative arrangement of parts being such that downward movement of the crown sheave produces downward extension of the elastic cable, and vice versa.

1,621,192. COMBINATION SQUARE AND BEVEL. RHOS ABIJAH DYKE, Myrtle Point, Oreg. Filed June 7, 1924. Serial No. 718,621. 2 Claims. (Cl. 33—92.)

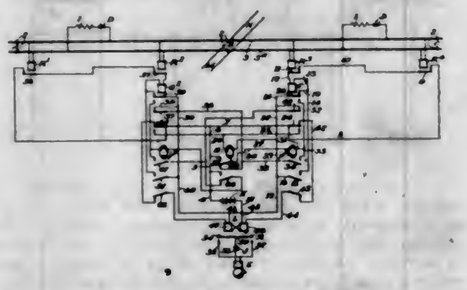


1. A combination square having two legs forming a right angle, an extendible fence pivoted at one end to the free end of the first leg and with the other end engaging the second leg, and being slidable therealong, there being a line of graduations along the second leg having proportionate relation to roof timber rises, the distance from said line of graduations to the pivotal point taken along the first leg having the same proportionate relation to the roof timber runs, and the extendible fence having graduations registering in similar terms quantities depending upon the angular relation of the fence to the legs.

1,621,193. ROCKING-HORSE. FRANZ EICHHORST, Treptow-on-the-Rega, Germany, assignor of one-half to Fritz Schmekel, Mount Clemens, Mich. Filed Sept. 7, 1926. Serial No. 133,834. 1 Claim. (Cl. 208—42.)

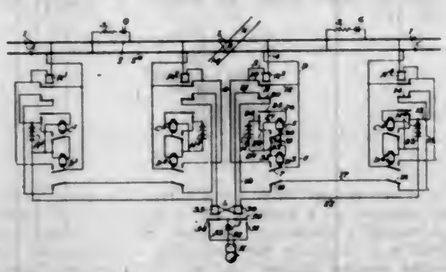
A rocking horse comprising a V-shaped frame, a cross bar pivoted to said frame, said bar carrying a steering wheel, a cranked shaft journalled in the arms of said frame, a pair of wheels fixed on said shaft, a body pivotally mounted on said frame, a link pivoted to said body, said link being pivotally connected to said cranked shaft, a plurality of pulleys mounted on said body and supports extending upwardly from said frame, and reins trained over said pulleys and fixed to said cross-bar, by which the said horse is moved forwardly and steered.

1,621,194. THRASHING MACHINE. FREDRICK L. ELDER, Dayton, Wash. Filed Aug. 5, 1924. Serial No. 730,277. 1 Claim. (Cl. 130—21.)



In a thrashing machine, the combination with a screening means, of curved walls arranged in parallel pairs with one pair disposed in advance of the other and both of the pairs rising from the bottom of the machine an endless apron for each pair of walls and being guided thereby, substantially triangular in cross section ribs transversely secured on each apron, a thrashing cylinder arranged in the path of incoming grain to be thrashed and said cylinder being disposed adjacent the bottom of the apron of the forward pair of walls, a beater co-operating with the thrashing cylinder to receive the grain therefrom, co-acting beaters arranged adjacent the upper end of the last mentioned apron and above the other apron, fans arranged below the aprons said co-acting beaters being adapted to separate the grain from the straw while the last mentioned apron is adapted to receive the separated grain, and said screening means being arranged to receive the grain therefrom.

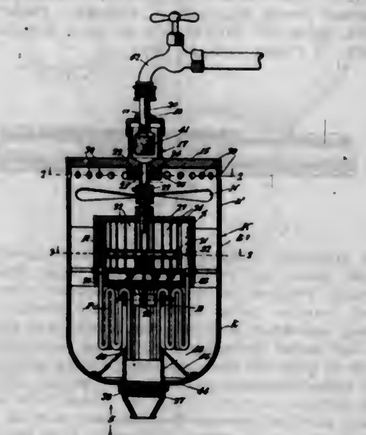
1,621,195. PROCESS FOR PREPARING A HIGHLY-ACTIVE CHARCOAL. OTTO ERNST and OTTO NICODEMUS, Hochst-on-the-Main, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed July 9, 1923, Serial No. 650,541, and in Germany July 15, 1922. 5 Claims. (Cl. 252—3.)



1. In processes for the production of highly active charcoal involving the carbonization of carbonaceous material in the presence of an acid of phosphorus the step which consists in carbonising the impregnated carbonaceous material in the presence of a gas containing free oxygen in quantity sufficient to substantially prevent reduction of the acid of phosphorus.

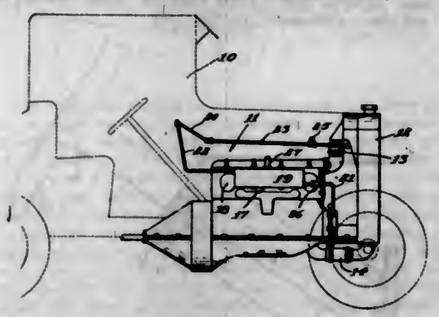
1,621,196. RAILWAY APPARATUS. ARTHUR W. FISHER, Forest Hills Borough, and WESLEY B. WELLS, Wilkinsburg, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 6, 1923, Serial No. 643,766. Renewed Dec. 20, 1926. 18 Claims. (Cl. 246—130.)

1. In combination, two contiguous insulated sections of railway track, a single slow acting relay controlled by traffic conditions in both said sections, two other relays one for each section controlled by said slow acting relay, and an electro-responsive device controlled in part by said other relays.



1,621,197. RAILWAY APPARATUS. CLARENCE S. SNAVELY, Pittsburgh, and ARTHUR W. FISHER, Wilkinsburg, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 6, 1923. Serial No. 643,767. 26 Claims. (Cl. 246—130.)

1. In combination, a highway, a railway track intersecting said highway and provided with two track sections extending in each direction from the highway, a relay for each section provided with a holding circuit, means responsive to a train in each section for opening the holding circuit for the associated relay, a slow acting relay for each section controlled by the associated relay, a second slow acting relay for each section controlled by the associated first slow acting relay, a pick-up circuit for each of said first relays controlled by the associated second slow acting relay, an interlocking relay having



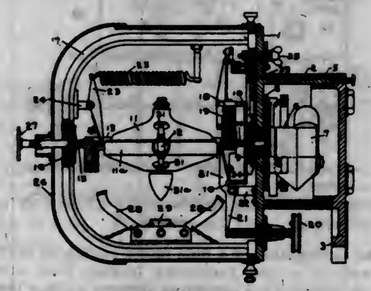
two magnets one for each section, means for controlling each magnet by the first relay and the second slow acting relay of the associated section, and a highway crossing signal controlled by said interlocking relay.

1,621,198. WATER COOLING AND FILTERING APPARATUS. NICOLAS GYMNAITIS, Santa Barbara, Calif. Filed Feb. 24, 1926. Serial No. 90,277. 7. Claims. (Cl. 62—139.)

1. A liquid cooling apparatus adapted to be associated with filtering means, comprising a casing, a water turbine within the casing, means for conducting water to said turbine, coils of porous pipe for receiving water from said turbine, a fan operated by said turbine for creating a movement of air within the casing and around said coils, a discharge spout removably secured in said casing.

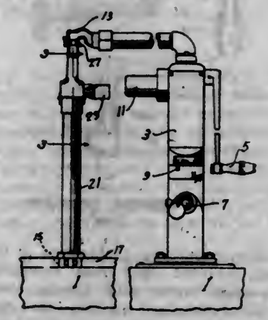
1,621,199. HEATER FOR AUTOMOBILES. HERMAN HANSON, Minneapolis, Minn. Filed Dec. 23, 1924. Serial No. 757,777. 3 Claims. (Cl. 237—12.3.)

2. In combination with the water cooling system of an internal combustion engine, a radiator, a feed pipe connecting said cooling system and radiator, a return pipe connecting said radiator and cooling system, an auxiliary heater positioned in said feed pipe and a check valve situated at the inlet of said heater for preventing back flow through said feed pipe.



1,621,200. INFANT'S STOCKING. MAUD HEILMAN, Lost Hills, Calif. Filed Aug. 17, 1926. Serial No. 129,694. 2 Claims. (Cl. 2—239.)

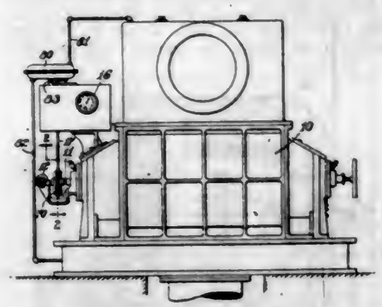
1. An infant's stocking having a leg and a foot portion with front and back seams, the inside of the leg portion at the top being substantially straight across the stocking from seam to seam and the outside of the leg portion extending upwardly from the front and back



seams to a considerable height above the top of the inner portion, and a binding on the outside upper extension, said binding joining the front and back seams.

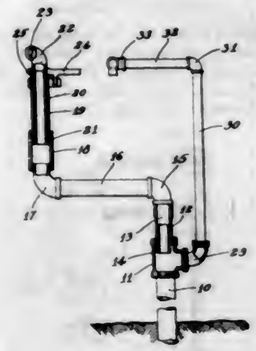
1,621,201. FIRE-CONTROL APPARATUS. JAMES BLACKLOCK HENDERSON, Blackheath, England. Original application filed July 26, 1919, Serial No. 313,542, and in Great Britain Nov. 25, 1915. Divided and this application filed Sept. 16, 1924, Serial No. 738,027. Renewed July 28, 1926. 18 Claims. (Cl. 89—28.)

1. In gun-fire control apparatus, an angularly movable frame, a gyroscope pivotally mounted therein and displaceable longitudinally of a pivotal axis of its mounting in the frame, target position indicating means, an electric switch having relatively movable contacts, actuating mechanism for said switch under the joint control of said frame and gyroscope and an adjusting connection operable by displacement of said gyroscope to adjust said target position indicating means and the switch contacts.



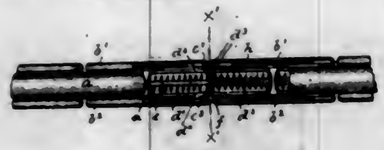
1,621,202. MECHANICAL APPARATUS. SHERWOOD HINDS, Richmond Heights, Mo., assignor to St. Louis Pump & Equipment Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 27, 1922. Serial No. 539,564. 6 Claims. (Cl. 221—72.)

1. In apparatus of the class described, in combination, a receptacle for the storage of liquid, a supply aperture therefor, a cover for said aperture, a pump adapted to discharge liquid from said receptacle, a nozzle on said



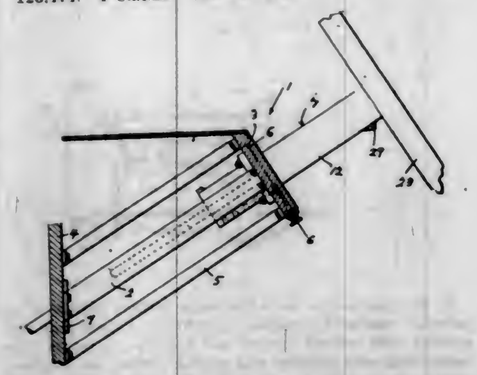
pump through which said liquid is discharged, the nozzle being located at a higher elevation than said aperture, a drip pipe extending up from the cover having a hinged portion adapted for engagement with said nozzle, said hinged portion swinging vertically on a horizontal pin on said pipe, and means for locking the hinged portion of the pipe when said portion is engaged with said nozzle to prevent the cover from being opened, the pipe when in such locking position serving to convey back to the tank any liquid that is discharged from the nozzle.

1,621,203. PRESSURE TEMPERATURE COMPENSATOR AND SLIP INTEGRATOR FOR METERS. CARL R. HOUGHTON, Connersville, Ind., assignor to The Connersville Blower Co., Connersville, Ind., a Corporation of Indiana. Filed Aug. 31, 1925. Serial No. 53,545. 15 Claims. (Cl. 73—167.)



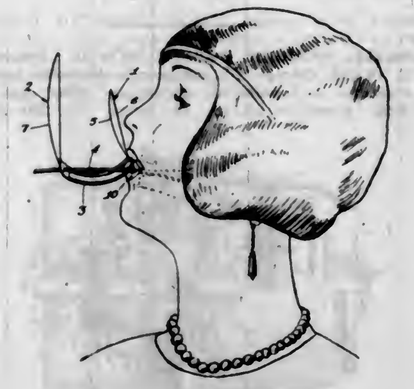
1. The combination of a fluid meter having an inlet and outlet and of a type permitting leakage from inlet to outlet, an indicator for indicating volumes passing through the meter, a driving train dependant upon meter movement for actuating said indicator, a second driving train connected with said indicator, and means for driving said second driving train in accordance with leakage flow through said meter.

1,621,204. SPRINKLER. CHARLES F. HUMPHREY, Pasadena, Calif. Filed Dec. 23, 1924. Serial No. 757,638. 5 Claims. (Cl. 299—71.)



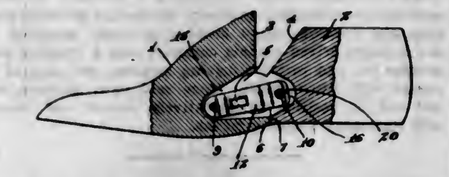
1. A sprinkler comprising a standard, a tubular member rotatably mounted upon said standard, a nozzle rotatably mounted upon said tubular member, said nozzle being rotatable about an axis other than the axis of rotation of said tubular member and being disposed to discharge a stream in a direction other than parallel to the axis of rotation of said tubular member, means for supplying fluid to the interior of said tubular member so as to be discharged through said nozzle, an arm carried by said nozzle, and stops mounted upon the standard engageable by said arm whereby upon the discharge of fluid through said nozzle the tubular member will be caused to swing upon said standard until said arm engages upon one of said stops, and thereupon the nozzle will be partially rotated so as to produce movement of said tubular member in the opposite direction until the other stop is engaged.

1,621,205. EXPANDING BRACELET. FRANK JONES and ERNEST JONES, Birmingham, England. Filed Jan. 31, 1923, Serial No. 616,146, and in Great Britain Feb. 3, 1922. 1 Claim. (Cl. 59—79.)



An expanding bracelet comprising interconnected pairs of side plates and center links, the center links being interposed between the members of adjacent pairs of side plates, cranked spring abutment slides having portions slidably interfitted with the side plates, said side plates and said spring abutment slides having cooperating guide means to hold the slides against twisting and constrain them to proper movement, said slides having spring abutment portions located within the center links and connecting portions between the abutment portions and the guide means of the slides, said center links having slots accommodating the connecting portions, springs abutting the abutment portions of the slides and the ends of the center links, and a fixed guide wire extending axially through each center link and through the springs therein, said abutment portions having openings larger than the wires and through which the wires extend loosely whereby the guide wires serve solely for the purpose of locating and maintaining the springs in correct relationship to their abutments.

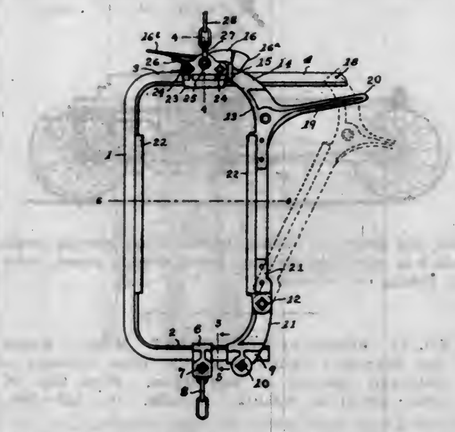
1,621,206. STEERING DEVICE. ALEXANDER KACZIBA, San Antonio, Tex. Filed July 19, 1926. Serial No. 123,474. 4 Claims. (Cl. 74—39.)



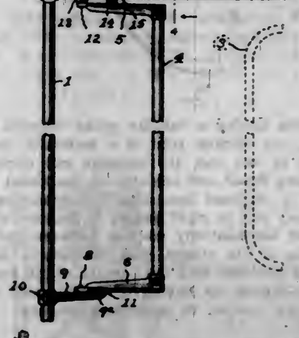
1. In a steering device of the class described, an extensible steering column including a stationary lower section and a slidable upper section disposed over the lower section, an extensible steering post adapted for rotation within said steering column; a steering wheel secured on the upper end of the steering post, and means for adjustably securing the steering post in any extended position, said means comprising a latch, the slidable section of said extensible steering column being provided with spaced recesses for cooperation with said latch.

1,621,207. VOICE PLACER. EVA KELLER, Pasadena, Calif. Filed Oct. 27, 1925. Serial No. 65,119. 13 Claims. (Cl. 84—466.)

1. A voice placer comprising in combination a frame, a front sound reacting plate adapted to touch the front teeth near its lower edge, and a rear reflecting plate positioned to receive the sound waves from the mouth.



1,621,208. PROCESS OF ASSEMBLING LASTS. WALTER A. KRENTLER, Detroit, Mich., assignor to Krentler-Arnold Hinge Last Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 8, 1925. Serial No. 74,165. 1 Claim. (Cl. 12—136.)

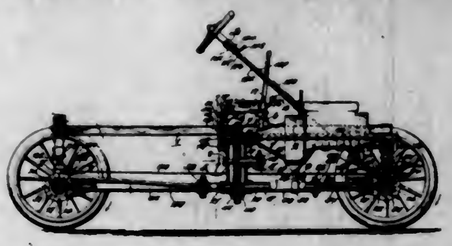


The improved process of assembling two part lasts having a single connecting spring member, which consists in providing a spring member with an edge portion positioned toward the line of driving of the assembling pin in advance of a recess in said member to receive the connecting pin, uniting the single spring member and the other last part, proportioning the said single spring member and the connecting pin positions to predetermine the extent of resiliency applied to the spring and last members when completely assembled, then providing a conically pointed pin, driving the same so that said conical point will first engage the said extending portion of the spring, and completing the assembling and spring tension of the last parts by continuing the driving action of the retaining pin.

1,621,209. STANCHION. RUDOLPH J. LANGER, Monticello, Iowa, assignor, by mesne assignments, to Franklin Equipment Company, Monticello, Iowa, a Corporation of Iowa. Filed Nov. 21, 1925. Serial No. 70,451. 6 Claims. (Cl. 119—147.)

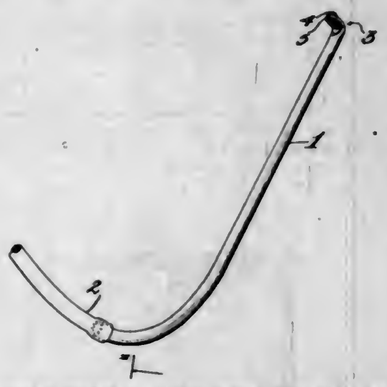
1. A stanchion including a main frame formed with a fixed side and laterally projecting top and bottom bars which are rigid with the fixed side, a slide adjustably mounted on the bottom bar, an upwardly extending hinge arm projecting from the slide, a swinging side pivotally mounted on the hinge arm, a slide adjustably mounted on the top bar, a rigid arm projecting upwardly from the swinging side, and latch means carried by the slide on the top bar to overhang the arm at the upper end of the swinging side to hold the swinging side in a closed position.

1,621,210. STOP BAR. RUDOLPH J. LANGER, Monticello, Iowa, assignor, by mesne assignments, to Franklin Equipment Company, Monticello, Iowa, a Corporation of Iowa. Filed Nov. 21, 1925. Serial No. 70,452. 8 Claims. (Cl. 119—147.)



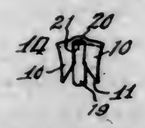
1. A stop bar attachment for stalls having stall posts and a top rail, upper and lower swinging arms, a support from the top rail for the upper arm, a stop bar mounted upon said arms, a stop lug projecting from the upper swinging arm and disposed to engage said rail to limit the swinging movement of the stop bar, a shift bar pivotally mounted upon said stop lug, a lateral bracket projecting from a stall post upon which bracket the lower arm is pivoted, and a stop on said bracket to engage the lower arm.

1,621,211. SELECTIVE FOUR-WHEEL DRIVE AND STEERING AND BRAKE MECHANISM FOR AUTOMOBILES. RICHARD H. LEWIS, Riverdale, Md. Filed Feb. 20, 1923. Serial No. 620,193. 17 Claims. (Cl. 180—45.)



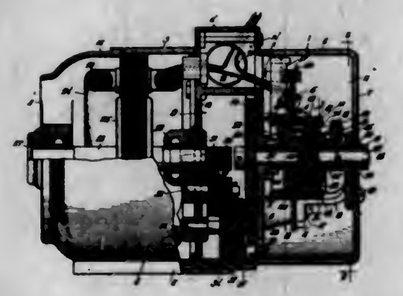
1. In an automobile, a four wheel drive mechanism, a steering means for the front wheels, and means operative-

ly connected with said front wheel steering means for steering the rear wheel selectively to the right or the



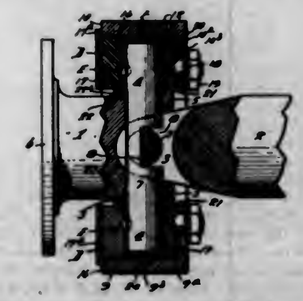
left, and means for locking the rear wheel steering means which in turn locks the front wheel steering means, thereby locking the automobile.

1,621,212. SURGICAL INSTRUMENT. MARK C. MYERS, San Francisco, Calif.; Mercantile Trust Company of California executor of said Myers. Filed Dec. 26, 1922. Serial No. 609,012. 1 Claim. (Cl. 128—304.)



A curette having a tubular shank adapted to be connected to the suction tube of a manually operable suction bulb at one end, the opposite end portion of said shank being flared and one side of the flared portion cut away on a diagonal line with the remaining side bent transversely and at right angles to the axis of the shank at a point substantially midway between the outer and inner ends of the sloped edge, whereby a flared intake opening is provided into the tubular shank together with a concavo-convex lip having a rounder side disposed in overhanging relation to the intake opening.

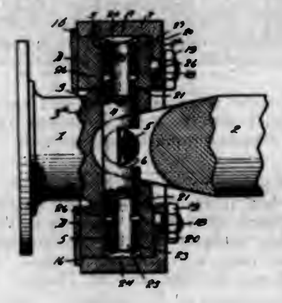
1,621,213. METALLIC FASTENER OR JAMB NAIL. GUSTAF OLSON, Chicago, Ill., assignor to Eric J. Strand, Chicago, Ill. Filed May 22, 1926. Serial No. 110,987. 4 Claims. (Cl. 85—11.)



1. In a metallic fastener of the class described, the combination of a metallic main body portion and a pair of pointed prongs disposed at an angle with respect to said main body portion and all formed in one integral piece, the bases of said prongs being at the apex of said angle and spaced apart, and an arched portion integral with the bases of said prongs and normally projecting outward and adapted to be depressed and held in wedge-like engagement with and between said bases of said prongs, and acting to spread and tend to hold apart the pointed ends of said prongs.

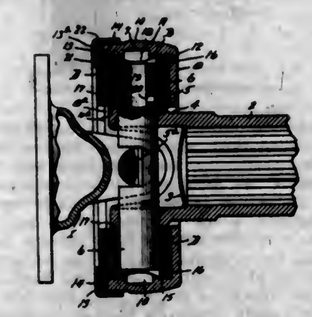
1,621,214. PERIODIC ROTARY SWITCH. WALDEMAR N. OLSON, Chicago, Ill., assignor to Reynolds Electric Company, a Corporation of Illinois. Filed Apr. 22, 1925. Serial No. 25,175. 16 Claims. (Cl. 200—24.)

10. In an electric circuit controller of the class described, the combination of a rotative driving member, a rotative driven contact member having suitably insulated electrically conductive contact portions, stationary electrically conductive brush members adapted to operatively engage said electrically conductive contact portions of the driven contact member, resilient means connected with and forming an operative connection between said rotative driving member and said driven contact member and adapted to permit the driven contact member to rotate at a speed which varies with respect to the speed of rotation of the rotative driving member, stationary stopping means comprising a plurality of stops mounted on a suitable stationary support, a movable stopping and releasing pawl member pivotally mounted on the rotative driven contact member, and a rotative cam member on said rotative driving member and adapted to engage and automatically move said pawl member into and out of position to operatively engage and release said stationary stopping means.



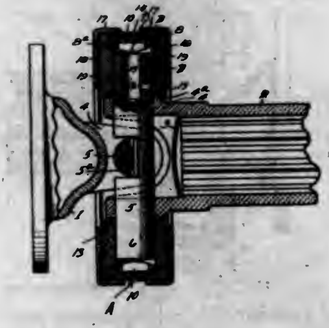
1,621,215. UNIVERSAL JOINT. FREDERICK W. PETERS, Cleveland, Ohio, assignor to Spicer Manufacturing Corporation, South Plainfield, N. J., a Corporation of Virginia. Filed Dec. 10, 1923. Serial No. 679,596. 29 Claims. (Cl. 64—102.)

1. In a universal joint, the combination, with a driving and a driven member and trunnions carried thereby, of a connecting member having seats extending inwardly from one side thereof for the trunnions of one of the first two members and seats extending inwardly from the opposite side thereof for the trunnions of the



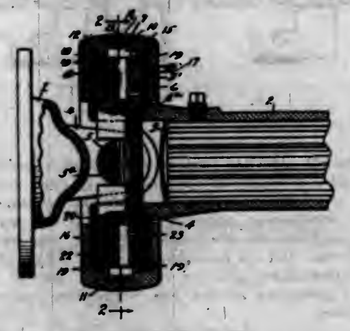
other of such members, bearing blocks adapted to receive said trunnions and to fit within the seats provided therefor, and means for securing the said blocks in said seats.

1,621,216. UNIVERSAL JOINT. FREDERICK W. PETERS, Cleveland, Ohio, assignor to Spicer Manufacturing Corporation, South Plainfield, N. J., a Corporation of Virginia. Filed May 1, 1924. Serial No. 710,207. 11 Claims. (Cl. 64—102.)



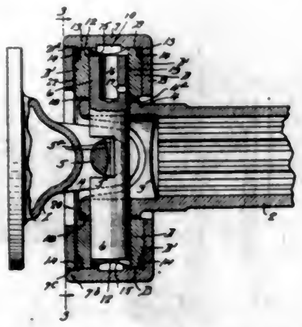
1. In a universal joint, the combination, with a driving and a driven member and trunnions carried thereby, of a connecting ring having seats for said trunnions and lubricant chambers between said seats, adjacent chambers communicating by passages extending through said seats beyond the ends of the trunnions, each trunnion having a bore in the outer end thereof and provided with one or more ports extending laterally from the bore adjacent the bottom thereof to the seat in which said trunnion is mounted.

1,621,217. UNIVERSAL JOINT. FREDERICK W. PETERS, Cleveland, Ohio, assignor to Spicer Manufacturing Corporation, South Plainfield, N. J., a Corporation of Virginia. Filed Apr. 22, 1925. Serial No. 24,925. 12 Claims. (Cl. 64—102.)



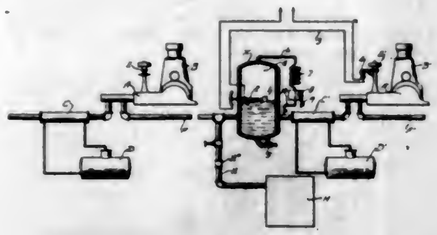
1. In a universal joint, the combination, with a driving and a driven member and trunnions carried thereby, of a hollow lubricant-containing connecting ring for said trunnions, the said ring having seats extending transversely thereof from one side toward and terminating short of the opposite side, bearing blocks for said trunnions adapted to be inserted in said seats, each bearing block having a flange at the outer end thereof with a washer interposed between said flange and the adjacent face of said ring, a washer interposed between the opposite end of each bearing block and the bottom of the seat therefor, and means for securing said blocks in place within said ring.

1,621,218. UNIVERSAL JOINT. FREDERICK W. PETERS, Cleveland, Ohio, assignor to Spicer Manufacturing Corporation, South Plainfield, N. J., a Corporation of Virginia. Filed Apr. 22, 1925. Serial No. 24,927. 7 Claims. (Cl. 64—102.)



1. In a universal joint, the combination, with a driving and a driven member and trunnions carried thereby, of a hollow lubricant-containing connecting ring for said trunnions, the said ring having seats extending transversely therethrough, bearing blocks for said trunnions adapted to be inserted in said seats, a clamping ring adjustably mounted upon each side of the outer face of the said ring and each such ring having a radially inwardly extending flange adapted to overhang the ends of the bearing blocks, and packing means covering the joints between the ends of said blocks and the cooperating ends of said seats and interposed between such ends and the flange on the clamping ring adjacent thereto.

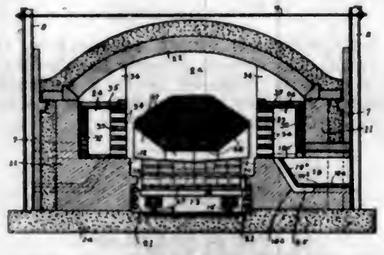
1,621,219. UNIVERSAL JOINT. FREDERICK W. PETERS, Cleveland, Ohio, assignor to Spicer Manufacturing Corporation, South Plainfield, N. J., a Corporation of Virginia. Filed Apr. 22, 1925. Serial No. 24,928. 12 Claims. (Cl. 64—102.)



1. In a universal joint, the combination, with a driving and a driven member and trunnions carried thereby, of a hollow lubricant-containing connecting ring for said trunnions, the said ring having seats extending transversely thereof and located entirely within the sides of said ring, bearing blocks for said trunnions within said seats and entirely within the sides of said ring, the seats intersecting the inner wall of the ring, and packing means interposed between opposite end portions of each block and the surfaces of the seats adjacent thereto.

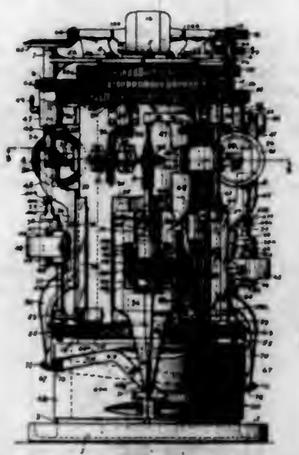
1,621,220. UNIVERSAL JOINT. FREDERICK W. PETERS, Cleveland, Ohio, assignor to Spicer Manufacturing Corporation, South Plainfield, N. J., a Corporation of Virginia. Filed Sept. 16, 1925. Serial No. 56,642. 15 Claims. (Cl. 64—102.)

1. In a universal joint, the combination with a driving and a driven member and trunnions carried thereby, of a hollow lubricant-containing connecting ring for said trunnions, the said ring having seats extending transversely thereof from and through one side toward and terminating short of the opposite side, bearing blocks for said trunnions in said seats, packing material interposed between the inner end of each bearing block and the bottom of the seat therefor, a clamping ring adjustably mounted on the opposite end of the ring from the bottoms of said seats, and packing material interposed between the outer end of each bearing block and said ring.



1,621,221. OIL-PIPE-LINE SYSTEM. GEORGE D. POGUE, Mount Vernon, N. Y. Filed Jan. 20, 1923. Serial No. 613,912. 24 Claims. (Cl. 137—78.)

1. An oil pipe line system, comprising a receiving station and a plurality of intermediate stations arranged in series and combined in such a way as to form a practically continuous passageway for the oil while it is traveling from the receiving station to the terminus of the system, and an emergency storage means at each of said intermediate stations into which the oil traveling from a preceding station can be diverted under certain conditions.

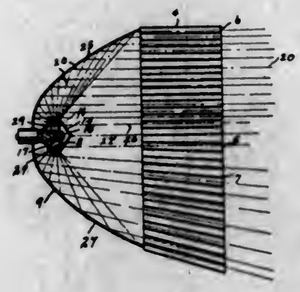


1,621,222. APPARATUS FOR BURNING OR CALCINING MATERIALS. HARRY M. ROBERTSON, Lakewood, Ohio. Filed June 20, 1925. Serial No. 38,589. 14 Claims. (Cl. 222—3.)

1. In a tunnel kiln for calcining material, the combination of a pre-heating section and a burning section, the burning section comprising an elongated central portion through which material is conveyed and a plurality of secondary combustion chambers disposed in each side wall of the burning section and opening into the said central portion from end to end thereof, a plurality of primary combustion chambers disposed within the side walls of said burning section and having exit openings

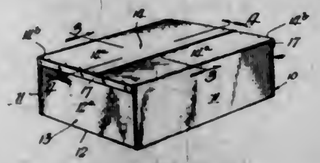
leading into the lower portion of said secondary chambers, air inlets for the latter chambers, and means for conveying material through said sections.

1,621,223. MACHINE FOR HOBBING GEARS, SHAFTS, AND OTHER ARTICLES. CHARLES H. SCHUHR, Cleveland, Ohio, assignor to The Lees-Bradner Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 6, 1923. Serial No. 666,933. 19 Claims. (Cl. 90—4.)



10. In an apparatus of the class described, the combination of a main support, a hobbing mechanism, means for moving the hobbing mechanism upon the main support in a closed path of movement, said hobbing mechanism comprising a hob spindle and a work spindle, means for rotating the hob and work spindles at a relative velocity ratio suitable for hobbing, and means for otherwise moving one of said spindles relative to the other with a hob feeding movement.

18. In an apparatus of the class described, the combination of a main support, a hobbing mechanism, means for moving the hobbing mechanism upon the main support in a closed path of movement, said hobbing mechanism comprising a hob spindle and a work spindle, means for rotating the hob and work spindles at a relative velocity ratio suitable for hobbing, and means for causing a hob feeding relative movement between the spindles.

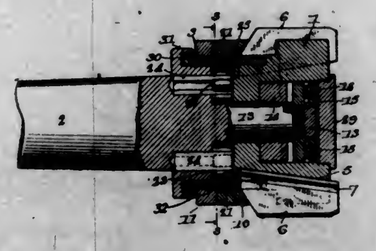


1,621,224. HEADLIGHT. CLARENCE N. SCOTT, Houston, Tex. Filed June 8, 1925. Serial No. 35,515. 1 Claim. (Cl. 240—48.4.)

A headlight including a reflector, a filament of substantially circular form, disposed cross wise with respect to the axis of the reflector and having its center on said axis, a series of non-reflecting radial shields disposed across the path of the filament so as to obstruct

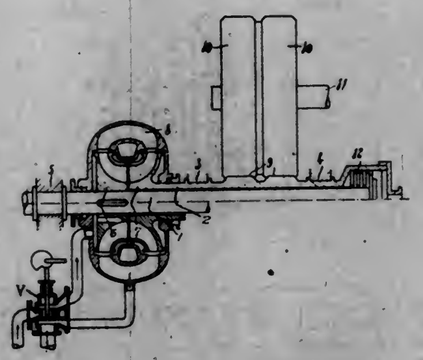
the rays of light emitted from said filament in a tangential direction, a non-reflecting shield arranged within the circle of the filament and a cellular shield having light passageways arranged in front of the reflector.

1,621,225. BOX. HARRISON B. WALTER, Chicago, Ill., assignor, by mesne assignments, to Container Corporation of America, Chicago, Ill., a Corporation of Delaware. Filed Apr. 13, 1922. Serial No. 552,342. 1 Claim. (Cl. 229—43.)



A box made of a single blank of fibre or paper board, the blank being cut and creased to provide a bottom wall, two side walls and two top closure flaps adapted to overlap along a median line of the box, the bottom wall having end extensions to provide ends of the full depth and width of the box, and the side walls having end extensions which are folded against the end walls to substantially cover said end walls, and wood cleats, a pair for each end of the box, embracing the extensions forming the end of the box between them and being stapled thereto, said wood cleats extending the full width of the box and the top closure flaps of the box being folded down upon said wood cleats and nailed to the composite seats thus provided.

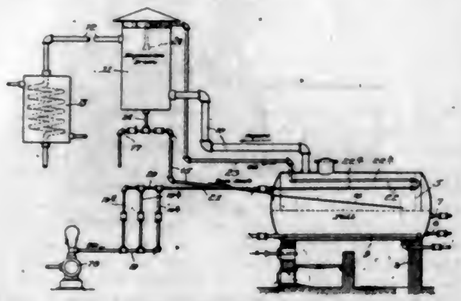
1,621,226. MILLING CUTTER. SEBASTIAN J. WELTER, Chicago, Ill., assignor to Armstrong Bros. Tool Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 19, 1923. Serial No. 663,554. 4 Claims. (Cl. 76—101.)



1. The method of making a milling cutter and maintaining a uniform cutting width thereon which consists in pressing into transverse slots on an annular body, teeth having opposed lateral cutting edges and having serrations extending in the direction of said insertion thus cutting mating serrations in the walls of said slots adjacent said serrations, in deforming portions of said body between adjacent slots to press the walls thereof against the respective blades, and in subsequently transversely displacing certain of said blades in their respective slots offsetting them from the others of said blades to compensate for the lessening of the width of cutter in resharpening.

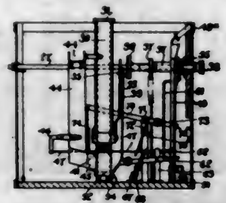
1,621,227. REAMER. CHARLES P. WETMORE, Milwaukee, Wis., assignor to Wetmore Reamer Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 21, 1921. Serial No. 479,356. 13 Claims. (Cl. 279—16.)

8. In a reamer, a hollow head provided with a partition intermediate the ends thereof to form recesses on either side of said partition, said partition being provided with a central opening connecting said recesses, an arbor having one end thereof fitted into one of said recesses and provided with a stem extending through said opening into the other of said recesses, and means applied to the end of said stem for holding said head and arbor in assembled relation.



1,621,228. REVERSIBLE POWER-TRANSMISSION DEVICE. OSCAR ANTON WIBERG, Finspong, Sweden. Filed Jan. 5, 1923. Serial No. 610,896, and in Sweden Jan. 2, 1922. 2 Claims. (Cl. 60—54.)

1. In a power transmission device the combination with a driving shaft, of a driving hydraulic transmission element on said driving shaft at an intermediate point thereof, laminated friction clutch elements at one end of said shaft, a hollow shaft surrounding concentrically

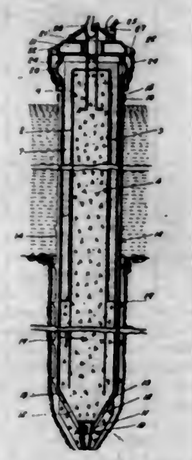


said driving shaft from said end thereof to said transmission element, laminated friction clutch elements at one end of said hollow shaft engaging alternately between said first mentioned laminated friction clutch elements, a driven hydraulic transmission element on the opposite end of said hollow shaft, adapted for operation in the opposite direction to said driving elements, a distributor between said hydraulic transmission elements, and mechanical gear elements on said hollow shaft intermediate between its ends.

1,621,229. ART OF DISTILLATION. DAVID MOYES ALLAN, Halifax, Nova Scotia, Canada, assignor to Standard Development Company, a Corporation of Delaware. Filed Jan. 5, 1922, Serial No. 527,110, and in Canada Feb. 20, 1923. 3 Claims. (Cl. 196—5.)

3. In apparatus for the distillation of oil, a still, an expansion chamber, a vapor line passing from the still to the expansion chamber, means for returning condensate from the expansion chamber to the still, means for heating moisture containing oil by the vapors before they proceed to the expansion chamber, and means for feeding the heated moisture-containing oil into said extension chamber.

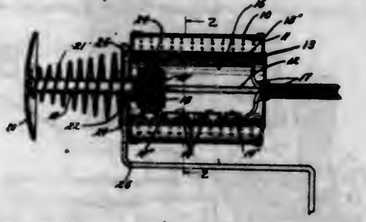
1,621,230. AUTOMATIC COIN-OPERATED MACHINE. GEORGE RICHARD BARR, Hackney, London, England. Filed Aug. 12, 1922, Serial No. 581,403, and in Great Britain Nov. 22, 1921. 8 Claims. (Cl. 194—30.)



1. A coin operated machine for playing games by means of a ball, said machine being provided with a playing surface and means to project a ball on to said surface, two separate coin chutes, a series of playing balls mounted in pile formation beneath said playing surface, a rotatable shaft, a member beneath said pile of balls connected to said shaft by link mechanism, so as to raise the pile of balls and deliver the uppermost ball on to the playing surface when said shaft is rotated, and means associated with said coin chutes whereby the rotatable shaft is released for manual rotation on the passage of coins through said chutes.

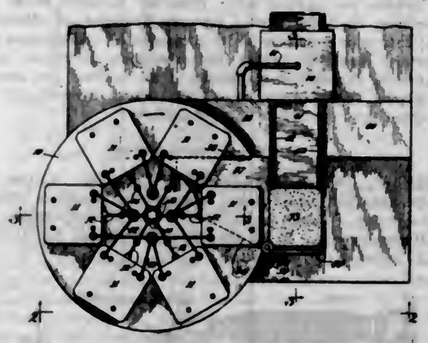
1,621,231. PAPER DOLL. MATTIE THAYER BABINGER, Kansas City, Mo. Filed Mar. 5, 1926. Serial No. 92,454. 1 Claim. (Cl. 46—40.)

A device for fastening dress members to a paper doll body member, comprising tapering tongues slit from said members and arranged to taper oppositely to permit each tongue to enter between the other tongue and the member carrying the same.



1,621,232. PILE. EDWARD BIGNELL, Lincoln, Nebr., assignor to Concrete Piling Co., Seward, Nebr., a Corporation of Nebraska. Filed Apr. 2, 1923. Serial No. 629,446. 5 Claims. (Cl. 61—80.)

2. A pile having a toe portion with radial, downwardly inclined passageways surrounding a nozzle chamber with which they communicate, in combination with a submerging frame comprising a plurality of detachbale pipes adapted to surround the pile and discharge into the passageways, a manifold for the supply pipes, and flexible connections between the manifold and the pipes.

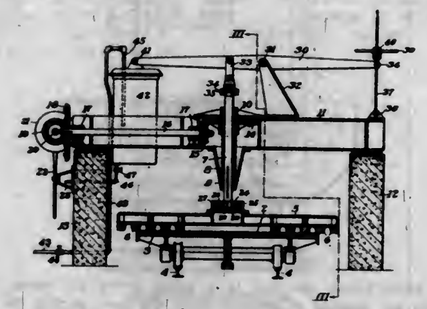


1,621,233. CONTROLLING DEVICE. HARRY E. CAMPBELL, Milwaukee, Wis., assignor to Union Electric Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 7, 1924. Serial No. 684,904. 4 Claims. (Cl. 201—62.)

4. A controlling device for electric circuits comprising a tubular insulating member; a resistance element carried upon the outer surface of said member; an elongated contact member mounted within said tubular member, having portions embedded therein; a row of aligned contact members mounted within said tubular member in spaced relation to said elongated contact member, each of said aligned contacts comprising a

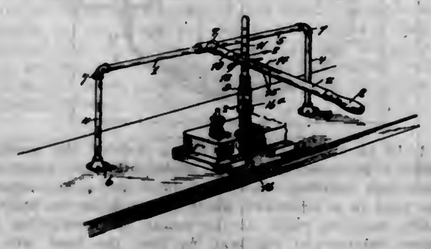
staple-like element, the prongs of which are embedded in and pass through said insulating member, and are conductively connected to said resistance element at separated points; a movable contact member in engagement with said elongated and aligned contact members; and means for actuating said movable contact member.

1,621,234. TOASTING MACHINE AND THE LIKE. CHARLES E. CARPENTER, Chicago, Ill. Filed Oct. 29, 1925. Serial No. 65,519. 8 Claims. (Cl. 126—41.)



8. In a machine of the class described, the combination of a smooth plane carrier surface, means for heating the same, a series of flat paddles traveling with said carrier surface and movable vertically with respect to the same, said paddles being plane throughout their working surfaces, means for heating the individual paddles, and means for introducing articles to be treated edge-wise between the carrier surface and the individual paddles in timed relationship with respect to the carrier travel, substantially as described.

1,621,235. MANUFACTURING PROCESS OF BLANKS FOR WATCH MOVEMENTS. HENRI COLOMB, Tavannes, Switzerland. Filed Oct. 5, 1922, Serial No. 592,641, and in Switzerland Mar. 6, 1922. 6 Claims. (Cl. 29—177.)

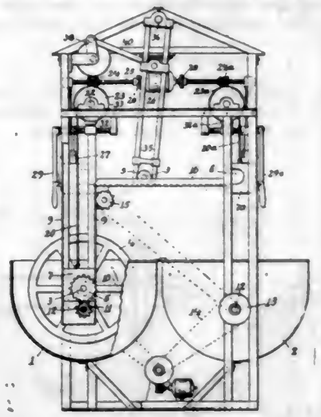


1. A process for making a bridge and plate of a watch movement which consists in first shaping the bridge and plates by forming the necessary recesses and holes therein, and after the metal of the plate and bridge has been distorted by such operation, then rectifying a number of the holes by a single operation of a punch having a plurality of matrices and after this rectifying step then similarly rectifying the remaining holes by a similar punch operation.

1,621,236. APPARATUS FOR GRINDING PLANE SURFACES. JAMES W. CRUIKSHANK, Pittsburgh, Pa. Filed Dec. 29, 1923. Serial No. 683,353. 8 Claims. (Cl. 51—110.)

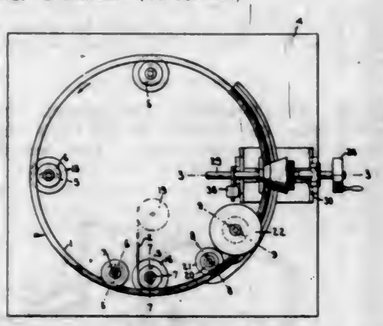
1. In apparatus for grinding sheet glass, a runner, means for driving said runner comprising a vertically extending driving shaft, a lever extending at an angle to said shaft and fulcrumed intermediate its ends, a connection between the upper end of said shaft and said lever, means connected to said lever on the same side of its fulcrum as said connection for adding weight to said runner, and means connected to said lever on the other side of its fulcrum for reducing the pressure of the runner upon the surface being ground, substantially as described.

1,621,237. VALVE-SPRING COMPRESSOR. GLENN S. DAVIS, Rome, Ga.; Roberta McClain Davis administratrix of Glenn S. Davis, deceased. Filed June 23, 1925. Serial No. 39,091. 2 Claims. (Cl. 29—86.3.)



1. A tool for the purpose indicated comprising a frame, having a transverse member, a lever having a terminal pivotal connection with said transverse member and movable longitudinally of the same, the lever being provided with a longitudinal slot, a fork having a shank passing through said slot, and a pin carried by the lever in spanning relation to the slot for pivotal engagement with the fork, the fork and the lever being provided each with a series of spaced holes for selective engagement by said pin.

1,621,238. APPARATUS FOR DYEING SKEINS. OTTO T. DEHLE, Boston, Mass. Filed July 6, 1926. Serial No. 120,852. 15 Claims. (Cl. 8—19.)

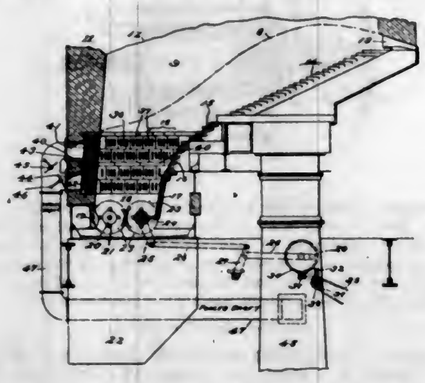


1. In a machine for dyeing skeins, two closely disposed parallel vats, a shaft adapted for carrying skeins, continuously rotating mechanism in each vat adapted to

rotate said shaft when lowered therein, means for raising and lowering said shaft out from and down into each vat, and means for horizontally moving said shaft from

a point above one vat to a point above the other vat and for keeping it parallel with the vats during its removal.

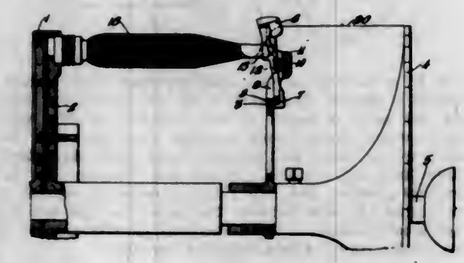
1,621,239. APPARATUS FOR COVERING TIRE BEADS. HAROLD A. DENMIRE, Akron, Ohio, assignor to The General Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 10, 1921. Serial No. 506,671. 3 Claims. (Cl. 154—9.)



1. In an apparatus for covering circular tire beads, a table, a plurality of flanged rollers arranged about the bead and elevated above the table so as to support the bead in a horizontal plane spaced from the table, a fabric applying roller having means for positioning the fabric relative to the bead so that the bead will be located centrally of the fabric and feeding and applying rollers on the two sides of the bead to press the fabric to the bead and unite the two edges in a flap.

1,621,240. VERMIFUGE AND INSECTICIDE. WILLIAM J. DENNIS, Attleboro, Mass. Filed Apr. 16, 1923. Serial No. 632,858. 5 Claims. (Cl. 167—6.)

1. An insecticide and vermifuge comprising ground cube root with the fibrous element removed.



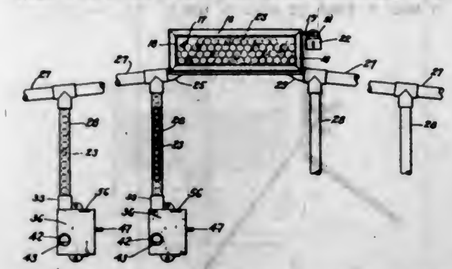
1,621,241. FURNACE. WARREN C. DRAKE, Inwood, N. Y. Filed June 29, 1922. Serial No. 571,718. 3 Claims. (Cl. 110—32.)

1. In a furnace the combination of a progressive feed grate, a furnace rear wall and lateral walls bounding three sides of a refuse pocket or chute of substantial depth, said grate being arranged to give support to the progressing fuel bed as far as the upper front edge of said pocket, a wall bounding the front side of such pocket constituting an extension of said fuel supporting grate but so steep as to give negligible support to the weight of the refuse in the pocket, mechanical means at the bottom of the pocket giving regulated refuse discharge without

dumping or emptying the pocket, said rear wall where it bounds the pocket being inwardly inclined so as to overhang the pocket and prevent bridging of clinkers, and said rear and side walls composed of argillaceous refractory material having air admission apertures substantially throughout the depth of the pocket, and means supplying forced draft to said apertures whereby air is directed into the refuse in said pocket.

1,621,242. WEFT-REPLENISHING LOOM. CLARE H. DRAPER, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed July 7, 1925. Serial No. 42,012. 3 Claims. (Cl. 139—248.)

1. A weft replenishing loom provided with a hopper having bobbin holders including a small-end disk provided with tip holders for receiving the tip of the bobbin, such tip holders having an outer end provided with a tip groove, an off-set thread groove leading to the tip groove and thread directing surfaces on opposite sides of the thread groove, the thread directing surface opposite the off-set being provided with a diagonal thread guiding ridge to guide the thread into the thread groove so as to prevent the thread from winding up on the bobbin tip as it is discharged from the hopper into the shuttle at replenishment.

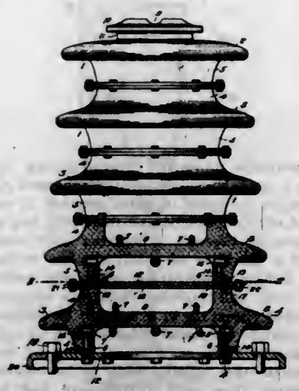


1,621,243. CURTAIN FIXTURE. JOHN S. EAGAN, Providence, R. I. Filed Apr. 22, 1926. Serial No. 103,780. 2 Claims. (Cl. 156—22.)

1. In a curtain rod comprising in a single piece of resilient material a web, inwardly directed lateral extensions upon the web, and oppositely directed lips integral with the extensions and spaced from the web, an attaching plate, a lateral convexo-concave lug upon the

plate disposed at right angles thereto comprising lateral edges abutting directly against the lips and a convex face abutting directly against the web affording a three-point contact with said web.

1,621,244. COIN-OPERATED VENDING MACHINE. ABRAHAM A. FAGEN, Minneapolis, Minn. Filed May 11, 1922. Serial No. 560,215. 4 Claims. (Cl. 211—8.)



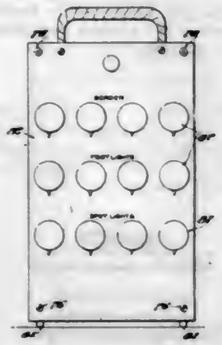
1. A device of the class described comprising a casing having side and end walls, and a bottom slanting from one side wall to the other, a delivery opening in one end wall below the lowermost portion of the bottom, and a projection extending laterally from the side wall, overlying and spaced from the bottom a distance substantially equal to the diameter of the spherical bodies to be delivered, whereby the bodies are delivered laterally to the channel thus formed to form a row of bodies for delivery through the opening in direction at right angles to their reception.

1,621,245. CONSTRUCTION FOR METAL STOOLS, STANDS, AND THE LIKE. STANLEY A. FLOWERS, Pittsburgh, Pa., assignor to Pittsburgh Tinware Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 13, 1926. Serial No. 80,892. 8 Claims. (Cl. 155—194.)

1. A sheet metal construction of the character described comprising the combination of a body formed of a plurality of sections bent and having their ends connected together to form an inclosure and said sections being provided with depending legs, and a top supported on said body and having a flange which fits down into the body and braces the same from within, the lower edges of said sections and the vertical edges of the legs being provided with inturned strengthening flanges, the flanges on the lower edges of the sections and those on the adjacent legs being continuous.

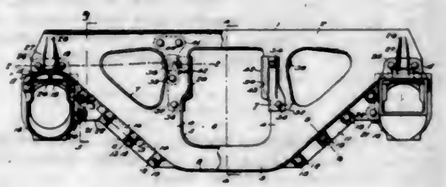
1,621,246. INSULATOR. WALTER T. GODDARD, Hamilton, Ontario, Canada, assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Oct. 1, 1921. Serial No. 504,665. 9 Claims. (Cl. 173—318.)

1. A high tension insulator comprising an imperforate disk of insulating material having hub portions extending from the opposite faces thereof, a pair of substantially flat metallic disks cooperating with said disk of insulating material, and connecting means therefor comprising headed members seated in correspondingly formed openings in said hub portions, said members being provided with projecting portions detachably secured to said metallic disks.



6. A high tension insulator comprising a plurality of units of insulating material of disk form, concentric hubs formed on the upper and lower faces of said disk, a metallic disk of greater diameter than the diameter of said hub secured to each of said hubs by members housed within the same, and means for securing the disks of adjacent sections together.

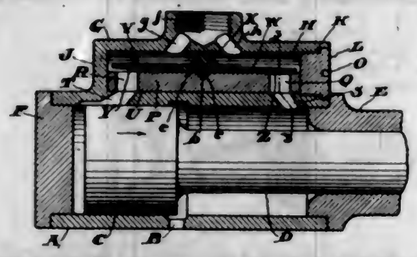
1,621,247. UNIVERSAL JOINT. EMIL GRUENFELDT, Cleveland, Ohio. Filed Nov. 28, 1925. Serial No. 71,956. 7 Claims. (Cl. 64—102.)



1. In a universal joint, the combination, with a driving and a driven member and trunnions carried thereby, of a hollow lubricant containing connecting ring for said trunnions, the said ring comprising two complemental parts adapted to be secured together each part containing a complete bearing for one of the trunnions of both the driven and driving member.

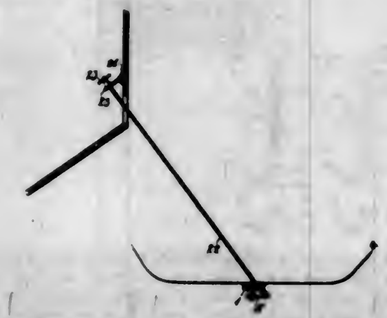
1,621,248. MINIATURE-STAGE-LIGHTING SYSTEM. GEORGE L. HALL, Melrose, Mass. Filed Nov. 23, 1926. Serial No. 150,361. 6 Claims. (Cl. 240—1.)

3. In a portable miniature stage-lighting system, in combination, a portable miniature switchboard comprising a frame portable by hand, a panel secured to said frame and provided with a plurality of relatively low resistance rheostats mounted thereon, a lighting unit comprising a reflector and a plurality of relatively low voltage lamps of different colors co-operating with said reflector and arranged in sets, and flexible conductors connecting said lamps with said rheostats in a manner to enable a single rheostat to control the same colored lamp of all the sets of lamps, said flexible conductors being of substantial length to enable the lighting unit to be located a substantial distance from said switchboard and being connected with said rheostats and lighting unit to enable the latter to be supported by said frame and transported therewith when not in use.



1,621,249. SIDE FRAME. CYRUS HANKINS, Baltimore, Md., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed May 5, 1925. Serial No. 28,094. 19 Claims. (Cl. 105—205.)

1. A car truck side frame comprising inner and outer walls arranged in spaced relation, each of said walls having a plurality of truck column portions, a plurality of top arch bar portions and a plurality of bottom arch bar portions, said bottom arch bar portions being provided with flanges, projecting inwardly of the side walls, having portions thereof extending downwardly therefrom, and means uniting the downwardly extending portions, leaving apertures between said uniting means.

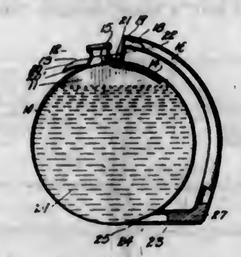


1,621,250. ROCK DRILL. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 19, 1925. Serial No. 69,954. 9 Claims. (Cl. 121—19.)

1. In a fluid actuated rock drill, the combination of a cylinder and a reciprocatory piston, a free exhaust port in the cylinder controlled by the piston, a valve chest having a cylindrical bore, an oscillatory plate valve in the

bore, a removable valve seat seated on the cylindrical wall of the bore, and common means for holding the valve and the valve seat in operative position.

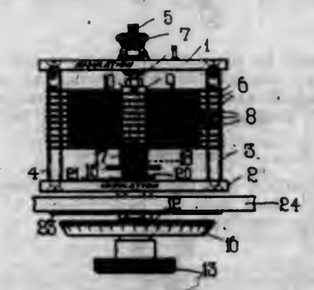
1,621,251. DRAIN PLUG OR VALVE FOR CONTAINERS. GEORGE P. HAWES, Jr., U. S. Army, Fort McPherson, Ga. Filed Nov. 4, 1922. Serial No. 599,153. 13 Claims. (Cl. 137—139.) (Granted under the act of Mar. 3, 1883, 22 Stat. L. 625.)



1. The combination with a motor vehicle, of a crank case draining apparatus, consisting of a valve member adapted to be mounted in the lower portion of the crank case of the motor, having a body portion exteriorly screw threaded, a frusto-conical valve seat extending inwardly from one end of the body portion and provided with openings, a sleeve for the reception of a valve stem having cam surfaces at its end, a valve having a frusto-conical head and openings, corresponding with the valve seat, and a stem extending through and beyond the sleeve, a valve operating lever having a tubular extension screw threaded for adjustment on the valve stem and having cam surfaces adapted to operate against the cam surfaces of the sleeve, to clamp the valve in its closed position, a compression spring between the valve body and the lever, operating means connected at one end and adapted to operate the lever, said operating means extending through the dash of the vehicle, a handle having an enlarged base portion secured at the end of the operating means, and a bracket mounted on the dash and provided with a bayonet slot through which said operating means extend and are secured, to retain said valve in its closed and clamped position.

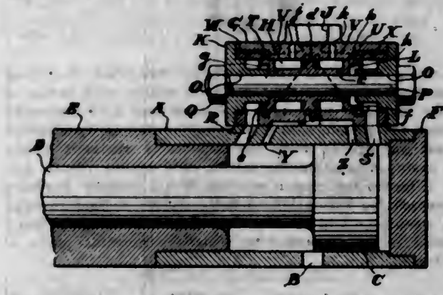
2. A drain for containers, consisting of a valve, means for operating the valve, means for clamping the valve to its seat, only when closed, and means for holding the valve operating means when valve is closed.

1,621,252. CONTAINER. NEWTON S. HILLYARD, St. Joseph, Mo. Filed July 22, 1926. Serial No. 124,184. 3 Claims. (Cl. 220—1.)



1. The combination with a receptacle having a cylindrical wall portion and having a projecting discharge

nipple, of a handle member secured to said cylindrical wall portion and engaging said nipple, said handle being curved substantially concentrically with said cylindrical

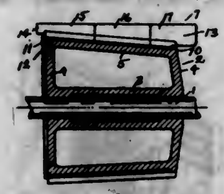


wall portion throughout the major portion of its length and extending substantially half way around said cylindrical wall portion.

1,621,253. VARIABLE ELECTRIC CONDENSER, VARIOMETER, AND THE LIKE. ALBERT FRANK HOLLIDAY, Wigan, England. Filed Dec. 8, 1924, Serial No. 754,579, and in Great Britain Dec. 15, 1923. 8 Claims. (Cl. 175—41.5.)

1. In a variable electric tuning instrument, the combination of a stationary coupling element, a coupling element movable relatively to said stationary element, an operating spindle having a handle for said movable element, means insulating said movable element from said operating spindle and connecting means adapted to connect all metallic members lying between said insulating means and the handle of said spindle to earth.

1,621,254. VALVE FOR ROCK DRILLS. GEORGE W. HULSHIZER, Stewartsville, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 17, 1925. Serial No. 76,016. 2 Claims. (Cl. 121—18.)

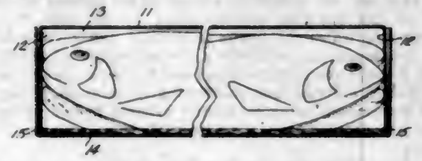


1. In a rock drill, the combination of a cylinder having a free exhaust port, a reciprocatory hammer piston in the cylinder controlling said exhaust port, a valve chest having a chamber, said valve chest having inlet passages leading from the ends of said chamber to the ends of the cylinder, crossed passages leading from the ends of the cylinder to points on opposite sides of the center of the chamber for exhausting a portion of entrapped air from the cylinder, the remaining entrapped air passing to that end of the chamber corresponding to the end of the cylinder to which the piston is moving, and a valve having end heads for controlling the admission of pressure fluid through the inlet passages and having a central head alternately covering and uncovering the crossed passages, said outer heads being constantly exposed to live pressure fluid to augment the entrapped air for actuating the valve.

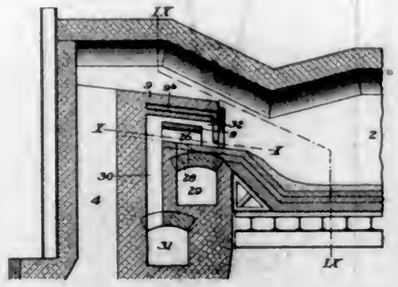
1,621,255. CRUTCH. ROBERT N. HUNTER, Charlotte, N. C. Filed Apr. 17, 1926. Serial No. 102,706. 5 Claims. (Cl. 135—49.)

5. In a crutch, a hollow shank secured to the base portion, a cuff slidably mounted on said shank, rocker members secured to the lower portion of said shank, members pivoted to the cuff and to the rocker members, means cooperating with said cuff for sliding the cuff and swinging the rocker members on their respective pivots.

1,621,256. PULVERIZER BEATER. JACOB H. JONES, Harborcreek, Pa., assignor, by mesne assignments, to Erie City Iron Works, a Corporation of Pennsylvania. Filed May 31, 1922. Serial No. 565,009. 1 Claim. (Cl. 83—11.)



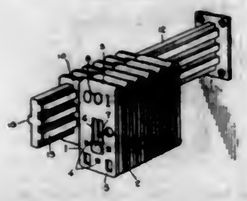
In a pulverizer beater, the combination of a drum having axially extending undercut grooves with a shoulder at the end of each; and sectional blades, the sections having bases engaging portions of the undercut walls of the grooves and being adapted to be slid endwise into the grooves, said shoulders being adapted for locking the blades in the grooves.



1,621,257. METHOD OF HANDLING AND PRESERVING FISH AND THE LIKE. DANIEL E. KNOWLTON, Buffalo, and EDWARD W. DONNIGAN, Alden, N. Y. Filed Oct. 13, 1924. Serial No. 743,271. 4 Claims. (Cl. 99—14.)

3. The hereindescribed method of preserving comestibles such as fish, which consists in packing the comesti-

bles in shallow covered boxes, inverting said boxes to permit water therein to settle and seal the joint between the body and cover of the box, then freezing the comestibles and water while in said boxes, and maintaining the comestibles while still retained in said boxes at a sufficiently low temperature to keep the comestible in the frozen state.



1,621,258. OPEN-HEARTH FURNACE. LUTHER L. KNOX, Bellevue, Pa., assignor to Kate A. Knox, Bellevue, Pa. Filed Oct. 14, 1920. Serial No. 416,792. 13 Claims. (Cl. 158—7.5.)

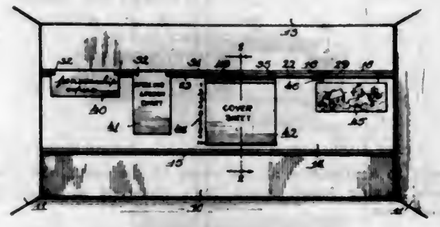
1. An open-hearth furnace having gas and air inlet ports at each end, separate offtake ports extending above said inlet ports, and gas and air-reversing chambers into which the inlet ports open at each end of the furnace, said reversing chambers having lateral and upper walls which separate said chambers from the said offtake ports, substantially as described.

1,621,259. LAUNDRY CHECKING DEVICE. EDWIN LANE, New York, N. Y., assignor to Carolyn Laundry, New York, N. Y., a Corporation of New York. Filed Apr. 24, 1925. Serial No. 25,593. 3 Claims. (Cl. 40—23.)

1. A marker-check for purposes described, comprising a substantially flat body of moderate thickness having integral rigid means for attachment to a laundry-piece and also having formed therein a check-perforation configurated to match a certain key.

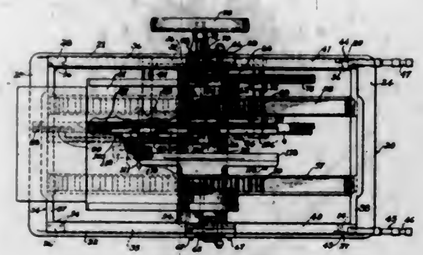
1,621,260. ADJUSTABLE LEG FOR TUBS OR THE LIKE. WILLIAM E. LINDEMUTH, Kansas City, Mo., assignor to The Todd Company, Kansas City, Mo., a Corporation of Missouri. Filed Jan. 11, 1926. Serial No. 80,521. 1 Claim. (Cl. 68—31.)

An attachable leg for tubs or the like, comprising a tubular standard having a slotted upper end, a nut within the upper end of the leg having its corners seated within the slots, the slotted portions of the standard being peaned over the nut to form an inturned flange to retain the latter in its seat, a screw threaded into the nut, a clamp engaged by the screw comprising a tub engaging portion and a flanged portion embracing the upper end of the standard, and a bracket attached to the leg in position for supporting a tub between the bracket and clamp.



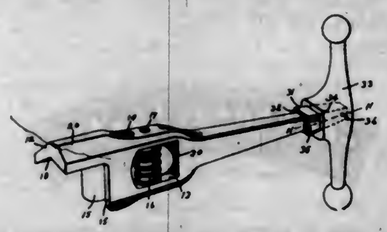
1,621,261. SHOCK ABSORBER. LOUIS L. LOMAR, Houston, Tex. Filed Nov. 11, 1925. Serial No. 68,420. 13 Claims. (Cl. 188—88.)

1. In a device of the character described, a casing adapted to contain a fluid, a piston within said casing, a hollow piston rod open at its inner end and extending through the piston, said piston rod having an aperture in its wall, a tapered valve rod adjustably mounted within said casing and extending within said hollow piston rod, said valve rod having a portion of its surface flattened to provide for regulation of the passage of fluid through said opening, said casing and said piston rod being adapted to be connected to relatively movable parts of a vehicle.



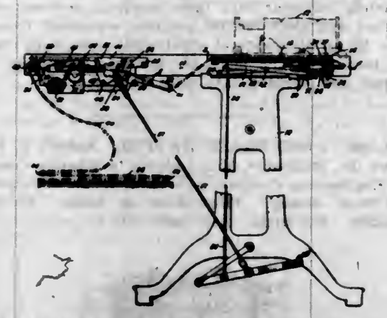
1,621,262. EDUCATIONAL DEVICE. ARCHIBALD E. MACQUARRIE, Minneapolis, Minn. Filed Aug. 11, 1924. Serial No. 731,238. 8 Claims. (Cl. 35—15.)

1. The combination with a blackboard, of supporting means holding said blackboard in fixed position, a display device carried by said supporting means over said blackboard, holding means slidable longitudinally of said display device, and educational and instructional device de-



tachably carried by said holding means and movable over the surface of the blackboard to cover any part thereof and leave any part of said blackboard exposed, as desired.

1,621,263. RECIPROCATING MECHANISM. CYRUS A. MCCAIN, Oak Park, Ill. Filed May 23, 1924, Serial No. 715,286. Renewed Aug. 4, 1926. 16 Claims. (Cl. 74—98.)

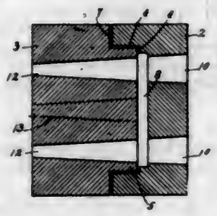


7. The combination of a driven reciprocating member, a driving reciprocating member movable in a path approximately parallel to the path of travel of said driven member, means connecting said members at all times, loosely during the mid portions of their reciprocations, and tightly, as to relative longitudinal movement, during the end portions of their reciprocations, and means for giving said driven member a movement during the mid portions of its reciprocations different from that of said driving member during the same mid portions.

1,621,264. WRENCH MECHANISM. CHARLES WILLIAM MCDANIEL, Portsmouth, N. H. Filed Nov. 8, 1924. Serial No. 748,569. 2 Claims. (Cl. 81—177.)

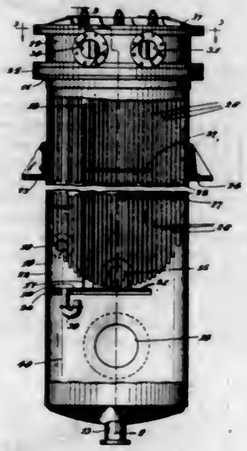
2. A wrench comprising an elongated stock having at its outer end a jaw fixed to the stock and a complemental jaw movably engaged with the stock; means carried by the stock and movable jaw for adjusting the latter, said jaws having cheeks at opposite sides of the longitudinal axis of the stock, the said stock having a tapered end portion polygonal in cross section and a shoulder thereon; and a handle having a tapered socket conforming to the tapered end portion of the stock, and a resilient hooked tongue secured to the socket, and projecting from the larger end thereof, and adapted to yieldingly engage said shoulder and separably confine the handle on the stock, said tapered end portion being adapted to be engaged by a bit brace when the handle is removed.

1,621,265. ALIGNING AND REGISTERING DEVICE FOR BILLING MACHINES. RUDOLF T. MANNHARDT, White Plains, and ALDRO B. HITZEL, Jamaica, N. Y., assignors to Gilman Fanfold Corporation, Ltd., Toronto, Canada, a Corporation of Ontario. Filed Aug. 22, 1925. Serial No. 51,808. 40 Claims. (Cl. 197—126.)



1. In a machine of the character described, in combination, a writing platen upon which a record strip may be led and supported in writing position, a main strip-clamping presser bar for clamping the strip in writing position, an auxiliary strip-clamping presser bar, mechanism for exerting a pull upon said strip to tension, smooth and align it upon said platen and unitary operating mechanism for said presser bars and said exerting mechanism for releasing said main presser bar and controlling said exerting mechanism to exert an aligning pull upon the strip while the auxiliary presser bar remains in strip clamping position.

1,621,266. TOY. LOUIS MARX, New York, N. Y. Filed June 14, 1924. Serial No. 719,962. 4 Claims. (Cl. 46—48.)



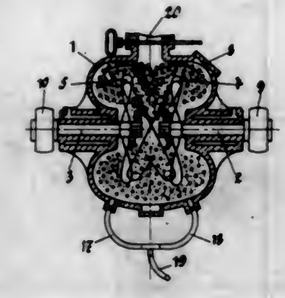
1. A toy vehicle comprising a vehicle body, running gear therefor, means simulating part of a fuel-consuming structure, and devices associated with said means for producing an emission of sparks in semblance of fuel-consuming activity of such means, said device comprising a pyrophoric body, a friction wheel arranged to be frictionally engaged by the pyrophoric body, and motion multiplying gearing connecting the said running gear with the friction wheel.

1,621,267. FIRE BRICK. OSCAR NYGAARD, Saugus, Mass., assignor to Bernitz Furnace Appliance Company, Boston, Mass., a Corporation of Massachusetts. Filed May 18, 1925. Serial No. 31,227. 13 Claims. (Cl. 110—75.)

1. A fire brick comprising front and rear sections of refractory material with their marginal portions secured together and their central portions separated from each other by an air space of substantial area, said rear section having one or more air passages extending therethrough and opening into said air space.

1,621,268. FEED-WATER HEATER. ABBOTT L. PENNIMAN, Jr., Baltimore, Md., assignor to Wheeler Condenser & Engineering Company, Carteret, N. J., a Corporation of New Jersey. Filed June 6, 1925. Serial No. 35,278. 8 Claims. (Cl. 257—221.)

1. In a feed water heater, a cylindrical vertically placed shell, a tube plate at the upper end of the shell, a plurality of U tubes suspended at their ends from the said tube plate and extending downwardly therefrom, means for admitting steam adjacent the lower end of the shell and below the lower ends of the said U tubes, a water box associated with the tube plate, an inlet connection for admitting feed water to the water box, and an outlet connection for conveying the feed water from the water box.

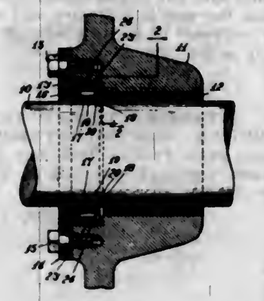


1,621,269. HAIR COMB. JACK STANSFELD PICKFORD, Weymouth, England. Filed Feb. 26, 1926, Serial No. 90,720, and in Great Britain Apr. 24, 1925. 7 Claims. (Cl. 132—13.)

1. In a hair-comb the combination with the back, of at least three substantially parallel rows of teeth arranged side by side and held close together solely along the back of the comb, the teeth of one row being spaced apart beyond the roots from the teeth of an adjacent row to provide a longitudinal channel extending between each two contiguous rows from the tips of the

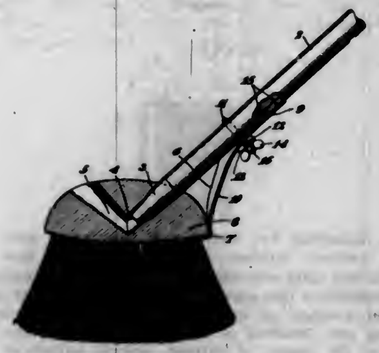
teeth to a situation at the roots of the teeth, the outer rows having longer teeth than those of at least one inner row.

1,621,270. PROCESS OF AND APPARATUS FOR OBTAINING POWDERS OF GREAT FINENESS. EMIL PODSZUS, Berlin-Friedrichshagen, Germany. Original application filed July 1, 1922, Serial No. 572,340. Divided and this application filed Sept. 2, 1924, Serial No. 735,253, and in Germany July 12, 1921. 5 Claims. (Cl. 83—46.)



1. The process of producing very fine powders of colloidal fineness, which consists in producing high-speed mutually impinging whirling gas or air currents within a closed casing, causing said currents to circulate within said casing at the rate of several thousand times or more per minute, thereby causing the particles of the material to be treated suspended in said currents to continually impinge upon each other, and at the same time adding to the particles of the material to be treated a certain amount of coarser particles of the same or other material, to thereby increase the mutual impact of the particles of the material to be treated.

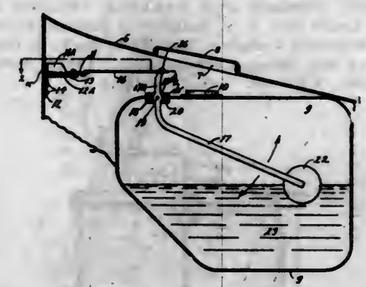
1,621,271. PLATE FOR MULTIGRAPH MACHINES. ERNST PREISLER, St. Louis, Mo., assignor to Progressive Electrotyping Co., St. Louis, Mo., a Corporation of Missouri. Filed Dec. 3, 1925. Serial No. 72,926. 4 Claims. (Cl. 101—378.)



1. A plate for multigraph machines comprising a curved plate having a printing surface on its outer face, parallel square recesses formed on the inner face of said plate, and a sheet metal lug having a resilient hollow head secured in each of said recesses extending the full length of the plate.

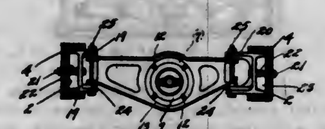
1,621,272. STUFFING BOX. FRED I. RAYMOND, River Forest, Ill., assignor to The Raymond Brothers Impact Pulverizer Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 24, 1925. Serial No. 25,563. 12 Claims. (Cl. 288—1.)

1. In a shaft packing, the combination of a flexible packing member surrounding the shaft, a plurality of elastic, substantially U-shaped retaining members circumferentially arranged, without connection one with the other, against the packing member to keep the same in proper relation with the shaft.



1,621,273. BROOM. WALTER C. READ, Bloomfield, N. J. Filed Sept. 5, 1925. Serial No. 54,657. 3 Claims. (Cl. 15—143.)

1. An attachment for bracing a broom handle with respect to its head, comprising a sheet metal member having at its top a longitudinal hollowed portion to lie against the broom-handle and hold said member in alinement therewith, said member increasing in width toward its other end and having thereat an angular seat extending for the length of said end to receive the lower edge of the broom-head block, and means between said top and bottom for clamping said body portion into the angular space between said handle and head.



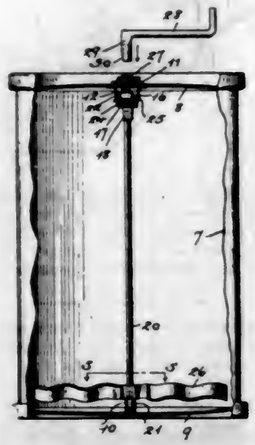
1,621,274. GASOLINE GAUGE. JAMES D. REEKIE, St. Paul, Minn. Filed Apr. 10, 1926. Serial No. 101,089. 8 Claims. (Cl. 73—82.)

1. A fuel gauge for automobiles having a fuel tank in proximity to a fixed vertical element, having an aperture therein, said fuel gauge comprising a float within the fuel tank, a lever oscillatable in a vertical plane and mainly within the tank, said float fixed on said lever, means for fulcruming said lever at the top part of the fuel tank, said lever having an arm extending upwardly outside of the fuel tank, a reach rod pivotally secured with one end to the upper end of said upper lever arm and extending toward the said fixed element, a segmental horizontally oscillatable gauge member mounted pivotally adjacent said fixed element, a vertical rim on

said gauge member with graduated numerals thereon adapted to be exposed consecutively to view in said aperture in the fixed element, said float adapted to oscillate the lever in a vertical plane to actuate the rod and the gauge member in approximately horizontal plane.

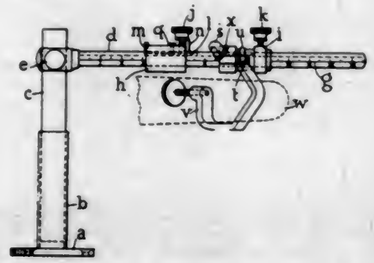
1,621,275. EXTENSION UNIT. WILMOT G. REEVES, Stockbridge, Mich. Filed June 20, 1925. Serial No. 38,572. 2 Claims. (Cl. 180—1.)

1. In an automobile, the combination with the side members of a chassis, blocks of I-beam cross section fitted in said side members and provided with centrally disposed bosses adapted to engage the web of the side members, and bolts extending through said bosses for securing said blocks to the frame, a cross member pivotally secured to said blocks and provided with a centrally disposed opening, spherical housings on each side of said housing, gaskets interposed between the housing and the cross member, and a universal joint mounted in said housings.



1,621,276. RAKE. FREDERICK E. RICHARDSON, Manchester, Iowa. Filed July 8, 1925. Serial No. 42,245. 2 Claims. (Cl. 55—10.)

1. An implement having a channel-bar crosshead whose spaced flanges have opposed transverse slots, and elastic tines mounted interlockingly and detachably on the crosshead, each tine being bent reversely into a loop with unequal members, the loop traversing a pair of the opposed slots with its members near the bend engaging opposite end edges of one of the slots, the termination



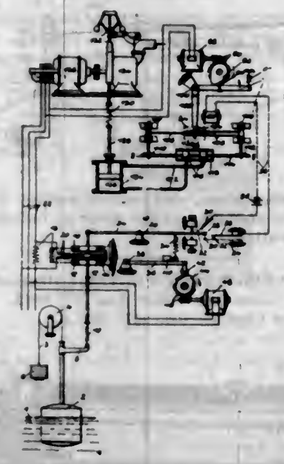
of the shorter member being shaped to detachably interlock with one end edge of the other slot of the pair while the other member contacts with the opposite end edge of the slot.

1,621,277. STIRRER FOR BARRELS. SOLOMON RICHMAN, Laurel Hill, N. Y., assignor to National Enameling and Stamping Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 21, 1924. Serial No. 733,360. 2 Claims. (Cl. 259—108.)

1. The combination with a receptacle having an end with a central opening therein and means to close said opening, of a bracket having two depending arms that are attached to said barrel-end at opposite sides of said central opening said arms being connected at their lower ends by a flat crosswise bearing-bar which bar has a vertical opening therein, a head seated on the upper side of the bearing bar and having a vertical stem which projects down through the opening of the said bar and said head also having a stem at its upper side above the said bearing bar for engagement with a crank, means extending from the arms of the bracket for engaging and holding the head down on the bearing bar, a shaft in the receptacle and having its upper end connected to the lower end of the head-stem and its other end sustained in the receptacle and agitator means on the shaft.

1,621,278. SOUND-REPRODUCING INSTRUMENT. JACQUES ROSTON, London County, England. Filed July 7, 1926, Serial No. 120,925, and in Great Britain July 14, 1925. 9 Claims. (Cl. 274—14.)

1. Means for enabling the needle of a sound reproducing instrument to be set back to any desired point of the record comprising in combination a vertical bearing fixed upon the casing, a horizontal arm carried by and adapted to rotate in said bearing, two sliding parts upon the horizontal arm, the first sliding part having means whereby it may be connected to the second sliding part and having means whereby it may be clamped to the horizontal arm, the second sliding part having means for engaging the first sliding part, and means whereby it may be connected to the tone arm of the instrument substantially as set forth.

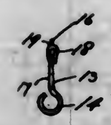


1,621,279. APPARATUS FOR CONTROLLING AND DISTRIBUTING ELECTRIC CURRENTS. ERNEST ROUCAYROL, Paris, France. Filed Dec. 30, 1922, Serial No. 610,040, and in France Jan. 6, 1922. 1 Claim. (Cl. 174—177.)

An apparatus for distributing, regulating and measuring electric currents for electro-therapic uses comprising one main electrode, several branch electrodes, one amperemeter, a line connecting said main electrode to one pole of a source of current, means for electrically connecting one terminal of the amperemeter to the other pole of the source of current, several adjustable rheostats each corresponding to one of said branch electrodes, several throw-over switches without break each corresponding to one of said rheostats, means for electrically connecting one terminal of each rheostat to the corresponding branch electrode, means for electrically connecting the other terminal of each rheostat to the main terminal of the corresponding switch, means for electrically connecting one branch terminal of each switch to the pole of the source of current which is connected to the amperemeter, and means for electrically connecting the other branch terminal of each switch to the other terminal of the amperemeter.

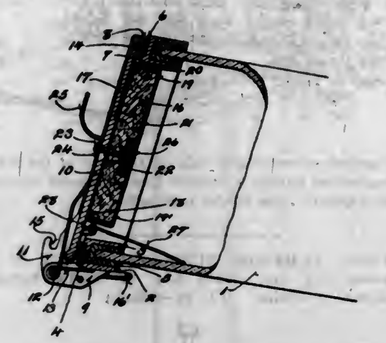
1,621,280. IMPULSE SYSTEM OF CONTROL. ERICH ROUČKA, Blansko, Czechoslovakia. Filed Aug. 20, 1923, Serial No. 658,353, and in Czechoslovakia Sept. 4, 1922. 29 Claims. (Cl. 171—312.)

1. A system of control comprising means for producing changes or impulses of auxiliary energy in regular intervals of time, means cooperating with said first-mentioned means to vary the time positions of said impulses in corresponding intervals, a governor mechanism for controlling the value to be controlled, means including a device operated synchronously with said intervals of time, and means actuated by said impulses to cooperate with the last-mentioned means to actuate said



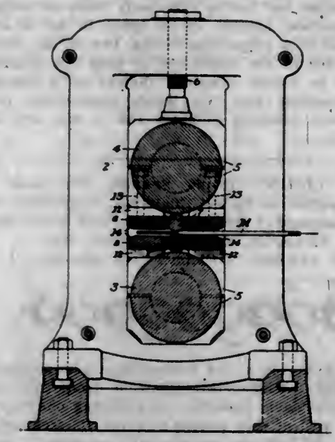
governor mechanism in accordance with said time positions of said changes or impulses in corresponding intervals of time.

1,621,281. MOLD AND PROCESS OF MAKING THE SAME. WILLIAM M. SHEFFIELD, New York, N. Y. Filed Nov. 27, 1925, Serial No. 71,650. Renewed July 24, 1926. 14 Claims. (Cl. 92—54.)



8. A mold of laminate structure having a mold cavity defined by the edges of alternate laminæ, the intervening laminæ being made of paper and having their edges inset to provide drainage channels.

1,621,282. SHOE-LACE FASTENER. SAMUEL R. SHETZLINE, Jr., Philadelphia, Pa., and EMIT A. DODELIN, Moorestown, N. J. Filed June 12, 1926. Serial No. 115,466. 1 Claim. (Cl. 24—121.)

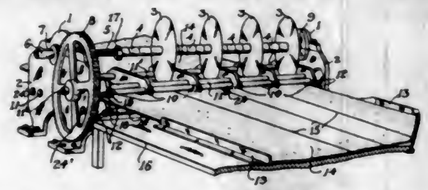


A shoe lace fastener produced from a single piece of wire having one end fastened into a loop to provide an extended bearing surface, said wire being bent upon itself intermediate its length to provide an inner hook supporting said loop and a body, and further bent upon itself in the opposite direction to provide an outer hook, the end of which is bent back upon itself so as to form a finished nose, and said inner hook being bent outward intermediate its ends so that the loop portion projects in close proximity to the body.

1,621,283. CANDY JAR. LAMAR H. SHOVER, Milwaukee, Wis., assignor to Panay-Horizontal Show-Jar Co., Milwaukee, Wis. Filed Dec. 12, 1922, Serial No. 606,422. Renewed Aug. 14, 1926. 4 Claims. (Cl. 215—48.)

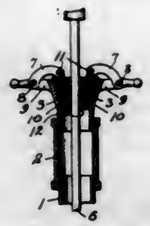
1. The combination with a receptacle, of a cover therefor, a perforated container removably positioned upon the inner side of said cover, a moisture regulating substance in said container, a handle positioned upon the outer side of said cover, and unitary means for securing the container and handle on to opposite sides of said cover.

1,621,284. ROLLING MILL. EDWIN E. SLICK, Pittsburgh, Pa. Filed Oct. 26, 1922. Serial No. 597,077. 18 Claims. (Cl. 80—38.)



1. In a rolling mill, upper and lower rolls, an intermediate roll, and means engaging said intermediate roll on substantially diametrically opposite sides thereof and between the ends of the working faces of the upper and lower rolls only for laterally supporting the same.

1,621,285. APPARATUS FOR CUTTING FURS. CECIL J. SOLOMON, New York, N. Y. Filed Jan. 13, 1926. Serial No. 80,976. 6 Claims. (Cl. 164—61.)



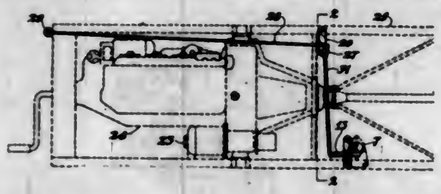
1. In a mechanism for cutting furs, the combination of a plurality of pairs of belts adapted to hold and feed the fur, and cutting means adapted to be associated with said belts and located intermediate the said pairs of belts

so that the cut is formed between those portions of the fur which are gripped by the said pairs of belts, the cutting edge of said cutting means being so located that

they operate substantially only on the base of the fur, said cutting means having a support located wholly at one side of the adjacent runs of the said belts.

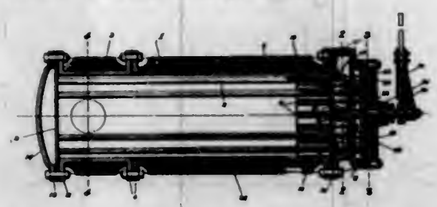
1,621,286. PUMP-ROD SUPPORT. NORMAN H. SOOY, Kansas City, Mo. Filed Aug. 12, 1926. Serial No. 128,903. 1 Claim. (Cl. 24—263.5.)

In a pump rod support, a bell nipple comprising two semi-tubular members detachably connected to each other to form a tube adapted to receive therethrough a rod to be supported and having externally threaded co-operating end portions adapted to be fitted in an internally threaded end of a supporting casing, two wedge clamping members fitted in the upper end of said bell nipple and adapted to be forced inwardly thereby to a pump rod clamping position, and two levers respectively pivoted to said wedge clamping members and to said bell nipple member.



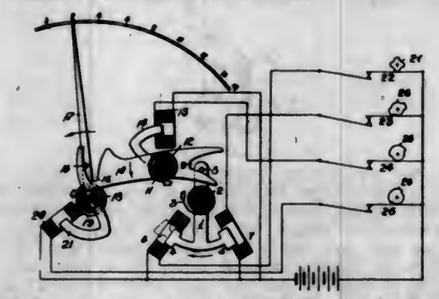
1,621,287. CHAIN. EUGEN SPEIDEL, Pforzheim, Germany, assignor to Speidel Chain Co., Providence, R. I., a Firm composed of Frederick Speidel and Eugen Speidel, both of Pforzheim, Germany. Filed June 1, 1926. Serial No. 112,883. 3 Claims. (Cl. 59—82.)

1. A chain having a link formed as a gem setting having side walls, a ring-shaped ornament about said setting link, and a bendable connector link having one end fixed to the side wall of said setting link and its free end bent to embrace and lock the ring-shaped ornament in position about said setting.



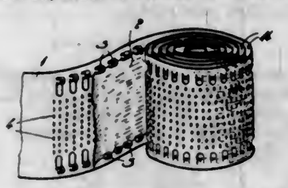
1,621,288. AUXILIARY FORD STARTER SWITCH AND SWITCH-OPERATING MECHANISM. CALVIN B. STEFFENS, Allenton, Mo. Filed Aug. 12, 1926. Serial No. 128,718. 2 Claims. (Cl. 200—161.)

1. In a switch of the kind described in combination with a conventional form of starter switch embodying conductors connected to the starter switch terminals; a base formed with an integral side and a bracket for securing to the underside of the starter switch; insulated terminals passed thru said side connected to said conductors; a spring set bracket formed with a lever pivoted on said base; an insulated conductor bar secured to said bracket for engaging said terminals passed thru said side; a bracket secured to the chassis of the machine; a triangular lever pivoted on said bracket; a wire secured to said bracket; a wire secured to said bracket lever and



said triangular lever; and means secured to said triangular lever extending at the front of the car for operating said switch.

1,621,289. FEED-WATER HEATER. HERMAN J. STERNBERG, St. Louis, Mo. Filed Aug. 12, 1922. Serial No. 581,416. 8 Claims. (Cl. 257—236.)

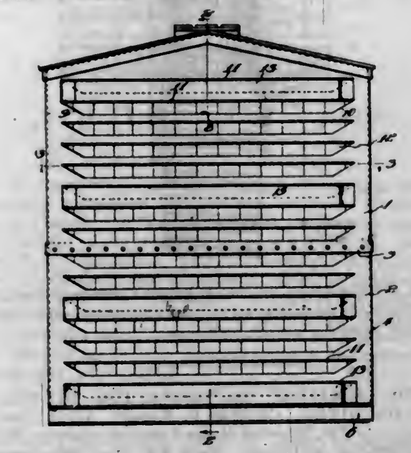


3. In a feed-water heater, the combination of a cylindrical shell, a pair of tube sheets, a plurality of tubes connecting said tube sheets and co-operating therewith to constitute a tube nest, one of said tube sheets being of smaller diameter than the shell so as to permit the tube nest to be slid longitudinally into the shell, a main head removably attached to the shell with a seat receiving the smaller tube sheet and having chambers for effecting the circulation of the feed water through the tubes, a secondary head at the other end of the shell for maintaining communication of the tubes with each other, a plurality of rotary cleaners having driving shafts rotatably mounted in the main head and having bodies lying within the tubes for scraping the walls thereof, said main head having a chamber on its outer side, a plurality of pinions carried by said shafts, and a driving gear meshing with the pinions for driving the same, all of said gearing being located in said chamber, said main head including a guard covering said gear and pinions, means for rotating said gear, and means for circulating a heating medium through the shell and around the tubes.

1,621,290. POSITION INDICATOR. HARRY L. TANNER, Brooklyn, N. Y., assignor to The Tanner Engineering Company, Inc. Filed Mar. 24, 1920. Serial No. 368,412. 15 Claims. (Cl. 177—327.)

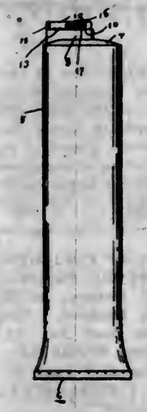
1. In an indicator, a movable index, means for moving the same in at least two directions, and movable means for arresting such movement of said index in one of said two directions in a plurality of different positions and for arresting such movement of said index in the other of said two directions in a plurality of different positions.

1,621,291. PROCESS AND DEVICE FOR THE DEVELOPMENT, FIXING, WASHING, ETC., OF PHOTOGRAPHIC OR CINEMATOGRAPHIC FILMS OR THE LIKE. NILS ALFRED UNGER, Vinterviken, Aspudden, Sweden. Filed Mar. 6, 1926, Serial No. 92,811, and in Sweden Nov. 13, 1925. 7 Claims. (Cl. 95—100.)



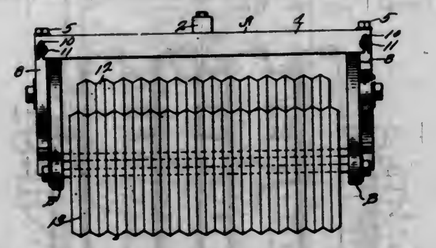
1. A device for the treatment of sensitized film comprising a flexible ribbon support and means disposed along the lateral margins thereof adapted to removably secure a film to said support.

1,621,292. SWITCH AND VALVE CONTROL IN AIR AND ELECTRIC COUPLING SYSTEMS FOR CARS. HERBERT E. VAN DORN, Chicago, Ill. Filed May 23, 1925. Serial No. 32,310. 6 Claims. (Cl. 303—86.)



1. The combination with the electric and air brake systems of a car including an electric coupler, main shut-off valves, and a switch for connecting the electric system to the coupler, of means associated with said switch for causing air to escape from said air system when the car is uncoupled while said switch is open, regardless of the position of said valves.

1,621,293. METAL WALL FOR RAILWAY CARS AND THE LIKE. WILLIAM E. VAN DORN, Chicago, Ill. Filed Apr. 17, 1922, Serial No. 553,981. Renewed Mar. 4, 1926. 4 Claims. (Cl. 105—410.)



1. A wall for a car comprising a metal panel, a lining lying behind and against said panel, said panel having sections partially severed therefrom and bent outwardly at an angle to the panel to form stiffening ribs adjacent to openings extending through the panel, and means passing through said openings for fastening said panel and said lining together.

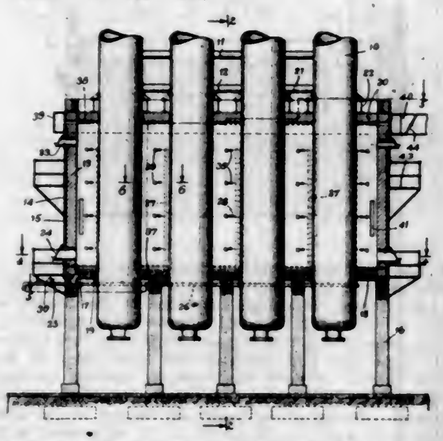
1,621,294. COLLAPSIBLE-TUBE CLOSURE. EARL C. VAN VALKENBURG, Holyoke, Mass. Filed Dec. 24, 1923. Serial No. 682,576. 1 Claim. (Cl. 221—60.)

In combination, a paste holding collapsible tube having a neck provided with an opening and an integral guide extending from the opening and provided with parallel side faces having external grooves therein, and also provided with a flat end face, having an external groove providing stops, and a sheet metal closure having side flanges slidably engaging the parallel side faces and provided with means slidably interlocking with said external grooves first named, the closure having a stop to slidably fit in the groove of the end face and engage the stops thereof, the closure having a knife cutting action on any ejected contents of the tube.

1,621,295. LAND-ROLLER FRAME. JOSEPH F. WAGNER, South Bend, Ind. Original application filed May 25, 1925, Serial No. 32,850. Divided and this application filed Jan. 28, 1926. Serial No. 84,367. 3 Claims. (Cl. 55—77.)

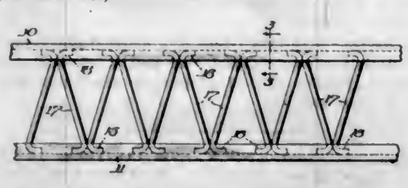
1. The combination with a land roller comprising a weight carrying frame having transversely disposed parallel bars formed from angle iron, one of the flanges of which is horizontally disposed and the other flanges vertically disposed, brackets disposed within the bars formed from angle iron and engaging the inner sides of the flanges thereof, of bolts longitudinally movable in elongated slots in the upper ends of the brackets and in elongated recesses in the horizontal flanges of the bars whereby the bolts may be moved out of engagement with the horizontal flanges, and bolts carried by the brackets and extending into vertically disposed recesses in the vertically disposed flanges of the bars.

1,621,296. PROCESS OF GRINDING AND POLISHING GLASS AND APPARATUS THEREFOR. FREDERIC BARNES WALDRON, Prescot, England, assignor to Pilkington Brothers Limited, Liverpool, England, a British Company. Filed Nov. 11, 1924, Serial No. 749,136, and in Great Britain Nov. 23, 1923. 14 Claims. (Cl. 51—278.)



1. In the continuous process of the abrasive treatment of glass involving the traveling of the glass, travelling a plurality of runners in the same direction as the glass and varying the supply of media for said treatment by each runner at successive stages of travel of that runner so as to produce an action of each runner of the plurality varying with and adapted to the condition of the glass on which it is operating.

1,621,297. PROCESS OF POLISHING GLASS AND APPARATUS THEREFOR. FREDERIC BARNES WALDRON, Prescot, England, assignor to Pilkington Brothers Limited, Liverpool, England, a Company of England. Original application filed Nov. 11, 1924, Serial No. 749,136, and in Great Britain Nov. 23, 1923. Divided and this application filed June 10, 1926. Serial No. 115,118. 2 Claims. (Cl. 51—278.)



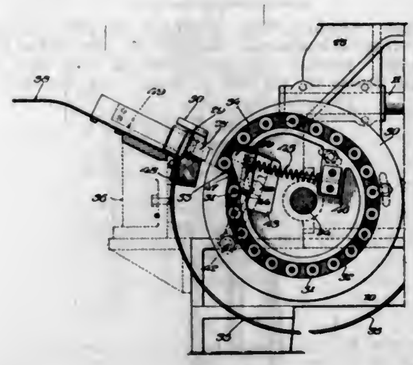
1. In the process of continuous polishing of glass, moving the runners in the direction of motion of the glass at a constant speed different from that of the glass and treating their polishing surfaces successively with different treatments at different stages of travel of a runner.

1,621,298. APPARATUS FOR HEATING STILLS. GEORGE D. WHITE, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Apr. 5, 1923. Serial No. 630,001. 2 Claims. (Cl. 196—116.)

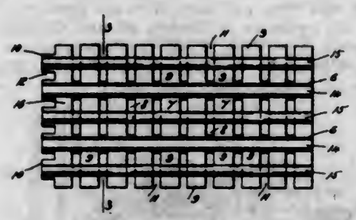
1. Apparatus for cracking hydrocarbon oils comprising a battery of spaced vertical stills, a furnace chamber disposed about said stills the walls of which chamber are spaced from the stills, a plurality of gas burners extending through opposite walls of said furnace and spaced from each other horizontally and vertically at points intermediate the several stills, the arrangement being such that heat is applied at a plurality of distributed points within the furnace in such a manner as to avoid direct contact of the flames against the still walls whereby hot spots are prevented, and a plurality of flue passages spaced from each other in the upper part of the furnace whereby the furnace gases are caused to travel upwardly through the furnace and are withdrawn at distributed points in the upper part thereof.

1,621,299. BUILT-UP STRUCTURAL ELEMENT. WILLIAM E. WHITE, Chicago, Ill., assignor to Kalman Steel Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 19, 1924. Serial No. 738,623. 4 Claims. (Cl. 189—37.)

1. In a structure of the class described, the combination of a pair of chords each having a longitudinal groove, and strut elements connecting said chords, said strut elements being relatively diagonally disposed, both ends of each strut being rebent at an acute angle, the metal of the chords being caused to flow into the angle of the bent ends of the struts seated in the grooves in said chords.



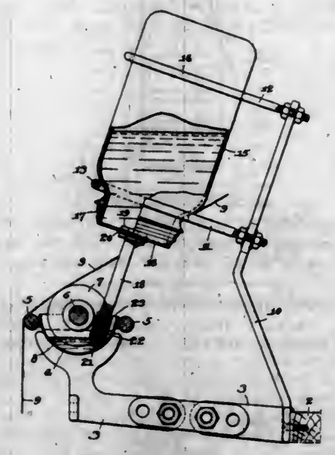
1,621,300. VALVE-STEM CAP. NICHOLAS I. WOOLSEY, Tottenville, N. Y. Filed Sept. 10, 1925. Serial No. 55,457. 4 Claims. (Cl. 152—12.)



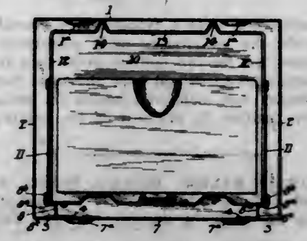
1. A valve-stem cap having a resilient washer arranged to embrace the end of a valve-stem and arranged to seal relatively spaced seats on said stem.

1,621,301. DELIVERY MECHANISM FOR BOX-FILLING MACHINES. CHARLES F. WRIGHT, Akron, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 22, 1926. Serial No. 103,674. 9 Claims. (Cl. 198—24.)

1. The combination with a conveyer having a succession of box holders, of a delivery element movable concurrently with the conveyer and having a succession of box receivers into which the boxes are discharged from said box holders, plungers reciprocable in said receivers and having cam-engaging portions, a stationary plunger-controlling cam having an outward lead remote from the conveyer, a resilient discharge member normally positioned in the said lead and in the path of the cam-engaging portions of the plungers, said member being operative to effect the quick outward movement of the succeeding plungers, and a box-receiving element to which the boxes are transferred by the outwardly-moving plungers.



1,621,302. GRATE SECTION. WILLIAM WYAND, Absecon, N. J. Filed Apr. 5, 1926. Serial No. 99,821. 8 Claims. (Cl. 126—152.)

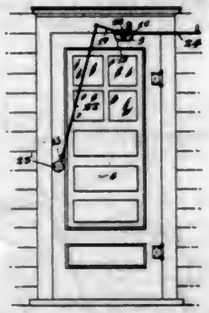


1. An integrally formed grate section for burning culm, comprising longitudinal supporting bars, inner crossbars extending between the longitudinal bars and forming oblong air channels, outer crossbars projecting from the outer sides of the longitudinal bars and forming oblong open-ended air channels, and longitudinal upwardly projecting ribs which extend crosswise over the tops of the said air channels and over the surfaces of the crossbars between them, said ribs being of much less depth than the crossbars and leaving the air channels between the crossbars substantially unobstructed.

1,621,303. YARN-OILING DEVICE. JACOB K. ALTEMUS, Philadelphia, Pa. Filed Dec. 27, 1924. Serial No. 758,383. 2 Claims. (Cl. 184—84.)

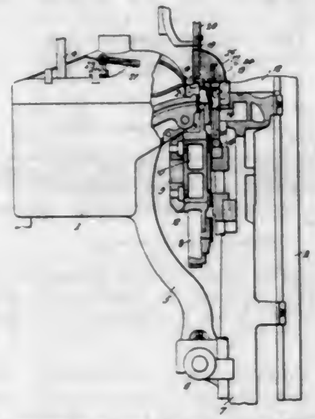
1. The combination of a receptacle for oil, an air tight oil reservoir supported above the receptacle and having a removable cap closing the lower end thereof, and a pipe supported by said cap and communicating with the lower portion of the reservoir and extending downwardly therefrom and constructed to discharge oil into the receptacle and means carried by the pipe and being longitudinally adjustable thereon and constructed to vary the height of the point of communication of the pipe with the receptacle.

1,621,304. FILING CASE. AXEL H. ANDERSSON, Benton Harbor, Mich., assignor to Baker-Vawter Company, Benton Harbor, Mich., a Corporation of Michigan. Filed Feb. 16, 1924. Serial No. 693,190. 7 Claims. (Cl. 45—2.)



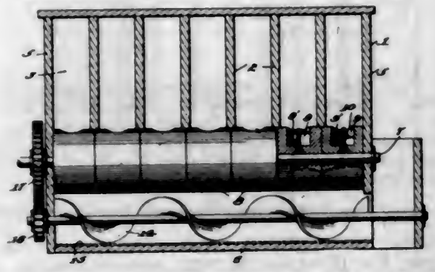
1. In a filing case, a sheet metal casing member including a top member formed with a top and opposite sides and inwardly-extending bottom flanges, and a bottom member formed with opposite upwardly-extending flanges forming a track, said bottom flanges of the top member being secured to said bottom member.

1,621,305. DOOR CHECK. HALVOR E. ANDERSON, Kenosha, Wis. Filed Jan. 28, 1926. Serial No. 84,339. 6 Claims. (Cl. 292—341.)



4. A door fastener comprising a bracket, means for securing the same to a door, a shelf formed on said bracket,

a jaw pivotally mounted at one end on said shelf, a semi-circular arm secured to the door frame and disposed be-

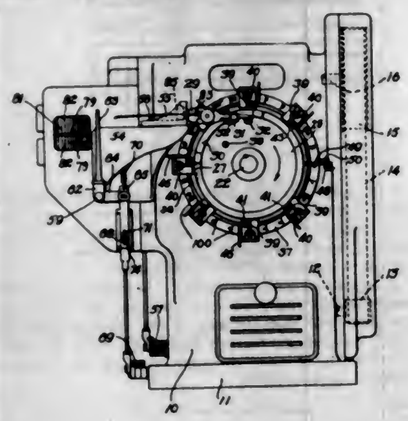


tween the open end of said jaw and said shell, resilient means for normally closing the jaw upon the arm and means whereby to release said jaw from said arm.

1,621,306. ATTACHMENT FOR TYPOGRAPHICAL MACHINES. FRANK Y. HAMBA, Astoria, N. Y. Filed May 3, 1926. Serial No. 106,182. 7 Claims. (Cl. 199—47.)

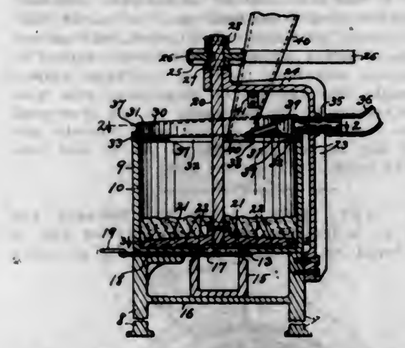
1. The combination with a typographical machine comprising a holder for matrices, a mold cooperating therewith and means for forcing molten metal into the mold, of a device arranged to extend over the joint formed between said holder and mold and means for actuating it into operative position in advance of the casting operation.

1,621,307. GRAIN MIXER. EMILE L. BENZEL, Sherman, Tex. Filed Sept. 28, 1923. Serial No. 665,370. Renewed July 22, 1926. 1 Claim. (Cl. 83—44.)



In combination, in a mixing apparatus, a bin having a plurality of compartments having open bottoms, and composite means for closing said bottoms, said composite means comprising a shaft, and a plurality of duplicate interchangeable cylindrical elements aligned on said shaft, said elements being held in proper relation to each other and to their respective compartments by end engagement with each other, and each said element being provided with a pocket extending from its outer peripheral face and adapted to receive material through the open bottom of its respective compartment.

1,621,308. GREASE GUN. MARTIN C. BERSTED, Chicago, Ill. Original application filed Nov. 27, 1920, Serial No. 426,722. Divided and this application filed Sept. 3, 1921. Serial No. 498,590. 2 Claims. (Cl. 221—47.3.)

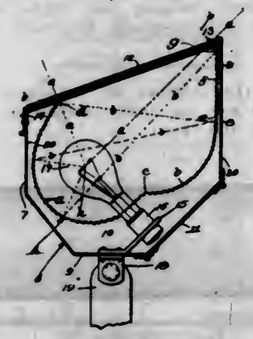


2. A grease gun comprising a barrel having a round opening in one end and an angular seat below said opening, a nut having an angular part to fit said seat and a round part to fit said opening, and a shoulder on said round part spun over to engage the end of the barrel.

1,621,309. WIRE-DRAWING APPARATUS. HARRY BLOUNT, Oak Park, and JOHN WAYLAND HERNLUND, Glen Ellyn, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 6, 1922. Serial No. 566,222. 18 Claims. (Cl. 205—16.)

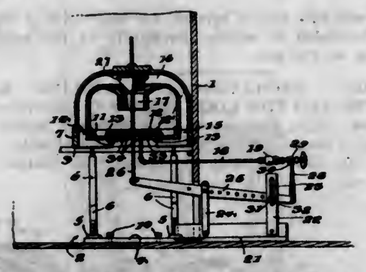
1. In a machine for stringing dies upon wire, a drawing block, and a stationary wire storage drum positioned adjacent said drawing block whereby the wire may be transferred from and stored in close association with said drawing block as each die is strung upon the wire.

1,621,310. LIQUID-FEEDING MEANS FOR APPARATUS FOR PREPARING A MOIST CEMENTITIOUS MIXTURE OR MASS. OTTO E. BORNHAUSER and JOHN EDWARD HERMAN, Sandusky, Ohio, assignors to The Her-Born Engineering and Manufacturing Company, Sandusky, Ohio, a Corporation of Ohio. Filed June 18, 1924. Serial No. 720,740. 4 Claims. (Cl. 299—58.)



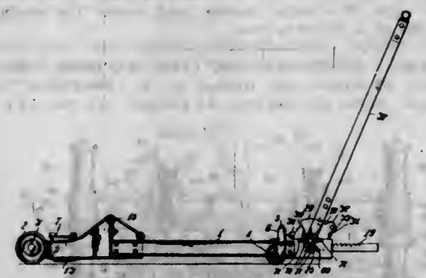
1. Liquid feeding means of the character indicated comprising an annular liquid-distributing member having a substantially horizontal annular liquid-distributing chamber which has a bottom which slopes downwardly in the direction of the outer circumference of said chamber, said chamber having a downwardly discharging annular outlet formed at the lower end of said bottom.

1,621,311. MANUFACTURE OF FERTILIZERS. GEORGE CLAUDE, Paris, France, assignor to Societe l'Air Liquide (Societe Anonyme pour l'Etude et l'Exploitation des Procedes Georges Claude), Paris, France. Filed Dec. 20, 1923, Serial No. 681,821, and in France Jan. 24, 1923. Renewed Apr. 5, 1926. 13 Claims. (Cl. 71—9.)



1. A process for the manufacture of a fertilizer which comprises treating a mineral containing both potassium chloride and sodium chloride with carbon dioxide, ammonia and water to form sodium bicarbonate and ammonium chloride.

1,621,312. LIGHT REFLECTOR. ARVID S. CRANDALL, Chicago, Ill. Filed Mar. 11, 1926. Serial No. 93,835. 5 Claims. (Cl. 240—3.)



1. A light reflector having two concave, curved, light reflecting faces, the concavity of one face being relatively deep and the curved end of one face joining a curved end of the other, and one of said curved faces merging into a substantially straight face, the opposite ends of said light reflecting faces being spaced apart to provide an opening for the passage of direct and reflected light rays issuing from a light source located in the deep concave space of the reflector, said opening extending transversely of the plane of the substantially straight light reflecting face whereby light rays reflected by said substantially straight light reflecting face cross the direct light rays issuing from said opening in transverse lines.

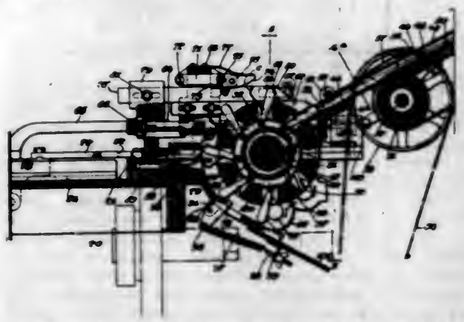
1,621,313. OIL BURNER. GEORGE H. CROWELL, Berlin, N. H. Filed Mar. 6, 1926. Serial No. 92,776. 12 Claims. (Cl. 158—91.)

12. In an oil burner, a supporting base having an extension, a combustion chamber, a burning surface, means for supplying oil to said burning surface, a valve for varying the supply of oil, a manifold through which air passes to the combustion chamber, a valve within said manifold and co-operating therewith for automatically varying the amount of air passing therethrough as the oil supply is varied, a rod carrying said air control valve, a link operably connected to the oil supply valve, an upright member secured to the extension of said supporting base, and a lever pivotally connected to said upright member and connected at one end to the rod carrying the air control valve, and at its other end to the link operably connected to the oil supply valve.

1,621,314. LIFTING JACK. IRWIN E. DEARSLEY, Racine, Wis., assignor to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Dec. 4, 1925. Serial No. 73,187. 21 Claims. (Cl. 254—2.)

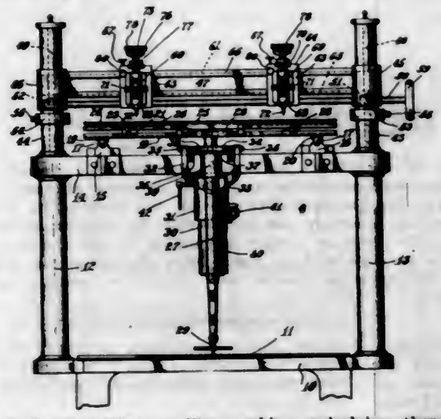
1. In a lifting jack, an elevating and lowering mechanism comprising a pivoted reversing member, a means for automatically rotating the member in one direction, a locking cam for moving the member in the opposite direction against the action of the means to an inoperative position, and a lever pivoted on the axis of the reversing member and adapted to operate the cam.

1,621,315. BAKING PAN. ELIZABETH D'EVLYN, Chicago, Ill., assignor of one-half to Earl J. Brown, Chicago, Ill. Filed May 20, 1925. Serial No. 31,480. 2 Claims. (Cl. 53—6.)



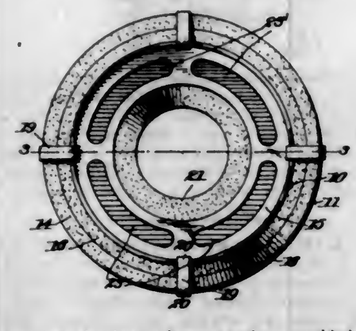
1. The combination with a pie pan comprising a bottom, an upwardly flared side, and an annular rim projecting outwardly from the top of the side, of a sheet

metal ring comprising an upwardly and outwardly flared annular wall conforming to and fitting snugly against the side wall of the pan beneath the rim, an annular



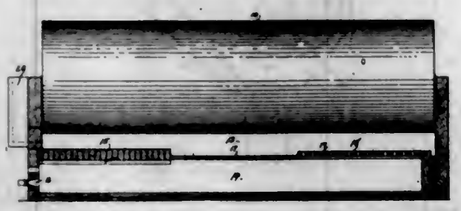
outer side-wall and a bottom, the side wall of the ring being extended to project outwardly of the margin of the rim of the pan.

1,621,316. MECHANISM FOR FILLING MATCH SAFES AND THE LIKE. JOSEPH C. DONNELLY, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed May 16, 1925. Serial No. 30,646. 13 Claims. (Cl. 226—4.)



1. In mechanism for filling match safes having hinged lids, the combination of a turret having peripheral openings therein for the reception of the safes, means for rotating said turret to advance the said openings to and past successive stations, means at one station for feeding a row of match safes having closed lids toward said turret and entering the safes in succeeding openings of the turret, means for opening the said lids at a second station, means for introducing matches into the open safes at a third station, and means for closing the lids at a fourth station.

1,621,317. ENGRAVING OR LIKE MACHINE. WILLIAM S. EATON, Sag Harbor, N. Y. Filed July 12, 1923. Serial No. 650,994. 14 Claims. (Cl. 90—13.1.)



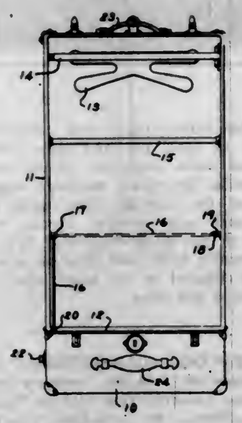
1. An engraving or like machine embodying therein a work support universally movable upon a single plane, a pattern table, a transmitter arm, a universal joint connecting one end of said transmitter arm with said work support, a tracing stylus carried by the other end of said arm, a universal support for said arm intermediate its ends, parallel, vertically extending guides above and adjacent said work support, a cross-head mounted upon said guides and capable of movement toward and from said work support, means imparting movement to said cross-head for setting said cross-head, means whereby said cross-head may be moved independently of said last named means toward and from said work support, and a plurality of tool-heads carried by said cross-head embodying therein a tool point adapted to be brought into and out of engagement with work upon said support by the movement of said cross-head, and means carried by each of said heads whereby said tool point may be adjusted with relation to said head to vary the depth of cut by the point.

1,621,318. ANT TRAP. ARTIST A. EDWARDS and ROBERT L. MCDONALD, Wilson, Okla. Filed Feb. 5, 1924. Serial No. 690,713. 1 Claim. (Cl. 43—121.)

An ant trap having a lower section provided with an upstanding inclined marginal wall and a substantially central opening, an upper section having a depending wall provided with an inclined portion flush with the first inclined portion and a portion in telescopic relation with the said wall, an entrance wall depending from the upper section through and below said opening, the interior of the trap constituting a captive chamber, and the upper section having an entrance to said chamber intermediate said depending wall and said entrance wall, said sections having beads integral therewith at the margins of their upper and lower walls, respectively, clips resiliently clasping said beads, and flanges depending from said upper wall marginally of said entrance.

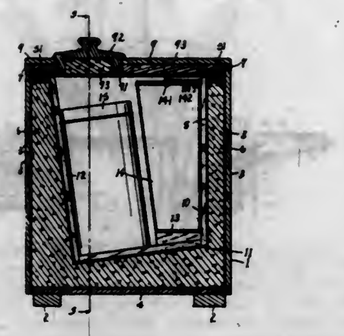
1,621,319. STILL. HARRY E. GILBERT, Bridgeport, Conn. Filed Mar. 20, 1925. Serial No. 16,906. 4 Claims. (Cl. 196—116.)

1. In a still, the combination of a container substantially horizontally disposed, a firebox having a top in spaced relation to the bottom of the container, a burner at the forward end of the firebox, the top of the firebox being divided in zones of heat-conducting qualities of



various degree, the zone nearest the burner being the least heat-conducting and the zones more remote from the burner progressively greater heat-conducting, for the purpose of making the said top uniformly radiant.

1,621,320. PRESSURE GAUGE. JOSEPH F. GRIFFIN, Brooklyn, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 3, 1923. Serial No. 666,262. 8 Claims. (Cl. 73—109.)



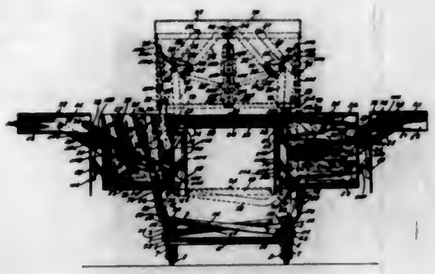
1. In a pressure gauge, the combination of a main Bourdon tube connected with a source of oscillating pressure, an indicating needle, mechanism connecting said needle with said main Bourdon tube, the latter and said mechanism possessing an inherent flexibility of predetermined degree, an auxiliary Bourdon tube connected with the same source of oscillating pressure, an oscillation indicator, and resilient connection between the indicator and said auxiliary Bourdon tube, the latter and its connections possessing an inherent flexibility of lesser degree that that of the main Bourdon tube and its connections, whereby said auxiliary Bourdon tube is flexed to absorb the shocks of said pressure oscillations and said indicating device is actuated to indicate said oscillations.

1,621,321. WARDROBE-TRUNK CONSTRUCTION. EMMA B. HANSON, New Rochelle, N. Y. Filed Dec. 3, 1925. Serial No. 72,911. 1 Claim. (Cl. 190—13.)

In a trunk of the steamer type, a body section, a cover section, said cover section being hinged across one end to the body section and arranged to serve as a wardrobe compartment, a rod hinged at one end to a side wall of the cover section and adapted to extend across the compartment and be removably attached to the opposite side wall to hold garments in place in the compartment, and said rod being adapted to be swung about its hinged end and attached at the other end to the body section, whereby to serve as a diagonal brace rod, to hold the cover in erect position.

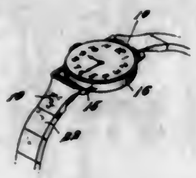
1,621,322. REFRIGERATOR. HAROLD A. HAWN, Grand Rapids, Mich. Filed Jan. 19, 1926. Serial No. 82,243. 3 Claims. (Cl. 62—75.)

1. A cabinet refrigerator comprising an outer open top insulated casing, an interior lining with bottom inclined toward the front and with inclined front wall, spacer strips on said walls and bottom, and supports with level tops resting on said bottom spacers at the rear, a cylindrical can supported on said bottom spacer strips and resting against the inclined front spacer strips, a refrigerant container with inclined front portion and level bottom adapted to rest on said supports in spaced relation to the rear wall against the rear spacer strips and to the rear of and overhanging the rear portion of said can, and removable covers for the top of said casing, coacting as specified.



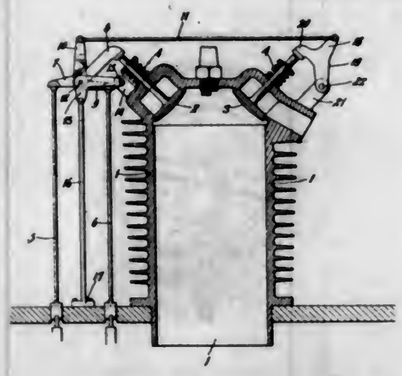
1,621,323. ARM SLING. EFFIE M. HORN, Palisade, Colo. Filed Aug. 21, 1926. Serial No. 130,702. 1 Claim. (Cl. 128—94.)

In an arm sling, a tubular arm receptacle, shoulder straps connected to opposite ends thereof, horizontally aligned eyelets carried by the tubular receptacles at op-



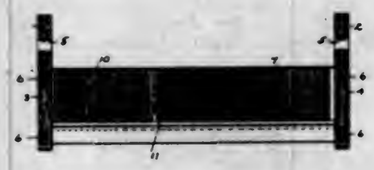
posite sides of the longitudinal center thereof and tapes at the ends of the arm straps for passage through said eyelets and connection with one another, said shoulder straps having their outer edges substantially coinciding with the outer ends of the tubular member and their inner ends connected with the tubular member substantially at the center thereof.

1,621,324. DESK CONSTRUCTION. JOHN A. HUGHES, Waco, Tex. Filed June 7, 1926. Serial No. 114,341. 13 Claims. (Cl. 45—52.)



1. An article of furniture for the purpose set forth comprising a truck, a pair of synchronously shiftable rock shafts journaled therein, a pair of actuating members fixed to each end of each shaft exteriorly of the truck and bodily carried with said shaft, a vertically movable article support arranged between the pairs of actuating members, a pair of normally closed file cases arranged over said article support and oppositely shiftable relatively to each other, a shifting arm pivotally connected between each pair of actuating members and further pivotally connected to said support, and connections between said actuating members, arms and cases to provide, on the manual shift of one case from the other the synchronous shifting of the cases to open position at the sides of said support and further for moving the support to its elevated position and on the manual shift of one case towards the other to synchronously shift said cases to closed position and in abutting relation above said support and further for moving the support to its lowermost position.

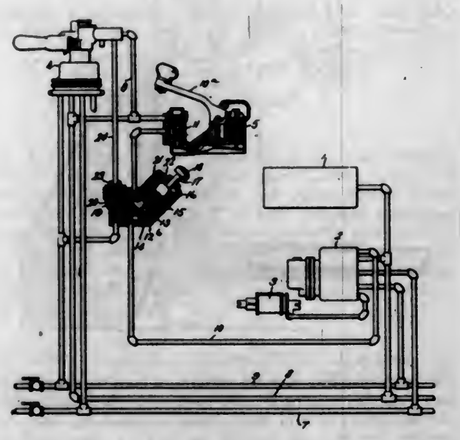
1,621,325. BRACELET HOOK. AUGUST F. KRAEMER, Providence, R. I., assignor to Louis Stern Company, Providence, R. I., a Corporation of Rhode Island. Filed May 20, 1926. Serial No. 110,562. 6 Claims. (Cl. 24—233.)



1. A sheet metal bracelet hook formed of a body portion having a front plate with side flange and having a hook at one end thereof, and a spring tongue having one end portion arranged to close the hook, its opposite end portion being fulcrumed against the inner surface of said front plate and having a part folded upon itself and retained in operating position by said body flanges.

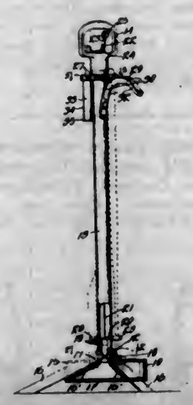
1,621,326. INTERNAL-COMBUSTION ENGINE. CHARLES L. LAWRANCE, New York, N. Y., assignor to Wright Aeronautical Corporation, a Corporation of New York. Filed Mar. 3, 1924. Serial No. 696,438. 2 Claims. (Cl. 123—90.)

1. The combination of an engine cylinder having inlet and exhaust ports at opposite sides thereof; poppet valves controlling said ports; a fulcrum at one side of said cylinder; a bell crank and a valve actuating rocker, both mounted on said fulcrum, said rocker being in operative relation with one of said valves; a valve rocker in operative relation with the other of said valves and a link connecting said last named rocker and said bell crank.



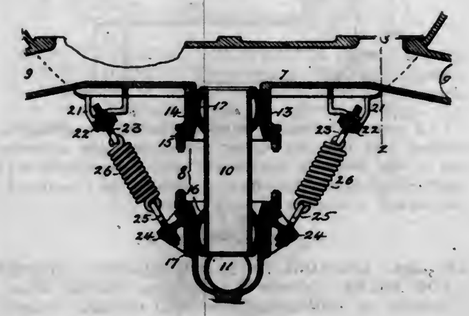
1,621,327. RACK FOR BATTERY PLATES. SOLOMON A. LEHMAN, Fort Wayne, Ind. Filed June 26, 1925. Serial No. 39,659. 3 Claims. (Cl. 136—82.)

1. A portable battery-plate rack comprising a hollow frame having an open top and open bottom and also having its end walls projecting below the lower edges of its side walls, insulating members supported on the inner faces of the opposite side walls of the frame respectively, each said member having a plurality of vertical slots in its exposed vertical face, and a flange projecting laterally from said face of each member and adapted to be engaged by the lower edge of the battery plates disposed in the slots.



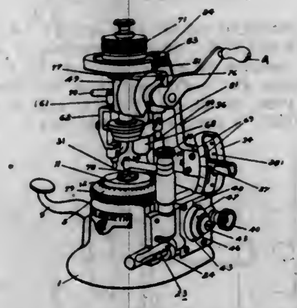
1,621,328. SAFETY CAR-CONTROL EQUIPMENT. GEORGE MACLOSKIE, Erie, Pa., assignor to General Electric Company, a Corporation of New York. Filed July 20, 1926. Serial No. 123,756. 7 Claims. (Cl. 303—19.)

1. In a safety car control equipment, the combination with a brake valve having a removable handle, a controller handle, and a valve operated upon the release of the controller handle for venting fluid to effect an application of the brakes, of means operative upon the removal of the handle of said brake valve for effecting the



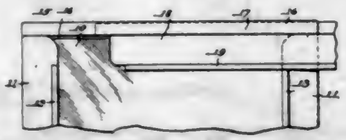
closing of the communication through which fluid is vented by the operation of said valve which is operated upon release of the controller handle.

1,621,329. GOLF-STICK CARRIER. ADOLPH W. MALONE, Fillmore, Utah, assignor of one-half to Albert H. Vestal, Anderson, Ind. Filed Sept. 1, 1926. Serial No. 132,972. 9 Claims. (Cl. 150—1.5.)



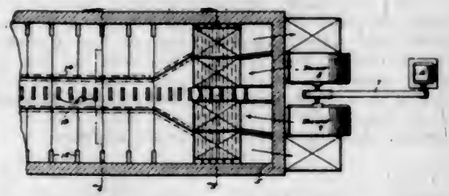
9. A carrier comprising a standard, a handle adjacent the upper end thereof, a base at the lower end thereof, supporting legs pivoted to said base, spring means for maintaining said supporting legs in inoperative position, a trigger associated with the handle, and a connection between said supporting legs and said trigger for moving the legs to operative position substantially as set forth.

1,621,330. STEAM-PIPE SUPPORT FOR ARTICULATED LOCOMOTIVES. JAMES C. MARIS and HENRY K. HARWICK, Philadelphia, Pa. Filed Sept. 15, 1926. Serial No. 135,577. 3 Claims. (Cl. 105—47.)



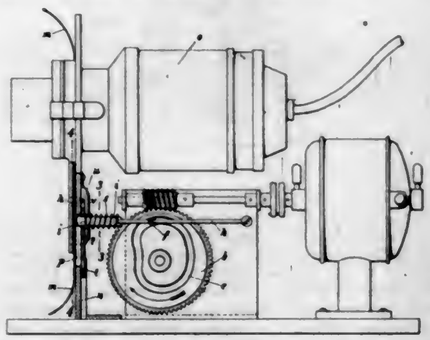
1. The combination in an articulated locomotive in which the boiler overhangs the front frame, of a flexible steam supply pipe connected at one end to a distributer on the boiler, and at the other end to the forward cylinder structure, with supporting springs, one located on each side of the pipe, and arranged diagonally at the upper ends of the pipe, the upper ends of the springs being attached to the boiler structure.

1,621,331. LENS CUTTER. ALBERT E. MAYNARD, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed July 22, 1922, Serial No. 576,846, and in Great Britain July 6, 1922. 7 Claims. (Cl. 33—28.)



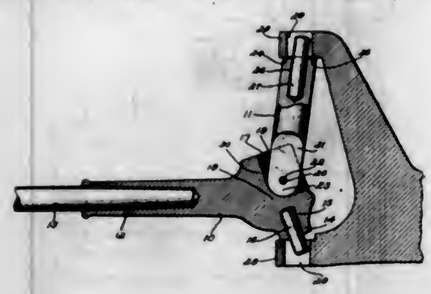
1. In a machine of the character described, a base, a lens support on the base, a cutter member having a cutter adapted to cut a lens supported on the lens support, a lens former support, a former comprising a plurality of exact lens shapes of lenses to be cut rotatably carried by the former support, a former contact member on the cutter member contacting with a selected lens shape, means for moving the former support to bring the selected lens shape into engagement with the contact member, and means for rotating said lens support and former in synchronism, whereby the cutter will cut the lens on the support to the same configuration as the lens shape in contact with the contact member.

1,621,332. SASH FRAME. HENRY C. MILLS, Cleveland, Ohio. Filed June 15, 1926. Serial No. 116,176. 6 Claims. (Cl. 189—76.)



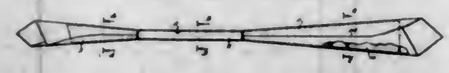
1. A rectangular metal frame of the class described including four inwardly facing channelled side members, one of said members including a section removable by a longitudinal sliding movement to permit the insertion or withdrawal of a glass pane or the like.

1,621,333. HEATING UNIT AND HEATING SYSTEM FOR KILNS. MORITZ L. MUELLER, Seattle, Wash., assignor to Northwest Blower Kiln Company, Seattle, Wash., a Corporation of Washington. Filed Oct. 11, 1926. Serial No. 140,902. 11 Claims. (Cl. 34—46.)



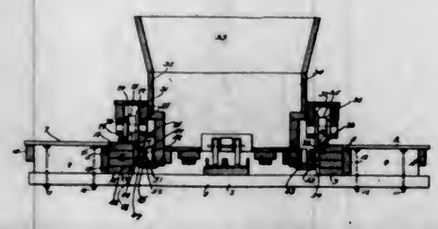
1. In combination with a kiln comprising elongated pressure air and suction air ducts and means for maintaining a flow of air therein, of a transversely extending heating unit of such length as to lie within and substantially span such pressure air and suction air ducts, and means for supplying a heating fluid to such unit from an external source.

1,621,334. DRIVING GEAR FOR FILMS IN PROJECTION APPARATUS. WILLY REICHMANN, Hamburg, Germany, assignor, by mesne assignments, to National Screen Service, Inc., a Corporation of New York. Filed July 31, 1926, Serial No. 126,222, and in Germany Mar. 24, 1925. 3 Claims. (Cl. 88—18.4.)



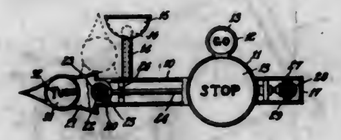
2. Intermittent driving mechanism for perforated films in projection apparatus comprising a lever having a stationary fulcrum, means adapted to oscillate said lever, a feeding member mounted upon the free end of the said lever and movable with respect to said lever towards and away from the said film, a spring adapted to normally urge the said feeding means into engagement with the film, and control means adapted to move said feeding means away from said film upon the return movement of the said lever.

1,621,335. EXPANDING TOOL. ALOYSIUS A. ROESCH, Andover, Mass. Filed Sept. 20, 1926. Serial No. 136,605. 4 Claims. (Cl. 81—15.)



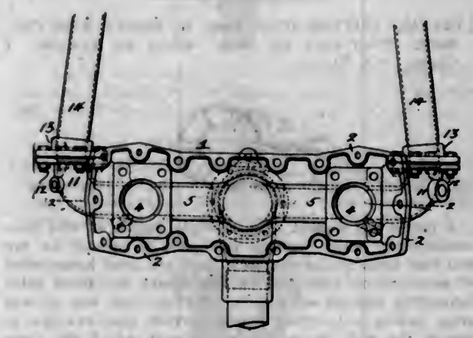
3. An expanding tool comprising a pair of cooperative work engaging members, lever means for effecting the relative movement of said work engaging members, and a removable locating pin carried by each of said work engaging members.

1,621,336. NECKTIE AND LINING. SAMUEL RUTENBERG, New York, N. Y. Filed June 29, 1926. Serial No. 119,388. 1 Claim. (Cl. 2—146.)



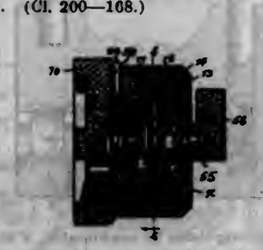
A necktie comprising a body having the edges of the fore end thereof permanently secured together to within a short distance of its end, and a lining for the fore end, said lining consisting of a strip of stiff material and a covering enclosing the same, the covering and strip being secured together and to the neck section of the tie, and the body of said fore end being secured to the lining adjacent the neck section and unattached throughout the remainder of its length.

1,621,337. COASTER-TRACK STRUCTURE. HERBERT P. SCHMECK, Philadelphia, Pa., assignor to Philadelphia Toboggan Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 20, 1926. Serial No. 155,973. 15 Claims. (Cl. 104—248.)



1. In combination, a coaster having abutting surfaces and also a supporting wheel, a track beam, a wearing element mounted on said beam and positioned in operative relation to one of said abutting surfaces, and a safety rail disposed in abutting relation to the other of said surfaces, whereby lateral and vertical displacement of said coaster may be limited to a desired extent.

1,621,338. AUTOMOBILE DIRECTION SIGNAL. GODFRIED SCHOCK, Cleveland, Ohio. Filed Apr. 7, 1926. Serial No. 100,232. 3 Claims. (Cl. 116—51.)



1. A signalling device comprising a rotatable housing fashioned as an arrow, a glass face in said housing, a casing supporting said housing, said casing having a fork at one end, tongues on said movable housing positioned intermediate said fork, a spindle rotatably journalled in said fork and rigid with said casing, a bevel gear on said spindle and means engaging said gear to rotate said housing from the vertical to the horizontal position or vice versa.

1,621,339. MALLET LOCOMOTIVE. ELLWOOD M. SHANNON, Bala, Pa. Filed Sept. 3, 1926. Serial No. 133,393. 3 Claims. (Cl. 105—47.)

1. The combination in a simple "Mallet" locomotive, of a smoke box, of a boiler; a distributor secured to the underside of the smoke box and having a steam chamber therein; a passage in the structure arranged to be connected to the boiler, and said structure having passages arranged to communicate with the pipes leading to the cylinders on the forward frame and cylinders on the rear frame of the locomotive.

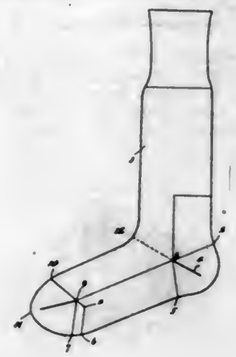
1,621,340. ROTARY SNAP SWITCH. GEORGE B. THOMAS, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed July 13, 1921. Serial No. 484,353. 2 Claims. (Cl. 200—168.)

1. In a rotary snap switch, an insulating body comprising superposed sections and means for uniting the same to form a rigid body unit, the upper surfaces of said sections lying in planes capable of being machined, upper and lower banks of contacts mounted on said surfaces, in combination with a switch spindle, and upper and lower banks of switch blades thereon cooperating with the said contacts, the engaging surfaces of said blades and contacts lying in planes substantially normal to the axis of the switch spindle.

1,621,341. LOCKING ATTACHMENT FOR INCANDESCENT LAMPS. THEODORE B. H. VOGT, Passaic, N. J., assignor to General Electric Company, a Corporation of New York. Filed Apr. 2, 1921. Serial No. 457,991. 4 Claims. (Cl. 173—356.)

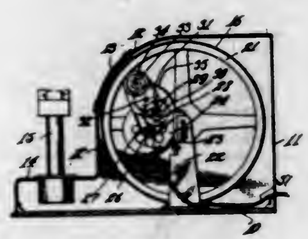
1. A locking attachment for incandescent lamps comprising a metal sleeve threaded at one end to enter a socket and at the other end to receive a lamp, a locking member carried by said sleeve actuated by the insertion of the lamp to positively engage said socket, and mahually controlled means to lock the lamp to said sleeve.

1,621,342. ATTACHMENT FOR ARCTICS. JAMES H. WEBBER, Carrolltown, Pa. Filed June 11, 1926. Serial No. 115,332. 2 Claims. (Cl. 36—72.)



1. An attachment for an arctic formed of semi-rigid and springy material and comprising a cylindrical body adapted to fit within the upper end of the arctic and a rolled top for receiving the upper edge of the arctic and frictionally engaging the same.

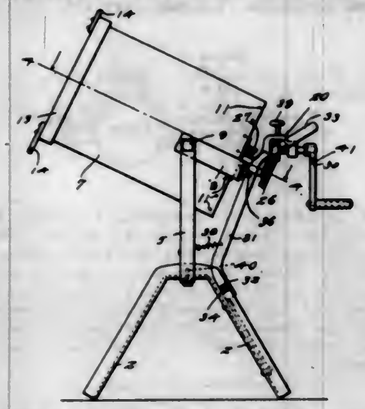
1,621,343. SEAMLESS HOSIERY AND METHOD OF MAKING SAME. JAMES CLAUDIUS WILLIAMS, Dalton, Ga., assignor to Dalton Hosiery Mills, Dalton, Ga., a Corporation of Georgia. Filed July 16, 1926. Serial No. 122,918. 7 Claims. (Cl. 66—187.)



1. In a process for manufacturing seamless hosiery having the usual seamless toe pocket commenced on substantially half the needles, the step of inserting a seg-

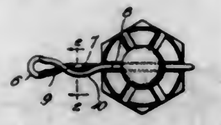
ment of fabric between the toe and heel by reciprocating knitting on a number of needles varied by picking, said half the needles being in action when knitting the course

which meets the inner ends of the toe gores, and fewer of said needles in action in the other courses of the segment.



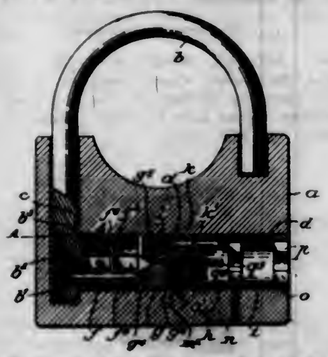
1,621,344. MECHANICAL ADVERTISING DEVICE. JAMES TRESTER ADDLEBURG and LLEWELLYN MARSHALL FOX, Greeneville, Tenn. Filed Sept. 8, 1926. Serial No. 134,199. 3 Claims. (Cl. 40—33.)

1. A mechanical advertising device comprising a casing having a rear enlarged part and a forward low portion adapted to support a cigar lighter or the like in front of the enlarged part, a transparent window mounted in the enlarged part adjacent to the upper end of the cigar lighter, a drum mounted for rotation in the enlarged part of the casing and adapted to carry a number of displays on its periphery, a support in the casing, an electric motor mounted on the support, a gear casing hinged upon the shaft of the motor, a train of gears in the gear casing, and a friction wheel carried upon the outer end of the casing and connected to said train of gears, the weight of said casing and gears adapted to maintain the friction disc against the inner side of the drum for driving the same.



1,621,345. MIXING MACHINE. NEWTON M. ANDERSON, Bedford, Ind. Filed June 11, 1925. Serial No. 36,451. 7 Claims. (Cl. 83—73.)

1. A mixing machine comprising a stand, a stirrup pivoted to the stand, means releasably holding the stirrup against movement, a bracket secured to the stirrup and including angularly related arms, a shaft journaled in one of said arms, a drum secured to the shaft, a second



shaft journaled in the other of said arms, meshing gears carried by said shafts, and a hand crank secured to said second shaft.

1,621,346. COTTER PIN. EARL W. BEATTY, Falls City, Nebr. Filed June 28, 1926. Serial No. 119,189. 1 Claim. (Cl. 74—8.)

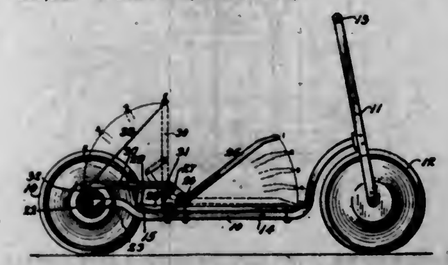
A cotter pin formed from a single length of wire bent substantially upon itself at its center to provide an eye and two arms projecting from said eye, said arms being of semi-circular cross section and having flat inner sides contacting slidably with each other, at least one of said arms having a laterally bowed portion near the eye to engage the wall of an opening through which the arms are forced to effect spreading of the arms at their free ends, said eye, said flat sides and said bowed portion being disposed in substantially the same plane.

1,621,347. PADLOCK. HEINRICH BIEMER, Berlin, Germany. Filed May 18, 1922, Serial No. 544,799, and in Germany May 7, 1921. 3 Claims. (Cl. 70—108.)

1. A padlock comprising in combination, a body portion, a bow displaceable relative to said body portion and having one of its shanks journaled in the latter, said body portion having a bore perpendicular to said shank, a lock cylinder in said bore, a spring-influenced locking

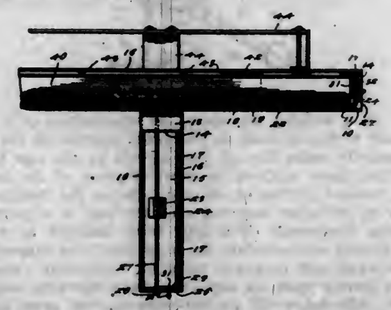
bolt for cooperating with a shank of the bow and arranged parallel to said lock cylinder, a cam member for displacing the locking bolt upon a rotation of the lock cylinder, and means for maintaining the lock cylinder in locking position.

1,621,348. YARN. ALBERT BOLLER, Wetzikon, Switzerland. Filed May 17, 1926, Serial No. 109,782, and in Switzerland Oct. 17, 1925. 3 Claims. (Cl. 117—52.)



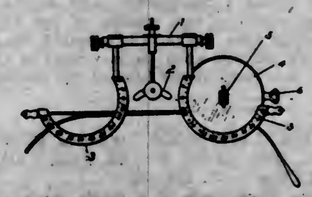
1. A yarn for knitted fabrics consisting of a hard twist yarn and a loosely twisted thread, said thread being helically wound around said yarn.

1,621,349. ELECTRIC FUSE. GEORGE R. BROWN, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed July 20, 1926. Serial No. 123,762. 4 Claims. (Cl. 200—130.)



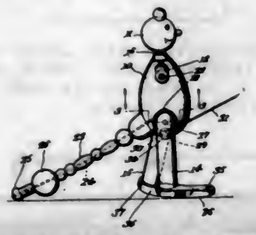
1. An electric fuse comprising an insulating base provided with a gas passageway, and a metal shell enclosing an end of said base and the passageway therein, said shell forming with said base an expansion chamber for the gases and having in the wall thereof inwardly opening exit passages from said chamber.

1,621,350. TOY VEHICLE. ARTHUR S. BURKE, Sioux Falls, S. Dak. Filed Sept. 18, 1926. Serial No. 136,332. 9 Claims. (Cl. 208—35.)



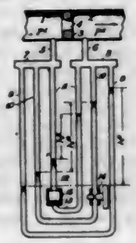
1. In a toy vehicle, a frame provided with supporting wheels, one of which is propelled, a power lever, an actuating lever connected to the wheel to be propelled, and a connection between said levers by which a greater extent of travel is transmitted to the actuating lever than the extent of travel imparted to the power lever.

1,621,351. COMBINATION TAIL LIGHT AND ILLUMINATED LICENSE PLATE. PHILIP E. CLEMENT, Manchester, N. H. Filed June 19, 1926. Serial No. 117,155. 1 Claim. (Cl. 40—132.)



In a device of the character described, a casing having an opening formed in the front wall thereof, a stencil plate alignable with the opening and when aligned therewith having one end thereof engaged with one end wall of the casing, the opposite end wall of the casing having an opening, a door for said opening hinged to the rear wall of the casing and when in the closed position having its free edge abutting the opposite end of the stencil to thereby prevent longitudinal movement of the stencil, means for locking the door in closed position including a rod of greater length than the distance from the bottom of the casing and the top of the opening of said end wall, the outer face of the door having a vertically directed eye, the bottom wall of the casing having an opening with which the eye aligns when the door is in closed position, means for securing the rod in position, including a hook upon the lower end of the rod adapted to underlie the bottom wall of the casing, an extension upon the bill of the hook adapted to overlie the bottom wall of the casing, when the rod is in its latching position and openings formed in the bottom wall of the casing between which the extension may be disposed whereby a seal wire is directed through said openings and over the extension and will lock the rod in position.

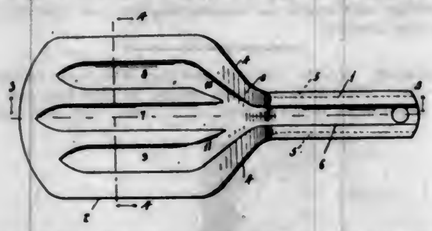
1,621,352. MEASURING INSTRUMENT. BERNARD P. CURRIER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Apr. 10, 1922. Serial No. 551,134. 7 Claims. (Cl. 33—200.)



7. A measuring instrument for a trial frame and lens cell, comprising a disc having a central opening and supported by said lens cell, guide sleeves arranged on both sides of the opening, a movable indicating bar arranged within said opening and guide sleeves and an arcuate shaped pad carried by one end of said indicating bar and adapted to rest against the eye.

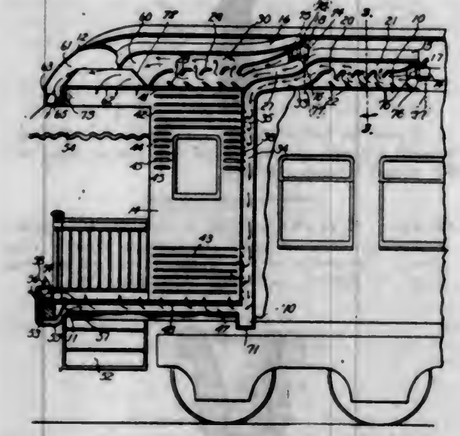
1,621,353. TOY. JOHN JAMES DAHLSTROM, New Orleans, La., assignor to Walkee Toy & Novelty Co., Inc., New Orleans, La., a Corporation of Louisiana. Filed July 30, 1926. Serial No. 126,009. 2 Claims. (Cl. 46—40.)

2. In a walking toy figure, the combination of a body, a pair of legs pivoted to the lower portion of the body at opposite sides thereof, feet carried by the legs having inclined lower surfaces to effect stepping of the feet by the forward motion of the body, means for limiting the forward swinging movements of the legs, a support projecting rearwardly from the body adapted to engage the ground and maintain the body from over-balancing in a forward and rearward direction, outwardly extending arms carried upon the opposite sides of the body near the top of the figure for counter-balancing the same against tilting sidewise, and a draw string having branches attached to said legs at points beneath the pivotal connections of the legs with the body for normally urging the legs in a forward direction and for disposing the line of draft of the figure beneath the pivotal connections of the legs with the body.



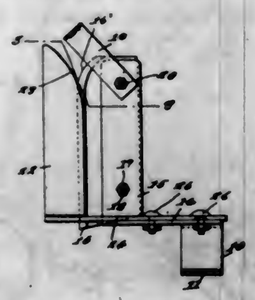
1,621,354. PULSATION COMPENSATED METER. CLARENCE A. DAWLEY, Plainfield, N. J. Filed Dec. 21, 1921. Serial No. 523,902. 5 Claims. (Cl. 73—167.)

1. A pulsation compensated flow meter comprising a movable element actuated by head and subject to the pulsating head of the metered fluid, means retarding said moving element in both directions, the degree of retardation being greater in one direction than in the other but in definite relation thereto, said retarding means comprising a liquid valve device having a displaceable valve member which affords, when seated, a port opening of less area than the port opening when the valve is unseated, the port of less area being effective when the movement of the movable element is induced by the head of the metered fluid.



1,621,355. PIE-PLATE SCOOP. WILLIAM H. DE CAMP, Van Wert, Ohio. Filed Feb. 26, 1925. Serial No. 11,859. 1 Claim. (Cl. 294—32.)

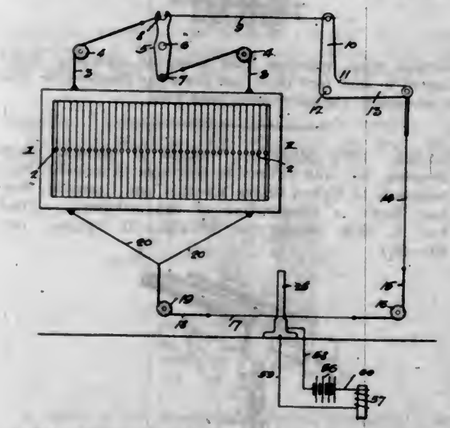
A pie plate scoop made of a single blank of metal comprising a handle and a relatively wide flat scoop, said scoop being rounded at the rear end whereby the handle is elevated, said scoop being adapted for rocking on said end after engagement with a pie plate, a plate retaining flange on each edge of the scoop adjacent the handle, the side edges of the handle being bent thereunder to reinforce and strengthen the same, a depressed rib extending continuously from the end of the handle to approximately the relatively opposite end of the scoop, and said



scoop having depressed ribs merging into the first mentioned rib along diverging lines at the rounded rear end of the scoop.

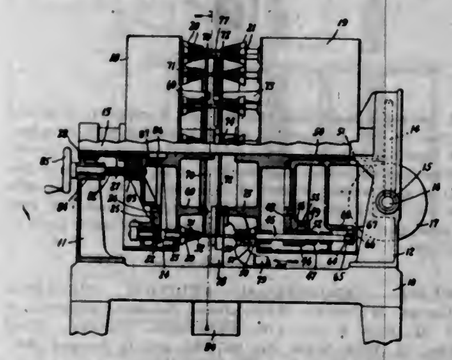
1,621,356. DUST-PREVENTING DEVICE FOR REAR PLATFORMS OF VEHICLES. CEPHUS H. DICKEY, Kansas City, Kans. Filed Aug. 21, 1926. Serial No. 130,653. 20 Claims. (Cl. 105—350.)

1. The combination with a vehicle body having a rear platform, of means for supplying air to said platform at the end thereof adjacent the vehicle body and adjacent the end thereof remote from said vehicle body.



1,621,357. TWINE AND ROPE CUTTER. DANIEL S. DILLENBACH, Hastings, Nebr. Filed June 19, 1926. Serial No. 117,124. 4 Claims. (Cl. 30—14.)

1. In a device of the class described, a knife blade, a vertical support therefor, a plate member carrying said support and extending horizontally, means for mounting

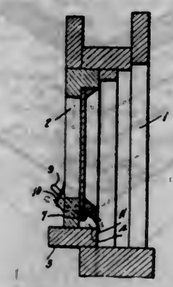


the plate member, a shield comprising a plurality of members overlapping the edge of the blade for a portion of its length, these members each including a foot portion, and means for adjustably mounting the foot members on the plate.

1,621,358. ELECTRIC STOP MOTION FOR LOOMS. JAMES DONNELLY, Philadelphia, Pa. Filed July 22, 1926. Serial No. 124,165. 5 Claims. (Cl. 139—337.)

1. In combination with a loom employing heddle frames, a normally taut harness for operating each of said heddle frames and an electrical stop motion for said loom, each harness including a horizontally extending element; an independent normally open switch for each harness having a fixed contact and a movable contact, said movable contact being operatively associated with the horizontal element of said harness, said movable contact being adapted to engage said fixed contact when the harness becomes slack; a frame bridging said horizontal element for supporting said contacts; means for insulating one of said contacts from said frame; a frame for supporting said movable elements in said bridge frame; means for adjusting said supporting frame relative to the normal operating plane of said horizontal element and means for adjusting said fixed contact relative to said movable contact.

1,621,359. GLASS-WORKING MACHINE. JOHN T. FAGAN and JOHN J. MALLOY, Cleveland, Ohio, assignors to General Electric Company, a Corporation of New York. Filed Feb. 7, 1921. Serial No. 442,958. 5 Claims. (Cl. 49—2.)

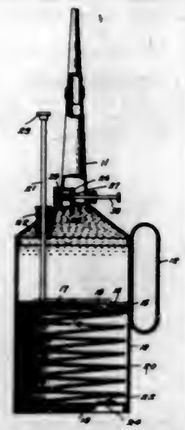


1. In a glass working machine, means for holding each end of a glass tube blank, means for successively advancing a series of said holders, means for aligning said blanks relative to each other, means for continuously and synchronously rotating said holders during their advancement, means for heating the rotating blanks locally and means for applying a gradual pull longitudinally of the said heated blanks whereby a contraction is formed on each of said blanks.

1,621,360. INCANDESCENT LAMP. ROBERT N. FALGE, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Apr. 22, 1922. Serial No. 556,080. 2 Claims. (Cl. 176—34.)

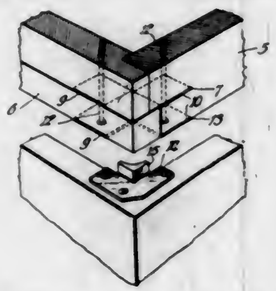
1. An electric incandescent lamp for vehicle headlamps comprising a base, a concentrated filament and a clear glass bulb having its wall of substantially uniform thickness throughout and having that portion thereof opposite to the base of the lamp of substantially spherical contour but slightly rippled so as to prevent the back reflection of a definite image of the filament without affecting appreciably the light transmitted therethrough.

1,621,361. CASEMENT-WINDOW WEATHER STRIP. ISAAC W. FISHER, Laguna Beach, Calif. Filed Dec. 31, 1924. Serial No. 759,118. 1 Claim. (Cl. 20—65.)



In a casement window, a sash having a rabbet at the lower portion of its outer face, plates at opposite sides of the sash closing the ends of said rabbet, a rod journaled in said plates, a weather strip on the rod to extend below the sash and engage over the outer edge of the sill of the window, an arm integral with one end of the rod having a grip parallel to the major portion of said rod and also integral with the rod, said grip being disposed in the rear of the sash, and one of the plates having a portion extending to the rear of the sash to coact with said grip.

1,621,362. OIL CAN. PHILIZA H. FONTAINE, Petersburg, N. Dak., assignor of one-half to Leo F. Boedigheimer, Petersburg, N. Dak. Filed Aug. 30, 1926. Serial No. 132,557. 1 Claim. (Cl. 221—48.)



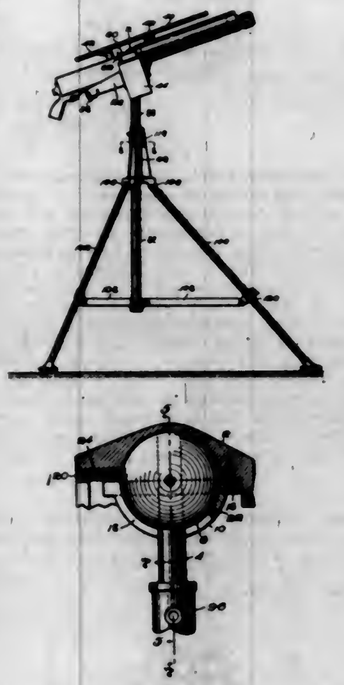
An oil can including a spout, a valve controlling communication between the spout and can, said can having a filling opening in the bottom thereof, a cap normally closing said opening, a plunger operable within the can and having a sealing fit with the body to suck oil into the can through the filling opening when moved in one direction, a spring influencing said plunger in one direc-

tion, a rod connected with the plunger for depressing the latter against the tension of said spring, said plunger having a central opening, a check valve reposing upon

said plunger and normally closing said opening, and adapted to be opened when the plunger is depressed to allow the oil admitted to the can to pass into the upper portion of the latter.

1,621,363. BOX OR CRATE. AMOS L. FOREMAN, Chicago, Ill., assignor to Milk Bottle Crate Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 11, 1924. Serial No. 691,942. 1 Claim. (Cl. 217—69.)

The combination with a box or crate, of means for reinforcing and strengthening an exposed corner of the same, said means comprising an angularly bent channel member embodying a web and pairs of flanges applied to the inner walls of the box or crate at an exposed corner thereof, the web of said channel member providing a facing for the meeting inner walls of the box or crate at said corner and one flange of each pair being embedded in said walls and the other flanges bearing against the exposed edges of the box or crate at said corner, and fastenings projecting through said flanges and embedded in the box or crate.



1,621,364. ATTACHMENT PLUG AND RECEPTACLE. GILBERT W. GOODRIDGE, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed July 23, 1921. Serial No. 487,138. 7 Claims. (Cl. 173—330.)

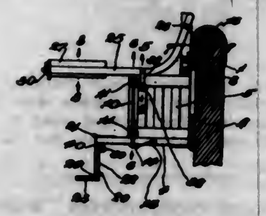
1. An attachment plug receptacle comprising an insulating block recessed to afford a plug-receiving chamber with ribs projecting into said chamber at opposite sides thereof, receptacle contacts arranged within said chamber and overhung by the upper portions of said ribs, together with a face plate overlying said insulating body and apertured to permit entrance of a cooperating at-

tachment plug, together with inwardly swinging doors mounted in said face plate and inwardly displaceable into the receptacle chamber above said ribs.

1,621,365. GUN MOUNT. SAMUEL G. GREEN, Camp Benning, Ga., and JULIAN S. HATCHER, Annapolis, Md., assignors to United States Machine Gun Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 6, 1922. Serial No. 599,433. 12 Claims. (Cl 89—40.)

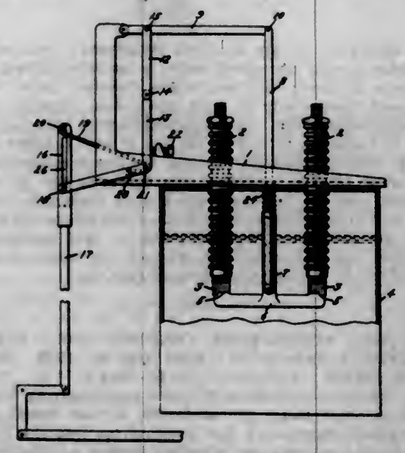
1. In a gun mount, in combination, a support; a sphere carried by said support; a socket provided with a spherical chamber slidably embracing said sphere; gun carrying means carried by said socket; a slot provided in the wall of said socket; a part of said support to engage said slot for rotary movement of said socket about the axis of said part and for sliding movement of said part in said slot.

1,621,366. CENTRIFUGAL FRICTION COUPLING. JÖRGEN MICHELET HALS, Oslo, Norway, assignor to J. M. Hals & Co. A/S., Christiania, Norway. Filed Dec. 15, 1922, Serial No. 607,262, and in Norway Mar. 31, 1922. 2 Claims. (Cl. 192—105.)



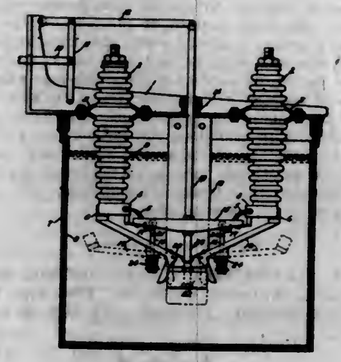
1. In a centrifugal friction coupling a driving element, a radial pin secured rigidly thereto, a centrifugal body

supported by said pin and having an enlarged saddle shaped recess for taking up the pin so as to allow an



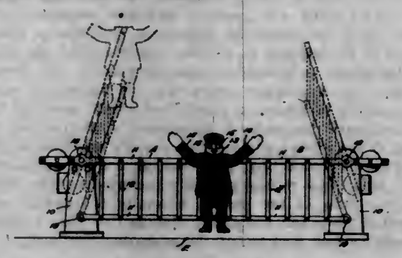
automatic peripheral as well as a radial and angular adjustment of the centrifugal body and a driven part surrounding said body and coacting with the same.

1,621,367. COLLAPSIBLE CHAIR AND SWING. ORIN HAWKINS, Waukegan, Ill. Filed Apr. 23, 1923. Serial No. 634,128. 1 Claim. (Cl. 155—79.)



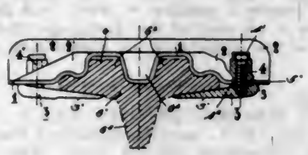
A chair of the character described including a seat, a back portion, sides hinged to the back portion and operatively resting on the edges of the seat, a movable tray including supporting arms pivotally connected at one end to the upper end of the back and their other ends operatively resting on the upper edges of said sides, supporting pins carried by the arms, locking plates carried by said pins, coil springs on the pins normally urging the plates toward the arms and one end of said plates having normal engagement with the sides to prevent movement of the arms relative to the sides.

1,621,368. SWITCH-OPERATING MECHANISM. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 1, 1922. Serial No. 565,198. 2 Claims. (Cl. 200—153.)



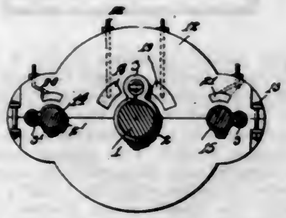
1. The combination of contacts separable to break a circuit, a toggle releasable to permit the separation of the contacts, means for moving said toggle to close said contacts, said means acting upon said toggle through a lost motion connection and a spring interposed at said lost motion connection for assisting the separation of said contacts upon their release and for causing said means to assume a position in which said lost motion is taken up at the start of the closing operation, whereby the force of the spring does not oppose said closing operation.

1,621,369. ELECTRIC SWITCH. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 11, 1922. Serial No. 600,200. 5 Claims. (Cl. 200—150.)



2. An electric switch comprising a pair of fixed main contacts, a bridging member adapted to engage said contacts, a pair of fixed secondary contacts, movable contact members connected together and arranged to bridge said secondary contacts, and a locking member movable with said bridging member, said locking member being arranged to have sliding engagement on opposite sides with said contact members when the bridging member is initially moved from closed circuit position for holding the contact members locked in closed circuit position.

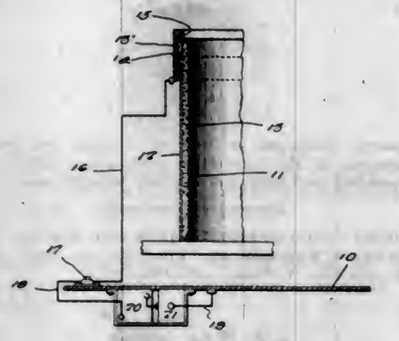
1,621,370. CROSSING GATE. JOHN HONOR, Southwest, Pa., assignor of one-half to Bennie Watzman, Southwest, Pa. Filed Oct. 19, 1923. Serial No. 669,590. 1 Claim. (Cl. 192—142.)



A device of the character described, spaced shafts, a motor, operative connection between the motor and one of said shafts, means operatively connecting said shafts spaced stationary contacts carried by the housing, a rotatable disk mounted for movement relative to said contacts, said disk being formed with diametrically opposed notches, means initially moving said disk into engagement with the stationary contacts, means forming connection between the stationary contacts and the motor for energizing the same, means forming operative connection between the motor driven mechanism and the disk to provide for rotation of the disk until the notches therein are moved opposite the stationary contacts.

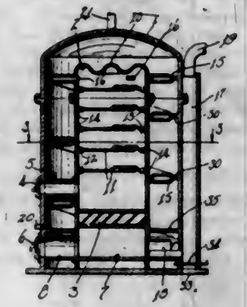
1,621,371. REMOVABLE CREEPER FOR TRACTOR BELTS. ADOLPHE KÉGRESSE, Paris, France. Filed Aug. 14, 1924, Serial No. 732,093, and in France Sept. 22, 1923. 5 Claims. (Cl. 305—10.)

5. A creeper for an endless track belt, comprising a base member adapted to extend transversely across and fit against the outer surface of the belt and to project beyond the same at opposite ends, said ends having stud holes therein and slots beyond said holes, ground-gripping ribs on the base member, clamping lugs adapted to be disposed against the inner surface of the belt directly opposite the ends of the base member and having tenons for engagement in said slots, threaded studs fixed to said lugs and projecting through said stud holes, and nuts fitted on the projecting portions of the studs and adapted to be tightened into binding engagement with the adjacent face of the base member.



1,621,372. AUTOMOBILE SIGNAL CONTROL SWITCH. WILLIAM H. KRAUSER, Milton, Pa. Filed Sept. 7, 1922. Serial No. 586,686. 2 Claims. (Cl. 200—59.)

1. A switching apparatus comprising a switch plate of substantially circular formation having lateral semi-circular projections, means for detachably mounting the said switch plates upon the steering column and control rods of a vehicle, contact plates secured upon the upper face of the switch plates adjacent the steering column and control rods, and contact members adapted to be secured upon the operating apparatus including a sleeve adapted to be disposed in parallel position with the operating members, detachable clamps secured to the sleeves arranged for detachable connection of the sleeve upon the operating members, a cylindrical shank mounted for axial movement in each of the sleeves, spring means arranged in the sleeves adapted to normally urge the shanks in outwardly projecting positions in contact with the switch plate and rollers pivotally mounted at the outer projecting ends of the shanks normally contacting with the switch plate and adapted to engage the contact plates in predetermined position of the operating members.

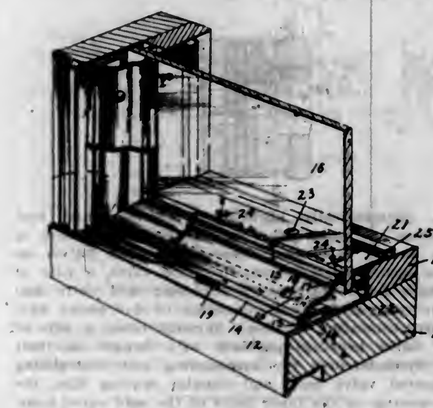


1,621,373. LIGHTER. CHARLES E. MCMANAMAN, Swayzee, Ind. Filed Aug. 11, 1923. Serial No. 656,966. 1 Claim. (Cl. 175—115.)

An igniter of the character described comprising a base, a pair of cylindrical members of different diameters providing inner and outer sections respectively, the inner section extending above the upper periphery of its companion section, a wick interposed between the sections and having an appreciable portion exposed, a dielectric annulus having its lower portion reduced in thickness mounted upon and encircling the outer section and having its enlarged portion resting upon the upper periphery thereof, a sparking point carried by said annulus and in juxtaposition with the upper periphery of the inner section, electric conducting means connected with a suitable

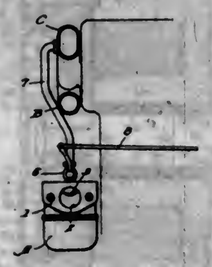
source of energy which is in turn connected with the inner section whereby the circuit when closed will cause a spark to jump from the sparking point to the upper periphery of the inner section in order that the wick may be ignited.

1,621,374. BOILER CONSTRUCTION. WILLIAM FRANCIS MCPHEE, Chicago, Ill. Filed June 28, 1923. Serial No. 648,324. 1 Claim. (Cl. 122—183.)



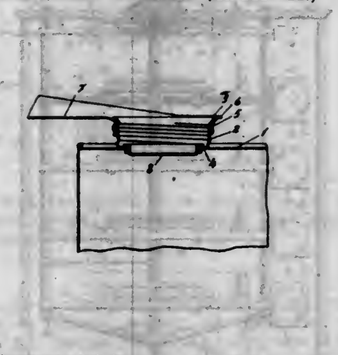
A device of the type described comprising a combustion chamber having corrugated walls, a water-containing receptacle enclosing said combustion chamber, spiral coils disposed horizontally in said combustion chamber and communicating with said water-containing receptacle, a flue in communication with the top of said chamber and being coiled downwardly, whereby the flue is immersed in the water of said receptacle, said flue being flat in cross section, and the inner surface thereof conforming with the wall of said combustion chamber, and means for spacing said flue away from the walls of said combustion chamber and said receptacle, whereby the water in said receptacle may completely surround said flue.

1,621,375. STORE-FRONT CONSTRUCTION. ROBERT MICHAELS, Chicago, Ill. Filed Sept. 22, 1923. Serial No. 664,206. 4 Claims. (Cl. 20—56.4.)



1. Window construction having a glass-engaging hollow sash of sheet metal provided with a base extended a substantial distance in the direction towards the glass, and having an obliquely extending portion reaching from the outer side of the base towards the glass, said obliquely extending portion and said base being joined and the base being plane and having at its outer and inner

edges vertical flanges, and downwardly and inwardly extending screws passing through alining holes in said obliquely extending portion and said base, the screws



having heads to engage and exert clamping pressure against said obliquely extending portion, the holes in the base being situated between said flanges.

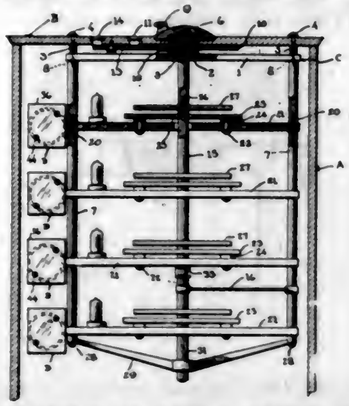
1,621,376. ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. JESSE EARLE NILES, Pontiac, Mich. Filed Sept. 22, 1922. Serial No. 589,960. 1 Claim. (Cl. 123—119.)

An attachment of the character described comprising a body adapted to be substituted for the gasket usually placed between a carbureter and the intake manifold of an internal combustion engine, said body having relatively flat faces and a central passage providing spaced openings upon its opposite sides for receiving the conventional form of fastening means therethrough securing and associating the carbureter with the intake manifold, a downwardly extending forwardly projecting trough-shaped partition arranged in the upper portion of the central passage and having communication with an inlet opening in the top of the body and extending an appropriate distance within the adjacent end of the intake manifold, valve controlled air inlet means arranged within the inlet opening in the top of the body and communicating with the partition, and means communicating an exhaust manifold with the valve controlled inlet means whereby exhaust gases may be introduced into the intake manifold for heating the fuel mixture from the carbureter and force the same upwardly within the intake manifold whereby easier starting and less fuel will be attained.

1,621,377. METAL-RING MOUTHPIECE WITH REVOLVING LIP FOR TINS, CANS, AND OTHER RECEPTACLES. JOSÉ MA. OLLER TINTORÉ, Barcelona, Spain. Filed Dec. 3, 1924, Serial No. 753,712, and in Spain Dec. 3, 1923. 2 Claims. (Cl. 221—11.)

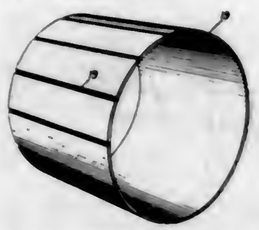
1. An improvement in cans, comprising a sheet metal mouthpiece stamped to form an exterior-interior thread, a threaded ring and a threaded pouring lip member engaging respectively the inside and outside of said thread in a common zone of said mouthpiece.

1,621,378. VEHICLE BRAKE. THOMAS H. REEDER, Glendive, Mont. Filed Apr. 14, 1924. Serial No. 706,450. 1 Claim. (Cl. 188—5.)



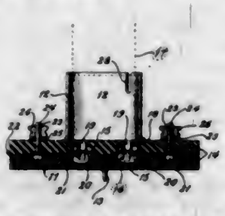
In combination with the rear axle and frame of a motor vehicle, a brake including substantially long plates secured to the axle and supported thereunder, each of said plates having a forwardly and downwardly extended end portion, a link pivotally connected with each plate at the opposite end thereof, a link pivotally connected with each of the first mentioned links, brake shoes having ground engaging portions and having one of their respective ends pivotally connected with the forwardly and downwardly extended ends of the plates, the last mentioned links being connected with the brake shoes at points adjacent to the opposite ends thereof, operating rods pivotally connected with the frame of the vehicle and having pivotal connection with the links at their points of pivotal connection for moving the ground engaging portions of the brake shoes to their active positions.

1,621,379. VARIABLE CONDENSER. THOMAS T. RODGERS, MARC A. GIELIN, FRANCIS K. MOORE, and GEORGE T. MOORE, Milwaukee, Wis., assignors to Rodgers Radio Corporation, West Allis, Wis., a Corporation of Wisconsin. Filed Sept. 24, 1924. Serial No. 739,490. 4 Claims. (Cl. 175—41.5.)



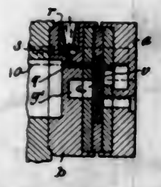
1. Radio tuning apparatus, comprising a frame formed with insulating partitions each having an opening therein, an axially movable shaft extending through the openings in said partitions, a plurality of condenser units each having a fixed plate and a movable plate having the whole

of one of its surfaces opposed to the passive plate at all times, said movable plates being connected with the shaft for simultaneous movement to vary the distance be-



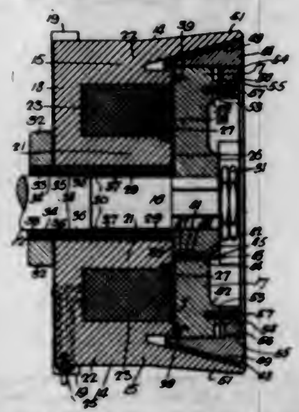
tween the plates of the respective condensers by equal increments, and means for independently adjusting said fixed plates.

1,621,380. PROCESS FOR MANUFACTURING SHEET METAL. WILLIAM E. RUDGE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 28, 1924. Serial No. 716,522. 1 Claim. (Cl. 29—160.4.)



The method of manufacturing metal blanks preliminary to rolling into sheets which consists in casting molten metal into cylindrical form having a plurality of longitudinal grooves, and fracturing the metal in line with said grooves to separate said cylinder into a plurality of segments.

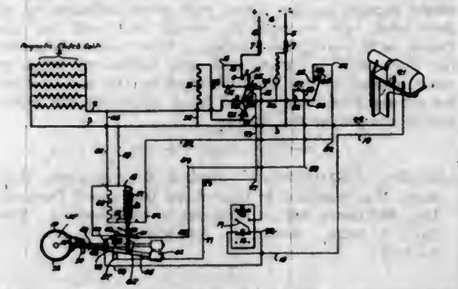
1,621,381. TUBE SOCKET. FRANCIS S. SINCLAIRE, Cambridge, Mass. Filed Feb. 19, 1924. Serial No. 693,923. 1 Claim. (Cl. 173—328.)



An electrical connector comprising a pair of plates of insulating material having a mercury cup provided therebetween, a collar depending from one of said plates into said cup to form a trap at the top of the same and through which collar one of the parts to be electrically connected is adapted to be inserted, and a conductor strip interposed between said pair of plates and having one end extending into said mercury cup and its other end projecting beyond the sides of said plates.

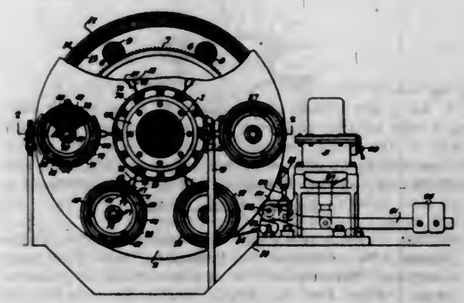
1,621,382. PNEUMATICALLY-OPERATED PERCUSSIVE HAND TOOL. CLEMENT HENRY STEVENS, High Wycombe, England. Filed Oct. 20, 1924, Serial No. 744,726, and in Great Britain Sept. 26, 1924. 2 Claims. (Cl. 121—24.)

1. A pneumatically operated percussive hand tool comprising the combination of a cylinder, a piston, a handle and a valve box comprising a disc valve, an annular spacing disc surrounding said valve, a pair of removable ported valve seats enclosing said valve and annular spacing disc and consisting of flat plates having ports consisting of simple through holes, a pair of ported valve housings provided with flanges on their outer circumferences for surrounding and centralizing said ported valve seats and annular spacing disc, the ports opening on the inner faces of the said valve housings coinciding with the ports in the flat plates forming the renewable valve seats, means for admitting air under pressure to said valve box and conveying said air to the required ports in the cylinder.



1,621,383. MAGNETIC CLUTCH. JOSEPH W. THROPP, Trenton, N. J. Filed June 29, 1923. Serial No. 648,525. 10 Claims. (Cl. 192—84.)

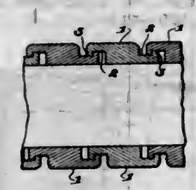
1. In combination, a shaft, a field piece comprising a magnetizable member and a magnetizing winding concentrically mounted about said shaft, said field piece having one end adapted to serve as a pole face, an armature member slidably mounted on said shaft in such manner as to be movable toward and away from said pole face, two friction elements, one carried by the armature member and one mounted in relatively fixed position, and spacing members supplemental to the friction elements for limiting the forward movement of said armature member.



1,621,384. CONTROL SYSTEM. JOSEPH W. THROPP, Trenton, N. J. Filed Aug. 13, 1924. Serial No. 731,889. 13 Claims. (Cl. 192—12.)

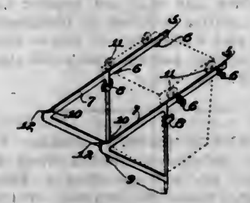
4. The combination in a control system, of a clutch coil, a brake, a solenoid for moving the brake from its applied position to its released position, main circuits for the said coil and the said solenoid, a supplemental circuit for the solenoid including a resistor, switch mechanism for the said main circuits including a manually operable switch for causing the substan-

tially simultaneous energization of both the coil and the solenoid to thereby effect the engagement of the clutch and the release of the brake, and a cut-out switch for automatically interrupting the main circuit to the solenoid when the brake is in its released position.



1,621,385. POWER-TRANSMISSION SYSTEM. JOSEPH W. THROPP, Trenton, N. J. Filed Aug. 13, 1924. Serial No. 731,890. Renewed Dec. 11, 1926. 17 Claims. (Cl. 192—12.)

1. In a clutch, the combination of a rotatable member, a gear secured to the rotatable member, a second member rotatable concentrically with the first member, a pinion movable with the second member and meshing with the said gear, a shaft rotatably mounted on the second member and carrying the pinion, a friction element having a splined connection with the shaft near the outer end thereof, a second friction element fixedly secured to the said second rotatable member, a spring tending to move the first said friction element outward along the shaft away from the second friction element, means carried by the shaft for limiting the last said movement, and electro-magnetic means for moving the first said friction element in opposition to the spring inward along the shaft into engagement with the second friction element.

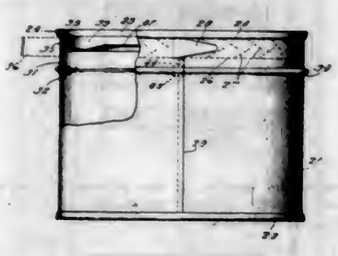


1,621,386. REFRIGERATOR WALL. VIRGIL P. WARREN, Atlanta, Ga. Filed Sept. 24, 1924. Serial No. 739,727. 1 Claim. (Cl. 20—4.)

A wall including framework, siding strips secured to said framework and having similar slidably connected interlocking joints formed by providing diagonally opposite edges of each strip with rabbets of the same width and depth and grooving the face of each rabbet parallel to the sides of said strip similarly to form a lateral tongue on each rabbeted edge of said strip, the groove so formed being substantially wider than the width of said tongue, the strips being secured to said framework with the tongues of each strip in the grooves of the adjacent strips and in lateral contact with the tongues of said adjacent strips to allow each tongue to slide laterally, when the strips expand, in

contact with the bottom of the groove in the adjacent strip, and thereby provide a double seal against air leakage around the joint.

1,621,387. REFRIGERATOR-ICE-TANK SUPPORT. VIRGIL P. WARREN, Atlanta, Ga. Filed Dec. 2, 1924. Serial No. 753,509. 3 Claims. (Cl. 211—7.)

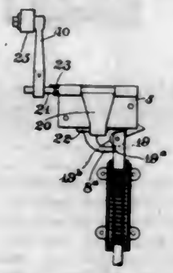


1. A refrigerator ice tank support comprising a pair of spaced track members, a pair of pivoted track frames positioned in front of said track members and each adapted to swing horizontally about a vertical axis, one of said track frames being pivoted slightly formward of the other of said frames.

1,621,388. RUBBER FLAP. GEORGE H. WHEATLEY, Chicago, Ill. Filed Dec. 3, 1923. Serial No. 678,135. 2 Claims. (Cl. 152—20.)

1. An all-rubber, endless and one-piece tire flap having a sectional contour prior to installation, generally the same as the contour after the installation, adapted to protect the inner tube from contact with the rim and from pinching by the tire base, said contour comprising a concave section having an opposite convex side forming a smooth fillet at said tire base but not following the outline of the tire section at said base under conditions of inflation, said flap being relatively thick at the central portion thereof and tapering toward the edges thereof, and adapted to be stretched over the edges of a rim to be inserted between the inner tube and said rim and to extend up on the inner surface of the base portion of said tire.

1,621,389. INTERIOR-COLLAR CAN. MAGNUS E. WIDELL, Cincinnati, Ohio, assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 20, 1923. Serial No. 633,366. 4 Claims. (Cl. 220—53.)

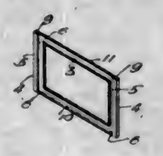


1. A container, comprising a body having an end member permanently secured thereto, and a separate collar secured within the upper part of the body, said body being scored beneath the top opposite to said collar to provide a tearing strip adapted to be removed to open the container, and said end member having a depressed central portion adapted to frictionally fit within said collar, and a shoulder of larger diameter than said depressed central portion which fits tightly within the mouth of the can body.

1,621,390. FURNACE GRATE. JOSEPH T. WILLARD, O'Fallon, Ill., assignor to Eureka Steel Range Company, O'Fallon, Ill., a Corporation of Illinois. Filed Mar. 16, 1923. Serial No. 625,561. 7 Claims. (Cl. 126—170.)

1. A grate provided with a grate-rest, said grate-rest having a plurality of discharging openings, closure means formed on said grate for each of said openings located on a plane below said openings, and a plurality of pushing elements borne by said grate located on a plane above said openings movable with said closure means for co-operation with said openings.

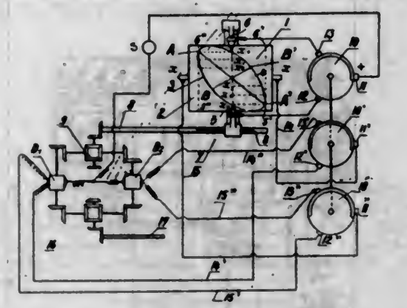
1,621,391. ELEVATOR-DOOR LATCH. WILLIAM A. WILLIAMS, Columbus, Ohio. Filed Sept. 26, 1923. Serial No. 664,952. 2 Claims. (Cl. 187—31.)



1. Apparatus for an electrically operated elevator including, in combination, a power circuit having electrodes included in the power circuit, a circuit closer case containing said electrodes and having a hinged cover, a manually operated rectilinearly moving spring actuated door latch bolt carried by the car and adapted to engage said case when the door is closed, a circuit closer carried by the cover, said cover actuated by the door latch bolt to close the circuit and hold the same closed, said cover also having a latch cooperating with the latch bolt to latch said bolt, means to latch the cover, means on the car controlled by the power circuit for releasing the last named latch when the car arrives and is stopped at the door.

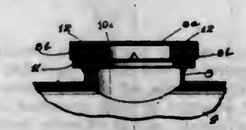
1,621,392. UNION SUIT. JOSEPH M. ATKINSON, Baltimore, Md., assignor to Oppenheim Oberndorff Company, Inc., Baltimore, Md., a Corporation of Maryland. Filed June 4, 1924. Serial No. 717,804. 2 Claims. (Cl 2—78.)

1. As a new article of manufacture, a union suit having a side opening beginning at a point adjacent the side seam at the waist line and extending obliquely to the bottom and front portion of one leg of the garment, and fastening devices for closing the edges of said opening.



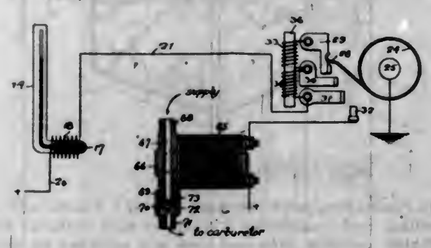
1,621,393. CARD HOLDER. CONRAD BERGMANN, Philadelphia, Pa., assignor to Columbia Steel Equipment Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 17, 1924. Serial No. 756,600. 4 Claims. (Cl. 40—16.)

1. The combination with a panel having a pair of parallel spaced slots, a plate having offset flanges adapted for insertion through the slots from one side of the panel, and a card-holding frame having recesses adapted for interlocking reception of said flanges whereby the frame is supported on the other face of said panel.



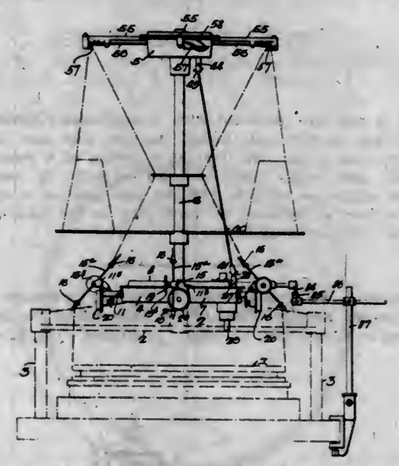
1,621,394. MECHANICAL INTEGRATING DEVICE AND APPLICATIONS OF THE SAME, CHIEFLY TO A NAVIGATION-COURSE RECORDER. CHARLES FREDERIC JEAN MARIE BERTIN, Mustapha, Alger, Algeria. Filed June 27, 1924, Serial No. 722,834, and in France June 30, 1923. 9 Claims. (Cl. 234—26.5.)

1. A course recorder adding algebraically successive values of components y along a given direction of successive course elements of predetermined length making a variable angle with said direction comprising an electric circuit, a movable element, means whereby said element moves in proportion with the variations of x, means whereby said electric circuit is temporarily closed each time a course element of predetermined length has been covered, a motor fed by said electric circuit, means whereby the position of the movable element causes the



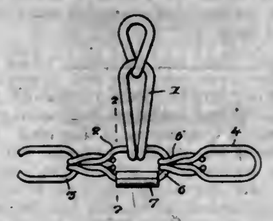
rotation of motor to be proportional to the value of y at the time of the closing of the circuit and means for adding the successive rotations of the motor.

1,621,395. VALVE PAD FOR WIND INSTRUMENTS. ANTHONY CICCONE, Chicago, Ill. Filed July 5, 1923. Serial No. 649,665. 3 Claims. (Cl. 84—385.)



1. A valve for wind musical instruments comprising a cup-shaped member having an annular wall, a filler within said cup-shaped member and having an annular wall inwardly of and in spaced parallel relation to said first wall thereby defining an annular channel, and a compressible annular pad member received in said channel and being extended beyond said walls whereby the forward portion of the same may be compressed laterally, the entire forward portion of said end surface of the pad being free whereby any portion of said surface may be seated.

1,621,396. THERMO-ELECTRIC INDICATOR AND SAFETY DEVICE. WILLIAM A. COLLINS, Philadelphia, Pa., assignor, by mesne assignments, to The Safe-T-Stat Co., Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 19, 1923. Serial No. 633,315. 4 Claims. (Cl. 177—351.)



3. The combination with an internal combustion engine, of a rheostat including means controlled by the temperature of the engine, a heating resistance, an electric circuit including said resistance and said rheostat, and a visible indicator consisting of a liquid column thermometer placed in proximity to and to be affected by said resistance.

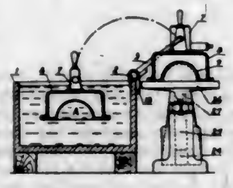
1,621,397. STOP MOTION FOR KNITTING MACHINES. FRANK CRAWFORD, Sr., New Brunswick, N. J., assignor to The Crawford Manufacturing Company, New Brunswick, N. J., a Corporation of New Jersey. Filed Dec. 6, 1923. Serial No. 678,966. 10 Claims. (Cl. 66—160.)

9. The combination in a stop motion, a bracket, a head pivoted to the bracket, friction means for holding the head; a disk on the head; a rod on the head having an eye at each end; an arm for releasing the stop motion; a ring on the arm arranged to be held in position by the thread passing through the eyes for maintaining the said arm in a normal inoperative position and adapted to move said arm to an operative position to effect the operation of the stop motion when said ring is released by the thread.

1,621,398. ANTISKID CHAIN. EARL E. CRONENWETH, Wilkinsburg, Pa. Filed June 27, 1924. Serial No. 722,781. 1 Claim. (Cl. 152—14.)

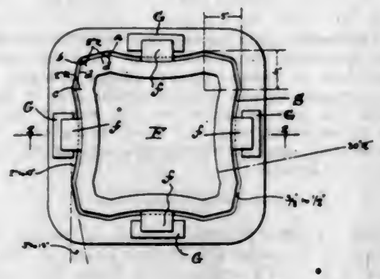
In combination with an anti-skid chain, extending side chains and cross chains whose end links are connected to certain of the links of the side chains, of a split metal sleeve arranged on and secured to that arm of the link opposite the arm to which the end link of the cross chain is connected, and said sleeve being of a length approximately equal to that of the arm of the link to which it is secured.

1,621,399. PAPER SIZING. JUDSON A. DECEW, Mount Vernon, N. Y., assignor to Process Engineers, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 11, 1923. Serial No. 631,371. 5 Claims. (Cl. 92—21.)



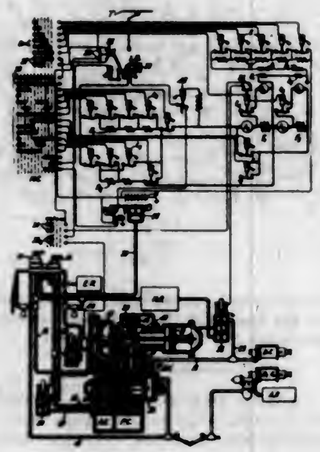
2. A method of coagulating rubber emulsions on paper making fibres while preparing the stock for the paper machine, which consists in mixing the rubber emulsions with the fibres in the presence of a previously precipitated aluminum hydrate formed by adding a soluble aluminum salt to a soluble alkali.

1,621,400. PILE WIRE. NELSON H. FAIRWEATHER, Everett, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Feb. 10, 1923. Serial No. 618,305. 3 Claims. (Cl. 139—44.)



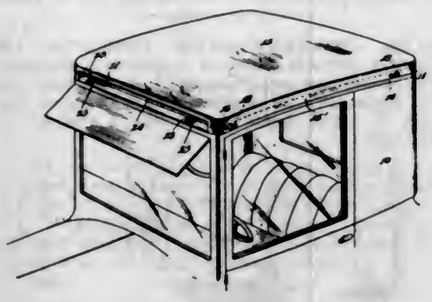
1. A pile wire provided with a longitudinal recess terminating at both ends within the wire and open at the upper edge of the wire for the reception of a removable blade, said recess being bounded laterally by resilient walls which are integral with the wire and are so spaced as to exert a frictional retaining grip on the sides of the blade when inserted in the recess.

1,621,401. PULP-MOLDING MACHINE. FERNAND FOY, Gentilly, France. Filed Oct. 6, 1925. Serial No. 60,801, and in France Oct. 15, 1924. 18 Claims. (Cl. 92—57.)



1. A molding machine, comprising a press embodying a movable table adapted to support a mold thereon and provided with a conduit which opens into the interior of the mold; means cooperative with the mold to press the same forcibly against said table under the action of the press; and means for forcing a heated fluid body under pressure through said conduit to shape and dry an article in said mold.

1,621,402. INGOT MOLD. EMIL GATHMANN, Baltimore, Md., assignor to The Gathmann Engineering Company, Baltimore, Md., a Corporation of Maryland. Filed Aug. 20, 1923. Serial No. 658,371. 4 Claims. (Cl. 22—147.)

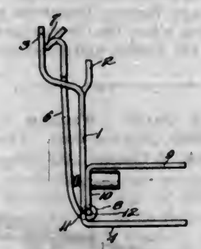


1. A mold top or feeder for ingot molds having a chamber provided with four primary side walls of convex contour and four widened corners, each provided with three curved salients intervening between the adjacent primary side walls of the feeder.

1,621,403. BRAKING SYSTEM. WILLIAM S. H. HAMILTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 4, 1925. Serial No. 34,967. 17 Claims. (Cl. 303—3.)

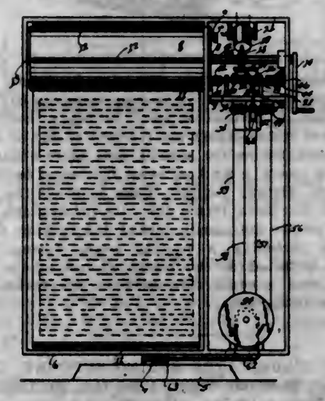
1. In a braking system for railway trains, the combination with separately and jointly operable air braking and electric braking means, of control means selectively operable to effect separate or joint operation of said braking means, and automatic means effective during separate operation of one of said braking means for insuring application of the other braking means upon failure of said one braking means.

1,621,404. FALSE ROOF FOR MOTOR VEHICLES. JOHN W. HARVEY, Denver, Colo. Filed Apr. 15, 1925. Serial No. 23,325. 1 Claim. (Cl. 296—137.)



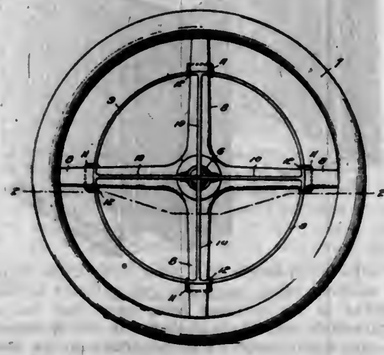
In combination with the main roof of a vehicle and an auxiliary roof, comprising a frame of rigid material and a flexible covering, stretched over and extended at opposite sides to form flaps, of bracket members secured to opposite sides of the main roof, complemental bracket members secured to opposite sides of the frame of the auxiliary roof, said bracket members supporting the auxiliary roof spaced above the main roof, and fastening means for securing the bracket members to hold the auxiliary roof in place, the supporting brackets and fastening means being concealed by the said flaps.

1,621,405. RIVET-SETTING MACHINE. ARTHUR R. HAVENER, Wayland, Mass., assignor to Judson L. Thomson Manufacturing Co., Waltham, Mass., a Corporation of Massachusetts. Filed Apr. 5, 1926. Serial No. 99,812. 6 Claims. (Cl. 218—3.)



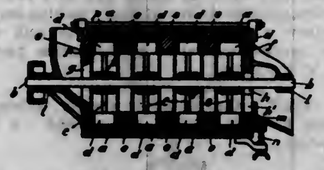
1. A rivet setting machine having, in combination, an anvil and a work support extending across the top of said anvil, the work support being provided with a slot extending transversely of the anvil and with a groove in its upper face intersecting said slot on opposite sides thereof.

1,621,406. SUSPENSION MEANS FOR TUBE FRAMES. EDGAR F. HATHAWAY, Wellesley, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 28, 1922. Serial No. 591,169. 10 Claims. (Cl. 139—10.)



9. In a loom, a pattern chain, a supporting tube, a spool bearing bracket secured thereto, a substantially rigid chain-engaging hook pivotally mounted on said bracket and extending within the tube, and means to force said hook yieldingly outward.

1,621,407. SCROLL-DISPLAYING DEVICE. DANIEL HILL, Porterville, Calif. Filed Jan. 18, 1926. Serial No. 82,107. 2 Claims. (Cl. 40—53.)

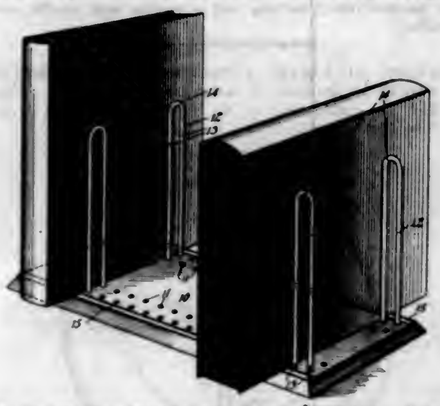


1. In a device of the character described, a casing rotatably mounted upon a base, a shaft positioned in said casing, a cylinder positioned on said shaft, a plurality of scrolls positioned within said cylinder and adapted to be unreeled therefrom, and rereeled thereonto, a gear positioned on said shaft, a motor positioned within said device, a worm adapted to be rotated by said motor, means for intermittently moving said worm in contact with said gear so as to rotate said cylinder, and means for intermittently reeling and unreeling said scrolls successively.

1,621,408. SIGNALING ATTACHMENT FOR STEERING WHEELS. MICHAEL B. HOLSTEIN, Richland, Pa. Filed Nov. 13, 1925. Serial No. 68,899. 5 Claims. (Cl. 200—59.)

1. The combination with a steering wheel for motor vehicles, of a signal-actuating plunger carried by said wheel and an operating lever pivoted at one end upon the steering wheel and directly contacting with said plunger at its point of crossing the latter and terminating adjacent the inner periphery of the steering wheel.

1,621,409. MANUFACTURE OF COCOA, CHOCOLATE, AND THE LIKE. HEINRICH HORN, Dresden, Germany. Filed Nov. 19, 1925, Serial No. 70,166, and in Germany Oct. 22, 1924. 2 Claims. (Cl. 83—11.)



1. A beater mill for the disintegration and extra fine comminution of pasty and liquid materials, comprising rotatable beaters, and chamber walls enclosing said beaters and only open inwardly, the internal surfaces of said chamber walls being formed as retarding and frictional surfaces, said walls uninterruptedly surrounding the beaters so closely that the material under treatment is prevented from escaping from the action of said beaters, and the head surfaces of the beaters rising in the direction opposite to the direction of rotation and the lateral surfaces of said beaters converging in the direction of rotation, for the purpose of driving the layers of material that are being carried round by the beaters against the layers of material that are being retarded by the chamber walls and thereby increasing the grinding pressure.

1,621,410. SUPPORTING RACK. EVERETT W. HOUSE, Elizabeth, N. J. Filed Jan. 20, 1926. Serial No. 82,520. 1 Claim. (Cl. 45—4.)

A supporting rack including a base having a pair of rows of vertically disposed apertures in its upper face adjacent each opposite marginal edge, the openings in each row being spaced apart the same distance as the

spacing between the rows of each pair, and a plurality of inverted U-shaped resilient partition members each having a pair of legs joined by a bight at the upper end and having free lower extremities normally spaced apart a distance approximately equal to the distance of the spac-

ing of adjacent openings, the lower extremities of each of said members being engaged in two adjacent openings, the spacing of the openings being such that the said members may be selectively anchored in the openings to dispose the bights respectively longitudinally or transversely of the base.

1,621,411. LICENSE-PLATE UNIT. ALFRED HORATIO HUMPHREY, Salem, N. Y. Filed Dec. 8, 1925. Serial No. 74,105. 3 Claims. (Cl. 40—132.)

1. A license plate unit including a casing, members integral respectively with the casing and with said license plate, and irremovable means hingedly uniting said members; together with means additional to said integral members to prevent separation of the license plate from the casing at the hinge.

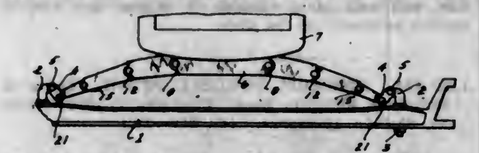
1,621,412. SIGN. ALFRED H. HUMPHREY, Salem, N. Y. Filed May 5, 1926. Serial No. 106,904. 5 Claims. (Cl. 40—133.)

1. A sign including two series of casings flaring outwardly and an electric lamp in each casing, the two series of casings being disposed back to back and in staggered relation and spaced to form a sinuous duct therebetween, and conductor wires disposed in said duct and connected with said lamp.

1,621,413. FILTERING DEVICE. JOE JAMES, Brownwood, Mo. Filed Sept. 18, 1925. Serial No. 57,167. 3 Claims. (Cl. 210—97.)

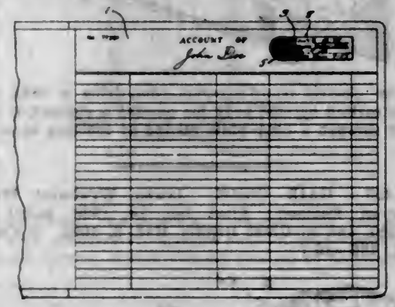
1. A device of the class described, comprising a shell, a funnel-shaped element positioned within the upper portion of the shell and forming therewith an air chamber, means for producing a box like receptacle within the shell below the edge of the funnel, and filtering material within this receptacle.

1,621,414. PUMP JACK. WILLIAM G. JENSEN and KRESTEN R. JENSEN, Nowata, Okla. Filed Mar. 1, 1926. Serial No. 91,594. 2 Claims. (Cl. 74—5.)



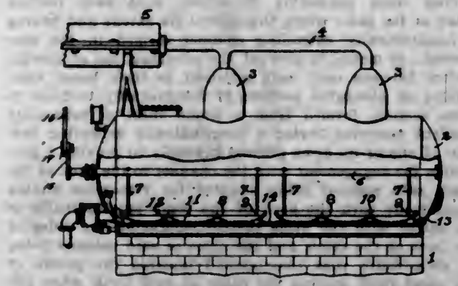
1. A pump jack having a stationary frame provided with transversely extending bearing members having bearing recesses, a pivoted support having a hollow shaft in its lower end engaging the recesses of one of the bearing members, means for holding said shaft engaged with its bearing recess, a walking beam fulcrumed on the upper end of the pivotal support, links between the walking beam and the main frame for constraining the walking beam to proper movement, means for rocking the walking beam including a rocking beam having a shaft rotatably mounted in the recess of one of the bearing members, and a connection between the rocking frame and the walking beam.

1,621,415. FABRICATED SPRING SUPPORT. PAUL W. JOHNSON, Portland, Oreg. Filed Oct. 20, 1925. Serial No. 63,720. 2 Claims. (Cl. 267—1.)



1. A fabricated spring support, comprising a central section, a series of sections disposed at either side of said central section the inner ends of each of the outer sections of said series being pivotally mounted within the

outer end of the adjacent inner section and having their inner ends projecting inwardly beyond said pivotal mount-



ing; and springs disposed within each of the inner sections to engage the projecting end of the adjacent outer section.

1,621,416. CHECK PROTECTOR. JOHN ACLE KINDLE, Monroe, Wash. Filed Apr. 3, 1926. Serial No. 99,611. 3 Claims. (Cl. 283—8.)

1. A signal stop payment device to be used on a ledger sheet in banks, comprising a tab bearing appropriately designed spaces for the insertion of data relative to a check upon which payment is to be refused, and the said tab being provided with means whereby it may be fixedly secured to the leaf.

1,621,417. CHAIN BRUSH FOR STILLS. WILLIAM KNAPP, Chanute, Kans. Filed Jan. 14, 1926. Serial No. 81,337. 3 Claims. (15—104.09.)

1. A chain brush for stills, comprising a head, spring clips having ends in said head, and a chain attached to said spring clips.

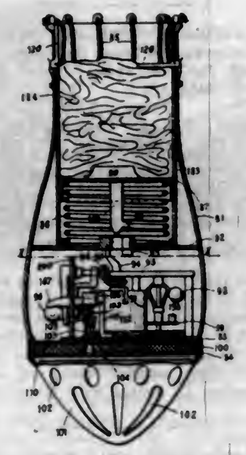
1,621,418. HITCH. DANIEL W. KOEHN, Galva, Kans., assignor of one-third to Gustav G. Dixon, Galva, Kans., and one-third to Harry G. Rolf, McPherson, Kans. Filed Mar. 19, 1926. Serial No. 96,012. 2 Claims. (Cl. 280—33.44.)

1. A tractor hitch comprising a frame like member including a curved body portion adapted to be attached to the tractor, an integral strip connecting the terminals of said body portion, a bracing element projecting from said body portion and connected with said strip at an appropriate point in its length, and a draw bar connected with one end of the body portion and adapted to be coupled to the object to be drawn by the tractor.

1,621,419. AUTOMATIC COUPLER FOR MINERS' CARS. THOMAS KOLINGER and LOUIS HABUNEK, Martins Ferry, Ohio. Filed Jan. 13, 1926. Serial No. 80,879. 4 Claims. (Cl. 213—178.)

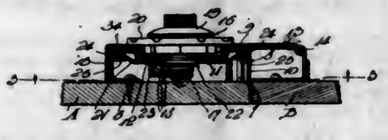
2. A coupler, self operating, for mining cars comprising two members, so positioned that one member will strike the other member, when the said cars are forced toward one another, and a resilient member positioned to receive one of said members and force it into locked engagement with the other member, which will cause the first mentioned member to engage with the second-mentioned member.

1,621,420. SAW OILER. MAX KRUSE, Creswell, Oreg. Filed Feb. 4, 1926. Serial No. 86,033. 4 Claims. (Cl. 221—82.)



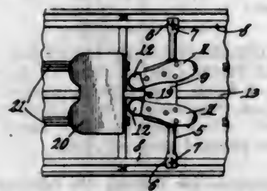
1. A saw oiler for use on logs and trees and comprising a container having a reduced neck at its lower end provided with a discharge fitting and a hanger having a yoke embracing the neck, said yoke having arms extending in a single member terminating in a hook above the container, means for securing the yoke to the lower end of the container, and means for securing the hanger to the container above the point where its arms merge into the single member.

1,621,421. APPARATUS FOR LIGHTING THE LANDING PLACE FROM AERIAL CRAFT. MARCEL KÜNZER, La Chaux-de-Fonds, Switzerland, assignor to Société Anonyme pour l'Exploitation des Brevets Künzer, Basel, Switzerland. Filed Dec. 11, 1925, Serial No. 74,833, and in Switzerland Nov. 4, 1925. 1 Claim. (Cl. 102—24.)



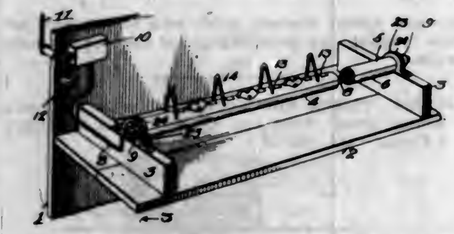
In an apparatus for lighting the landing place from aerial crafts the combination of an open cylinder turned upwards and an outer shell attached to said cylinder so as to form a chamber underneath said cylinder, a folded parachute sheltered within said cylinder and attached to

said shell, an ejecting device for the parachute constituted of a spring operated piston, a clock work contained within said chamber and a flare body suspended at the bottom of said shell, a firing device comprising a cocked hammer



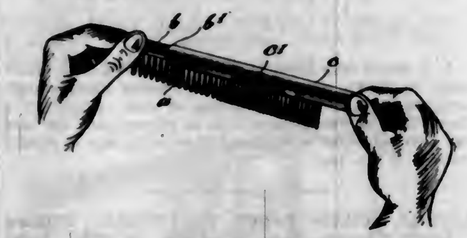
and a cartridge primer at an effective distance from said flare and a releasing mechanism consisting of cranks controlled by said clockwork and adapted to release the spring operated piston and the cocked hammer of the firing device.

1,621,422. LOCK. NIKITAS LAPPAS, Peabody, Mass. Filed Mar. 22, 1926. Serial No. 96,578. 4 Claims. (Cl. 70—55.)



1. In a lock, a keeper plate having an opening, an outer plate engageable with the outer side of said keeper plate, permutation locking means mounted on said outer plate and including a locking member movable through the opening of the keeper plate, a guard plate at the inner side of said keeper plate movable either into obstructing or non-obstructing relation with the opening thereof and exposed means whereby said guard plate may be rotated.

1,621,423. FOOT REST. GUY EDWIN LONG, Ithaca, N. Y. Filed Nov. 17, 1925. Serial No. 69,675. 1 Claim. (Cl. 9—7.)

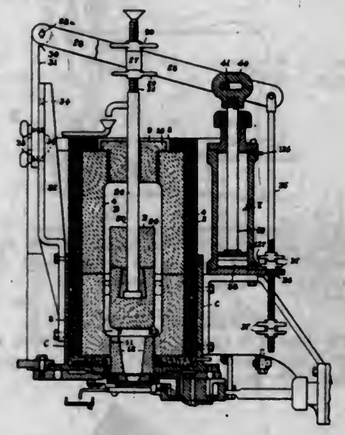


In a device of the character described, a supporting rod, a plate pivotally mounted on the supporting rod, foot pieces secured to the plate and adapted to move with the plate, said plate having an opening, a pivoted bolt passing through the opening, nuts on the free ends of the bolt, and said plate adapted to engage the nuts to restrict movement of the plate.

1,621,424. ELECTRIC POULTRY PERCH. DAVID R. MCGINNIS, Kalispell, Mont. Filed Feb. 2, 1926. Serial No. 83,464. 13 Claims. (Cl. 219—19.)

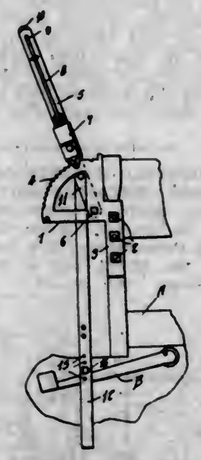
1. An electric poultry perch, comprising a body, and means carried by said body for passing a current of electricity through a fowl while resting or roosting upon the body.

1,621,425. HAIR COMB. JAMES WYNDHAM MEEK, Staines, England. Filed Jan. 14, 1926, Serial No. 81,220, and in Great Britain Mar. 2, 1925. 1 Claim. (Cl. 132—19.)



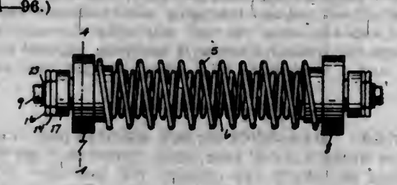
The combination with a comb including a back portion having teeth projecting therefrom, said back portion being of the same width throughout its extent and having a longitudinally extending channel formed in the side thereof; of means to prevent the accumulation of foreign matter between said teeth adjacent to their bases, comprising an elongated member of substantially U-shape in cross section, formed from a single sheet of inherently resilient material having a longitudinally extending portion of one of its arms pressed inwardly to provide a projection for engagement with the channel in the back of the comb, said member being adapted for removable sliding engagement with the back of the comb longitudinally of the latter with the arms thereof embracing the sides of the back of the comb, and the arms of said member being of such width that they extend towards the points of the comb teeth beyond the bases of said teeth when the member is applied to the comb.

1,621,426. APPARATUS FOR PRODUCING MOLD CHARGES OF MOLTEN GLASS. WILLIAM J. MILLER, Swissvale, Pa., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Original application filed Sept. 23, 1919, Serial No. 325,616. Divided and this application filed Apr. 1, 1926. Serial No. 98,983. 26 Claims. (Cl. 49—55.)



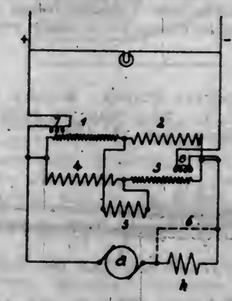
1. In apparatus for feeding molten glass in a succession of mold charges, the combination with a receptacle for molten glass provided with a discharge outlet, of a vertically reciprocating implement working in the glass in said receptacle to control the discharge of glass through said outlet without seating at the outlet, means

for imparting a reciprocating movement to said implement, means for limiting the reciprocating movement of said implement comprising an element moving in unison with



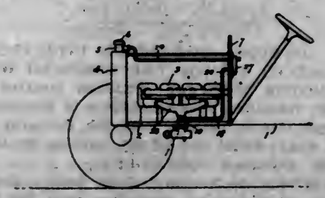
said implement and adjacent to an abutment, and adjustable stop members at opposite sides of said abutment to limit the motion of said element relative to the abutment.

1,621,427. CLUTCH-CONTROL MECHANISM FOR TRACTORS. FRANK O. PEASLEY, New Hampton, Mo. Filed Sept. 19, 1925. Serial No. 57,378. 1 Claim. (Cl. 74—89.)



A clutch control mechanism for tractors, comprising a bracket, a downwardly extending arm thereon adapted to be secured to the frame of a tractor, a segmental ratchet on said bracket, a lever fulcrumed on said bracket, a thumb latch carried by said lever and adapted to engage said ratchet, a rod pivotally secured to said lever, another rod having an offset end secured to the first mentioned rod and forming a forked member to enclose the clutch pedal of the tractor between its fingers, and a pin bridging the space between said rods and adapted to engage the pedal, said rods being provided with a plurality of oppositely disposed openings for adjusting the position of said pin.

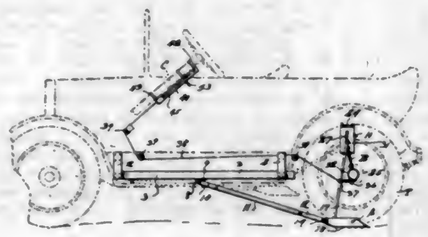
1,621,428. UNIVERSAL JOINT. FLORIAN BERTRAM PEDERSEN and HANS PETER ANDERSEN, Alameda, Calif. Filed Apr. 11, 1925. Serial No. 22,403. 1 Claim. (Cl. 64—96.)



In a device of the character described the combination with a pair of shafts having their ends in close proximity to each other, a split sleeve secured to each of said shafts, means for contracting said sleeves, each of said sleeves having an elliptical outer periphery, a collar slidable on each of said sleeves, said collar having an elliptical opening formed therethrough in such a manner that the opening therethrough will cause a slidable engagement with the elliptical periphery of said sleeves, an inner spring having its opposite ends secured to said collars, and an outer spring having its opposite ends secured to said collars, said springs being coiled in reverse direction.

1,621,429. SERIES-WOUND MACHINE WITH ADDITIONAL EXCITATION IN BRIDGE CONNECTION. WALDEMAR PETERSEN, Darmstadt, Germany. Filed Oct. 27, 1925, Serial No. 65,138, and in Germany Oct. 23, 1924. 4 Claims. (Cl. 171—223.)

1. In a series wound machine, a Wheatstone bridge the adjacent resistances of which are differentially variable under a change in voltage, connections between two opposite connections of said resistances and the terminals of the machine, and a boosting winding connected across the other two opposite connections of said resistances.



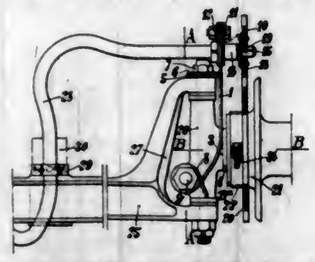
1,621,430. HUMIDIFYING DEVICE. JACK PHILLIPS, New York, N. Y. Filed Sept. 11, 1925. Serial No. 55,870. 1 Claim. (Cl. 123—25.)

In a device for supplying water vapor to internal combustion engines, a casing formed with a window, a removable plug at one end of the casing, an inlet pipe at the opposite end of the casing, a valve carried by the casing adapted to close said inlet pipe, an outlet pipe at one end of the casing near the removable plug, a glass con-

tainer positioned in said casing and extending from near one end to near the opposite end, said container being open at both ends, a supporting gasket surrounding said container at each end and impinging said casing whereby the water vapor entering through said inlet pipe may pass through the container before it can pass out said outlet pipe, and a strainer in said casing adjacent said outlet pipe.

1,621,431. EMERGENCY-BRAKE MECHANISM. CHRISTIAN REBER, Lincoln Park, Mich. Filed Mar. 20, 1926. Serial No. 96,272. 10 Claims. (Cl. 188—4.)

1. The combination with vertically movable supports arranged near the wheels of a vehicle, of a shoe carried by each of the supports and adapted to be moved beneath a wheel, means for normally maintaining the shoes in an inoperative position, and a single means operating to release the shoes in unison or to singly release any one of the shoes.

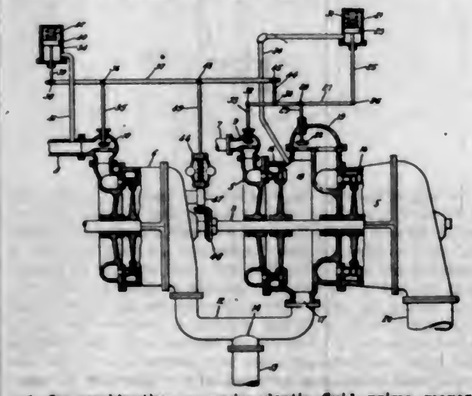


1,621,432. FOUNTAIN BRUSH. WILLIAM K. ROCKMAN, New York, N. Y. Filed May 20, 1925. Serial No. 31,642. 2 Claims. (Cl. 15—133.)

1. A fountain brush for making small characters, comprising a main ink reservoir, an auxiliary ink reservoir, means for conducting the ink from the main ink reservoir to the auxiliary ink reservoir, bristles carried by said auxiliary reservoir, and means for conducting the ink from the auxiliary ink reservoir to said bristles, both of said conducting means comprising elongated tubes having valveless conducting openings of minute cross section whereby unobstructed communication between the reservoirs and bristles is maintained for keeping the bristles in moist condition.

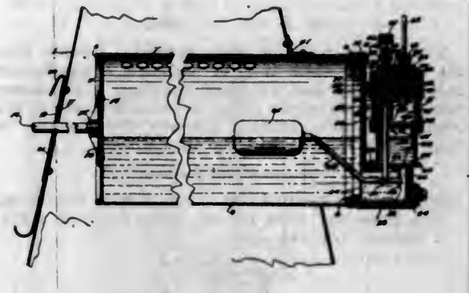
1,621,433. CONTROL FOR SPEED INDICATORS OR THE LIKE BY ONE OF THE STEERING WHEELS OF A MOTOR VEHICLE. CHARLES HILAIRE HENRI RODANET, Versailles, France, assignor to Etablissements Ed. Jaeger, Paris, France, a French Company. Filed May 4, 1925, Serial No. 27,981, and in France Feb. 18, 1925. 2 Claims. (Cl. 74—7.)

1. In a driving mechanism for the flexible shaft of a speedometer in subsequent connection with the steering wheel of an automobile, a gear, means for fixing the said gear upon a bearing of the hub of a steering wheel, a pinion keyed on the end of the flexible shaft of the speedometer, a sleeve for supporting the end of said flexible shaft near such pinion, a support for said sleeve, a frame provided with a branch disposed parallel to the plane of the gear, an axle for connecting pivotally the support of the pinion to the upper end of said branch of the frame, an ear arranged perpendicularly to the end of said frame, a cup serving as the axle of rotation



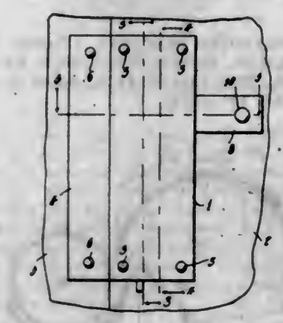
of said ear and centrally perforated for the passage of the pivotal axle of the wheel whose head serves as fixing means for the said cup on the axle.

1,621,434. DOLL'S LIMB. ISAAC A. ROMMER, Brooklyn, N. Y. Filed Feb. 1, 1926. Serial No. 85,306. 3 Claims. (Cl. 46—40.)



3. A doll's hand having a part formed of hard rubber appurtenant to the hand at the rear end; together with a fabric material applied to a lateral surface of said hard rubber part, said fabric having its opposed surface vulcanized to said lateral surface of the hard rubber material of said part, the exposed surface of said fabric being non-rubberized and adapted to absorb an adhesive to secure the hand to an arm part.

1,621,435. INDUSTRIAL-HEATING ELASTIC-FLUID PRIME-MOVER INSTALLATION. ARTHUR ROSCH, Charlottenburg, Berlin, Germany, assignor, by mesne assignments, to General Electric Company, Schenectady, N. Y., a Corporation of New York. Filed Nov. 9, 1925, Serial No. 67,792, and in Germany Nov. 25, 1924. 12 Claims. (Cl. 60—43.)

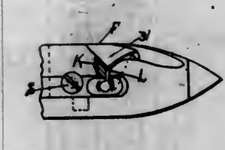


1. In combination, a main elastic fluid prime mover, an auxiliary elastic fluid prime mover, a conduit for conveying elastic fluid exhausting from the auxiliary prime mover to the main prime mover, and means responsive to the pressure of the elastic fluid supplied to the auxiliary prime mover for regulating the supply of elastic fluid to both prime movers.

1,621,436. AIR MOISTENER. CLARENCE E. SALLADA, Minneapolis, Minn. Filed Apr. 29, 1926. Serial No. 105,567. 5 Claims. (Cl. 137—104.)

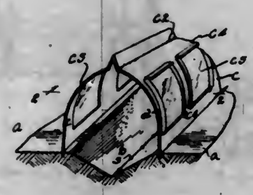
4. An air moistener comprising a container for water, a valve casing mounted upon the outer end of said container and comprising a lower sight chamber in communication with the container, a intermediate valve chamber and an upper filtering chamber, means for connecting the filtering chamber with a source of water supply, a regulating valve within the filtering chamber controlling the communication between the same and the valve chamber, a governor valve within the valve chamber to cut off or permit flow from the filtering chamber to the valve chamber, float-controlled means for operating said governor valve supported below and extending upwardly through the sight chamber, and a drip port establishing communication between the valve chamber and the sight chamber.

1,621,437. DOOR LATCH. ARNOLD A. SCHAEFFER, Houston, Tex. Filed May 1, 1926. Serial No. 106,181. 2 Claims. (Cl. 70—76.)



1. A latch comprising a casing, a bolt slidably supported by the casing and provided in its upper and lower edges with notches, a key operated tumbler, and a manually operable tumbler, said tumblers being adapted to engage in the notches in the upper edge of the bolt to secure the latter in projected position, and the manually operable tumbler being adapted to engage in the notch in the lower edge of the bolt provided said tumbler is moved through too great a distance during the operation thereof to effect the release of the bolt.

1,621,438. PROCESS FOR PREPARING A VARNISH. FEDERICO SCHWARTZ, Barcelona, Spain, assignor of one-half to Enrique Gil-Camporro, Barcelona, Spain. Filed Mar. 19, 1925, Serial No. 16,817, and in Spain Mar. 26, 1924. 4 Claims. (Cl. 234—26.)

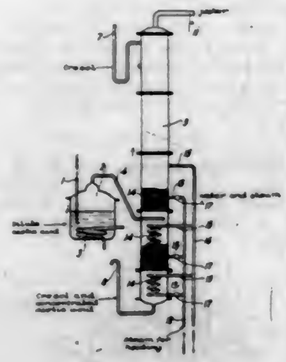


1. A process for the manufacture of a varnish which consists in preparing "castor-oil" ammoniate, saponifying gums or resins in the presence of this "castor-oil" ammoniate, saponifying separately an oil with ammonia and afterwards mixing in suitable proportions the saponified gums or resins with the saponified oil.

1,621,439. SHUTTLE BLOCK. FRANK H. STETSON, Methuen, Mass., assignor to U. S. Bobbin & Shuttle Co., Providence, R. I., a Corporation of Rhode Island. Filed Dec. 1, 1922. Serial No. 604,280. 2 Claims. (Cl. 139—223.)

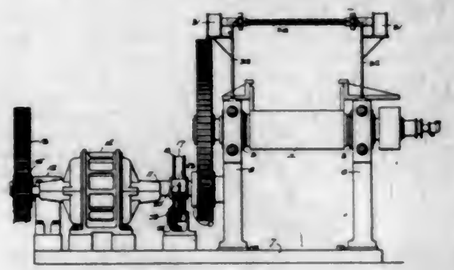
2. The combination with a wooden shuttle, of a threading block which has a guiding front edge which terminates in a downwardly projecting tongue which engages the wood of the shuttle, said tongue having a tooth which projects down and back at the bottom, and is forced into the wood.

1,621,440. PROCESS AND APPARATUS FOR GERMINATING SEED. ELLIOTT J. STODDARD, Highland Park, Mich. Filed Aug. 10, 1925. Serial No. 49,199. 10 Claims. (Cl. 47—19.)



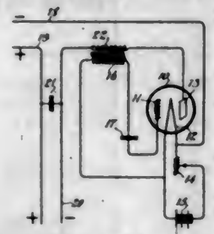
9. The combination of a seed bed, a row of seeds thereon, and a strip of material that shall shed water covering said seed, said strip engaging the bed on both sides of the row, said strip being provided with unobstructed apertures that shall exclude water but admit sunlight, for the purpose described.

10. The method of treating seed for germination, consisting in sowing the seed in the ground, protecting the seed so as to shelter the same from water, leaving room between the seed and protector for the growth of the plant, continuously protecting the seed until the plant



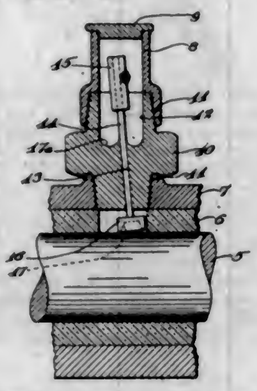
has developed to stand direct watering and sunlight, and watering the seed by pouring water over the protector so that it will be carried to the seed by capillary attraction through the ground.

1,621,441. PRODUCTION OF CONCENTRATED ACETIC ACID FROM DILUTE AQUEOUS SOLUTIONS OF THE SAME. HERMANN SUIDA, Modling, Lower Austria, Austria. Filed Feb. 27, 1925, Serial No. 12,180, and in Austria Mar. 8, 1924. 8 Claims. (Cl. 260—122.)



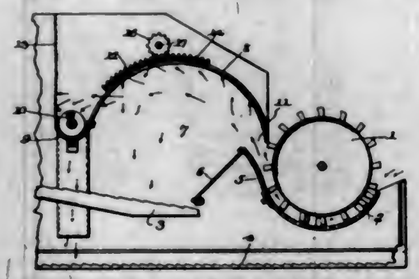
1. A process for producing concentrated acetic acid from dilute aqueous solutions which consists in evaporating the aqueous solution, in superheating the mixture of vapours of acetic acid and water and in extracting the acetic acid from the superheated mixture.

1,621,442. SAFETY STOP MECHANISM. JOSEPH W. THROPP, Trenton, N. J. Filed Aug. 26, 1925, Serial No. 52,615. Renewed Dec. 11, 1926. 4 Claims. (Cl. 192—2.)



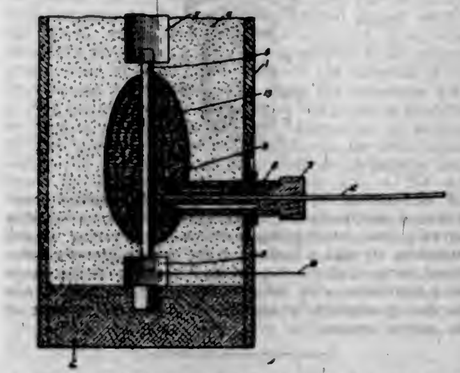
1. The combination with a power shaft to be controlled and a source of power therefor, of a brake apparatus associated with the said power shaft, means normally tending to move the brake apparatus into set position, a pivoted latch device having a surface concentric with its pivotal axis means adapted to be engaged by the said concentric surface for resisting the movement of the brake apparatus into set position, and an electro-magnetic device for causing the movement of the said latch device to disengage the concentric surface from the last said means and thus permit the brake apparatus to be moved into set position.

1,621,443. VOLTAGE REGULATOR. JOHN BOND TREVOR, Jr., New York, N. Y. Filed Feb. 24, 1926. Serial No. 90,403. 4 Claims. (Cl. 171—312.)



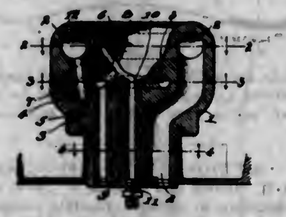
1. A voltage regulator which comprises a power line, the voltage of which is to be regulated, a transformer having primary and secondary windings, a thermionic valve having its output circuit in series with one of the windings of the transformer and with said line and its input circuit in series with the other winding.

1,621,444. OIL REGULATOR. ALEXANDER N. TURNQUIST, Glen Ellyn, Ill. Filed Jan. 27, 1925. Serial No. 5,162. 6 Claims. (Cl. 184—60.)



1. The combination with a rotatable shaft of a lubricating device therefor, comprising an oil receptacle opposite the shaft, an inclined stem slidable through the bottom of the receptacle and directed toward the shaft, and an annular enlargement carried by the stem and adapted for rolling contact with the shaft.

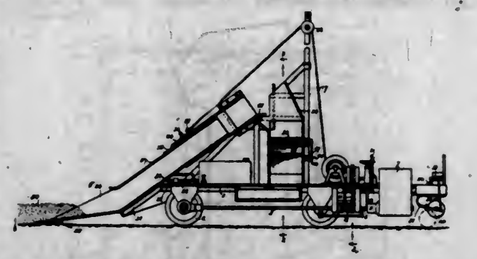
1,621,445. THRASHING MACHINE. DANIEL F. UNRUH, Goessel, Kans., assignor of one-half to Ed. Unruh, Goessel, Kans. Filed June 15, 1925. Serial No. 37,364. 3 Claims. (Cl. 130—27.)



1. The combination with the cylinder and concave of a thrashing machine, a straw rack positioned to receive straw therefrom, and a grain pan beneath the rack and concave, of an extension at the delivery end of the concave, an arcuate plate above the extension and straw rack and cooperating with said extension to form a delivery throat for straw and grain, that portion of the arcuate plate remote from the concave constituting means for deflecting straw downwardly onto the rack and being formed with openings for the escape of chaff and grain, means beyond the arcuate plate for collecting the accumulated chaff and grain passing through the openings, and means for delivering the collected material.

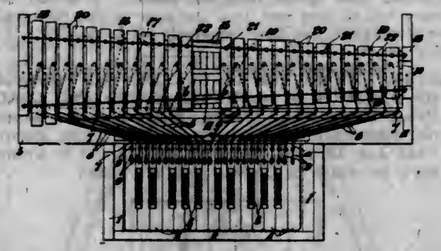
1,621,446. PROCESS AND APPARATUS FOR PRODUCING SILICA ARTICLES. HAROLD L. WATSON, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 1, 1926. Serial No. 99,146. 17 Claims. (Cl. 49—78.1.)

1. The process of shaping silica which consists in heating a part only of a mass of silica to fusion in such a manner that the unfused silica serves as a support for the fused silica, exerting sufficient traction upon the fused silica in the heating zone to withdraw the same and excluding unfused silica from withdrawal.



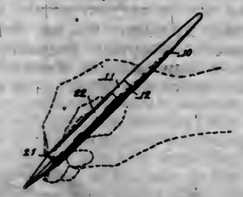
1,621,447. AUTOMATIC MECHANICALLY-OPERATED OIL BURNER. MERRITT AUGUSTUS WILLIAMS, Norfolk, Va. Filed May 5, 1925. Serial No. 28,145. 1 Claim. (Cl. 158—28.)

An oil burner nozzle comprising a one piece metal element, an air duct near the top of the element, an oil duct located between the air duct and the base of the element, the air duct being of larger cross-section than the oil duct, an oil spray opening suitably located in the element, an open communication of small cross-section leading from the air duct to the oil spray opening, means for maintaining a proper temperature on the burner consisting of a heating element suitably located in the nozzle.



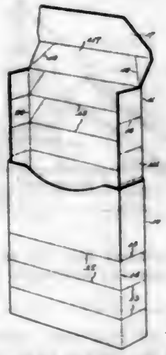
1,621,448. SNOW CLEANER AND DIGGER. ABRAHAM ZILBERSHER, New York, N. Y. Filed May 5, 1926. Serial No. 106,970. 4 Claims. (Cl. 214—131.)

2. In an apparatus of the character described, a frame, a swinging shovel for excavating and discharging material into substantially the center of the frame, and a plurality of means co-acting with said shovel for causing



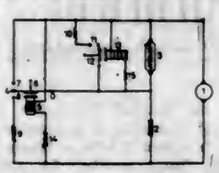
the matter to be discharged into the frame to be moved to one side of the same and discharged therefrom at different elevations.

1,621,449. MEANS OF PLAYING PERCUSSION MUSICAL INSTRUMENTS. ÁRPÁD ANGYAL, Balham, London, England. Filed Dec. 16, 1925, Serial No. 75,829, and in Great Britain Dec. 17, 1924. 1 Claim. (Cl. 84—404.)



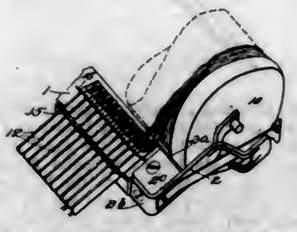
In apparatus for playing percussion musical instruments, a keyboard including a depressible key, a member to be struck to sound a note, a frame member, a rod mounted on said frame member for axial rotation, a crank at each end of said rod, a flexible connection between the crank at one end of said rod and said key whereby depression of said key imparts rotation to said rod, and a hammer member carried by the crank at the other end of said rod normally spaced from said member to be struck and movable into striking engagement with said member by rotation of said rod upon depression of said key.

1,621,450. PEN NIB. HARRY S. ARAMIAN, New York, N. Y. Filed Apr. 15, 1926. Serial No. 102,322. 2 Claims. (Cl. 120—112.)



1. In a pen including a holder, a tubular nib having an open end fitted over the end of the holder and a conical lower end slitted upwardly from the apex to define resilient prongs, said nib having a radial filling opening through which ink is introduced to the interior thereof, means axially slidable relative to the nib for closing the filling opening, said closing means comprising a sleeve, and means on the holder for limiting the sliding movement of the sleeve in a direction to uncover the opening.

1,621,451. CONTAINER. HENRY LINCOLN BEACH, Brooklyn, N. Y. Filed Mar. 18, 1926. Serial No. 95,679. 4 Claims. (Cl. 229—20.)

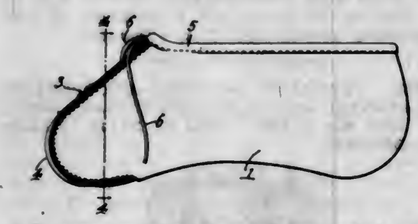


4. A container including a case and a drawer slidable into and from the case, said drawer having a closure tab at its outer end and having parallel transverse weakened lines spaced from one another to permit the closure tab to fold well into the case by the collapsing of the drawer along said transverse score lines.

1,621,452. MEANS FOR REGULATING THE VOLTAGE OF DYNAMOS OF VARIABLE SPEED AND LOAD. HENRI BÉNIT, Paris, France, assignor to La Societe dite l'Eclairage des Vehicules sur Rail, Paris, France. Filed Aug. 13, 1925, Serial No. 50,060, and in France Sept. 20, 1924. 2 Claims. (Cl. 171—229.)

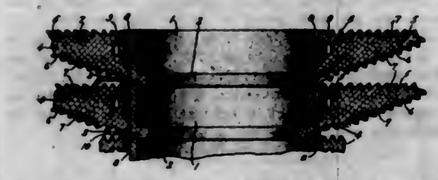
1. Means for regulating the voltage of dynamos of variable speed and variable load, with vibrating regulators having two contacts, comprising in combination with a dynamo having a field winding and a resistance in series with the field winding, a second resistance branched in parallel with said first resistance, an electro-magnetic automatic switch in the connection between the second resistance and the field winding, the magnet of said switch having its terminals connected to the terminals of the first named resistance, whereby said magnet is under the influence of the difference of potential at the terminals of the resistance in the field winding.

1,621,453. TUBE FRAME. WALTER BIXBY, Boston, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 6, 1922. Serial No. 541,321. 14 Claims. (Cl. 139—10.)



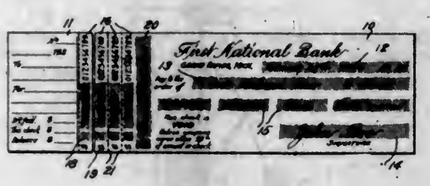
1. In a tube frame, the combination of a carrier bar provided with parallel slotted tube holding members extending longitudinally of the bar and firmly united therewith one forwardly of the other, and a series of parallel tuft tubes each passing through a pair of aligned slots in said holding members and having detachable interlocking engagement with one of the holding members to prevent accidental displacement in an axial direction, substantially as described.

1,621,454. DEVICE FOR FORMING ALIMENTARY PRODUCTS. WILLIAM D. BLEIER, New York, N. Y., assignor to Doughnut Machine Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 25, 1926. Serial No. 97,347. 3 Claims. (Cl. 107—14.)



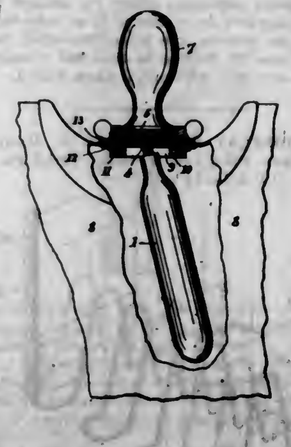
3. A forming device of the character described, comprising a sleeve, and a cooperative co-axial cutter disk movable into overlapping relation in severing plastic extrusions through a perimetric die outlet normally maintained between them, the discharge opening of the sleeve being triangular with counter-recesses at the angles, and the disk configured to correspond in outline to that of the sleeve opening.

1,621,455. COVER FOR BALLET SLIPPERS. BARNEY S. BONAVENTURE, New York, N. Y. Filed Apr. 2, 1926. Serial No. 99,320. 3 Claims. (Cl. 36—72.)



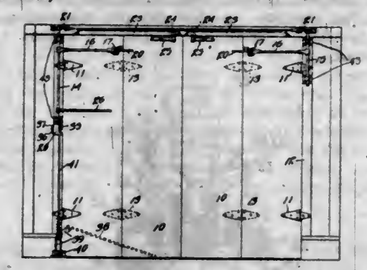
1. A cover for ballet slippers formed mainly of non-elastic material having an elastic insert in the toe portion thereof, and a wear device upon said insert.

1,621,456. SECTIONAL-TYPE INDUCTANCE COIL. WILLIAM W. BROWN and JOSEPH E. LOVE, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Apr. 25, 1925. Serial No. 25,914. 5 Claims. (Cl. 175—359.)



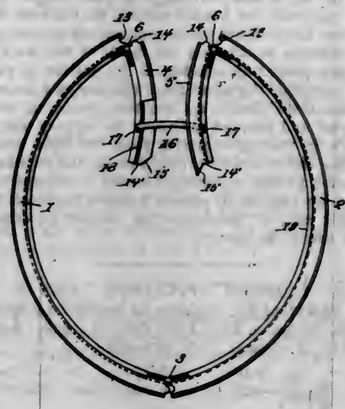
1. In combination a plurality of superposed hollow flanged members, one fitting partially within another and a plurality of insulators mounted on said members and extending outwardly therefrom.

1,621,457. CHECK. JAY BULLOCK, Marquette, Mich., assignor to Anna Synthia Reed, Portland, Oreg. Filed July 3, 1925. Serial No. 41,350. 1 Claim. (Cl. 283—12.)



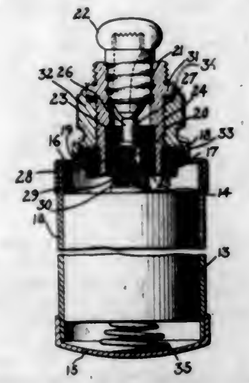
In a check having spaced parallel spaces, appropriately designated for the insertion of data, and treated to disclose attempts of erasure, denominational spaces bearing the words thousands, hundreds, tens and ones, over which the face value of the check is adapted to be written, spaces along the back of the check for the insertion of the amount, and a designated space along the transverse margin for the insertion of the name of the payee, a plurality of tabs at one end thereof and adapted to be severed therefrom, indicia upon each of said tabs, the said indicia comprising denominational units such as thousands, hundreds, tens and ones, and digits from 0 to 9, the said digits being adapted to be cancelled to designate the number of denominational units to be taken, the said tabs further having designated spaces for the insertion of the number of the said denominational units to be taken, the said tabs being attached to the check by means of scored lines adapting the tabs to be severed from the check and from each other in such manner that the indicia on the tabs attached to the check will denote the amount for which it was drawn.

1,621,458. INFLATING APPARATUS FOR LIFE-SAVING DEVICES. ROBERT HUNTER CAMPBELL, Upper Edmonton, London, England, assignor to Sparklets Limited, London, England. Filed Oct. 22, 1925, Serial No. 64,190, and in Great Britain Aug. 5, 1925. 2 Claims. (Cl. 9—19.)



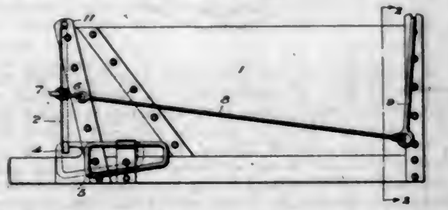
1. In apparatus of the type described, a flexible bag having an opening, a capsule within said bag, a closure for the bag opening, and a handle formed in one with said closure, in combination with a stem-like portion made hollow and breakable for part of its length, secured into said capsule and said closure, relative angular displacement of said capsule and said handle being adapted to break said stem-like portion and to discharge the capsule contents into the bag.

1,621,459. DOOR OPENING AND CLOSING MECHANISM. JAMES A. CREWES, Indianapolis, Ind. Filed Mar. 4, 1926. Serial No. 92,355. 11 Claims. (Cl. 268—35.)



1. In combination a door frame, a door pivoted at each side of the frame, separate irreversible pin and slot operators for each door, manual and pedal driving means for one of said operators and connecting linkage between the two operators, substantially as set forth.

1,621,460. AUTOMOBILE TIRE RIM. JOSE CRUZ and PEDRO NOGUERA, Shelton, Conn. Filed Apr. 29, 1925. Serial No. 26,771. 1 Claim. (Cl. 301—82.)

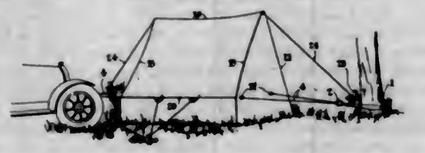


A collapsible tire rim comprising a pair of main rim sections, a pair of supplemental rim sections, each of said sections being formed with outwardly extending tire bead receiving flanges at opposite sides, all of said rim sections being adapted for end to end assembly in circumferential relation in expanded tire supporting position, each of said sections having the flanges formed with projections adapted to interfit in sockets formed in the flanges of adjacent sections, independent hinge means securing each of said supplemental sections to one of said main sections and pivotally securing said main sections together, each of said hinge means securing said sections in abutting coincident and tire supporting position, and a link pivotally secured at its ends to the inner faces of said supplemental sections intermediate the ends of said sections, said supplemental sections having the end portions slotted to receive said link, said link retaining said supplemental sections with the ends in abutting coincident relation in tire supporting position; whereby the interfitting of the projections in the recesses and the abutting of the ends of the rim sections in expanded tire supporting position directly distributes lateral stress to the rim circumferentially and relieves such stress from application to the link, and hinge means connecting the sections.

1,621,461. DIAGNOSTIC INSTRUMENT. HENRY L. DE ZENG, Geneva, N. Y., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Original application filed Feb. 15, 1923, Serial No. 619,085. Divided and this application filed Oct. 3, 1925. Serial No. 60,215. 2 Claims. (Cl. 240—10.5.)

1. In a device of the character described, a handle, a battery in the handle having a projecting pole member, a cover cap over the handle having an internal opening, an annular lamp socket in the opening of the cap, an annular insulating member on the inside of the lamp socket, an annular insulating member on the outside of the lamp socket insulating the same from the cap, a contact member in the inner insulating member connecting with the lamp socket and adapted to engage the battery pole, a contact piece on the cap insulated from the light socket and an annular sleeve rotatably mounted on the outside of the lamp socket having a portion adapted to engage the contact piece on the cap in certain rotative positions to close the circuit and to disengage the contact in other positions to break the circuit.

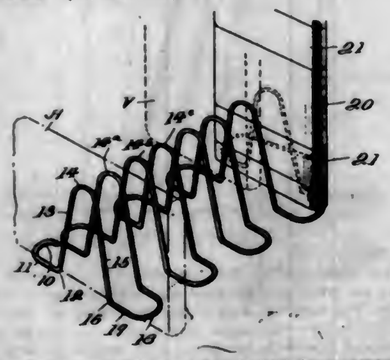
1,621,462. DUMPING APPLIANCE. JOHN J. DOUGHERTY, Scranton, Pa., assignor of one-half to William P. Boland, Scranton, Pa. Filed Oct. 13, 1923. Serial No. 668,451. 5 Claims. (Cl. 298—23.)



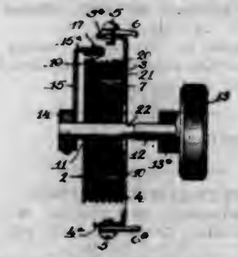
1. A dumping appliance comprising a body; a door mounted for swinging movement thereon; instrumentality disposed on the exterior of the body and connected with the door and including a downwardly-extending member within the body and adapted to bear against the inside of the front end of the car and be engaged by contents of the body to maintain the door in closed position.

1,621,463. WINDOW. LUIS ESTRADA, Buenos Aires, Argentina. Filed Sept. 19, 1925. Serial No. 57,401. 3 Claims. (Cl. 20—42.)

1. A window, comprising a stationary main frame, an auxiliary frame mounted in and movable relatively to the main frame, brackets secured to the side members of the auxiliary frame, vertically adjustable forks mounted in said brackets, a sash, and upper and lower link connections between said forks and the corresponding side members of the sash to enable the latter to move bodily out of and into the auxiliary frame, said auxiliary frame being movable in a direction to bring the sash into position to enable its outer surface to be cleaned from within the interior of the room wherein the window is located.

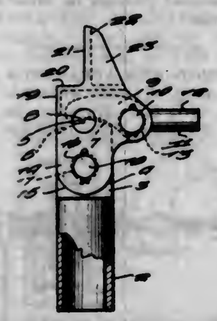


1,621,464. CAMPING OUTFIT. JOSEPH OVILA FORTIN, Ottawa, Ontario, Canada. Filed Feb. 2, 1925. Serial No. 6,456. 7 Claims. (Cl. 5—113.)



1. A camping outfit adapted for simultaneous erection comprising in combination a tent, a fabric sheet adapted to form a bed within the tent, flexible tension members extending along the longitudinal edges of said sheet and through opposite walls of the tent, struts loosely connected to said tension members for spreading the same apart so that when said members are under tension said struts are under compression, and vertically adjustable means loosely connected to the tension members for maintaining the sheet supported above the ground when the ends of said members are anchored at or near the ground, the connections between the several members being permanent but loose or flexible so that the complete outfit moves as a unit and is compact when folded.

1,621,465. DISPLAY RACK. JOHN C. HAMMES, Des Moines, Iowa. Filed June 2, 1926. Serial No. 113,190. 2 Claims. (Cl. 211—14.)

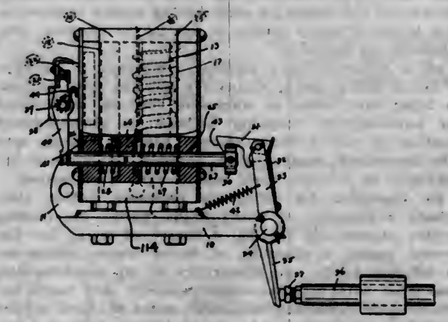


1. A display rack for materials in bolt form comprising a single piece of wire with bends in both the horizontal plane and successive parallel vertical planes whereby to form horizontal supporting portions to rest upon a support, and vertical loops in successive parallel planes, said loops being each adapted to be received within a bolt of said material to support the same in vertical displayed position.

1,621,466. RHEOSTAT. JOHN ELLIOTT JENKINS, Chicago, Ill. Filed Mar. 15, 1922. Serial No. 543,859. 21 Claims. (Cl. 201—56.)

8. A rheostat comprising a block of non-conductive material, having a helical groove formed in the annular face thereof, a resistance wire lying within said groove, an endwise shiftable and rotative spindle journalled axially in said block, a contact arm mounted on said spindle, and adapted to track in said groove in contact with said wire, a knob mounted at one end of said spindle, a conductor connected with one end of said resistance wire, a conductor plate fixed to one side of said block, and having an apertured end portion adapted in one position of endwise movement of said spindle to have electrical contact therewith, said spindle having a reduced portion adjacent said point of contact, whereby the shifting of said spindle into another position separates said spindle and plate, breaking the circuit therethrough.

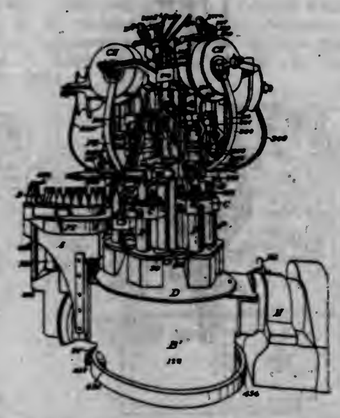
1,621,467. ROTARY BACK-UP POST. CHARLES W. PERKINS, Sulphur Mines, La., assignor to William J. Miller, Sulphur, La. Filed Aug. 11, 1925. Serial No. 49,657. 3 Claims. (Cl. 255—35.)



1. In combination, a post provided with an upper flattened terminal forming a tongue, a tong support provided with a pair of depending ears adapted to embrace the tongue and pivotally connected with the tongue, a latch member pivotally connected to the tong support and provided with an anvil extending beyond the pivot opposite to the latch member, the latch member adapted to engage the tongue.

1,621,468. AQUEOUS RUBBER DISPERSION AND PROCESS OF PRODUCING THE SAME. WILLIAM BEACH PRATT, Wellesley, Mass., assignor to Research, Incorporated, Boston, Mass., a Corporation of Massachusetts. Filed July 2, 1923. Serial No. 649,158. 12 Claims. (Cl. 106—28.)

1. A process of dispersing rubber in water, which comprises dissolving rubber in a solvent, then mixing such solution with water in the presence of a soapy vegetable extract whereby the rubber globules are dispersed in the aqueous medium, without breaking down the physical structure of the globules, and finally removing the solvent without recoagulating the dispersed rubber globules.



7. A process of dispersing rubber in water, which comprises dissolving rubber in a solvent, mixing the solution with water containing a soapy vegetable extract, then mixing the resulting mass and water so that the water forms the continuous phase of the dispersion or emulsion, and the decoagulated rubber globules are dispersed therein, removing said solvent, and concentrating the resultant product by removal of water until a smooth paste results, all without recoagulation of the rubber globules.

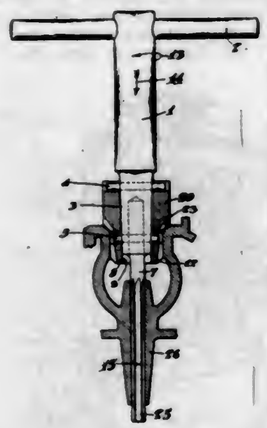
1,621,469. ELECTRIC GENERATOR. BENJAMIN P. REMY, Indianapolis, Ind. Filed Dec. 1, 1925. Serial No. 72,525. 5 Claims. (Cl. 171—209.)

1. In an inductor generator, the combination of a permanent magnet, a pair of pole pieces each in magnetic contact with one of the poles of said magnet, one of said pole pieces in magnetic contact with two polar projections, and an inductor interposed between the other pole piece and said polar projections and movable linearly from one to the other of the latter.

1,621,470. BOTTLING MACHINE. PATRICK W. SHIELDS, Pittsburgh, Pa., assignor to McKenna Brass & Manufacturing Company Inc., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 14, 1921. No. 507,769. 111 Claims. (Cl. 226—77.)

5. A rotary bottling and crowning machine, comprising a plurality of bottle filling and crowning heads, means for rotating said machine to bring said heads suc-

cessively to a plurality of stations, means for delivering crowns to said heads, and means operated by said last named means for automatically rendering said rotating means inoperative if said crown feeding means is inoperative, substantially as described.



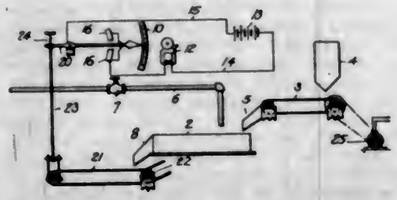
7. A rotary bottling machine, comprising a plurality of bottle filling heads, means for rotating said machine to bring said heads successively to a plurality of stations, a bottle support cooperating with each of said heads, means at one of said stations for feeding a bottle to each of the supports, and means for rendering said bottle feeding means ineffective for feeding a bottle to any of said supports as desired, while continuing the feed to the remainder of said supports, substantially as described.

36. The combination with a bottling machine and means for driving the same, of a bottle feeding mechanism and means spaced above the bottle feeding mechanism and adapted to be engaged by a bottle, the last mentioned means cooperating with the bottle feeding mechanism for rendering said driving means inoperative if a bottle of undue height is fed to the machine, substantially as described.

43. A rotary bottling machine, comprising a plurality of bottle filling heads, means for rotating said machine to bring said heads to successive stations, and means for automatically stopping a head in predetermined position in case a bottle thereon becomes broken, said last mentioned means being normally maintained inoperative by a bottle itself substantially as described.

49. Apparatus for filling and crowning bottles, comprising a plurality of filling heads, means for feeding bottles successively thereto, a source of water for the several heads, a plurality of flavor sources connected to different heads, and a plurality of cap supply means associated with different heads, whereby said heads are effective for producing successive series of filled bottles of different flavors, each properly identified by its cap, substantially as described.

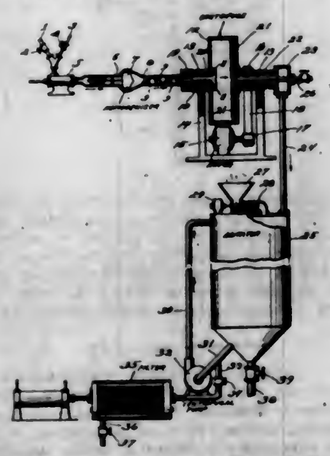
1,621,471. VALVE SEATING AND ALIGNING TOOL. OLIVER G. SIMMONS, Lakewood, Ohio, assignor to The National Tool Company, Cleveland, Ohio. Filed Sept. 9, 1926. Serial No. 134,492. 1 Claim. (Cl. 90—12.5.)



In a valve seating tool, a body portion provided with a valve stem reamer cutter, a detachable chamfering cutter and a detachable port cutter interposed between the cutters aforesaid, said port cutter being concentrically ground and serving as a guide to maintain alignment between said chamfering cutter and said valve stem reamer cutter.

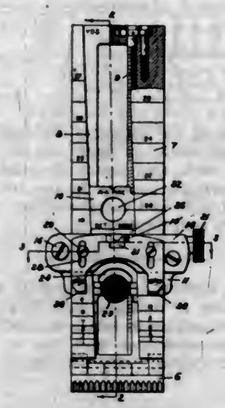
1,621,472. MOLD FOR CASTING METALS. WILLIAM H. SMITH, Detroit, Mich., assignor to Ford Motor Company, Highland Park, Mich., a Corporation of Delaware. Filed Aug. 14, 1925. Serial No. 50,312. 1 Claim. (Cl. 22—188.)

A metallic mold for hot metal casting made from iron having no other element or elements in its make-up over one per cent.



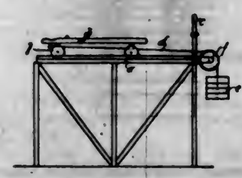
1,621,473. [WITHDRAWN.]

1,621,474. ORE-TREATING SYSTEM. ALFRED L. BLOMFIELD, Kingman, Ariz. Filed May 17, 1919. Serial No. 297,913. 5 Claims. (Cl. 265—68.)



1. In an ore treating system, the combination of means adapted to separate solids in materials in classes according to their weight and including a movable element, an indicator pivoted intermediate of its ends to form two arms, one of the arms being connected with the said element and actuated by the same, a scale cooperating with the other arm of the indicator, and contacts located at opposite sides of the indicator and arranged to be engaged by the latter when the indicator moves a predetermined distance in either direction from its normal position.

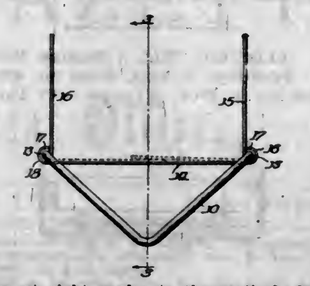
1,621,475. METHOD AND APPARATUS FOR TREATING PETROLEUM HYDROCARBONS. WALTER M. CROSS, Kansas City, Mo. Filed Nov. 24, 1924. Serial No. 751,849. 3 Claims. (Cl. 196—40.)



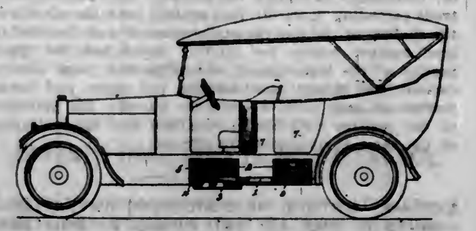
1. A continuous process for treating petroleum hydrocarbons, consisting in combining the oil with an acid to form an intimate mixture, limiting the period of contact to a predetermined length of time of approximately one half minute to prevent polymerization of the oil, separating the oil from the acid sludge by mechanical separation.

1,621,476. REAR SIGHT FOR GUNS. SAMUEL G. GREEN, Gray, Ga. Filed June 15, 1925. Serial No. 37,352. 7 Claims. (Cl. 33—55.) (Granted under the act of Mar. 3, 1883, 22 Stat. L. 625.)

7. A rear sight for guns embodying a slotted leaf having an inclined guideway, a drift slide in the guideway provided with a sighting aperture, a main slide embracing the leaf and connected to the drift slide, and an adjustable range index plate attached to the main slide.



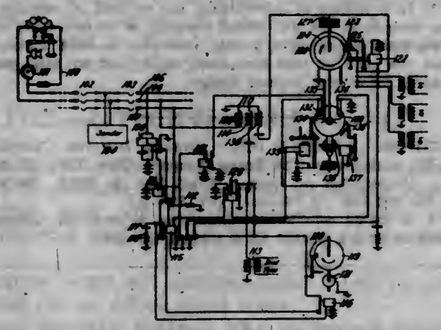
1,621,477. GYMNASTIC APPARATUS. JOS PILATES, Hamburg, Germany. Filed Aug. 24, 1925, Serial No. 52,205, and in Germany Aug. 27, 1924. 6 Claims. (Cl. 272—81.)



1. Gymnastic apparatus comprising a substantially horizontal carriage mounted for movement in a linear direction and of a length sufficient to afford support to the back and shoulders of the user when in recumbent position, said carriage being mounted for movement in a linear direction, an abutment positioned toward one end of the upper surface of the carriage and projecting therefrom sufficiently to engage against the shoulders of the user and resistance means arranged between said carriage and a fixed point and acting to oppose movement of said carriage.

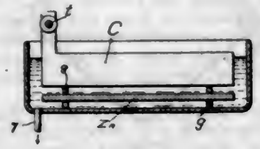
1,621,478. SLEEPER ANCHOR. WILLIAM E. WHITE, Chicago, Ill., assignor to Kalman Steel Co., Chicago, Ill., a Corporation of Delaware. Filed Dec. 8, 1923. Serial No. 679,470. 8 Claims. (Cl. 72—101.)

7. In a device of the class described, the combination of a single wire bent to provide a pair of V-shaped anchor elements, and wings having a hinge connection with the connecting wires and adapted to lie in a vertical plane at right angles to the vertical plane of the anchor elements.



1,621,479. RETRACTING SECTIONAL RUNNING BOARD. WILLIAM H. CLEVELAND and CLARENCE W. BOTHE, Wellington, Kans. Filed May 25, 1923. Serial No. 641,496. 2 Claims. (Cl. 280—166.)

2. In combination with an automobile having a body with one or more doors, an apron projecting downwardly from the body and having front and rear mud guards of a running board consisting of a front, a rear and an intermediate section, all of said sections capable of being positioned within the apron and of being positioned outwardly, therefrom, one or more of said sections being operatively connected with the said doors, the sections when positioned outwardly forming a continuous running board extending from the front to the rear mud guards.



1,621,480. TESTING SYSTEM. CLAUDE EWING, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 31, 1926. Serial No. 132,825. 13 Claims. (Cl. 179—175.)

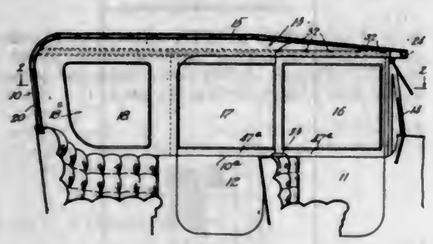
1. In a testing system for testing impulse transmitters located at subscribers' stations, a testing device arranged

to be automatically associated with a transmitter in response to the initial operation thereof and responsive to further operation of said transmitter for testing the same.

1,621,481. ELECTRIC CELL. CHARLES FÉRY, Paris, France. Filed Sept. 2, 1921, Serial No. 498,092, and in France Dec. 1, 1914. 3 Claims. (Cl. 136—136.)

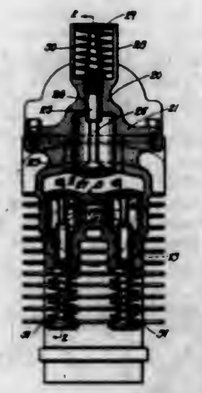
1. The improvement in the electric cells employing a soluble negative electrode horizontally disposed at the bottom thereof, and having an exciting liquid made up of a layer each of lower and higher density electrolyte, said negative electrode being covered with the higher density layer, which comprises, a positive electrode having the major portion thereof elongated and having its greatest dimensions extending horizontally, said positive electrode extending upwardly into contact with the air above the surface of the low density electrolyte and disposed in such manner within the exciting liquid and the upper portion of the high density electrolyte that local electric current may freely pass between the upper and lower portion of said positive electrode whereby the potential of the positive electrode is equalized and depolarization of the same is automatically effected.

1,621,482. METHOD OF PRODUCING ADVERTISING SIGNS IN THE AIR AND PRODUCT. JOHN REID, Glasgow, Scotland, assignor to Alfred Ernest White, London, England. Filed May 5, 1920, Serial No. 379,187, and in Great Britain May 7, 1919. 4 Claims. (Cl. 40—127.)



1. In a system of advertising, the method of establishing designs in the air, which consists in maneuvering an aeroplane, giving off a visible substance in such manner that the path of said aeroplane, as defined by said substance, forms the desired design.

1,621,483. SOLUBLE OIL. HOWARD DIMMIG, Chicago, Ill., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Feb. 8, 1924. Serial No. 691,508. 4 Claims. (Cl. 87—9.)



1. A stable soluble oil comprising mineral oil, sodium resinate and a phenol as a mutual solvent.

1,621,484. ADJUSTABLE WINDOW HANGER. MELVIN B. PRICE, Los Angeles, Calif.; Lydia Ann Price executrix of said Melvin B. Price, deceased. Filed Apr. 18, 1921. Serial No. 462,111. 9 Claims. (Cl. 296—47.)

6. In a device of the character described, a shoe and a track therefor, means to hold the shoe in adjusted position on the track, said means comprising a plurality of relatively staggered recesses in the track having oppositely inclined ends and complementary means on the shoe to engage in said recesses.

1,621,485. VALVE CONSTRUCTION FOR GAS ENGINES. EDWARD B. RODGERS, New York, N. Y. Refiled for abandoned application Serial No. 535,827, filed Feb. 9, 1922. This application filed Dec. 8, 1925. Serial No. 74,182. 2 Claims. (Cl. 123—90.)

1. In an internal combustion engine, the combination of a cylinder, a cylinder head having a chamber disposed laterally at one end of the cylinder and in communication therewith, the bottom wall of said chamber having a pair of valve seated openings, said cylinder head having a relatively large opening opposite said valve seated openings, an integral extension, of the cylinder having a pair of exhaust ports one for each of said valve seated openings, a valve for each of said openings, spring head stems for said valves, a cap to be received in the second mentioned opening and having a valve seated opening disposed between the first mentioned openings and in opposition thereto, said cap having an intake port, a valve for said last mentioned valve seated opening, and a spring press stem for said valve.

Patents Nos. 1,621,486 to 1,622,264.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 356—No. 4. TUESDAY, MARCH 22, 1927. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $4.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

(ORDER No. 2,998.)

U. S. PATENT OFFICE, *Washington, Mar. 8, 1927.*

The following changes are hereby directed, to take effect March 15, 1927:

Establish, in Rooms 182, 184, and 103 of the Patent Office, new examining division 55, and transfer thereto the following classes:

30, Cutlery, from Division 26;

107, Bread, Pastry, and Confection Making, from Division 44;

Designs, from the Division of Designs.

Transfer the following class from Division 25 to Division 32:

183, Gas Separation.

Transfer the following classes from Division 6 to Division 25:

8, Bleaching and Dyeing;

52, Explosive, Pyrotechnic, and Match Compositions;

71, Fertilizers;

127, Sugar, Starch, and Carbohydrates.

THOMAS E. ROBERTSON,
Commissioner.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,452,214, F. H. Nicholson, Railway-traffic-controlling apparatus, decided February 12, 1927, claims 8, 10, 24, 26, and 27.

Pat. 1,484,525, J. E. Noeggerath, Means for damming up semisolid substances, decided February 8, 1927, claim 1.

Pat. 1,508,371, L. Krieger, Process of preserving batteries, decided January 29, 1927, claims 1 to 5, inclusive.

Pat. 1,542,144, Y. Katsumoto, Core of transformers, decided January 28, 1927, claims 1, 2, and 3.

Pat. 1,566,942, W. A. Willis, Rail, decided January 31, 1927, claims 1 to 6, inclusive, and 8.

Pat. 1,593,721, P. S. Kane, Golf ball, decided February 7, 1927, claim 1.

NOTICE—CHANGES IN PATENT OFFICE FEES—EFFECTIVE APRIL 14, 1927.

The act of Congress approved February 14, 1927, amends section 4934, Revised Statutes, so as to provide (except in design cases) a fee on filing each original application for a patent of $20 and of $1 for each claim in excess of twenty, and on issuing each original patent, of $20 and of $1 for each claim in excess of twenty.

The new rates are effective in connection with all applications filed on or after April 14, 1927, and all final fees paid on or after that date.

In every case which contains more than twenty claims, the payment after April 13, 1927, of a final fee of $20, or less than $20 plus $1 for each claim in excess of twenty, will not save the case from forfeiture.

Condition of Applications Under Examination at Close of Business March 11, 1927.

Room No.	Divisions, Examiners, and Subjects of Inventions. (Total number of applications awaiting action, excluding Trade-Mark Division, 55,321; Trade-Mark Division, 1,913. Oldest new case, July 22, 1926; oldest amended, July 23, 1926. The dates given are 1926 except where † indicates 1927.)	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

GOLDMAN *v.* HALL, HARTWELL & CO., INC.

Decided August 20, 1926; rehearing September 23, 1926.

1. TRADE-MARKS — OPPOSITION — MATTERS PLEADED IN NOTICE OF OPPOSITION—FAILURE TO ANSWER.

Where in the notice of opposition the registration of opposer was pleaded as well as the similarity of the marks and probable confusion of goods and the applicant took no testimony to show error in opposer's pleadings, *Held* that the Examiner properly considered opposer's registered trade-mark, although notice of the registration had not been given under rule 54 (*e*), and he properly assumed jurisdiction to decide the question of similarity of the marks and of the goods of the respective parties in the absence of testimony upon these matters. The applicant had, in such pleadings, full notice that these matters would be considered at final hearing, notwithstanding opposer took no proofs.

2. SAME—SAME DESCRIPTIVE PROPERTIES—MALE ATTIRE—WOMEN'S AND CHILDREN'S.

Collars and dress, negligee, and work shirts belong in a general way to the same class (clothing) as middy blouses, ladies', children's, and misses' dresses, knickers, boys' suits, bloomers, overskirts, waists, and sport coats, and two substantially identical marks appearing in the same market upon these goods would result in confusion or mistake in the mind of the public and the deception of purchasers.

3. SAME—OFFICE RECORDS—REGISTRATION.

The Office is bound to take notice of its own records and in the ex parte consideration of an application should deny registration in view of a prior registration of substantially the same mark used on the same class of goods. Registration is prima facie evidence of ownership of the mark.

APPEAL from Examiner of Interferences.

Opposition No. 6,302 to registration of trade-mark of Hall, Hartwell & Co., Inc., for collars and shirts, filed February 6, 1925, Serial No. 209,164, published March 24, 1925.

Mr. John E. Cross for Harry W. Goldman.

Mr. Frank C. Curtis for Hall, Hartwell & Co., Inc.

KINNAN, *First Assistant Commissioner:*

This case comes on for review, on appeal of Hall, Hartwell & Co., Inc., applicant, of the decision of the Examiner of Interferences sustaining the opposition filed by Harry W. Goldman, doing business as The Harry W. Goldman Co., and adjudging the applicant not entitled to the registration for which it has applied.

The applicant company seeks registration of the notation "Bonniebriar," used as a trade-mark for collars and dress, negligee, and work shirts. Continuous use of the mark since July 16, 1923, is alleged, although the application was filed February 6, 1925. The opposer claims registration No. 174,260, October 9, 1923, of the mark "Bonnie Briar," used on middy blouses, ladies', children's, and misses' dresses, knickers, boys' suits, bloomers, overskirts, waists, and sport coats.

No testimony has been taken by either party, and the applicant, in consequence, is restricted to the date of its application. No briefs were filed before the Examiner of Interferences, and none has been filed on this appeal on behalf of the appellant, although counsel appeared at the hearing and argued the case. The appellee has filed a typewritten brief.

[1] In the assignment of errors accompanying the appeal it is alleged the Examiner of Interferences should not have considered opposer's registered trade-mark, because notice had not been given the applicant in accordance with Patent Office rule 154 (*e*), and that tribunal should not have assumed jurisdiction to decide the questions of similarity of the marks and of the goods of the respective parties in the absence of testimony upon these matters.

These contentions are deemed without merit. In the notice of opposition the registration of opposer was pleaded as well as the similarity of the marks and probable confusion of goods. The applicant took no testimony to show error in opposer's pleadings and had, in such pleadings, full notice that these matters would be considered at final hearing, notwithstanding opposer took no proofs.

[2] The marks are substantially identical, the only difference being that the two words of opposer's mark are formed into a single word in the applicant's mark. The words are spelled the same, look alike, sound the same, and have identical significance. As to the goods upon which the respective parties use the marks, it may be said that in a general way those of the applicant relate to male attire, while those of the opposer are generally for the use of women and children. There is, however, no clear line between these various articles of wearing apparel. In a general way they all belong to the class of clothing, and it is believed inevitable that these two substantially identical marks appearing in the same market upon these goods here under consideration would result in confusion or mistake in the mind of the public and the deception of purchasers. The cases cited by opposer, especially those of *H. Wolf & Sons* v. *Lord & Taylor*, 202 O. G. 632, 41 App. D. C. 514; *E-Z Waist Company* v. *Reliance Mfg. Co.*, 311 O. G. 709, 52 App. D. C. 291; *Rosenberg Co.* v. *Elliott*, 7 Fed. (2d) 962, to which may be added *The American Tobacco Co., Inc.*, v. *Gordon*, 342 O. G. 510, —— App. D. C. ——, are believed to be conclusive that all these goods belong to the same general class and constitute "merchandise of the same descriptive properties" within the meaning of section 5 (*b*) of the Trade-Mark Act of February 20, 1905.

The decision of the Examiner of Trade-Mark Interferences sustaining the opposition and adjudg-

ing the applicant not entitled to the registration sought is affirmed.

ON REHEARING.

KINNAN, *First Assistant Commissioner:*

The applicant company, through its counsel, has petitioned for a rehearing of the matters decided by me on August 20, 1926.

The point urged in support of the petition is that the Office should not consider the registration of the opposer in the absence of the taking of testimony.

[3] The Office is bound to take notice of its own records and, in the ex parte consideration of the application, should have denied registration in view of the registration of the opposer. Registration is prima facie evidence of ownership of the mark (sec. 16 of the act of February 20, 1905).

It is not thought there has been any such error in the former judgment as would warrant the reaching of any other conclusion than that set forth in my decision of August 20, 1926.

The petition is, in consequence, denied.

Court of Appeals of the District of Columbia.

THE DAVIES-YOUNG SOAP CO. *v.* THE SELIG CO.

No. 1,870. Decided December 6, 1926.

TRADE-MARKS—"DYSCO"—"SELCO"—NOT DECEPTIVELY SIMILAR.

The arbitrary words "Dysco" and "Selco" are not so similar, either in appearance or pronunciation, as to make confusion in trade probable.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. Howard S. Smith and *Mr. W. L. Symons* for The Davies-Young Soap Co.

Mr. E. H. Talbert for The Selig Co.

Before MARTIN, Chief Justice, VAN ORSDEL, Justice, and HATFIELD, Judge of the U. S. Court of Customs Appeals.

MARTIN, *C. J.:*

This is an appeal from a decision of the Commissioner of Patents dismissing the opposition of appellant to the registration of a trade-mark applied for by the appellee.

The trade-marks in question are for use upon similar goods, to wit vegetable-oil cleaning soap.

On August 15, 1922, the appellant obtained registration of the mark "Dysco" for use upon its goods, having used the mark since July 1, 1921. In the month of July, 1923, the appellee began the use of the word "Selco" as the trade-mark for similar goods, and on February 14, 1924, filed its present application for registration. The application was opposed by appellant upon a claim that the names are so similar as to be likely to produce confusion in trade and commerce. The opposition was overruled and dismissed by concurring decisions of the Patent Office, hence this appeal.

The two words in question are purely arbitrary and devoid of definition. The name "Dysco" is composed of the initial letters of appellant's name, to wit Davies-Young Soap Co., arranged in order, with the abbreviation "Co.," used as a final syllable, thereby forming the word "Dysco." The name "Selco" is somewhat similarly formed, being composed of the first syllable of the company name "Selig," together with the abbreviation "Co.," as a final syllable, thereby producing the name "Selco."

The opposition of appellant was dismissed by the Examiner of Interferences, and the applicant was adjudged to be entitled to the registration applied for. This decision was affirmed by the Commissioner of Patents.

We do not find it necessary to review or discuss the various cases which have been cited by counsel, but content ourselves with saying that in our opinion the words "Dysco" and "Selco" are not so similar either in appearance or pronunciation, as to make confusion in the trade probable.

The decision of the Commissioner of Patents is therefore affirmed.

Court of Appeals of the District of Columbia.

IN RE PARKS.

No. 1,860. Decided December 6, 1926.

REISSUE WITH BROADENED APPARATUS CLAIMS OF PATENT GRANTED ON PARENT APPLICATION DURING PENDENCY OF DIVISIONAL APPLICATION AND WITH BROAD PROCESS CLAIMS—DELAY.

Where appellant complied with a requirement for division between apparatus and process claims by filing a divisional application containing only process claims, which divisional application eventuated in a patent after the issue of a patent on the parent application, the latter patent containing only apparatus claims, *Held* that appellant was not entitled, in an application for reissue of the first or apparatus patent, filed almost three and one-half years after such patent was granted, to broaden the apparatus claims merely because his divisional application was copending with the parent application, such divisional application containing process claims as broad as the apparatus claims sought by the reissue.

APPEAL from Patent Office. Affirmed.

Mr. George W. Saywell for Parks.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, VAN ORSDEL, Justice, and HATFIELD, Judge U. S. Court of Customs Appeals.

VAN ORSDEL, *J.:*

This appeal is from the decision of the Commissioner of Patents rejecting appellant's reissue application, for claims relating to means for automatically manufacturing envelopes.

It is unnecessary to consider the claims since the case turns solely upon the question of whether or not appellant's reissue application was filed in time. The case is concisely stated by the Examiner as follows:

> The first official action upon the application from which the original patent [No. 1,316,737, Sept. 23, 1919] was granted was a requirement of division between the machine and process claims. This resulted in a divisional process application which matured into Patent No. 1,459,415. The present reissue application was filed during the pendency of said process application. The applicant contends that by reason of the process application he has been continuously in possession of rights which would prevent the accruing of any public rights operating to vitiate his reissue application.

Appellant is now seeking to broaden his claims and relies upon his right to do so, notwithstanding the lapse of almost three and one-half years since the original patent was granted. We are not impressed with his contention that public rights would not accrue because of his continuous possession of the claims in his original process application. Apparatus and method applications are separate and distinct, and relate to different classes of invention. Appellant is not entitled in his reissue application to broaden his claims merely because his process application was copending with the application on which the original patent was issued, containing claims as broad as those now sought by the reissue. His contention that under those circumstances the public could not obtain intervening rights, and, therefore, not be injured by the granting of this reissue application, is not in our opinion well founded.

We agree with the Examiners in Chief that—

> an apparatus and a process are distinct classes of invention and afford a somewhat different protection. The applicant has been granted his process patent and is entitled to such protection as it affords, and he would not be before the Office at this time with an application for a reissue of his apparatus patent, if he did not expect to obtain additional protection thereby. He is, therefore, seeking to restrict the rights of the public as to matter which was not claimed in his original patent, and it is no answer to this position that this application was filed while the present application was still pending.

The applicant seeks to excuse his delay in not filing the reissue application within the two-year period because of change of attorneys, financial difficulties in business ventures, and lack of time. This excuse was held inadequate by the tribunals of the Patent Office, and in this we concur.

The decision of the Commissioner of Patents is affirmed.

(C. C. A. N. J.) The Stedman patent, No. 1,482,952, for reenforced rubber flooring and process of manufacture, *Held* invalid. *Stedman* v. *Puritan Rubber Mfg. Co.*, 16 F. (2d) 742.

(C. C. A. Minn.) The Rousso patent, No. 42,398, design for towel cabinet, *Held* valid and infringed. *Boyle* v. *Rousso*, 16 F. (2d) 666.

Interference Notice.

U. S. PATENT OFFICE, *Washington, Feb. 23, 1927.*

Beyer Bros. Commission Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Corbin & Wiesmer, 17 Ferry Street, Binghamton, N. Y., for registration of a trade-mark and trade-mark registered February 6, 1917, No. 115,285, to Beyer Bros. Commission Co., 182 Duane Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Beyer Bros. Commission Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Beyer Bros. Commission Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, Mar. 7, 1927.*

Charles Hedden Incorporated, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Alfred Wright, Perfumer, Inc., of No. 113 West Eighteenth Street, New York, N. Y., to effect the cancellation of the trade-mark registration of Charles Hedden Incorporated, of 16 East Thirty-Third Street, New York, N. Y., No. 88,875, dated October 29, 1912, and the notice of such proceeding sent by registered mail to the said Charles Hedden Incorporated at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Charles Hedden Incorporated, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 22, 1927.

[VOL. 356. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

S. P.), Boracic Acid (Boric-Acid Powder U. S. P.), Lump Alum (Ammonia Alum), Alum Powder (U. S. P. Ammonia Alum), Blue Vitriol, Borax, Compound Licorice Powder, Permanganate Potash, Epsom Salt, Benzoic Acid, Oxalic Acid, Calomel, Cream Tartar, Quinine Sulphate, Sodium Phosphate, Salicylic Acid, Mustard Seed, Rochelle Salts, Plaster Mustard, Fumigator (The Vesuvian Fumigator), Extract Witch-Hazel, Carbolic Acid, Castor Oil (Aromatic), Aromatic Spirits Ammonia, Coconut Oil, Tincture Chloride of Iron, Sweet Spirits Niter, Essence Peppermint, Spirits Camphor, Paregoric, Glycerin and Rose Water, Blue Ointment, Glycerin, Peroxide of Hydrogen, Petrolatum, Fish Oil, Tincture Arnica, Chloroform Liniment, Chloroform, Essence Jamaica Ginger, Hinkle's Tablets (Cascara Compound), Castor Oil (Cold Pressed), Sirup White Pine, Zinc-Oxide Ointment, and Tincture Iodine.

Claims use since about July, 1925.

Ser. No. 225,341. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE BASSICK MANUFACTURING COMPANY, Chicago, Ill. Filed Dec. 31, 1925.

The drawing is lined to indicate the colors blue, red, and yellow.

Particular description of goods.—Filters for Filtering Fuel for Use in Internal-Combustion Engines and Usually Located Between the Fuel-Supply Tank and the Carburetor.

Claims use since Sept. 15, 1923.

Ser. No. 226,339. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) DETROIT AEROFLEX STABILIZER COMPANY, Detroit, Mich. Filed Jan. 25, 1926.

AEROFLEX STABILIZERS

No claim is made to the word "Stabilizers" apart from the mark as shown.

Particular description of goods.—Air-Cushion Devices for Moderating the Load-Supporting Spring Action of Motor Vehicles.

Claims use since Dec. 9, 1925.

Ser. No. 226,761. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) CAMFIELD RADIO MANUFACTURING COMPANY, Oakland, Calif. Filed Feb. 2, 1926.

DUOFORMER

Particular description of goods.—Coils for Radio Apparatus.

Claims use since August, 1925.

Ser. No. 227,057. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CHARLES A. CARICARI, doing business as The Phoenix Candy Company, New York, N. Y. Filed Feb. 9, 1926.

Applicant disclaims the use of the words "Old Fashioned Taffy" apart from the mark shown.

Particular description of goods.—Candy.

Claims use since January, 1921.

Ser. No. 227,507. (CLASS 38. PRINTS AND PUBLICATIONS.) THE BUZZA COMPANY, Minneapolis, Minn. Filed Feb. 19, 1926.

No claim is made to the exclusive use of the word "Process" apart from the mark shown in the drawing.

Particular description of goods.—Wall Calendars and Printed Calendars.

Claims use since Feb. 1, 1926.

Ser. No. 227,746. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JILL BROTHERS, Weslaco, Tex. Filed Feb. 24, 1926.

PANCHITA

Particular description of goods.—Fresh Vegetables.

Claims use since Nov. 1, 1925.

Ser. No. 228,100. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FLORIO & C. SOCIETÀ ANONIMA VINICOLA ITALIANA, Torino, Italy. Filed Mar. 4, 1926. Under section 5b of the act of 1905 as amended in 1920.

FLORIO

MARSALA TONIC

Florio & C.

SOCIETÀ ANONIMA VINICOLA ITALIANA
MARSALA - ITALY

Particular description of goods.—Tonic for General Debility.

Claims use since 1924.

Ser. No. 228,175. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHEMISCHE FABRIK STOCKHAUSEN & CIE., Krefeld, Germany. Filed Mar. 5, 1926.

TAKO

Particular description of goods.—Glycerin, Bleaching Composition, Sizing and Finishing Materials for Paper and Textile Fabrics, and Starch Preparations for Sizing and Similar Purposes.

Claims use since Dec. 29, 1921.

Ser. No. 228,176. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHEMISCHE FABRIK STOCKHAUSEN & CIE., Krefeld, Germany. Filed Mar. 5, 1926.

Terpinopol

Particular description of goods.—Bleaching Compositions and Compositions for Removing Stains, and Cleaning, Used in the Manufacture of Fabrics and Other Textile Materials.

Claims use since May 5, 1907.

Ser. No. 228,177. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHEMISCHE FABRIK STOCKHAUSEN & CIE, Krefeld, Germany. Filed Mar. 5, 1926.

Tetralix

Particular description of goods.—Bleaching Compositions and Compositions for Removing Stains, and Cleaning, Used in the Manufacture of Fabrics and Other Textile Materials.
Claims use since Feb. 20, 1911.

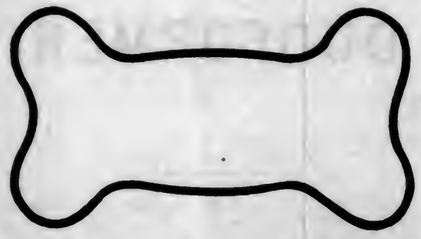
Ser. No. 228,645. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) CHICAGO FUSE MFG. CO., Chicago, Ill. Filed Mar. 15, 1926.

GEM Locktite

No claim is made to the word "Locktite" except in connection with the other features of the mark shown.
Particular description of goods.—Outlet Boxes, Switch Boxes, Hangers, Mounting Bars, and Lath Supports.
Claims use since Feb. 15, 1926.

Ser. No. 229,135. (CLASS 32. FURNITURE AND UPHOLSTERY.) UNITED MANUFACTURING COMPANY, Portland, Oreg. Filed Mar. 24, 1926.

SUPERBILT



Particular description of goods.—Overstuffed Furniture for Household Use, Breakfast Tables, Mattresses, and Bed Springs.
Claims use since Dec. 1, 1925.

Ser. No. 229,479. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) JAMES B. UTT, doing business as Utt-Williams Electrical Products Company, Santa Ana, Calif. Filed Mar. 31, 1926.

AEROLOOP

Particular description of goods.—Radio Receiving Sets.
Claims use since June 1, 1925.

Ser. No. 229,613. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) F. H. BENNETT BISCUIT COMPANY, New York, N. Y. Filed Apr. 3, 1926.

The mark consists of a design representing an outline of a bone.
Particular description of goods.—Animal Biscuits.
Claims use since Sept. 2, 1908.

Ser. No. 230,406. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) OHIO MALT PRODUCTS COMPANY, Toledo, Ohio. Filed Apr. 19, 1926.

The trade-mark is lined for red and blue.
Particular description of goods.—Malt Extracts, Beverages, and Sirups.
Claims use since Apr. 15, 1926.

Ser. No. 230,811. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) S. ALLCOCK & COMPANY, LIMITED, Redditch, England. Filed Apr. 28, 1926.

KLAMATH

All rights in the word "Klamath" apart from other features of the mark are hereby disclaimed.
Particular description of goods.—Artificial Flies, Gut Hooks, and Gut Lines (Made in England).
Claims use since Oct. 1, 1923.

Ser. No. 230,812. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) S. ALLCOCK & COMPANY, LIMITED, Redditch, England. Filed Apr. 28, 1926.

Holdwell

All rights in the word "Holdwell" apart from the other features of the mark are disclaimed.
Particular description of goods.—Casting Fishing Lines Made of Spanish Gut.
Claims use since Oct. 1, 1920.

Ser. No. 230,813. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) S. ALLCOCK & COMPANY, LIMITED, Redditch, England. Filed Apr. 28, 1926.

Marvel

Particular description of goods.—Gut Casting Fishing Lines (Made in England).
Claims use since Oct. 1, 1920.

Ser. No. 231,169. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) SOUTHWESTERN PRODUCTS COMPANY, Paris, Tenn. Filed May 5, 1926.

NU-GLOS

Particular description of goods.—Treated Dust Cloth Used on Autos, Furniture, or Painted or Enameled Surfaces.
Claims use since Mar. 1, 1920.

Ser. No. 231,420. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) VICTOR ADDING MACHINE CO., Chicago, Ill. Filed May 10, 1926.

SPORTABOUT

Particular description of goods.—Motor Boats.
Claims use since May, 1925.

Ser. No. 231,886. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WAYNE CREAMERY, Detroit, Mich. Filed May 19, 1926.

No claim is made to the representation of a cow, the words "Pure," "Milk," "Better," and "Health" appearing in the drawing.
Particular description of goods.—Pasteurized and Fresh Milk.
Claims use since July, 1925.

Ser. No. 231,999. (CLASS 33. GLASSWARE.) GRAHAM & ZENGER, INC., New York, N. Y. Filed May 21, 1926.

PINE TREE

The lining on the drawing indicates shading only.
Particular description of goods.—Glassware.
Claims use since Mar. 1, 1926.

Ser. No. 232,029. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MONROE MILLING COMPANY, Waterloo, Ill. Filed May 21, 1926.

FAD

Particular description of goods.—Wheat Flour.
Claims use since April, 1924.

Ser. No. 232,260. (CLASS 15. OILS AND GREASES.) DE BATAAFSCHE PETROLEUM MAATSCHAPPIJ, The Hague, Netherlands. Filed May 26, 1926.

BIMUTINE

Particular description of goods.—Fuel Oils.
Claims use since Jan. 9, 1926.

Ser. No. 232,308. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) AMERICAN CHICLE COMPANY, Long Island City, N. Y. Filed May 27, 1926.

CHICCOS

Particular description of goods.—Chewing Gum.
Claims use since May 5, 1926.

Ser. No. 232,384. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE BITTMANN-TODD GROCER COMPANY, Kansas City, Kans. Filed May 28, 1926.

Orchid

Particular description of goods.—Canned Fruits, Canned Vegetables, Canned Berries, Canned Mushrooms, Cheese, Preserved Figs; Canned Meats—Namely, Potted and Deviled Meats, Vienna Sausage, Sliced Beef, Corn Beef, Roast Beef, and Chile Con Carne; Canned Oysters, Catchup, Shredded Coconut, Coffee, Dried Fruits, Flavoring Extracts for Food Purposes, Oatmeal, Breakfast Cereals, Corn Flakes, Apple Butter, Fruit and Berry Preserves, Jellies, Crushed Fruits, Horse-Radish, Honey, Evaporated Unsweetened Canned Milk, Vegetable Relishes, Pepper Sauce, Cornstarch, Table Sirup, Maple-Blend Sirup, Corn Sirup, Prepared Mustard, Peanut Butter, Olives, Pickles, Rice, Salad Dressings, Spices, Tea, Vinegar, Maraschino Cherries, and Mincemeat.
Claims use since 1906.

Ser. No. 232,774. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HYLTON FLOUR MILLS, INC., Ogden, Utah. Filed June 5, 1926.

All wording is disclaimed apart from the mark as shown on the drawing.
Particular description of goods.—Wheat Flour.
Claims use since January, 1922.

Ser. No. 233,003. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) THE HI-BRED CORN COMPANY, Des Moines, Iowa. Filed June 10, 1926.

The representation of the ear of corn in the drawing is disclaimed.
Particular description of goods.—Seed Corn.
Claims use since Jnn. 1, 1926.

Ser. No. 233,111. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) COLUMBUS MANUFACTURING COMPANY, Columbus, Ga. Filed June 12, 1926.

NINA

Particular description of goods.—Cotton Sheetings.
Claims use since Feb. 5, 1926.

Ser. No. 233,112. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) COLUMBUS MANUFACTURING COMPANY, Columbus, Ga. Filed June 12, 1926.

PINTA

Particular description of goods.—Cotton Sheetings.
Claims use since Feb. 5, 1926.

Ser. No. 233,216. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) MILLERS FALLS COMPANY, Millers Falls, Mass., and New York, N. Y. Filed June 14, 1926.

No claim is made to the representation of the level as shown on the drawing. The drawing is lined to indicate the color red.
Particular description of goods.—Levels.
Claims use since June 10, 1926.

Ser. No. 233,349. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) J. W. ASHER CO., El Centro, Calif. Filed June 17, 1926.

CAMELS

Particular description of goods.—Fresh Cantaloupes, Fresh Melons, and Fresh Lettuce.
Claims use since Apr. 1, 1926.

Ser. No. 233,731. (CLASS 39. CLOTHING.) DAVID J. GROSS, New York, N. Y. Filed June 25, 1926.

The representation of the girl is a fanciful picture.
Particular description of goods.—Middies, Middy Blouses, Smocks, and Children's Dresses.
Claims use since July 16, 1920.

Ser. No. 233,824. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MARTIN HOKANSON, Duluth, Minn. Filed June 28, 1926.

VIKING

Particular description of goods.—Edible Crackers.
Claims use since June 23, 1926.

Ser. No. 234,068. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOHN G. WOODWARD & CO. (INC.), Council Bluffs, Iowa. Filed July 2, 1926.

Lixies

Particular description of goods.—Candy.
Claims use since June 23, 1926.

Ser. No. 234,204. (CLASS 32. FURNITURE AND UPHOLSTERY.) FINCH AND HISEY, Wayne, Mich. Filed July 6, 1926.

Diner-ette

Particular description of goods.—Household Tables.
Claims use since Dec. 1, 1924.

Ser. No. 235,697. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) W. D. HOUGHTON & COMPANY LIMITED, Warrington, England. Filed Aug. 7, 1926.

Particular description of goods.—Steel Wire Known as Music Wire, Needle Wire, Rope Wire, and Round Steel Wire.
Claims use since on or about June 7, 1876.

Ser. No. 235,769. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) MAX ABELMAN, doing business as M. Abelman Co., Boston, Mass. Filed Aug. 10, 1926.

MACO

Particular description of goods.—Dry, Paste, or Ready-Mixed Paints, Colors in Oil, Varnishes, and Prepared Shellacs.
Claims use since Oct. 1, 1925.

Ser. No. 235,999. (CLASS 2. RECEPTACLES.) THE CASEY-FOSTER CO., Boston, Mass. Filed Aug. 16, 1926.

No claim is made to the lining, which indicates red color, in the drawing. The word "Products" appearing upon the star is not a part of the mark.

Particular description of goods.—Garbage Receivers, Ash Cans, Cake and Bread Boxes, Knife and Fork Boxes, Tea and Coffee Canisters, Filing Boxes, Safe-Deposit Boxes, Medicine Chests, and Workboxes.

Claims use since Aug. 11, 1926.

Ser. No. 236,215. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) LILY FOUNDRY COMPANY, Los Angeles, Calif. Filed Aug. 20, 1926.

The representation of a lavatory is disclaimed apart from the mark as shown.

Particular description of goods.—Plumbers' and Steam-Fitters' Supplies—Namely Bowls, Basins, Tubs, Baby Baths, Sinks, Toilet Bowls, Lavatories, and Tanks.

Claims use since Mar. 1, 1926.

Ser. No. 236,232. (CLASS 39. CLOTHING.) STEINFELD BROS. INC., New York, N. Y. Filed Aug. 20, 1926.

"Tailorcraft"

Particular description of goods.—Ladies' Wearing Apparel Comprising Petticoats, Pantalets, Bloomers, Slips, and Step-Ins Made of Silk, Cotton, Textile Fabrics, or Combinations Thereof.

Claims use since Jan. 1, 1924.

Ser. No. 236,242. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MADELEINE VIONNET ET CIE, Paris, France. Filed Aug. 20, 1926.

No claim is made to the exclusive use of the words "Madeleine Vionnet et Cie" apart from the mark as shown.

Particular description of goods.—Perfumes of All Kinds; Perfumed Talcum, Sachet, and Face Powder; Perfumed Paste, Stick, Powder, and Liquid Rouge; Perfumed Face and Massage Cream, Perfumed Hair Tonic and Lotions, Perfumed Bath Salts and Powders, and Perfumed Dentifrices in Paste, Powder, and Liquid Form.

Claims use since Jan. 24, 1923.

Ser. No. 236,899. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NERVODO AKTIENGESELLSCHAFT, Zurich, Switzerland. Filed Aug. 19, 1926.

No claim is made to the wording except "Nervodo" apart from the mark shown.

Particular description of goods.—Special Medical Remedy and Pharmaceutical Preparation Against All Kind of Nervous Disease.

Claims use since Aug. 27, 1925.

Ser. No. 237,400. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) ANCHOR CAP & CLOSURE CORPORATION, Long Island City, N. Y. Filed Sept. 18, 1926.

The lining shown on the drawing is for shading.

Particular description of goods.—Closure Caps.

Claims use since 1913.

Ser. No. 237,511. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) CLARKE D. PEASE, INC., New York, N. Y. Filed Sept. 21, 1926.

The letters "H. S." within a circle comprise the trademark.

Particular description of goods.—Automobiles, Automobile Chassis, and Constructive Parts Thereof, and Carrosseries.

Claims use since October, 1923.

Ser. No. 237,655. (CLASS 38. PRINTS AND PUBLICATIONS.) THE COMMERCIAL REPORTER, New York, N. Y. Filed Sept. 24, 1926.

The COMMERCIAL REPORTER

"The Commercial Reporter."

Particular description of goods.—Monthly Publication.

Claims use since Jan. 1, 1926.

Ser. No. 237,857. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) THE FRED. GRETSCH MFG. CO., Brooklyn, N. Y. Filed Sept. 28, 1926.

The Turkish writing meaning as follows: "Turkish Cymbal (cymbal) Dish-Shaped Musical Instrument of Brass, Used in Pairs to Produce a Sharp Ringing Sound by Clashing Them Together"; the signature of A. Zildjian & Company; "Established in 1603"; the French writing meaning "Founded in 1603, Beware of Imitations, Turkish Cymbal," the signature in script being the authentic signature of A. Zildjian & Co. in Armenian; no claim being made to the exclusive use of the words in Turkish meaning "Turkish Cymbal (Cymbal) Dish-Shaped Musical Instrument of Brass, Used in Pairs to Produce a Sharp Ringing Sound by Clashing Them Together, Paris, Londres, Trade Mark De Constantinople," and the representation of the cymbals, nor to the words and numeral "Founded in 1603," in both Turkish and French, and the words "Beware of the Imitations," in both English and French, apart from the mark as shown in the drawing.

Particular description of goods.—Cymbals.

Claims use since Apr. 20, 1926.

Ser. No. 238,050. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE CURTISS CANDY COMPANY, Chicago, Ill. Filed Oct. 2, 1926.

CURTISS
Sandwich

The word "Sandwich" does not form a part of the registration.

Particular description of goods.—Candy and Candy Bars.

Claims use since Feb. 1, 1926.

Ser. No. 238,305. (CLASS 2. RECEPTACLES.) CONTAINER CORPORATION OF AMERICA, Chicago, Ill. Filed Oct. 8, 1926.

Particular description of goods.—Fiber-Board and Corrugated-Board Boxes or Shipping Containers.
Claims use since Aug. 25, 1926.

Ser. No. 238,747. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SERVICE GROCER COMPANY, INC., Detroit, Mich. Filed Oct. 16, 1926.

USEMORE

Particular description of goods.—Canned Fruits and Vegetables, Canned Salmon, Coffee, Tea, Jams, Jellies; Preserves—Namely, Peach, Pear, Crab Apple, Cherry, Blueberry, Strawberry, Apricot, and Pineapple; Condiments—Namely, Catchup, Chili Sauce, Horse-Radish Sauce, Prepared Mustard; Olives, Pickles, Salad Dressing, and Flavoring Sauce Used in Cooking, Dried Fruits; Sirups—Namely, Corn and Mixed Cane and Corn Molasses; and Plain Wheat Flour.
Claims use since 1922.

Ser. No. 238,766. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) BENTZ ENGINEERING CORPORATION, Newark, N. J. Filed Oct. 18, 1926.

MULLIFIER

Particular description of goods.—Leather-Conditioning Cabinets.
Claims use since July, 1926.

Ser. No. 238,966. (CLASS 39. CLOTHING.) HALF SIZE DRESS CO., New York, N. Y. Filed Oct. 21, 1926.

Particular description of goods.—Gowns, Frocks, and Dresses.
Claims use since Oct. 7, 1926.

Ser. No. 239,100. (CLASS 45. BEVERAGES, NONALCOHOLIC.) GENERAL CITRUS CORPORATION, Los Angeles, Calif. Filed Oct. 28, 1926.

JULIUS

Particular description of goods.—Nonalcoholic, Maltless Beverage Sold as a Soft Drink.
Claims use since Sept. 1, 1926.

Ser. No. 239,115. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JUNIOR CANDY COMPANY, Milwaukee, Wis. Filed Oct. 23, 1926.

Particular description of goods.—Candy.
Claims use since Oct. 1, 1926.

Ser. No. 239,237. (CLASS 37. PAPER AND STATIONERY.) CONSTRUCTION SUPPLIES COMPANY OF AMERICA, New York, N. Y. Filed Oct. 26, 1926.

CONSUCO

Particular description of goods.—Paper and Stationery—Namely, Paper Towels and Toilet Paper.
Claims use since Jan. 1, 1926.

Ser. No. 239,241. (CLASS 39. CLOTHING.) DAVISON-PAXON-STOKES CO., Atlanta, Ga. Filed Oct. 26, 1926.

Particular description of goods.—Women's Silk Hosiery.
Claims use since Oct. 6, 1926.

Ser. No. 239,438. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) TON-TEX CORPORATION, Grand Rapids, Mich. Filed Oct. 29, 1926.

Particular description of goods.—Belting—Namely, a Composition Textile and Rubber Belting.
Claims use since Sept. 1, 1926.

Ser. No. 239,449. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WHITE GRAIN COMPANY, Duluth, Minn. Filed Oct. 29, 1926.

The shade lines on the drawing indicate the colors orange and green.
Particular description of goods.—Feeds (Scratch Feeds).
Claims use since about Sept. 1, 1926.

Ser. No. 239,679. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE WM. SCHLUDERBERG-T. J. KURDLE CO., Baltimore, Md. Filed Nov. 4, 1926.

BEAUTIES

Particular description of goods.—Packers' Products—Namely, Lards, Creamery Butter, Hams, Bacon, Shoulders, Sausage, Pork Roll, Dried Beef, Cheese, Lard Compounds Made from Cottonseed Oil and Other Oils.
Claims use since Jan. 1, 1920.

Ser. No. 239,807. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LEE HESS, doing business as Halitosine Company, St. Louis, Mo. Filed Nov. 8, 1926.

HALITOSINE

Particular description of goods.—Antiseptic Preparations and Lotions for Use Externally and in the Mouth.
Claims use since Oct. 26, 1926.

Ser. No. 239,892. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ORCHESTRON COMPANY, Glendale, Calif. Filed Nov. 10, 1926.

Orchestron

Particular description of goods.—Radio Loud Speaker.
Claims use since May 12, 1926.

Ser. No. 239,918. (CLASS 33. GLASSWARE.) CAPSTAN GLASS COMPANY, Connellsville, Pa. Filed Nov. 11, 1926.

Particular description of goods.—Tumblers, Glasses, Glass Bottles, Glass Jars, Fancy Glass Vase Jars, and Glass Dishes.
Claims use since May, 1919.

Ser. No. 239,980. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE GLADIATOR CO., INC., New York, N. Y. Filed Nov. 12, 1926.

AGLOs

Particular description of goods.—Hair Preparation and Tonic to Nourish the Scalp, Relieve Dandruff, Itching Scalp, and Eczema, and Also a Hairdressing to Give the Hair a High Luster.
Claims use since Oct. 27, 1926.

Ser. No. 240,004. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) REIF BROTHERS, Buffalo, N. Y., assignor to Reif-Rexoil Inc., Buffalo, N. Y. Filed Nov. 12, 1926.

REXOIL

Particular description of goods.—Oil-Burning Apparatus.
Claims use since Oct. 28, 1926.

Ser. No. 240,414. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) HUGO HEUSCH & CIE. G. M. B. H., Aachen, Germany. Filed Nov. 22, 1926.

„Sphinx"

Particular description of goods.—Hand Sewing Needles; Pins Made of Steel, Brass, Iron, or Aluminum Wire with Heads of Similar Material or Heads of Glass; Safety Pins Made of Steel, Brass, Iron, or Aluminum Wire; Crochet Needles, Hand Knitting Needles; Hairpins Made of Steel, Brass, Iron, or Aluminum Wire with Heads of Similar Material or Heads of Glass; and Hatpins Made of Steel, Brass, Iron, or Aluminum Wire with Heads of Similar Material or Heads Made of Glass.
Claims use since Oct. 1, 1894.

Ser. No. 240,456. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) TUTTLE & BAILEY MANUFACTURING COMPANY, New York and Brooklyn, N. Y. Filed Nov. 22, 1926.

GRAMERCY

Particular description of goods.—Heating-System Devices in the Nature of Radiator Inclosures and Cabinets Serving to Deflect, Reflect, Control, and Distribute Heat.
Claims use since June 17, 1926.

Ser. No. 240,458. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) TUTTLE & BAILEY MANUFACTURING COMPANY, New York and Brooklyn, N. Y. Filed Nov. 22, 1926.

VILLA

Particular description of goods.—Heating-System Devices in the Nature of Radiator Inclosures and Cabinets Serving to Deflect, Reflect, Control, and Distribute Heat.
Claims use since June 17, 1926.

Ser. No. 240,462. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MANUEL S. VALLDEJULI, Buffalo, N. Y. Filed Nov. 22, 1926.

Particular description of goods.—A Laxative, Diuretic, and Eliminant.
Claims use since November, 1924.

Ser. No. 240,636. (CLASS 7. CORDAGE.) WHITLOCK CORDAGE COMPANY, New York, N. Y. Filed Nov. 26, 1926.

No claim is made to the representation of the rope apart from the mark shown. A multi-ply yarn, made up of several yarns twisted together, is arbitrarily used in contrast with the single-ply yarns forming the strand cover yarns in twisted rope structure in such manner that at each emergence of the multi-ply yarn to the exterior of the rope it produces the appearance of a longitudinal series of substantially diamond-shaped figures, as illustrated in the accompanying drawing, thereby distinguishing applicant's rope from the product of all other manufacturers.
Particular description of goods.—Rope.
Claims use since on or about Apr. 1, 1923.

Ser. No. 240,676. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MARSHALL S. NEAL, doing business as Marshall Neal & Company, Pasadena, Calif. Filed Nov. 27, 1926.

Villa Rosa

Particular description of goods.—Stuffed Figs, Fig Chews Composed of Taffy, Strawberry Preserves, Strawberry Fig Preserves, Fig Chutney, Tomato Chutney, Mustard Pickle, Cucumber Pickle, Spiced Figs, Watermelon Pickle, Guava Jelly, Mint Jelly, Roselle Jelly, Apple Jelly, Grapé Jelly, Fruit Cake, Chocolate Leaves Consisting of Thin Cakes Composed of Almond Paste Coated with Chocolate, Crystallized Apple, Crystallized Pineapple, Crystallized Orange Peel, Crystallized Grapefruit Peel, Stuffed Dates, Stuffed Prunes.
Claims use since Oct. 15, 1926.

Ser. No. 240,701. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CORN PRODUCTS REFINING COMPANY, New York, N. Y. Filed Nov. 29, 1926.

LIBERTY

Particular description of goods.—Cornstarch.
Claims use since about Sept. 1, 1900.

Ser. No. 240,729. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MORROW-KIDDER MILLING COMPANY, Carthage, Mo. Filed Nov. 29, 1926.

Sea Foam

Particular description of goods.—Wheat Flour.
Claims use since 1880.

Ser. No. 240,747. (CLASS 15. OILS AND GREASES.) SMITH & NICHOLS, INCORPORATED, New York, N. Y. Filed Nov. 29, 1926.

VICTOR

Particular description of goods.—Candles.
Claims use since 1913.

Ser. No. 240,948. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) BAKELITE CORPORATION, New York, N. Y. Filed Dec. 4, 1926.

BAKELITE

Particular description of goods.—Molding Compounds and Mixtures Adapted for the Manufacture of the Following Electrical Commodities or Parts Thereof and for

Such Electrical Commodities or Parts Made of Said Compounds and Mixtures: Electrically-Insulating Panels, Electrically-Insulating Washers and Bushings, Electrically-Insulating Rods and Sheets, Bus-Bar Supports, Signal-Device Insulation, Electrical Distributor Heads, Ignition Insulation, Ignition Timers, Dials for Radio and the Like; Knobs for Rheostats, Condensers, and the Like; Switch Bases, Handles of Electrically-Insulating Compositions, Switch Handles, Condenser End Plates, Junction Blocks; Generators (Insulated Parts), Electrically-Insulating Material for Parts of Potentiometers, Panels for Radio Sets, Electrically-Insulated Thumb Nuts and Knobs, Electrically-Insulating Face Plates, Electrically-Insulating Sockets, Junction-Box Insulators, Rotors, Connecters, Telephone and Radio Jacks, Commutators, Magneto Gears, Tubes for Coil Windings; Magneto Parts—Namely, Silent Resilient Gears and Combination Shaft Connecters and Insulators and Insulating Compositions for Such Parts; Telephone-Receiver Shells, Telephone Ear Caps, Wireless Boxes of Insulating Material, Insulators for Electromagnets of Annunciators, Insulators for Signal Devices; Electrically-Insulating Material for Electric Meter Covers and Bases, Tube Sockets, Variometers, Spools for Receiving Electrical Windings, Switchboards, Electric-Sign Insulation, Bobbin Heads for Electromagnetic Coils, Motor and Dynamo Brush Holders, Telephone Switch Members, Telephone Mouthpieces, Electrically-Insulating Parts for Water Heaters, Electrical Push Buttons, Mercury Wells, Fuse Blocks, Rheostat Bases, Third-Rail Insulation; Parts for Electric Curling, Soldering, and Flat Irons—Namely, Handles, Handle-Plugs and Electrically-Insulating Parts; Vacuum-Tube Bases, Lamp Sockets, Spark Intensifiers; Dental Parts—Namely, Insulators for Motor and Flexible-Shaft Drills, High-Tension Terminal Posts for X-Ray Tubes, and Handles and Toggles for Electrical Exploring Lights; Violet-Ray Generators (Insulated Parts), Electrical Condenser Cases, Spark-Plug Covers, Wiring Channels, Radio Ear Phones, Transformer Parts and Cases; Electric Piano Controls, Refillable Fuse Cases; Electric Elevator Parts—Namely, Dashpots Forming Part of the Electrical Control of the Elevator, Electric Control and Switchboard Insulators; Phonograph-Motor Insulation, Variocouplers, Heat-Regulator Insulation, Plugs and Receptacles for Multiplex Telegraphy Apparatus; Diaphragms for Use in Sound-Reproducing Instruments Such as Microphones, Telephones, and Loud Speakers; Electrical Cable Terminals, Electric-Vacuum-Cleaner Insulation, Panel Switches, Attachment Plugs, Grid Leaks, Plugs (Telephone), Jack Plug Boxes, Electric Drills, Lightning Arresters, Loud Speakers, Vernier Dials and Electrically-Insulating Material for Verniers; Bases of Electrically-Insulating Material for Radio Amplifying Units, Radio Antennæ Loops, Switch and Outlet Plates, Electrical Brushes, Electrical Cigar Lighters, Adapters Made of Electrically-Insulating Material for Radio Tube Sockets House Wiring and Power Wiring Insulators; Electric-Fan Blades, Insulating Shells and Blocks for Traffic-Control Signals, Housing Cones for X-Ray Tubes, and Electric Hair-Waving Machinery, and for Insulating Cement and Impregnating Compositions for Coil Cases.

Claims use in connection with insulating panels, insulating washers and bushings, and insulating rods and sheets since about 1909; in connection with bus-bar supports, signal device insulation, electrical distributor heads, ignition insulation, ignition timers, dials for radio and the like, knobs for rheostats, condensers, and the like, switch bases, handles of insulating composition, and switch handles since about 1910; in connection with condenser end plates, junction blocks, generators (insulated parts), potentiometers, panels for radio sets, insulated thumb nuts and knobs, face plates, insulating sockets, junction-box insulators, rotors, connecters, and telephone and radio jacks since about 1911; in connection with commutators, magneto gears, tubes for coil windings, magneto parts—namely, silent resilient gears and combination shaft connecters and insulators and insulating compositions for such parts—telephone-receiver shells, telephone ear caps, wireless boxes of insulating material, insulators for electromagnets of annunciators, and insulators for signal devices since about 1912; in connection with electrical meter covers and bases, tube sockets, variometers, spools for receiving electrical windings, switchboards, electric-sign insulation, bobbin heads, and motor and dynamo brush holders since about 1913; in connection with telephone switch members, telephone mouthpieces, electrical insulation for water heaters, electrical push buttons, and mercury wells since about 1914; in connection with fuse blocks, rheostat bases, third-rail insulation, and parts for electric curling, soldering, and flat irons—namely, handles, handle plugs and electrically-insulating parts—since about 1915; in connection with vacuum-tube bases, lamp sockets, spark intensifiers, dental parts—namely, insulators for motor and flexible-shaft drills—high-tension terminal posts for X-ray apparatus, housing cones for X-ray tubes, and handles and toggles for electrical exploring lights, and violet-ray generators (insulated parts) since about 1916; in connection with electrical condenser cases, spark-plug covers, and wiring channels since about 1917; in connection with radio ear phones, transformer parts and cases, electric-piano controls, refillable fuse cases, and electric elevator parts—namely, dashpots, electric control and switchboard insulators—since about 1918; in connection with phonograph-motor insulation, variocouplers, and heat-regulator insulation since about 1919; in connection with plugs and receptacles for multiplex telegraphy apparatus since about April, 1920; in connection with diaphragms since about July, 1920; in connection with electrical cable terminals since about October, 1920; in connection with electric-vacuum-cleaner insulation since about December, 1920; in connection with panel switches since about January, 1921; in connection with attachment plugs since about February, 1921; in connection with grid leaks since about June, 1921; in connection with plugs (telephone) since about June, 1921; in connection with jack plug boxes since about April, 1922; in connection with electric drills since about May, 1922; in connection with lightning arresters since about June, 1922; in connection with loud speakers since about August, 1922; in connection with verniers since about March, 1923; in connection with amplifiers since about April, 1923; in connection with loops since about May, 1923; in connection with switch and outlet plates since about June, 1923; in connection with electrical brushes since about July, 1923; in connection with electrical cigar lighters since about January, 1924; in connection with wireless adapters since about February, 1924; in connection with house wiring and power insulators since about October, 1924; in connection with electric-fan blades since about November, 1924; in connection with insulating shells and blocks for traffic-control signals since about February, 1925; in connection with electric hair-waving machinery since about March, 1925; and in connection with insulating cement and impregnating compositions for coil cases since about 1910.

Ser. No. 241,142. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) THE EAGLE-PICHER LEAD COMPANY, Chicago, Ill. Filed Dec. 8, 1926.

EAGLE-PICHER

Particular description of goods.—Antimonial Lead, Pig Lead, Spelter, Solder, Babbitt, and Trap Lead.

Claims use since July 8, 1916.

Ser. No. 241,144. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE EAGLE-PICHER LEAD COMPANY, Chicago, Ill. Filed Dec. 8, 1926.

Exclusive use of the word "Products" is disclaimed apart from the mark shown. The lining in the drawing represents the colors black and white.

Particular description of goods.—White Lead, Blue Lead, Red Lead, Sublimed White Lead, Supersublimed White Lead, Sublimed Blue Lead, Sublimed Red Lead, Litharge, Sublimed Litharge, Orange Mineral, Lithopone, and Zinc Oxide.

Claims use since Nov. 15, 1926.

Ser. No. 241,145. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE EAGLE-PICHER LEAD COMPANY, Chicago, Ill. Filed Dec. 8, 1926.

Exclusive use of the word "Products" is disclaimed apart from the mark shown. The lining represents the colors black and white stripes.

Particular description of goods.—White Lead, Red Lead, Blue Lead, Sublimed White Lead, Supersublimed White Lead, Sublimed Blue Lead, Sublimed Red Lead, Litharge, Sublimed Litharge, Orange Mineral, Lithopone, and Zinc Oxide.

Claims use since Nov. 15, 1926.

Ser. No. 241,146. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE EAGLE-PICHER LEAD COMPANY, Chicago, Ill. Filed Dec. 8, 1926.

Exclusive use of the word "Products" is disclaimed apart from the mark shown in drawing. The lining represents the colors red and blue.

Particular description of goods.—White Lead, Red Lead, Blue Lead, Sublimed White Lead, Supersublimed White Lead, Sublimed Blue Lead, Sublimed Red Lead, Litharge, Sublimed Litharge, Orange Mineral, Lithopone, Zinc Oxide.

Claims use since Nov. 15, 1926.

Ser. No. 241,189. (CLASS 39. CLOTHING.) STANDARD HAT COMPANY, San Francisco, Calif. Filed Dec. 8, 1926.

Bobby Allen

No claim is made to the exclusive right to the name "Allen" apart from the other features of the mark as shown.

Particular description of goods.—Ladies' and Misses' Hats.

Claims use since Jan. 21, 1926.

Ser. No. 241,206. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) I. G. FARBENINDUSTRIE AKTIENGESELLSCHAFT, Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Dec. 9, 1926.

Cellappret

Particular description of goods.—Composition for Sizing, Stiffening, and Finishing Thread, Yarns, and Other Textile Materials, Including Artificial Silks.

Claims use since about August, 1926.

Ser. No. 241,212. (CLASS 38. PRINTS AND PUBLICATIONS.) F-R PUBLISHING CORPORATION, New York, N. Y. Filed Dec. 9, 1926.

LIPSTICK

Particular description of goods.—Nom de Plume for Magazine Articles in a Weekly Publication.
Claims use since July 18, 1925.

Ser. No. 241,296. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HORACE W. PAINE, New York, N. Y. Filed Dec. 10, 1926.

The word "Milk" appearing on the drawing being descriptive is disclaimed by applicant and is not sought to be registered as a part of the trade-mark.
Particular description of goods.—Bottled Milk.
Claims use since Sept. 1, 1926.

Ser. No. 241,361. (CLASS 37. PAPER AND STATIONERY.) THE TISSUE COMPANY, Saugerties, N. Y. Filed Dec. 11, 1926.

Applicant disclaims the right to the exclusive use of the words "Essex Flat Fold Crepe Paper."
Particular description of goods.—Crepe Paper for Decorative Purposes.
Claims use since Dec. 30, 1925.

Ser. No. 241,362. (CLASS 39. CLOTHING.) R. M. WATKINS, doing business as Watkins Hosiery Mills, Chattanooga, Tenn. Filed Dec. 11, 1926.

MISS SPRINGTIME

"Miss Springtime."
Particular description of goods.—Hosiery.
Claims use since Nov. 23, 1926.

Ser. No. 241,426. (CLASS 15. OILS AND GREASES.) E. H. MILTON AND SONS, Sedalia, Mo. Filed Dec. 13, 1926.

DIXCEL

Particular description of goods.—Gasoline, Kerosene, Burning Oils, Fuel Oils, and Distillate.
Claims use since August, 1921.

Ser. No. 241,466. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) L. AVANZINO & BRO. INC., Boston, Mass. Filed Dec. 14, 1926.

AVA

Particular description of goods.—Canned Fish.
Claims use since June 1, 1926.

Ser. No. 241,484. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) RAFFAELE INSANA, doing business as R. Insana Co., Long Island City, N. Y. Filed Dec. 14, 1926.

RIMEDIO DIABOLICO

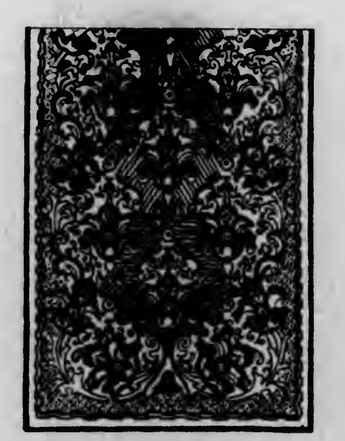
REISSUES

MARCH 22, 1927.

16,575. TOWING DEVICE. ISAAC E. BOEKENOOGEN and EARL R. AMES, Aitkin, Minn. Filed May 10, 1926. Serial No. 108,204. Original No. 1,579,504, dated Apr. 6, 1926, Serial No. 2,295, filed Jan. 14, 1925. 5 Claims. (Cl. 280—89.)

5. A device attachable to automobiles of various makes and designs for rendering the steering axle thereof rigid for towing purposes, comprising two clamps attachable to various sizes and shapes of axles and rods with means normally exposed to readily tighten the clamps to and loosen them from said axles and steering rods respectively, and a rigid part having a universally flexible attachment to at least one of said clamps, the attachments being such that they will prevent substantial longitudinal movement of said rigid part relative to the clamps and thus prevent relative longitudinal movement between the axle and rod, but being sufficiently flexible to allow attachment between the steering rods and axles of widely different normal positions of axles and rods relatively to each other.



16,576. CREAM-TREATING PROCESS. ROBERT K. COONEY, Toledo, Ohio, assignor, by direct and mesne assignments, to Campbell-Cooney Patents Co., Homer, Mich., a Corporation of Michigan. Filed Oct. 11, 1926. Serial No. 140,766. Original No. 1,599,650, dated Sept. 14, 1926, Serial No. 59,041, filed Sept. 28, 1925. 9 Claims. (Cl. 99—11.)

9. In the preparation of a cream for butter to have its acidity then increased by the addition of a culture the process of treating sour cream comprising adding an alkaline agent for reacting to reduce the acidity and to dissolve the curds while retaining the cream acid, allowing a time to react and warming, and then subjecting to a centrifugal machine for removing products of the reaction.

DESIGNS

MARCH 22, 1927.

72,250. TABLE SCARF. JOSEPH DERK, Philadelphia, Pa., assignor to The Derk Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 9, 1926. Serial No. 19,648. Term of patent 3½ years.

The ornamental design for a table scarf, as shown and described.

72,251. CURTAIN-POLE END. AUGUST DLOUHY, Wallingford, Conn., assignor to H. L. Judd Co., Inc., New York, N. Y., a Corporation of Delaware. Filed July 17, 1926. Serial No. 18,392. Term of patent 3½ years.

The ornamental design for a curtain-pole end, as shown and described.

72,252. WRAPPING PAPER. DOMINGO ESPAGNOL and AGUSTIN ENRIQUE ESPAGNOL, Buenos Aires, Argentina. Filed May 26, 1926. Serial No. 17,864. Term of patent 14 years.

The ornamental design for wrapping paper as shown.

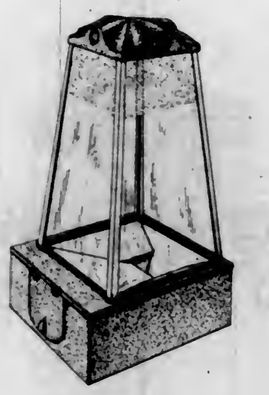
72,253. COMBINED SALT AND PEPPER SHAKER. ALFRED J. FLAUDER, Bridgeport, Conn. Filed Jan. 17, 1927. Serial No. 20,412. Term of patent 7 years.

The ornamental design for a combined salt and pepper shaker substantially as shown.

72,254. COMBINED SALT AND PEPPER SHAKER. ALFRED J. FLAUDER, Bridgeport, Conn. Filed Jan. 18, 1927. Serial No. 20,422. Term of patent 7 years.

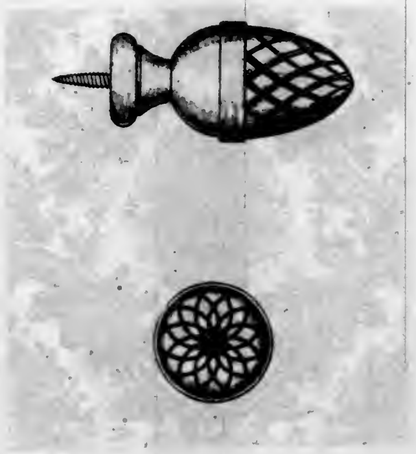
The ornamental design for a combined salt and pepper shaker substantially as shown.

72,255. COMBINED SALT AND PEPPER SHAKER. ALFRED J. FLAUDER, Bridgeport, Conn. Filed Jan. 19, 1927. Serial No. 20,423. Term of patent 7 years.



The ornamental design for a combined salt and pepper shaker substantially as shown.

72,256. BADGE. WILLIAM H. HARRIS, Richmond, Va. Filed Oct. 2, 1926. Serial No. 19,221. Term of patent 3½ years.



The ornamental design for a badge, as shown.

72,257. CABINET FOR DISPLAYING AND DISPENSING MERCHANDISE. CHARLES F. HAUNZ, Buffalo, N. Y. Filed Dec. 20, 1926. Serial No. 20,100. Term of patent 14 years.

The ornamental design for a cabinet for displaying and dispensing merchandise, as shown.

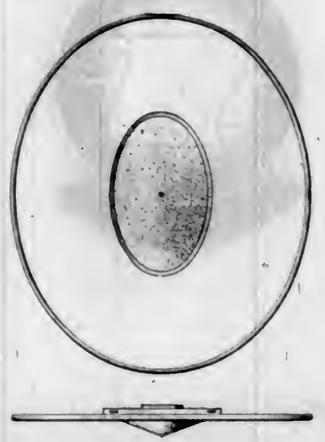
72,258. POLE END. WILLIAM F. HOFMANN, Brooklyn, N. Y., assignor to H. L. Judd Co., Inc., Wallingford, Conn., a Corporation of Delaware. Filed Nov. 27, 1926. Serial No. 19,863. Term of patent 3½ years.

The ornamental design for a pole end as shown.

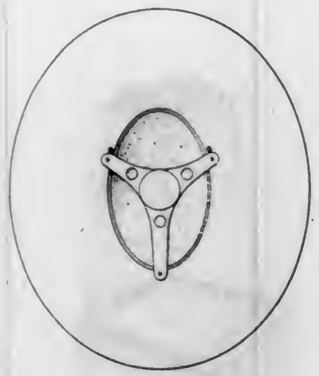
72,259. TEXTILE FABRIC. BENJAMIN HOLMES, Philadelphia, Pa., assignor to Morrell Mills, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 21, 1927. Serial No. 20,448. Term of patent 3½ years.

The ornamental design for a textile fabric as shown.

72,260. TEXTILE FABRIC. BENJAMIN HOLMES, Philadelphia, Pa., assignor to Morrell Mills, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 21, 1927. Serial No. 20,449. Term of patent 3½ years.

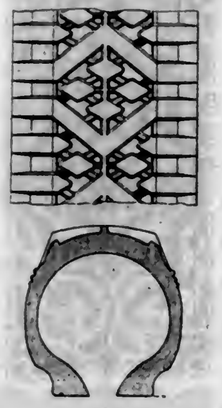


The ornamental design for a textile fabric as shown.

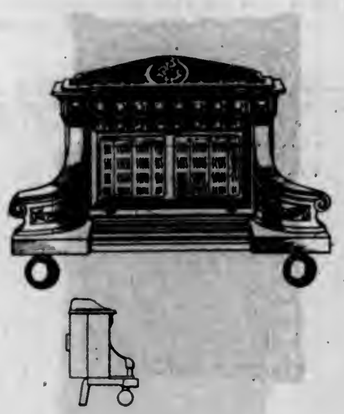


72,261. LOUD SPEAKER. MARCUS C. HOPKINS, Washington, D. C., assignor to Hopkins Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Dec. 22, 1925. Serial No. 15,818. Term of patent 14 years.

The ornamental design for a loud speaker substantially as shown.

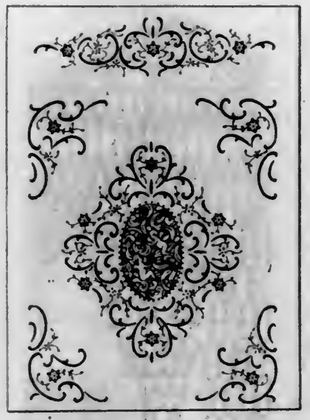


72,262. LOUD SPEAKER. MARCUS C. HOPKINS, Washington, D. C., assignor to Hopkins Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Feb. 5, 1926. Serial No. 16,416. Term of patent 14 years.



The ornamental design for a loud speaker substantially as shown.

72,263. TIRE OR SIMILAR ARTICLE. RALPH W. HUTCHENS, Eau Claire, Wis., assignor to Gillette Rubber Company, Eau Claire, Wis., a Corporation of Wisconsin. Filed Dec. 13, 1926. Serial No. 20,038. Term of patent 7 years.

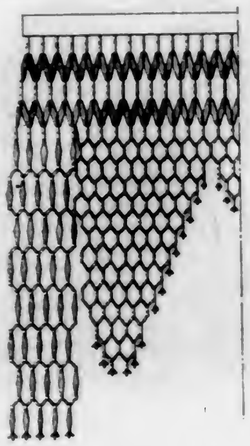


The ornamental design for a tire or similar article, as shown.

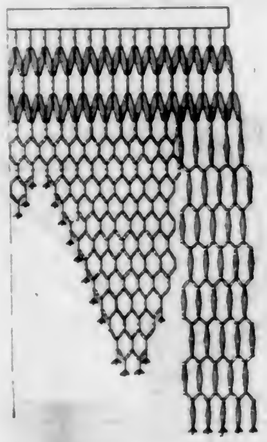
72,264. HEATER. BERTRAND B. KAHN, Cincinnati, Ohio, assignor to The Estate Stove Company, Hamilton, Ohio, a Corporation of Ohio. Filed Feb. 14, 1925. Serial No. 12,383. Term of patent 14 years.

The ornamental design for a heater, as shown.

72,265. BED SPREAD. DEMETRIUS KEMP, New York, N. Y., assignor to Kemp & Beatley, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 9, 1926. Serial No. 19,993. Term of patent 3½ years.



The ornamental design for a bedspread as shown.



72,266. AUTOMOBILE FENDER. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 14, 1925. Serial No. 15,419. Term of patent 14 years.

The ornamental design for an automobile fender, as shown.

72,267. PORTIÈRE. ELIZABETH LENOYEL, Cleveland, Ohio. Filed Jan. 4, 1927. Serial No. 20,269. Term of patent 7 years.

The ornamental design of a portière as shown.

72,268. LACE TRAY COVER OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 18, 1926. Serial No. 20,086. Term of patent 3½ years.

The ornamental design for a lace tray cover or the like, substantially as shown.

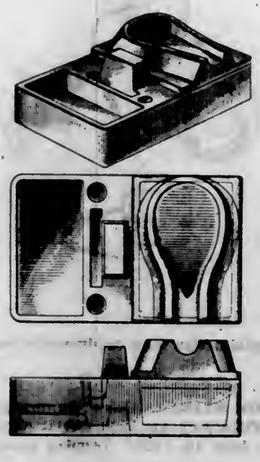
72,269. LACE SCARF OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,194. Term of patent 3½ years.

The ornamental design for a lace scarf or the like substantially as shown and described.

72,270. LACE SCARF OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,195. Term of patent 3½ years.

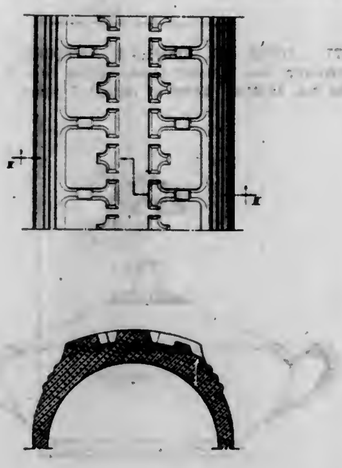
The ornamental design for a lace scarf or the like substantially as shown and described.

72,271. LACE SCARF OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,196. Term of patent 3½ years.



The ornamental design for a lace scarf or the like substantially as shown and described.

72,272. LACE SCARF OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 28, 1926. Serial No. 20,197. Term of patent 3½ years.



The ornamental design for a lace scarf or the like substantially as shown and described.

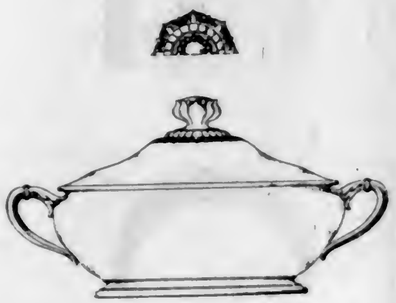
72,273. COMBINATION ASH TRAY, MATCHES SUPPORT, AND PIPE REST. ROBERT E. MCELDOWNEY, New Martinsville, W. Va., assignor to New Martinsville Glass Mfg. Co., New Martinsville, W. Va. Filed Jan. 4, 1927. Serial No. 20,276. Term of patent 3½ years.

The ornamental design for a combination ash tray, matches support, and pipe rest, as shown.

72,274. TIRE. JAMES REEVES NEVIUS, Trenton, N. J., assignor to The de Laski & Thropp Circular Woven Tire Company, Trenton, N. J., a Corporation of New Jersey. Filed Feb. 28, 1923. Serial No. 5,326. Term of patent 3½ years.

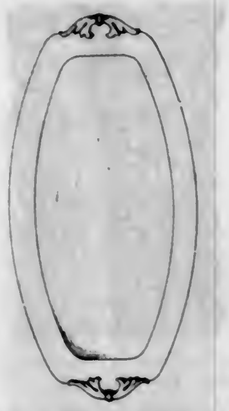
The ornamental design for a tire substantially as shown.

72,275. CANDY CONFECTION. ORRIL Z. POOLER, East Orange, N. J. Filed Jan. 3, 1925. Serial No. 11,885. Term of patent 3½ years.



The ornamental design for a candy confection, as shown.

72,276. HAND STAMP. HANS REICHEL, Brunswick, Germany. Filed July 12, 1926, Serial No. 18,329, and in Germany June 16, 1926. Term of patent 14 years.



The ornamental design for a hand stamp as shown.

72,277. DISH OR SIMILAR ARTICLE. FERDINAND SCHMIDT, Des Moines, Iowa. Filed Nov. 5, 1926. Serial No. 19,613. Term of patent 7 years.

The ornamental design for a dish or similar article, as shown.

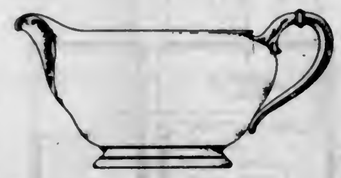
72,278. MEAT PLATTER OR SIMILAR ARTICLE. FERDINAND SCHMIDT, Des Moines, Iowa. Filed Nov. 5, 1926. Serial No. 19,614. Term of patent 7 years.

The ornamental design for a meat platter or similar article, as shown.

72,279. TEAPOT OR SIMILAR ARTICLE. FERDINAND SCHMIDT, Des Moines, Iowa. Filed Nov. 5, 1926. Serial No. 19,615. Term of patent 7 years.

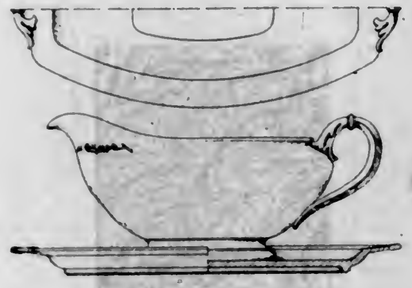
The ornamental design for a teapot or similar article, as shown.

72,280. SUGAR BOWL OR SIMILAR ARTICLE. FERDINAND SCHMIDT, Des Moines, Iowa. Filed Nov. 5. 1926. Serial No. 19,616. Term of patent 7 years.



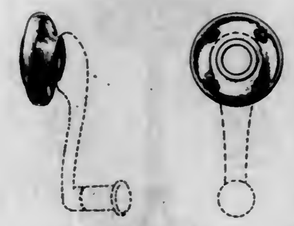
The ornamental design for a sugar bowl or similar article, as shown.

72,281. CUP OR SIMILAR ARTICLE. FERDINAND SCHMIDT, Des Moines, Iowa. Filed Nov. 5, 1926. Serial No. 19,617. Term of patent 7 years.



The ornamental design for a cup or similar article, as shown.

72,282. CREAMER OR SIMILAR ARTICLE. FERDINAND SCHMIDT, Des Moines, Iowa. Filed Nov. 5, 1926. Serial No. 19,618. Term of patent 7 years.



The ornamental design for a creamer or similar article, as shown.

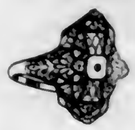
72,283. GRAVY BOAT OR SIMILAR ARTICLE. FERDINAND SCHMIDT, Des Moines, Iowa. Filed Nov. 5. 1926. Serial No. 19,619. Term of patent 7 years.

The ornamental design for a gravy boat or similar article, as shown.

72,284. PLATE FOR AUTOMOBILE WINDOW-REGULATOR HANDLE OR SIMILAR ARTICLE. WILLIAM SCHNELL, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed July 23, 1925. Serial No. 14,194. Term of patent 7 years.

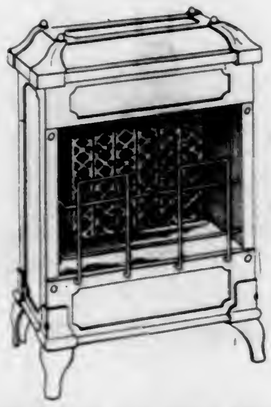
The ornamental design for a plate for automobile window regulator handle or similar article, substantially as shown.

72,285. COMBINED FLOOR LAMP AND SMOKING STAND. EDWARD SCHULTE, Chicago, Ill., assignor to The Nagel-Chase Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 20, 1927. Serial No. 20,440. Term of patent 3½ years.



The ornamental design for a combined floor lamp and smoking stand as shown.

72,286. SMOKING STAND. EDWARD SCHULTZ, Chicago, Ill., assignor to The Nagel-Chase Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 20, 1927. Serial No. 20,441. Term of patent 3½ years.

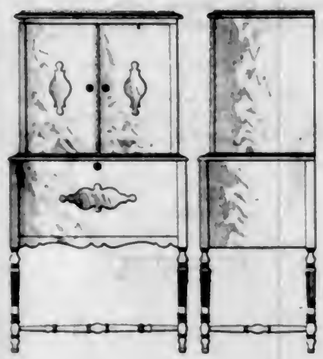


The ornamental design for a smoking stand as shown.

72,287. FINGER RING. SAMUEL SKALETZKY, New York, N. Y., assignor to Skaletzky Bros., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 7, 1927. Serial No. 20,303. Term of patent 3½ years.

The ornamental design for a finger ring, as shown.

72,288. GAS HEATER. JAMES B. SLATTERY, Brooklyn, N. Y. Filed Sept. 17, 1926. Serial No. 19,093. Term of patent 7 years.

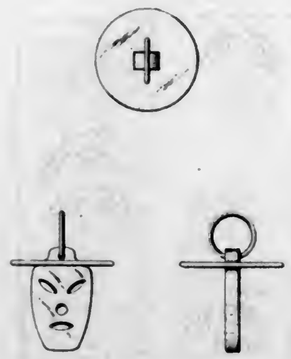


The ornamental design for a gas heater, as shown.

72,289. CURBING SECTION. COMMODORE PERRY SNELL, St. Petersburg, Fla. Filed Oct. 19, 1925. Serial No. 15,169. Term of patent 3½ years.

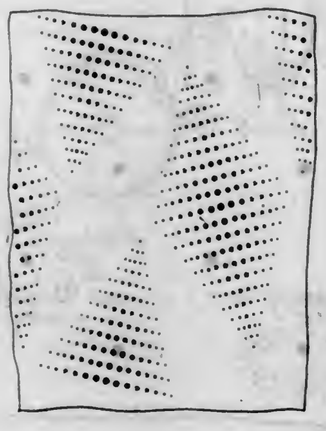
The ornamental design for a curbing section, as shown.

72,290. RADIOCABINET. DAVID S. SPECTOR, New York, N. Y., assignor to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed Dec. 30, 1926. Serial No. 20,240. Term of patent 14 years.



The ornamental design for a radiocabinet as shown.

72,291. COVER PAPER OR THE LIKE. THOMAS L. STONE, Newark, N. J., assignor to Hampden Glazed Paper and Card Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Dec. 8, 1926. Serial No. 19,973. Term of patent 14 years.



The ornamental design for cover paper or the like as shown.

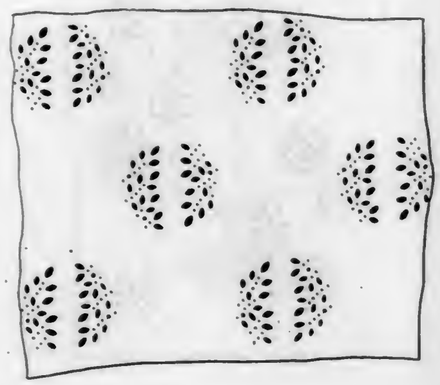
72,292. BABY'S TOOTH CUTTER. RUSSELL A. TONKS, South Orange, N. J., assignor to Tonka Brothers Co., Newark, N. J. Filed Dec. 31, 1926. Serial No. 20,248. Term of patent 3½ years.

The ornamental design for a baby's tooth cutter as shown.

72,293. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1926. Serial No. 16,221. Term of patent 3½ years.

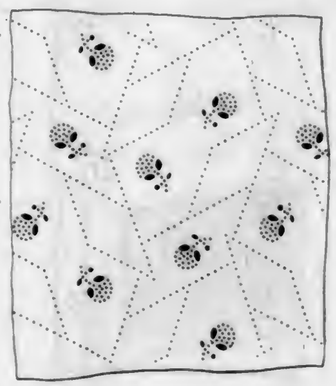
The ornamental design for flocked voile fabric, as shown.

72,294. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1926. Serial No. 16,223. Term of patent 3½ years.



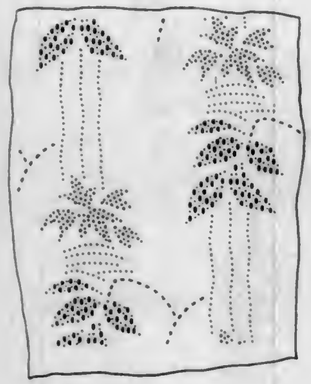
The ornamental design for flocked voile fabric, as shown.

72,295. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1926. Serial No. 16,224. Term of patent 3½ years.



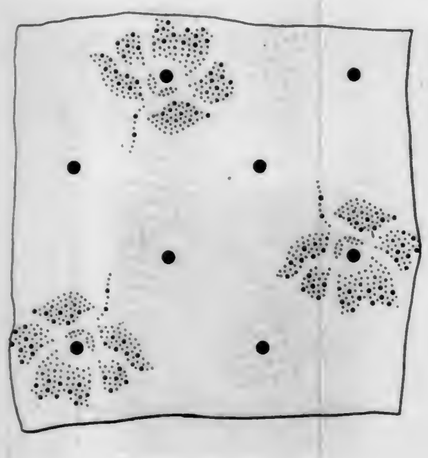
The ornamental design for flocked voile fabric, as shown.

72,296. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1926. Serial No. 16,226. Term of patent 3½ years.



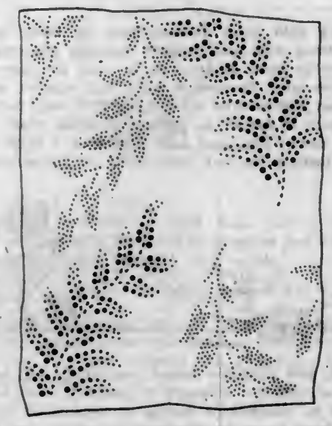
The ornamental design for flocked voile fabric, as shown.

72,297. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1926. Serial No. 16,227. Term of patent 3½ years.



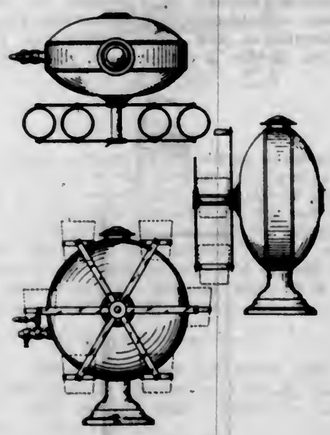
The ornamental design for flocked voile fabric, as shown.

72,298. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1926. Serial No. 16,228. Term of patent 3½ years.



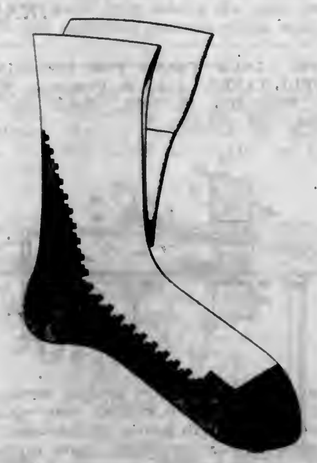
The ornamental design for flocked voile fabric, as shown.

72,299. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1926. Serial No. 16,229. Term of patent 3½ years.



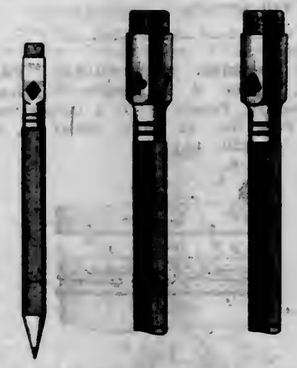
The ornamental design for flocked voile fabric, as shown.

72,300. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1926. Serial No. 16,230. Term of patent 3½ years.



The ornamental design for flocked voile fabric, as shown.

72,301. LIQUID REFRESHMENT DISPENSER. HYMAN WANERMAN, New York, N. Y. Filed Jan. 11, 1927. Serial No. 20,334. Term of patent 3½ years.

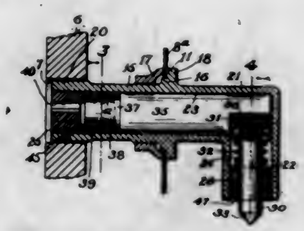


The ornamental design for a liquid refreshment dispenser, as shown.

72,302. STOCKING. ERNEST OSCAR NEBEL, Philadelphia, Pa. Filed Sept. 25, 1926. Serial No. 19,166. Term of patent 7 years.

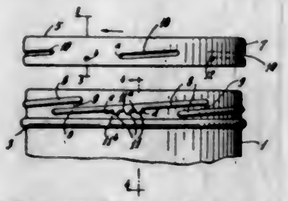
The ornamental design for a stocking substantially as shown.

72,303. PENCIL. LEO SOLINGER, New York, N. Y., assignor to Eagle Pencil Company, New York, N. Y., a Corporation of Delaware. Filed July 20, 1925. Serial No. 14,142. Term of patent 14 years.



The ornamental design for a pencil, substantially as shown and described.

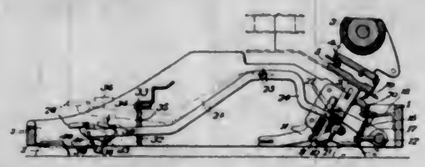
PATENTS



GRANTED MARCH 22, 1927.

1,621,486. LOCK VALVE FOR GASOLINE MOTOR-SUPPLY TANKS. JOHN R. BINGAMAN, West Reading, Pa. Filed May 15, 1926. Serial No. 109,219. 2 Claims. (Cl. 251—6.)

1. In combination with a gasoline motor supply tank having a bottom outlet with an inner valve seat, and a tank-supporting wall having an aperture; an L-shaped lock valve device comprising a main portion extending through and non-rotatably supported intermediately in a polygonal shaped aperture in the tank wall with its outer end projected into said supporting wall aperture and its tank enclosed L-end overhanging said inner valve seat, a spring-retracted valve mounted in said L-end and adapted to said seat, a rotatably mounted member in said main portion having a valve-operating cam at one end and a key-way slot in the opposite end, a key slotted end closure for said main portion, means arranged in said main portion inwardly of the slotted enclosure preventing fluid passage between said main portion and said rotatably mounted member and a set screw for the end closure normally located within said supporting wall aperture.



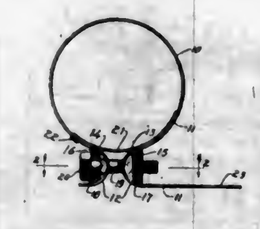
1,621,487. COVERED RECEPTACLE. CHARLES J. AULBACH, Passaic, N. J., assignor to Passaic Metal Ware Company, Passaic, N. J., a Corporation of New Jersey. Filed Nov. 12, 1925. Serial No. 68,525. 7 Claims. (Cl. 220—40.)

1. A container comprising a body having an open end, a cover having a flange to fit around said end, thread means upon the body and flange to detachably retain the cover on the body, and locking means on the body and cover flange distinct from the thread means and cooperative independently of the thread means to prevent accidental loosening of the cover from the body.

1,621,488. TYPEWRITING MACHINE. HENRY ALLEN AVERY, Groton, N. Y., assignor, by mesne assignments, to L C Smith & Corona Typewriters, Inc., Syracuse, N. Y., a Corporation of New York. Filed Apr. 4, 1925. Serial No. 20,729. 11 Claims. (Cl. 197—73.)

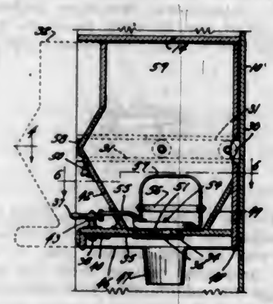
1. In a typewriting machine, the combination of a shiftable platen support, a shift key lever, means pivotally supporting said lever intermediate its ends, an abutment shifting with said support engaging the rear end of said lever in such manner as to rock the key-carrying end of the lever downward when the support moves to upper case position and move away from said lever when the support is forced to normal position with the key carrying end of the lever held depressed, a shift lock device for locking the key lever with its key-carrying end

depressed, and yieldable means connecting said lever and support of sufficient strength to maintain said lever and abutment in engagement during movements of the platen support from lower to upper case position but adapted, under excessive thrust transmitted to the support when in upper case position in a direction tending to restore said support to normal case position, to yield sufficiently to permit movement of the support to lower case position while the key lever remains locked.



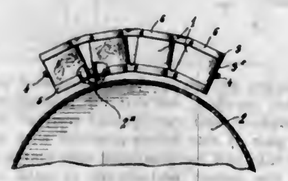
1,621,489. GLASS-CLEANING APPLICATOR. LLOYD H. BARDACH, Chicago, Ill., assignor, by mesne assignments, to Gold Dust Corporation, New York, N. Y., a Corporation of New Jersey. Filed Apr. 17, 1925. Serial No. 23,869. 2 Claims. (Cl. 15—133.)

1. In an applicator of the class described, a hollow flexible member open at its lower end and provided with a rounded top having upwardly extending segmental arcuate ribs, and fluid feeding apertures within the confines of said ribs.



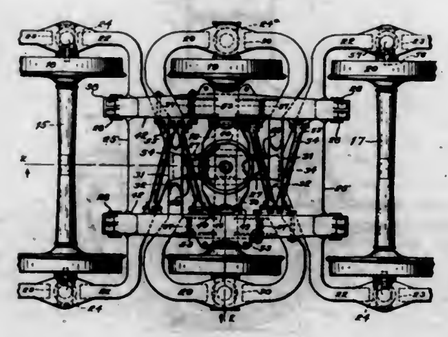
1,621,490. CLAMPING DEVICE. THOMAS BOVEY and SIDNEY J. V. BOVEY, Chicago, Ill.; said Sidney J. V. Bovey assignor to said Thomas Bovey. Filed Dec. 10, 1925. Serial No. 74,661. 2 Claims. (Cl. 24—19.)

1. A clamping device comprising an encircling strap, lugs adjacent the ends of said strap and having concave surfaces, elongated element that is passed through said lugs, separated transverse members at opposite ends of said element each having a convex face engaged with



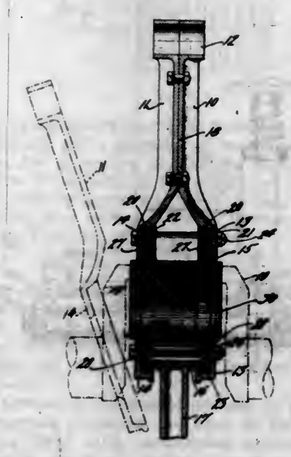
the respective surfaces of said lugs, and a rotatable element engaged with one of said members and adapted to move said members towards each other.

1,621,491. KITCHEN CABINET. EDWIN BURKE, Denver, Colo., assignor to The Midwest Cabinet Company. Filed Dec. 19, 1925. Serial No. 76,479½. 3 Claims. (Cl. 221—14.6.)



1. In a kitchen cabinet, a bin having an opening in the bottom thereof; a screen covering said opening; a gate arranged to close said opening; an agitator arranged to operate over said screen and move the bin contents thereon; an operating handle arranged to simultaneously move said gate and said agitator; and a stationary bar extending over said opening, said agitator arranged to slide between said bar and said screen so as to maintain said sifter against said screen.

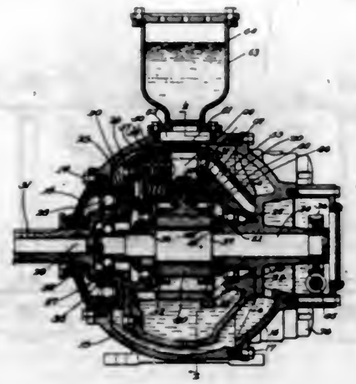
1,621,492. INDICATOR FOR LEAKING AIR, GASES, AND THE LIKE. ERNEST M. CATTLEY, New York, N. Y. Filed Apr. 25, 1925. Serial No. 25,811. 8 Claims. (Cl. 73—51.)



1. An indicator of the character described comprising a series of spaced separate hollow transparent cylinders arranged radially in a circularly disposed row and each having its end extending towards the center of the series open at that part adapted to be placed adjacent a tube, a curved frame comprising strips extending along opposite ends of the cylinders, the inner strip having spaced openings registering with the said open ends of the cylinders, the outer strip closing the outer ends of said cylinders, and agitatable members within said cylinders.

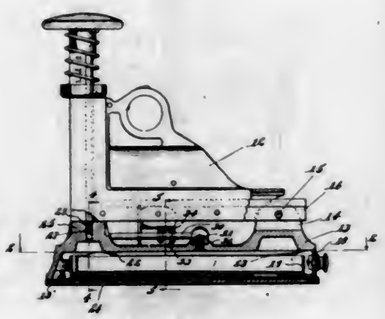
1,621,493. RAILWAY-CAR TRUCK. CARL L. CHARLES, Baltimore, Md., assignor to Boyden Steel Corporation, Baltimore, Md., a Corporation of Maryland. Filed Aug. 27, 1925. Serial No. 52,817. 21 Claims. (Cl. 105—166.)

1. In six wheel trucks, the combination of three journal members and axles for said members, each end member being mounted on a pivot positioned between the central axle and the side of the central member adjacent thereto, whereby each end member moves only angularly about said pivot.



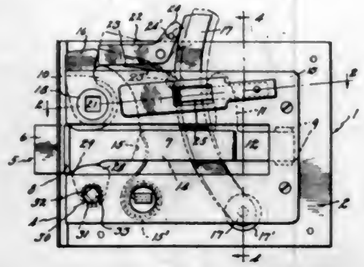
1,621,494. CONNECTING ROD FOR ENGINES. ROLAND CHILTON, Keyport, N. J., assignor to Healey-Aeromarine Bus Company, Inc., a Corporation of New York. Filed Jan. 12, 1926. Serial No. 80,756. 14 Claims. (Cl. 74—17.)

1. A connecting rod assemblage including in combination, a crank pin bearing comprising separable portions, hinge pin means on said bearing adapted to support one



end of a plurality of auxiliary rods, and a master rod provided with an integral ring portion adapted to embrace said bearing in a manner as to maintain the portions thereof in fixed relation.

1,621,495. ROTARY PUMP. CONRAD M. CONRADSON, Green Bay, Wis. Filed Mar. 6, 1926. Serial No. 92,749. 62 Claims. (Cl. 103—38.)

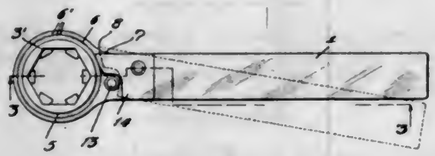


1. A pump comprising a rotary cylinder-carrying member, a crank pin about which said cylinder-carrying member rotates, pistons connected with said crank pin, a rotary shaft for supporting said crank pin, and means for shifting the axis of said crank pin when said shaft is rotated.

1,621,496. STAPLER. JOHN B. CROFOOT, Arlington Heights, Ill. Filed May 7, 1925. Serial No. 28,545. 5 Claims. (Cl. 1—2.3.)

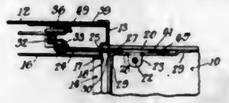
3. In a stapler, a base having a flanged seat, and gage mechanism including a guide member wtih a head firmly but removably mounted in said flanged seat, and gage means adjustably mounted on said member.

1,621,497. DOOR LATCH. WILLIAM C. DEVEREAUX, Detroit, Mich. Filed Apr. 6, 1925. Serial No. 21,104. 11 Claims. (Cl. 292—164.)



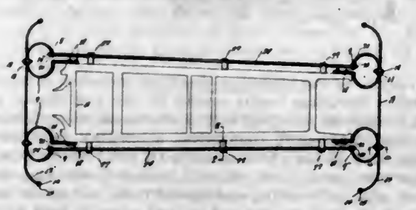
1. In a door latch, the combination with a case plate, and a lever mounted thereon for swinging movement, of means on the case plate engageable with the lever for retarding the swinging movement thereof.

1,621,498. CHECK VALVE FOR RESPIRATING APPARATUS. ALEXANDER BERNHARD DRÄGER, Lubeck, Germany. Filed Apr. 22, 1926, Serial No. 103,680, and in Germany July 4, 1925. 5 Claims. (Cl. 251—122.)



5. A check-valve for respirating apparatus comprising a carrier including an annular seat, a flexible diaphragm adapted to rest on said annular seat, a plurality of flexible ears projecting radially from the periphery of the diaphragm for maintaining the latter in operative relation to said seat, and an annular nange on said carrier independent of said diaphragm and surrounding the periphery thereof to enclose the valve elements and constituting a means for enabling the valve to be conveniently gripped.

1,621,499. RATCHET WRENCH. STONE R. ENBERG, Worcester, Mass., assignor to Walden-Worcester, Incorporated, Worcester, Mass., a Corporation of Massachusetts. Filed July 2, 1925. Serial No. 41,037. 2 Claims. (Cl. 81—60.)

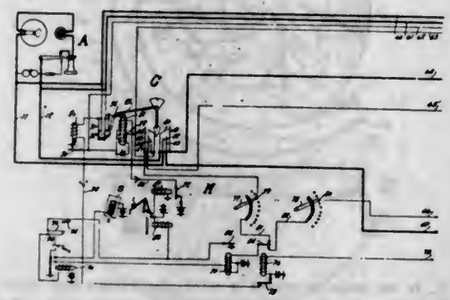


1. A ratchet wrench comprising a collet provided with a polygonal opening, an exterior mid-section having a nurled periphery, and exterior end sections of reduced diameter, a pair of side plates provided with holes adapted to receive said end sections, said side plates being spaced apart by the nurled mid-section of said collet, means for securing said side plates in place consisting of a pair of rivets, a handle pivoted between said side plates on one of said rivets, said handle being provided with a plurality of ratchet teeth adapted to engage the nurled section of said collet.

1,621,500. HINGE. CHARLES M. FITCH, Kankakee, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a Corporation of New York. Filed May 23, 1925. Serial No. 32,274. 26 Claims. (Cl. 126—191.)

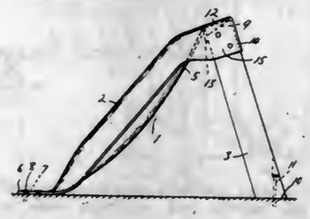
1. A hinge for mounting a door on a door frame comprising, in combination, a member pivoted on said frame, a pair of links each connecting said member and said door, one of the links being arranged for endwise movement and pivotally supporting the door, said other link being adapted to move said member about its axis as the door is opened.

1,621,501. BUMPER. JULIUS FLOTO, Chicago, Ill., assignor to John W. Telling, Chicago, Ill. Filed Jan. 21, 1926. Serial No. 82,631. 6 Claims. (Cl. 293—55.)



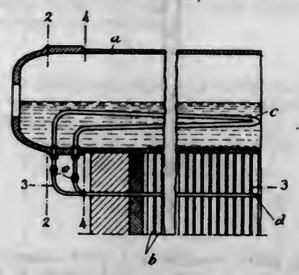
1. A device of the class described comprising a bumper means at the front end and bumper means at the rear end of a vehicle, both being resiliently connected and supported on the vehicle frame, and through uninterrupted thrust means extending between and connecting both of said bumper means for transferring shock from one bumper means to the other.

1,621,502. GOLDBEATER'S FOIL. SALY FREUND and BERTRAM STAUFFER, Nuremberg, Germany. Filed Apr. 29, 1926, Serial No. 105,608, and in Germany Mar. 16, 1925. 4 Claims. (Cl. 29—17.)



1. As a new article of manufacture, a gold-beater's foil formed of cellulose hydrate.

1,621,503. AUTOMATIC TELEPHONE SYSTEM. JOHN E. GARDNER, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Oct. 17, 1921, Serial No. 508,351. Renewed June 5, 1926. 37 Claims. (Cl. 179—18.)

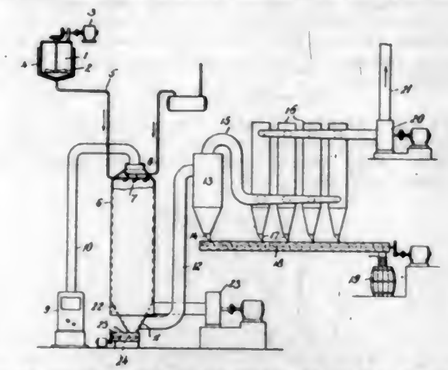


1. In a telephone system, main and branch exchanges, telephone lines in both exchanges, automatic switches in both exchanges, trunk lines extending from the branch to the main exchange, means controlled from a calling one of said telephone lines in said branch exchange for operating a series of said automatic switches to set up a connection with one of said telephone lines in said main exchange over one of said trunk lines, and automatic means controlled by said calling subscriber for then extending the connection by automatic switches in the branch exchange to another called line in said branch exchange.

1,621,504. WHEEL BLOCK. CHARLES A. GOODSPEED, Detroit, Mich., assignor to Wm. W. Blakely, Detroit, Mich. Filed June 8, 1925. Serial No. 35,751. 9 Claims. (Cl. 188—32.)

1. A wheel block comprising an inclined sheet metal member having a flat bearing portion and marginal flange portions, an oppositely inclined brace for the upper end of the said member, means securing the flange portions of said member to the sides of said brace, and means rigidly securing the flat bearing portion of said member to the upper end of said brace.

1,621,505. STEAM GENERATOR. OTTO H. HARTMANN and ALFRED HERMANUZ, Cassel-Wilhelmshohe, Germany, assignors to Schmidt'sche Heissdampf-Gesellschaft m. b. H., Cassel-Wilhelmshohe, Germany. Filed Mar. 23, 1925, Serial No. 17,609, and in Germany Mar. 26, 1924. 8 Claims. (Cl. 122—34.)

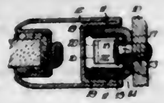


1. In a steam generator, means including a steam and water container and a plurality of water tubes connected therewith; for generating part of the steam directly, a tube system for generating the other part of the steam indirectly, the heat-receiving portion of said tube system being located as a protective screen in front of parts of said container exposed to extreme heat.

1,621,506. MANUFACTURE OF A FINELY-DIVIDED DRY SOAP PRODUCT. ROBERT L. HOLLIDAY, New York, N. Y., assignor to Industrial Spray-Drying Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 19, 1926. Serial No. 102,860. 4 Claims. (Cl. 87—16.)

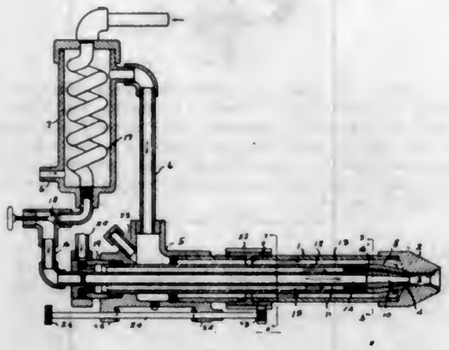
2. The process of manufacturing soap in powder form which comprises preparing the soap in the form of a free flowing liquid stock, evaporating moisture from the liquid stock by spraying it in the form of fine drops into the initial portion of a current of heated drying gas which entrains substantially all of the said liquid drops and positively carries the said drops and the soap particles resulting therefrom along through the apparatus

in like manner of flow while evaporation is taking place, whereby the said particles remain in suspension in the gas current until the moisture content thereof is reduced



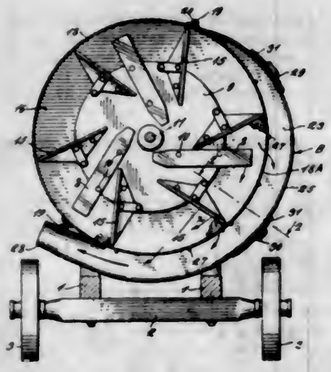
to the desired value and then separating the said particles from the gas current and collecting them to form a powdered soap product.

1,621,507. SASH GUIDE. THOMAS W. HOLT, Elkhart, Ind., assignor to Curtain Supply Company, Elkhart, Ind., a Corporation of Illinois. Filed May 25, 1925. Serial No. 32,536. 7 Claims. (Cl. 20—69.)



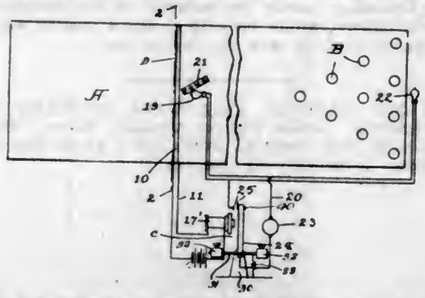
1. A sash guide, comprising a rigid channel strip of tapered formation adapted to be attached to a window jamb with the smaller end of the strip at the bottom of the jamb, and a plurality of spring-pressed sash-engaging elements secured within the strip and projecting from the contour of the same.

1,621,508. SASH GUIDE. THOMAS W. HOLT, Elkhart, Ind., assignor to Curtain Supply Company, Elkhart, Ind., a Corporation of Illinois. Filed May 25, 1925. Serial No. 32,537. 11 Claims. (Cl. 20—69.)



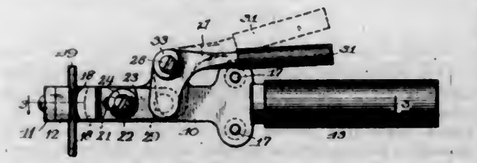
1. A sash guide comprising a rigid strip, and a substantially coextensive resilient strip secured to the rigid strip and having a sash-engaging portion projecting laterally beyond such strip for resiliently yielding movement toward the same.

1,621,509. OIL VAPORIZER AND BURNER. GRANVILLE A. HUMASON, Houston, Tex., and CHARLES G. LAMBERT, Shreveport, La., assignors of one-third to J. A. Logan, Harris County, Tex. Filed Feb. 12, 1926. Serial No. 87,744. 1 Claim. (Cl. 158—74.)



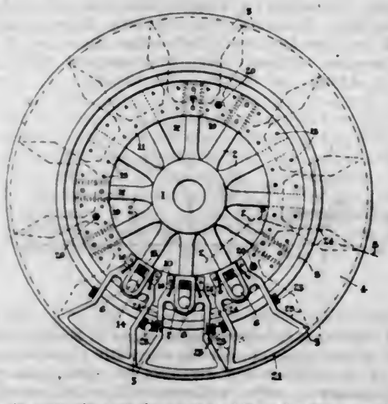
A device of the character described including a tubular jacket, a discharge nozzle carried by one end thereof and a T connection attached to the other end thereof, an oil line entering said T connection, a pressure fluid nozzle within said jacket provided with an axial steam duct, a steam pipe one end of which is threaded into said duct, an air pipe surrounding and spaced from said steam pipe, one end of which is anchored to said pressure fluid nozzle, said last mentioned nozzle having ducts for the passage of air delivered through said air pipe, a connecting nipple attached to said T connection and aligned with said jacket, said air and steam pipes being adjustable relative to said connecting nipple, an adjusting cap threaded on to said nipple and having a swiveling but operative connection with said steam pipe and by the manipulation of which said air and steam pipes and said pressure fluid nozzle may be adjusted relative to said discharge nozzle.

1,621,510. ENSILAGE CUTTER. CHARLES W. KEITH, Denver, Colo. Filed Apr. 5, 1926. Serial No. 99,810. 5 Claims. (Cl. 146—107.)



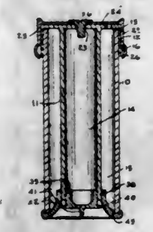
1. In an ensilage cutter, a rotor, fan blades and cutter blades mounted thereon, a casing enclosing said rotor and a foraminous partition curved about the center of rotation of the rotor and lying closely adjacent the peripheries of the fan blades to provide an exhaust passage for material passing through said partition.

1,621,511. FOUL INDICATOR FOR BOWLING ALLEYS. AUGUST J. KEMPIEN, St. Paul, Minn. Filed Sept. 22, 1919. Serial No. 325,548. 5 Claims. (Cl. 273—50.)



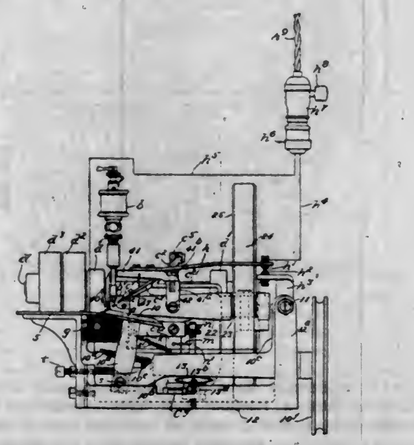
1. A foul indicator comprising a signal device, means for operating said signal device, including a member positioned in the floor of the bowling alley, a circuit including a magnet with its armature controlled thereby and a weighted member carried by the pivot of said armature to create a high moment of inertia whereby the signal device is inoperative upon a momentary actuation of said floor member.

1,621,512. HOLDER FOR ELECTRIC-WELDING ELECTRODES. CHARLES J. KOTCHI, Chicago, Ill., assignor to Koro Electric Corporation, Chicago, Ill., a Corporation of Illinois. Filed Jan. 29, 1926. Serial No. 84,565. 17 Claims. (Cl. 219—8.)



1. A holder of the character described including a handle, a fixed jaw, connected with the handle, a movable jaw co-operating with the fixed jaw, means for actuating the movable jaw, and means for frictionally maintaining the said movable jaw in its adjusted position with respect to the fixed jaw.

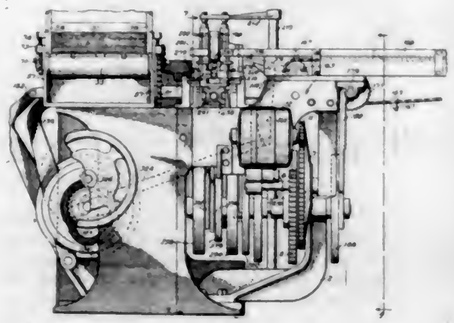
1,621,513. WHEEL ATTACHMENT. JAMES VINT LAUGHLAND, Richmond, Ontario, Canada. Filed Feb. 9, 1926. Serial No. 87,149. 6 Claims. (Cl. 301—47.)



1. An attachment for automobile wheels comprising a series of members normally cooperating to present a substantially continuous circular outer surface, and means for pivotally mounting each of said members, each member having inclined surfaces over which may slide a part of the adjacent member to cause a simultaneous rocking movement of all the members on their respective pivots.

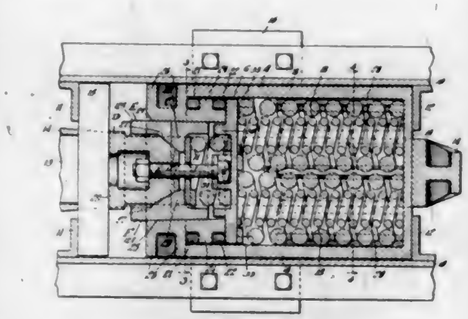
1,621,514. TABLE CASTER. OSWALD WYNDHAM MANN, Montreal, Quebec, Canada. Filed Dec. 23, 1925. Serial No. 77,248. 1 Claim. (Cl. 65—45.)

A table caster comprising inner and outer casings forming a central chamber and an annular chamber, said inner casing having internal and external threads adjacent to its lower end, a central bottom stopper screwing into the internal thread of said inner casing, an annular stopper screwing into the external thread of said inner casing and engaging the lower end of said outer casing, and a cover at the upper end common to both casings and flanged over the outer casing, said cover being formed of an inner part rigid with the casings and having slots into said central and said annular chambers respectively and an outer part rotatable on the inner part and having holes in groups adapted to register with said slots and view openings in the side wall or flange adapted to disclose labels denoting the contents.



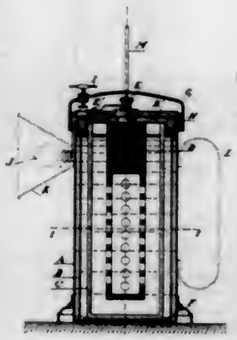
1,621,515. LEATHER-EDGE-FINISHING MACHINE. FRANK W. MERRICK, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 14, 1920. Serial No. 430,618. 30 Claims. (Cl. 69—17.)

1. The combination with an edge-finishing tool, of means for feeding coloring or finishing substance or preparation for application to the edge face of the material



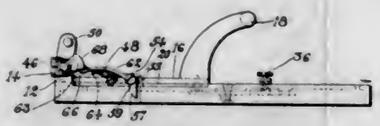
which is operated upon in advance of the tool itself, controlled by the material and operating to feed in the presence of the material and suspend the feeding in the absence of the material.

1,621,516. FOLDING AND FILLING MECHANISM FOR WRAPPING MACHINES. MICHAEL J. MILMOE, Chicago, Ill., assignor to F. B. Redington Company, Chicago, Ill., a Corporation of Illinois. Original application filed Mar. 31, 1919, Serial No. 286,345. Divided and this application filed Sept. 15, 1920. Serial No. 410,401½. 106 Claims. (Cl. 93—6.)



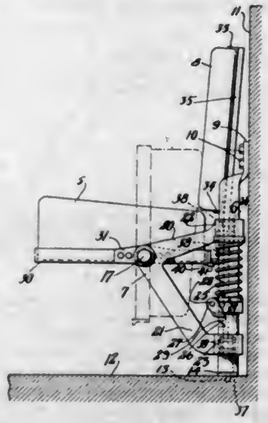
1. In combination, a support for a carton blank, a member having an inclined surface for engaging one edge of said blank, and means for moving said member relative to said blank to cause the edge of said blank to travel along said inclined surface to fold said blank into the form of an open carton.

1,621,517. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed July 18, 1925. Serial No. 44,420. 6 Claims. (Cl. 213—32.)



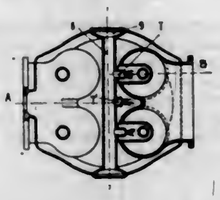
1. In a friction shock absorbing mechanism, the combination with a friction shell having retaining means thereon; of a casing open at one end and having retaining means for the shell at said open end for limiting the relative movement of the shell and casing longitudinally, said casing rearwardly of the shell forming a spring cage having substantially continuous top, bottom, side and end walls; twin arranged springs within the casing occupying substantially the entire available spring space thereof and adapted to be inserted through the open end of said cage, the retaining means of said casing being recessed to permit free insertion of said springs; a spring follower within the casing; and a friction wedge system cooperating with the friction shell.

1,621,518. ELECTRIC CELL WITH CONSTANT INTENSITY. JOSEPH PELLINI, Marseille, France. Filed June 30, 1925, Serial No. 40,477, and in France Nov. 22, 1924. 2 Claims. (Cl. 136—83.)



1. A two-liquid electric battery having a constant intensity for a predetermined time, comprising an outer vessel forming the negative element, a centrally disposed hollow perforated carbon member forming the positive element, a porous tubular member within said outer vessel and separating the same from said carbon member, an electrolyte consisting of a solution of magnesium sulphate, potassium sulphate and sodium sulphate in water carried by said outer vessel between it and said porous member, and a depolarizing liquid carried within said porous member and composed of a slightly acidulated solution of sodium bichromate in water, the relative proportions of the depolarizing liquid and electrolyte being regulated so as to retain constant intensity for a predetermined time.

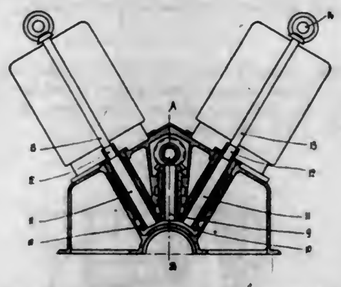
1,621,519. APPARATUS FOR OPERATING ON PARTS OF SHOES. ERNEST E. SABIN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 18, 1925. Serial No. 16,361. 12 Claims. (Cl. 12—52.)



1. In apparatus for operating on parts of shoes, a work support, a pair of pins projecting vertically from said support and constructed and arranged to enter holes previously formed in each of a plurality of shoe parts, a stripper, an actuator for said stripper, and automatically acting devices for connecting said stripper to and disconnecting it from said actuator.

1,621,520. SEAT. HERBERT W. SNYDER, Lima, Ohio. Filed Sept. 24, 1925. Serial No. 58,219. 3 Claims. (Cl. 155—51.)

1. A device of the character described comprising upright guide means, a bracket with upper and lower arms slidably engaging said guide means, a seat carried by said bracket, and spring supporting means for said bracket adjustable along said guide means between said arms.

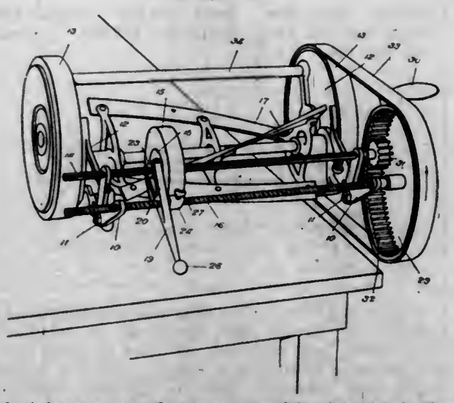


1,621,521. MEANS FOR COOLING THE VALVE STEMS AND SEATS IN INTERNAL-COMBUSTION ENGINES. GIULIO CESARE CAPPA, Turin, Italy. Filed Feb. 18, 1925, Serial No. 8,905, and in Italy Feb. 23, 1924. 1 Claim. (Cl. 123—173.)

The combination of a cylinder for internal combustion engines, having guides for the stems of the inlet and exhaust valves of the engine, inlet and exhaust pipes having large heat exchanging surfaces forming recesses surrounding and extending between the valve guides, a cooling jacket surrounding the cylinder and extending above the latter thereby enclosing said guides and heat exchanging surfaces, water supply pipes extending longitudinally of the cylinder between the wall of the latter and the jacket, an extension of the supply pipe extending horizontally through the jacket across the top of the cylinder head, and nozzles in said extension for discharging water onto the valve guides and into the recesses and water jacket through the top of the latter.

1,621,522. VALVE GEAR FOR INTERNAL-COMBUSTION ENGINES. GIULIO CESARE CAPPA, Turin, Italy. Filed Mar. 5, 1925, Serial No. 13,278, and in Italy Mar. 24, 1924. 3 Claims. (Cl. 123—55.)

1. In an internal combustion engine comprising two rows of oppositely inclined cylinders having overhead valves, and cam-shafts for operating the latter, the combination with a crank shaft, a driving shaft parallel to the latter and driven thereby, of a short auxiliary shaft mounted perpendicular to the driving shaft in a plane bisecting the angle formed by the adjacent rows of cylinders

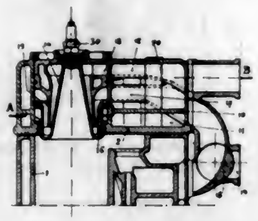


and in the middle cross plane of the engine, and means operatively connecting the short auxiliary shaft with the cam shafts.

1,621,523. TITANIUM ALLOY. ALVAH W. CLEMENT, East Cleveland, Ohio, assignor, by mesne assignments, to Ludlum Steel Co., Watervliet, N. Y., a Corporation of New Jersey. Filed Dec. 18, 1917. Serial No. 207,751. 5 Claims. (Cl. 75—1.)

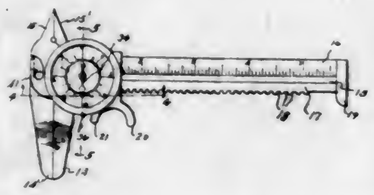
1. An alloy containing chromium in proportion varying from 10 to 30 percent, titanium in proportion from 5 to 12 percent, silicon in excess of the proportion normally present as an ordinary impurity and not exceeding 1 percent, the balance being aluminum and iron with carbon sufficiently low to avoid making the alloy so hard as to be difficult to work, the aluminum being present in appreciable amount and up to 10%.

1,621,524. LAWN-MOWER SHARPENER. SANFORD E. CLINE, Greensburg, Ind. Filed Feb. 11, 1925. Serial No. 8,481. 2 Claims. (Cl. 51—249.)



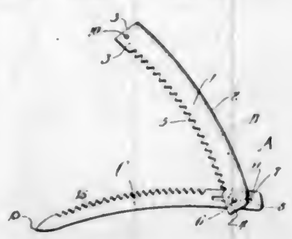
1. A lawn mower sharpener comprising brackets having means for attaching them to the frame of a lawn mower, two shafts mounted for rotation in said brackets, a grinding wheel slidable on and rotatable with one of said shafts, the other shaft having a member mounted on the second named shaft and cooperable with the grinding wheel to move the grinding wheel with it, and means for rotating said shafts, said member being provided with a projecting portion to bear slidably on a supporting surface on which the lawn mower is placed.

2. A lawn mower sharpener comprising two shafts, means for mounting them for rotation, a grinding wheel slidable on and rotatable with one of said shafts, the other shaft having a screw thread, a member mounted on



the second named shaft and arranged for moving the grinding wheel with it, a driving wheel on one of said shafts, a belt for connecting said driving wheel with one wheel of a lawn mower, and internal gear connection between said driving wheel and the other shaft.

1,621,525. HEAVY-OIL INTERNAL-COMBUSTION ENGINE. LUIGI CORSI, Turin, Italy. Filed Dec. 26, 1924, Serial No. 758,243, and in Italy Dec. 27, 1923. 4 Claims. (Cl. 123—35.)

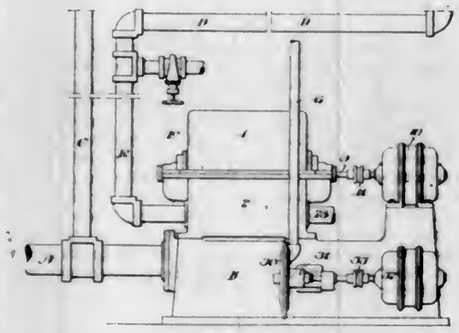


1. In an internal combustion heavy oil engine, the combination with a cylinder, and a suction valve therein, of a hollow head on the cylinder having a tubular conduit corresponding to the cylinder, a partition subdividing the head into an upper and a lower compartment, the lower compartment forming a cooling jacket for the head, a bell-shaped casing within the tubular conduit and communicating with the cylinder through its enlarged end, a spark plug at the vertex of said casing, an annular chamber between the casing and tubular conduit, a conduit extending through said upper compartment and connecting the annular chamber with the suction valve, and a second conduit extending through the upper compartment for conveying vaporized fuel from a carburetter to the annular chamber.

1,621,526. CALIPER. JOHN CULELL, Detroit, Mich. Filed Sept. 14, 1923. Serial No. 662,619. 2 Claims. (Cl. 33—147.)

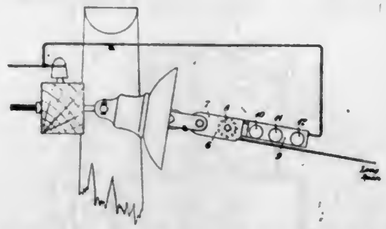
A measuring device of the class described comprising an elongated bar having teeth formed on one longitudinal edge thereof, said elongated bar being provided with a slot extending longitudinally thereof; a pair of engaging fingers each projecting from the opposite longitudinal edges of said bar adjacent one end thereof; a bar slidably mounted in said slot; a pair of fingers projecting from the opposite longitudinal edges of said slidably mounted bar; the fingers on the respective sides of said bars being adapted for cooperating for engaging material to be measured; a housing carried by the said slidably mounted bar, said housing having a plurality of recesses formed therein; a plurality of gears mounted in said recesses in operative relation one of said gears being adapted for engaging the teeth on the edge of the said pair; a dial carried by said housing; a pointer connected to one of said gears and adapted upon the movement of said slidably mounted bar relatively to the other bar for indicating on said dial the distance of movements.

1,621,527. HAIR-WAVING DEVICE. KARL EKLUND, Forest Park, and MYRTLE A. LOECK, La Grange, Ill., assignors to W. E. Keough Company, Forest Park, Ill., a Corporation of Illinois. Filed Aug. 13, 1926. Serial No. 128,934. 3 Claims. (Cl. 132—8.)



1. The improved hair waver comprising upper and lower inter-fitting members, pivotally united at one end, and between which members the strands of a lock of hair are transversely held to form a wave, and means for shifting the lower member longitudinally within the upper member to lock the two members together and simultaneously shift the angle of the held hair strands, the lower margins of the upper member and the upper margin of the lower member being provided with comb-like teeth.

1,621,528. COMPOSITION OF MATTER FOR TREATING ANIMAL TISSUE. CARLETON ELLIS, Montclair, N. J. Filed Sept. 21, 1921. Serial No. 502,285. 5 Claims. (Cl. 167—9.)

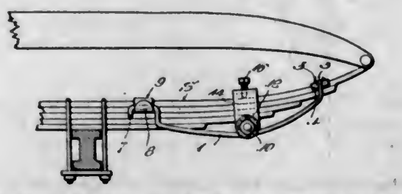


3. A composition of matter adapted for treating animal tissues comprising aluminum halide dissolved in a solvent comprising alcohol and water, the composition being stable, whereby the solution of the halide becomes rapidly absorptive by animal tissue.

1,621,529. APPARATUS FOR WITHDRAWING WATER OF CONDENSATION AND GASES ENTRAINED THEREWITH FROM STEAM HEATING SYSTEMS. JAMES LOGAN FITTS, Merchantville, N. J., and KARL W. ROHLIN, Philadelphia, Pa., assignors to Warren Webster & Company, Camden, N. J., a Corporation of New Jersey. Filed June 20, 1923. Serial No. 646,554. 18 Claims. (Cl. 103—6.)

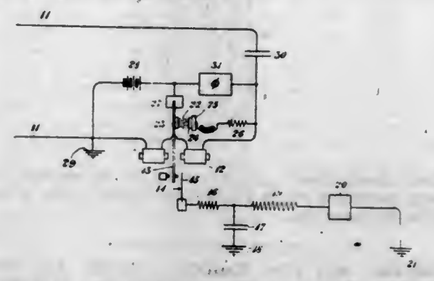
1. The combination, with the return line of a steam or vapor heating system, of a centrifugal pump in communication with such return line for receiving and returning to the boiler the water of condensation collecting in the return line, and a turbo-blower also in communication with said return line and serving to raise the pressure of the entrained air and gas accompanying the water of condensation from the return line to that of the atmosphere and discharge the same thereto simultaneously with the delivery of the water of condensation to the boiler.

1,621,530. DEAD-ENDING CLAMP. PAUL G. FITZPATRICK, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 16, 1924. Serial No. 732,526. 3 Claims. (Cl. 24—125.)



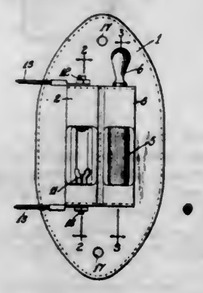
1. A dead ending clamp comprising a member having a forked portion and a clamp plate portion, a grooved wheel rotatably mounted within said forked portion, and a second clamp plate, said wheel being so positioned that the end of a span of wire will be carried over the wheel before passing between the clamp plates.

1,621,531. VENTILATOR. MAMIE MATHER GARLAND, Chicago, Ill., assignor to Garland Ventilator Company, Chicago, Ill., a Corporation of Illinois. Filed June 7, 1926. Serial No. 114,096. 3 Claims. (Cl. 98—20.)



1. In a ventilator, the combination of a base having an opening to coincide with a similar aperture through the roof of the structure to be ventilated and an upstanding flange around the margin of said opening, sidewalls rising from said base, a top-wall of less length than and connecting said side-walls with a space between the under side of said top-wall and the top edge of said flange, intermediate transverse walls to the front and rear of said base opening extending from said base to said top-wall but terminating short of said side-walls and located inwardly away from the front and rear margins of said top-wall, and end-walls upstanding from the front and rear ends of said base with spaces between them and said top-wall, said side-walls just above said base having drain holes therethrough with outstanding lips at their ends to direct the outside currents of air to increase the suction at said drain holes.

1,621,532. SHOCK ABSORBER. HOWARD B. GATES, Palatka, Fla. Filed Jan. 23, 1925, Serial No. 4,195. Renewed Jan. 7, 1927. 5 Claims. (Cl. 267—26.)

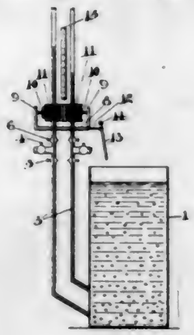


1. A shock absorber comprising two lengths of spring rod for disposition at opposite sides of a vehicle spring, said lengths being coiled between their ends to form eyes, a transverse member adapted to underlie the spring, said member having its ends mounted in said eyes, transverse means connecting said lengths at one end of the latter and adapted to overlie the spring near an end of the same, and an arched saddle connected with the other ends of said lengths for supporting the same.

1,621,533. ALTERNATING-CURRENT RELAY. DAVID GRIMES, Tompkinsville, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 29, 1921. Serial No. 525,726. 5 Claims. (Cl. 175—320.)

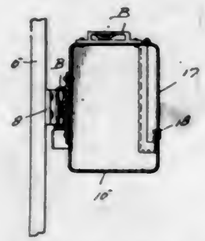
1. In an alternating current relay a local source of energy and means governed by the relay armature to apply this energy to the armature in phase with incoming energy to the relay.

1,621,534. PORTABLE LIGHTER. WALTER A. GUHMAN, New York, N. Y. Filed Dec. 27, 1922. Serial No. 609,218. 2 Claims. (Cl. 175—91.)



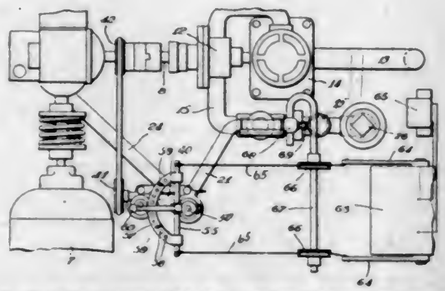
2. In a portable electric lighter, the combination of a casing adapted to be attached to an automobile, two pockets in said casing, both of the pockets being cut away intermediate their length, a sparker in one of said pockets provided with a gap which registers with said cutaway portion and having terminals leading from each end thereof the electrodes of which are located at each end of the pocket, the other of said pockets containing a receptacle for inflammable liquid and a removable igniter which has means at its tip for holding inflammable material, the whole operating substantially as and for the purpose set forth.

1,621,535. APPARATUS FOR DETERMINING THE SPECIFIC GRAVITY OF ORE PULPS AND THE LIKE. HERBERT E. T. HAULTAIN, Toronto, Ontario, Canada. Filed Sept. 12, 1922. Serial No. 587,764. 5 Claims. (Cl. 265—44.)



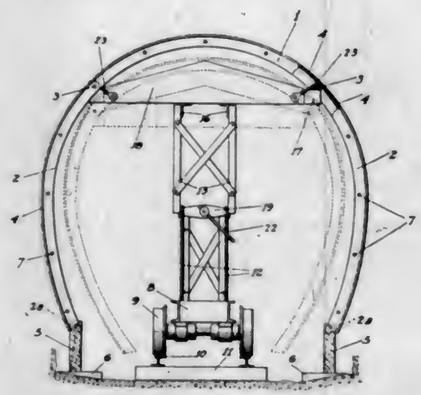
1. The combination with a container containing ore pulp the specific gravity of which increases from the top towards the bottom, of means for determining the mean specific gravity of a stratum of the pulp between two points at different distances from the bottom of

the container, comprising an inverted U-tube having its legs communicating respectively with the interior of the container at the top and bottom of the stratum



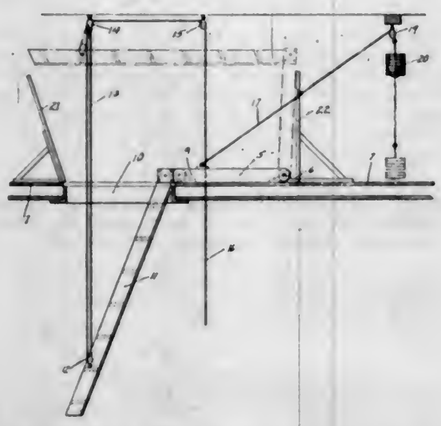
whose mean specific gravity is to be determined, and valve controlled means for admitting fluid to the U-tube below its upper end.

1,621,536. KIT FOR WAGONS, TRUCKS, AND THE LIKE. ELMER G. HANDTE, Pittsburgh, Pa. Filed Sept. 14, 1926. Serial No. 135,348. 2 Claims. (Cl. 224—29.)



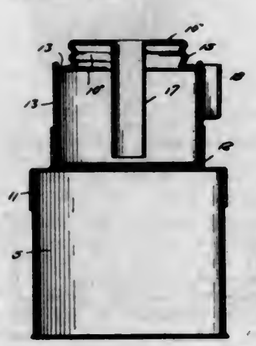
2. A device of the class described including, in combination, a bar, means for mounting the bar, a receptacle, slide brackets on the receptacle adapted to receive the bar, each slide bracket comprising a base plate, a U-shaped frame having its edges merging into the base plate, and a bight portion having struck therefrom a spring tongue extending inwardly towards the base plate.

1,621,537. OIL BURNER. FRANKLIN HARDINGE, Chicago, Ill., assignor to Hardinge Brothers, Incorporated, Chicago, Ill., a Corporation of Illinois. Filed May 5, 1923. Serial No. 636,869. 4 Claims. (Cl. 158—36.)



1. A burner comprising an atomizer, means for supplying fuel to said atomizer, including an adjustable valve, and means for controlling the adjustment of said valve, comprising a rotatable element having an arm extending at an angle to its axis, a segment rotatably mounted upon said rotatable element, a pair of stops adjustably mounted on said segment for limiting the movement of said segment relatively to said arms, and a thermostatically controlled element for moving said segment.

1,621,538. JUMBO FOR TUNNEL FORMS. HANS E. HELLER, Stockton, Calif. Filed June 2, 1926. Serial No. 113,303. 4 Claims. (Cl. 25—131.)



2. In combination, a tunnel-form section including transversely extending top frames, and longitudinally extending rods adjacent the ends of said frames; and a jumbo for manipulating the form including a wheel supported frame movable under the form, raising and lowering means on said wheel frame, and transversely extending beams carried by said means for direct but detachable supporting engagement with the rod members.

1,621,539. SCUTTLE LADDER. MARCUS B. HEMINGWAY, New Haven, Conn. Filed Nov. 12, 1926. Serial No. 147,955. 1 Claim. (Cl. 228—50.)

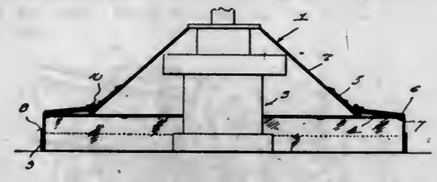
The combination with a ladder, of a frame having one-piece sides pivotally mounted on the floor distant from a trap-opening, to the edge of which opening the forward end of said frame extends and to which forward end the upper end of the ladder is pivoted, said ladder adapted to move downward by gravity, and means for raising the ladder and holding it in its raised position, whereby, when in its raised position, it lies horizontally above the floor, permitting the trap-door to be opened upward, independent of the movement of the ladder.

1,621,540. PLUMBER'S ACID CAN. HARLAN E. HILE, Latrobe, Pa. Filed Mar. 1, 1926. Serial No. 91,526. 1 Claim. (Cl. 113—111.)

A plumber's soldering accessory, including, in combination, a can adapted to receive a wet rag and having an opening in the side wall thereof provided at its edges with beads, a closure slidable on said beads across the opening, a cover removably mounted on the upper end of the can, a cup-shaped seat mounted on the exterior of the cover, an acid can seated in said seat and having an inturned flange at its upper end terminating in a rising annular threaded flange, a cap engaged with the said threaded flange and provided with a depending tube terminating in the acid can adjacent the bottom thereof, and a pocket formed on the exterior of the acid can for holding a brush.

1,621,541. INK AND PROCESS OF MAKING THE SAME. MATTHEW S. HOPKINS, Reading, and NORMAN UNDERWOOD, Swarthmore, Pa., assignors to Charles Eneu Johnson and Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 19, 1924. Serial No. 720,935. 2 Claims. (Cl. 134—36.)

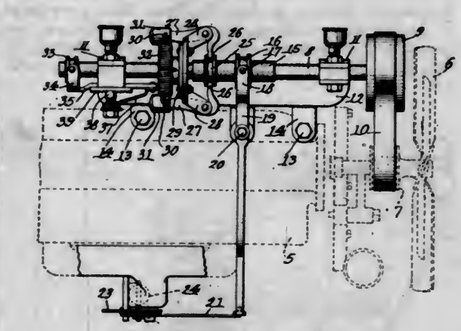
1. An emulsified ink composed of a coloring compound having an oily medium, and an aqueous solution of casein, borax, ammonia and sodium fluoride.



1,621,542. INTAGLIO INK. MATTHEW S. HOPKINS, Reading, and NORMAN UNDERWOOD, Swarthmore, Pa., assignors to Charles Eneu Johnson and Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 19, 1924. Serial No. 720,936. 2 Claims. (Cl. 134—36.)

2. An ink composed of an aqueous solution of casein, borax, ammonia and sodium fluoride and containing a solid coloring substance capable of acting as an agglutinant under the influence of a moderate heat.

1,621,543. PRINTING INK. MATTHEW S. HOPKINS, Reading, and NORMAN UNDERWOOD, Swarthmore, Pa., assignors to Charles Eneu Johnson and Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 19, 1924. Serial No. 720,937. 1 Claim. (Cl. 134—35.)

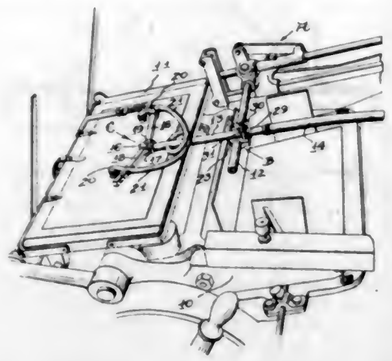


An ink composed of a pigment, glycerine, formaldehyde and an alkaline solution containng casein.

1,621,544. BROODER. ANNA KISTLER, Roseland, Nebr. Filed May 22, 1926. Serial No. 111,016. 2 Claims. (Cl. 119—31.)

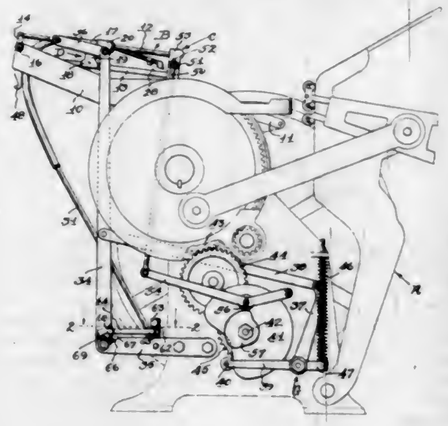
1. An attachment for a brooder of the class described comprising a plurality of attaching arms adapted to be connected at their inner ends with the lower edge portion of the hood of the brooder, the outer end portions of said arms being adapted to project outwardly beyond the lower edge portion in a substantially horizontal plane, said outer ends terminating in eyes, a ring supported from said eyes, and a flexible curtain provided at its top with a pocket in which a drawing string is located and having its lower edge portion reinforced, said curtain being adapted to cover the space between the ring and hood and to have its lower end portion hanging down from said ring to form an enclosure for the hood.

1,621,545. GOVERNOR. HENRY KLANECKY, Sargent, Nebr. Filed Apr. 28, 1925. Serial No. 26,511. 2 Claims. (Cl. 264—3.)



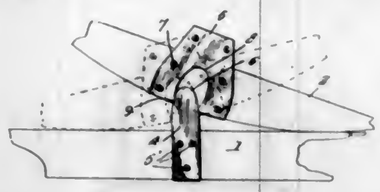
1. In combination with the butter-fly valve of an internal combustion engine, an operating device embodying a bracket having bearings and adapted to be attached to a cylinder block of the engine, a shaft mounted for sliding movement and rotary movement, within the bearings, a sleeve mounted on the shaft and adapted to slide longitudinally thereof, a governor mounted on the shaft and engaging the sleeve for controlling the movement of the sleeve longitudinally of the shaft, an arm connected with the butter-fly valve, means for transmitting movement of the sleeve to the butter-fly valve to regulate the butter-fly valve, means for sliding the shaft longitudinally of the bearings to change the normal relative positions of the shaft and governor, and means for rotating the shaft.

1,621,546. SHEET-DELIVERY MECHANISM. ABEL KLUGE and ENEVAL KLUGE, St. Paul, Minn., assignors to Braudtjen and Kluge, Inc., St. Paul, Minn., a Corporation of Minnesota. Filed Apr. 18, 1923, Serial No. 632,962. Renewed July 16, 1925. 7 Claims. (Cl. 271—54.)



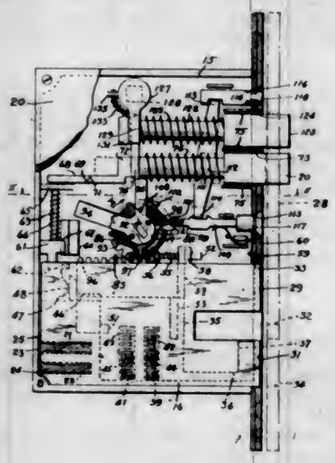
1. In a delivery mechanism for removing sheets from the platen of a press, a reach movable toward and away from the platen, said reach having a longitudinal section bore therein, arms on said reach pivotally adjustable

independently of each other, a suction grip slidably adjustable on each arm and flexible conduits, each conduit bringing one of said grips into communication with



the bore of said reach, the adjustment of the grips on said arms and of said arms on said reach serving to station the grips in various sheet engaging positions.

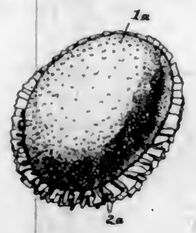
1,621,547. SHEET-DELIVERING DEVICE. ABEL KLUGE and ENEVAL KLUGE, St. Paul, Minn., assignors to Brandtjen and Kluge, Inc., St. Paul, Minn., a Corporation of Minnesota. Filed May 7, 1923, Serial No. 637,138. Renewed Aug. 3, 1925. 7 Claims. (Cl. 101—287.)



1. The combination with a platen press, of a bracket thereon, a track reaching back from the platen and pivoted at its rear end on said bracket, a carriage slidable on said track, a support swung on said carriage and movable from operative horizontal position into inoperative upright position, a mounting adjustable angularly and longitudinally of said support, a pneumatic grip on said mounting, a suction conduit communicating with said grip, a valve adapted, when open, to admit air to said conduit, means for reciprocating the carriage on said track, means for tilting the track upward and downward, said means being coordinated with the press mechanism and with each other to direct the grip inward in a path pitching sharply downward at its forward extremity to sheet taking position on the platen, thence rearward to depress sheet releasing position back of said platen, and a device actuated by said carriage reciprocating means for opening said valve at sheet releasing position of the grip.

1,621,548. WASHING MACHINE. HOWARD F. KUHNS, Allentown, Pa. Filed Apr. 21, 1924. Serial No. 707,964. 2 Claims. (Cl. 259—73.)

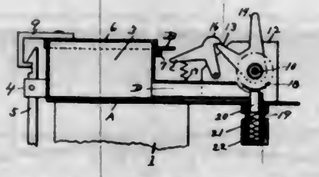
1. In a washing machine, the combination with a supporting structure, rockers mounted thereon, and a tub carried by the rockers, of means for holding the tub against movement longitudinally of the supporting structure during the rocking operation, said means including tongues connected to and upstanding from said structure, and yokes fixedly connected to the rockers and straddling the tongues, the cooperating faces of the tongues and yokes being shaped to maintain opposed portions of each yoke in contact with opposed portions of its tongue at all times during the rocking of the tub.



1,621,549. UNIVERSAL JIMMYPROOF AUTOMATIC LOCK. CLIVE W. LANPHERE, New York, N. Y. Filed Nov. 28, 1923. Serial No. 677,358. 58 Claims. (Cl. 70—46.)

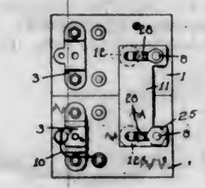
1. A lock comprising a casing, a bolt, means for holding said bolt retracted, means for automatically releasing said means, means for projecting said bolt when released and reciprocable means within said bolt for engaging an external member to prevent retraction of said bolt.

49. A lock comprising a casing, a bolt adapted to be automatically projected from said casing, means for holding said bolt retracted, means for automatically releasing said means, means including a cam for projecting said bolt from said casing and then to move the same at right angles thereto.



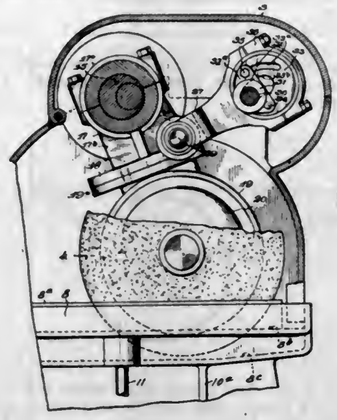
1,621,550. RUBBER SPONGE AND METHOD OF MAKING SAME. JOHN LEHR, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 2, 1926. Serial No. 139,160. 6 Claims. (Cl. 154—2.)

1. A rubber sponge having a skirt of sheet rubber projecting from the margin thereof.



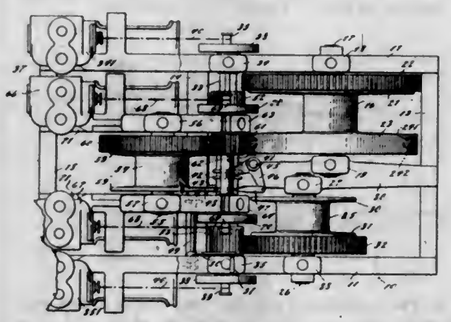
5. The method of making rubber sponges from substantially cylindrical blocks of rubber having exposed cells on the parallel faces and a peripheral skin which consists in juxtaposing to said peripheral skin an ornamental rubber strip and progressively folding the skin on a median line to embrace a portion of said rubber strip leaving a marginal portion projecting beyond the juxtaposed edges and cementing the juxtaposed parts together.

1,621,551. ACTUATING DEVICE FOR WIRE-PUSH-RELEASE CAMERAS. JOHN LESLIE LOMAX, Colorado Springs, Colo., assignor of one-half to Hermann Louis Oswald and Crafton Patton, Colorado Springs, Colo. Filed Sept. 7, 1926. Serial No. 133,961. 6 Claims. (Cl. 67—29.)



1. In a device of the class described, the combination of a horizontally disposed cylinder; a box mounted on the front portion of said cylinder and provided with a lid carrying a front latch; a vertically disposed trigger mounted on the front of said box and cooperating with said front latch; and trigger means, adapted to cooperate with said lid, mounted at the rear of said lid; and a transversely disposed shaft mounted at the rear of said trigger means and carrying a lever and a latch cooperating with said trigger means.

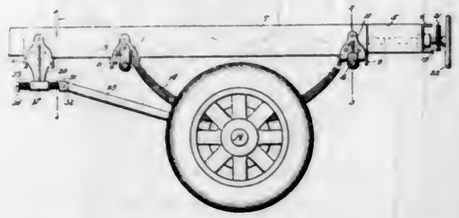
1,621,552. SELF-INDUCTION PRODUCER. MARION MALLORY, Toledo, Ohio, assignor to Mallory Electric Corporation, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 18, 1924. Serial No. 756,656. 6 Claims. (Cl. 123—148.)



1. In combination with a pair of induction coils located side by side, each having a core and primary and secondary coils, a removable bar of magnetic material magnetically connecting the cores of the induction coils.

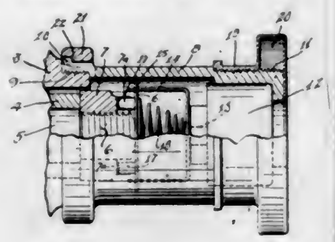
1,621,553. GRINDING MACHINE. JOHN MILLER, Jr., Beloit, Wis., assignor to Charles H. Besly and Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 24, 1924. Serial No. 751,744. 15 Claims. (Cl. 51—55.)

1. In a grinding machine, the combination of a rotative shaft having an eccentric bearing portion, a frame suspended from said shaft and journaled on the eccentric bearing portion thereof, a spindle journaled in said frame, a grinding member mounted on said spindle, and means for driving said shaft and spindle at predetermined speeds.



1,621,554. WINDING ENGINE. THOMAS SPENCER MILLER, South Orange, N. J. Filed Dec. 29, 1922 Serial No. 609,581. 2 Claims. (Cl. 254—184.)

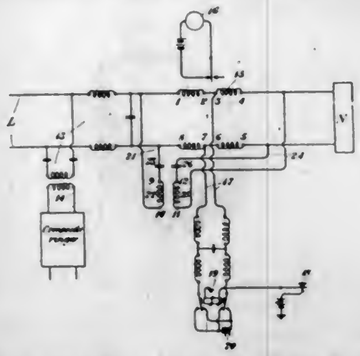
1. In a log loading and hauling machine, a first, a second, and a third drum each having a driving gear permanently secured thereto, three independent shafts on which the respective drums and associated gears are fixed, independent bearings for each of said shafts, a driving member comprising a shaft angular in cross section, a reversing motor for actuating said shaft, a sleeve fitted on said shaft and rotatable therewith but movable longitudinally thereof, means for moving said sleeve longitudinally of said shaft, said sleeve being provided with two pinions, the parts being constructed and arranged to cause one of said pinions to mesh with the gear associated with first said drum when in one position and the second pinion to be disengaged from the gear associated with the second drum, and in another position of said sleeve to cause the other



pinion thereon to engage the gear associated with said second drum and the first mentioned pinion thereon disengaged from the gear associated with the first drum, a second drive shaft, an independent reversing motor for actuating said second shaft, and means for actuating the gear associated with the third drum from said second drive shaft.

1,621,555. TRUCK. WILLIAM J. MILLER, Saginaw, Mich. Filed Mar. 10, 1926. Serial No. 93,683. 1 Claim. (Cl. 280—34.)

A truck of the class described including a main chassis comprising a pair of side rails formed of channel members, an auxiliary chassis comprising a pair of side rails formed of L-shaped members and cross members connecting the ends of the L-shaped members, plates on the cross members having hooked-shaped extensions rising upwardly therefrom and extending outwardly toward the sides of the auxiliary chassis for engaging over the bottoms of the channel side rails of the main chassis for slidably mounting the auxiliary chassis on the main chassis, means for mounting a rear axle and wheel assembly on the auxiliary frame, and means for moving the auxiliary frame longitudinally of the main chassis.



1,621,556. HUB CAP. JACOB J. MITNICK and JACKSON L. SILVERSTINE, Chicago, Ill. Filed Jan. 9, 1926. Serial No. 80,260. 5 Claims. (Cl. 301—108.)

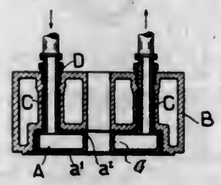
1. The combination of a hub cap, means at one end for securing said hub cap to a wheel plate, and a relatively thin metal shell secured to the hub casing at the opposite end, a portion of said shell being spaced from the side walls of said casing.

1,621,557. COMBINED RESONANT SHUNT DEVICE FOR TELEGRAPH CIRCUITS. HARRY NYQUIST, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 27, 1923. Serial No. 648,067. 4 Claims. (Cl. 179—4.)

3. A transmission line, a balancing network, a transmitting means and a receiving means associated with said line, said transmitting and said receiving means being in conjugate relation, separate circuits bridged across said line on the line and network sides of said receiving means, each of said circuits comprising inductance and capacity so arranged and so proportioned with respect to each other that said circuits will be resonant at a certain frequency coming in over said line and together

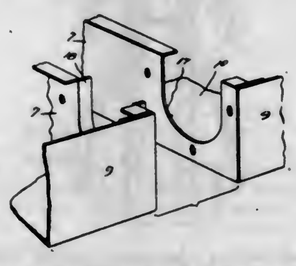
will be substantially equivalent to a bridged capacity with respect to the current transmitted to said line from said transmitting means.

1,621,558. COLLAPSIBLE RACK. JOHN PEARSON, Pullman, Ill., assignor to The Pullman Company, Chicago, Ill., a Corporation of Illinois. Filed May 9, 1924. Serial No. 712,042. 10 Claims. (Cl. 105—325.)



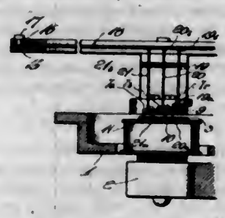
1. A collapsible rack of generally rectangular form, and stationary fixtures for supporting the rack at the four corners of the same, the association between the rack and the fixtures being such that the same fixtures are used both for supporting the rack in an outspread position and in a collapsed position.

1,621,559. AUXILIARY TAKE-UP FOR KNITTING MACHINES. NAPOLEON J. PERRY, Nashville, Tenn., assignor to May Hosiery Mills, Nashville, Tenn., a Corporation of Tennessee. Filed Sept. 13, 1920, Serial No. 409,982. Renewed Aug. 11, 1926. 18 Claims. (Cl. 66—24.)



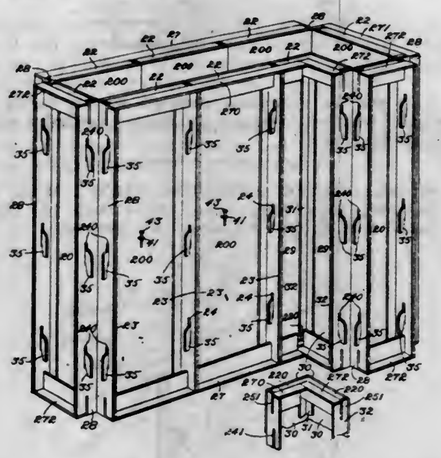
2. As a step in changing from plain to rib knitting, holding down the fabric at the knitting point by needles of one set while forming stitches of the initial course of rib knitting on the other set.

1,621,560. COOLING ARRANGEMENT FOR INTERNAL-COMBUSTION ENGINES. CONRAD REGENNOGEN, Kiel, Germany, assignor to Fried. Krupp Aktiengesellschaft Germaniawerft, Kiel-Gaarden, Germany. Filed Mar. 17, 1922, Serial No. 544,535, and in Germany Mar. 17, 1921. 1 Claim. (Cl. 123—178.)



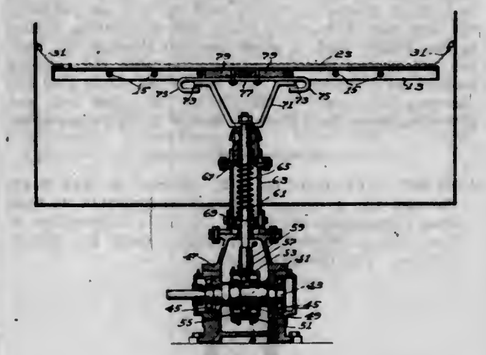
A water chamber of the character stated comprising several separately cooled portions which are each composed of a plurality of welded parts, said portions being independent from each other and adapted to expand freely with relation to each other and the parts surrounding them.

1,621,561. ELECTRIC SWITCH. BEN E. SPERO and LEON SPERO, Cleveland, Ohio. Filed May 13, 1925. Serial No. 29,925. 2 Claims. (Cl. 247—2.)



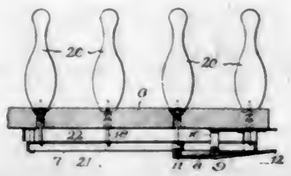
2. A plurality of switch boxes of the class described, adapted to be assembled in gang formation with the side walls thereof in contact one with the other, the abutting walls of said boxes each being provided with an aperture in transverse alignment, a flange on one of said side walls adjacent the aperture therein adapted to enter the aperture in the adjacent side wall thereby to provide a continuous passage therebetween, a cover for each of said boxes normally closing the front thereof, each of said covers having an elongated opening therein adapted to receive a switch handle therethrough.

1,621,562. ELECTROMAGNETIC SOUND REPRODUCER. LE ROY W. STAUNTON, Jackson Heights, N. Y., assignor to Brandes Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed Oct. 16, 1926. Serial No. 142,056. 5 Claims. (Cl. 179—100.)



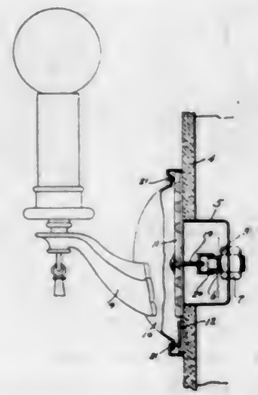
1. An electromagnetic sound reproducer comprising an electromagnetic driver, a plurality of armatures each responsive to different ranges of tone frequencies arranged to be actuated by said driver, a sound reproducing diaphragm of the direct acting type and independent connections between said armatures and points spaced apart along said diaphragm whereby vibrations over the entire range of musical frequencies may be imparted to said diaphragm.

1,621,563. FORM FOR CONCRETE STRUCTURES. FRANK W. STEVENS, Newton, Mass., assignor, by direct and mesne assignments, to Herbert C. Veno, Newton, Mass. Filed Oct. 4, 1923. Serial No. 666,597. 9 Claims. (Cl. 25—131.)



1. In a form for concrete structures, a series of panel sections having abutting vertical edge flanges provided with registering slots, and gravity keys in said slots for connecting the contiguous flanges of adjoining panels, said keys being bifurcated, and the legs thereof engaging the opposite faces of said flanges, respectively.

1,621,564. SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed June 29, 1925. Serial No. 40,263. 20 Claims. (Cl. 209—347.)



1. In a separator for grading materials, the combination of a frame having side bars, end bars connected to the side bars, and rods disposed at intervals in the space between the side bars and secured to the end bars, substantially flat screen clothing resting upon said rods without being stretched or secured to said frame, and means for vibrating said frame and screen clothing.

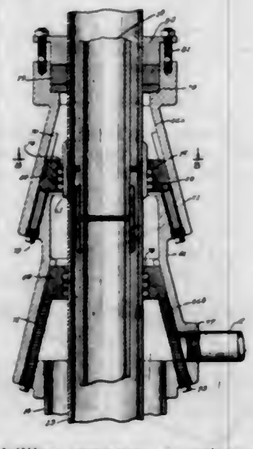
1,621,565. BOWLING-ALLEY PIN SPOTTER. AKSEL R. THOMPSON, New York, N. Y., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 9, 1926. Serial No. 128,131. 8 Claims. (Cl. 273—46.)

1. A peg for a bowling alley pin spotter having a laterally bent end to permit detachable engagement with the spotter frame.

1,621,566. FIXTURE-ATTACHING STRAP. MILES A. TIERNEY, Minneapolis, Minn. Filed Aug. 14, 1924. Serial No. 732,053. 4 Claims. (Cl. 240—85.)

1. The combination with an outlet box and a fixture stud extending therein, of a fixture strap comprising a fixed bar and a movable bar adjustably mounted thereon to form an extension thereof, said movable bar spanning the open face of the outlet box, a reducing bushing applied to the fixture stud, a screw inserted through the fixed bar and having threaded engagement with the reducing bushing for attaching the fixed bar to the fixture stud and clamping the same on the rim of the outlet box, and attaching means for securing a fixture to the fixture strap.

1,621,567. APPLICATOR CAP. ROBERT H. VAN SANT, Chicago, Ill., assignor, by mesne assignments, to Gold Dust Corporation, New York, N. Y., a Corporation of New Jersey. Filed Dec. 17, 1925. Serial No. 76,021. 1 Claim. (Cl. 15—133.)



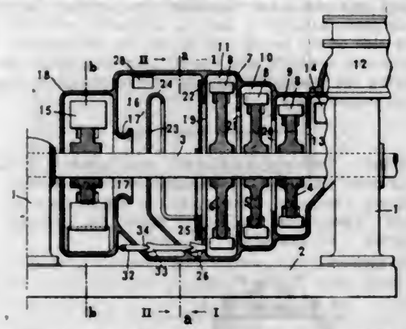
An applicator cap, comprising a thimble-shaped member of flexible and resilient material having an attaching flange about its open end, apertures provided in its top, and a circumferential groove formed in the interior surface of said member adjacent said apertures.

1,621,568. METHOD FOR MAKING CONFECTIONS. ZELMAN E. VOSE, Boston, Mass. Filed Apr. 15, 1924. Serial No. 706,783. 10 Claims. (Cl. 107—54.)

5. The method of making a composite confection of the class described which consists in agitating a mould containing a warm fluid center suspended in melted chocolate.

1,621,569. DRILLING WELLS. LOUIS H. WELLENSIEK, Houston, Tex. Filed June 1, 1923. Serial No. 642,733. 5 Claims. (Cl. 255—24.)

1. In well drilling apparatus, a casing collar formed with a plurality of flared sections, expansible rings mounted in said flared sections, resilient means tending to hold said rings in unexpanded position and means for admitting fluid to said casing collar.

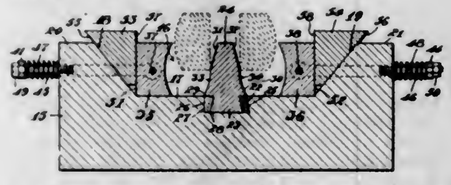


1,621,570. CUFF BUTTON. JOHN A. WILLIAMS, Richmond Hill, N. Y. Filed Sept. 8, 1925. Serial No. 54,893. 17 Claims. (Cl. 24—99.)

1. A cuff-button, comprising a base part, a fixed post, a pair of arm members pivoted to said post, and a pair of locking thrust members pivoted to the outer portions of said arm members, the arm members and thrust members adapted to be extended endwise from the post or to be folded together laterally, each arm member and its thrust member lying together in the latter condition so as to form a virtually solid cross head on the post.

1,621,571. PULVERIZER. HENRI EMIL WITZ, Rheinland Baden, Germany, assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed May 25, 1923, Serial No. 641,290, and in Germany May 26, 1922. 17 Claims. (Cl. 83—11.)

1. A pulverizing mill comprising a pulverizer proper, a fan, a casing therefor, the suction side thereof communicating with said pulverizer for propelling material therethrough, means for separating out the larger particles of the material in said casing, an expansion chamber between said fan and said pulverizer, means for adding



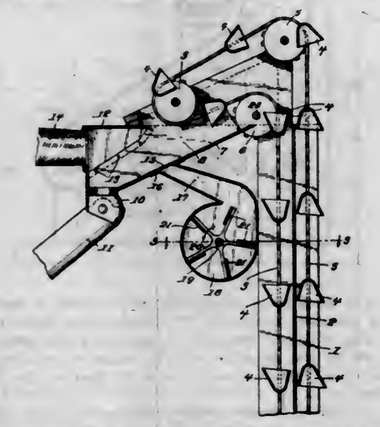
the particles separated out in said chamber to those from the fan casing and means for returning all the said particles to the pulverizer.

1,621,572. BARBER'S CLIPPER GUARD. FREDERIC E. YOUNG, Shreveport, La. Filed June 7, 1923. Serial No. 643,088. 1 Claim. (Cl. 30—1.)

A clipper guard embodying a plate having upwardly curved teeth formed along one edge thereof, the under surface of the plate being rounded at the junction of said teeth with the plate, the lower surface tapering towards the rear edge thereof, said plate having grooves formed transversely thereof, said grooves extending to points between the teeth, and means for securing the plate directly to a clipper.

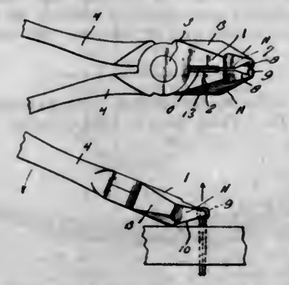
1,621,573. FORGING TOOL. RICHARD ARMOUR, Los Angeles, Calif. Filed July 21, 1923. Serial No. 652,984. 5 Claims. (78—60.)

1. A tool for forming the side members of a link, comprising a base block formed with a transverse channel having inclined end walls, a forming mandrel carried on said base block within the channel, a pair of slide blocks arranged between the mandrel and the inclined walls of the channel, wedge blocks interposed between the slide blocks and the inclined walls normally projecting above the upper face of the base block and adapted on being driven downwardly to advance the slide blocks, cross heads at the end of the base block, bars connecting the cross heads to the slide blocks, and springs bearing on said cross heads operable to retract the slide blocks.



1,621,574. SOLDIER TOY. EDWIN V. BABBITT, Fairhaven, Mass. Filed June 8, 1926. Serial No. 114,483. 3 Claims. (Cl. 46—40.)

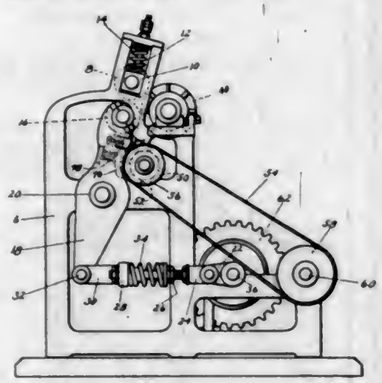
1. A toy soldier comprising a head and a sectional cocked hat including a brim section of sheet material superimposed on the top portion of the head, a rigid crown section superimposed on the brim section and secured to the head by a headed fastening member extending through the crown and the brim sections into the head, so that the central portion of the brim section is clamped between the head and the crown section, the



marginal portion of the brim section being turned upward and portions thereof being secured to the crown section, so that the crown section simulates the crown, and the brim section the brim of a cocked hat.

1,621,575. EAR-CORN CLEANER. MANTON BAKKER, Grundy Center, Iowa. Filed Aug. 15, 1924. Serial No. 732,298. 1 Claim. (Cl. 209—147.)

The combination with a corn elevator which includes the usual inclined hopper having an open top and provided with a delivery spout, and having an opening in its bottom which is closed by a screen, of a means for removing fibrous substance from between the ears of corn in their passage through the hopper into the spout, comprising a fan for injecting air through the screen and into the bottom of the hopper and operated by the elevator, a hood closing the open top of the hopper and disposed at an angle opposite the fan inlet and a fabric tube removably secured on the outer face of the hood.



1,621,576. COTTER-PIN EXTRACTING PLIERS. GEORGE BESANCON, Wilkes-Barre, Pa. Filed Nov. 4, 1926. Serial No. 146,214. 1 Claim. (Cl. 29—86.2.)

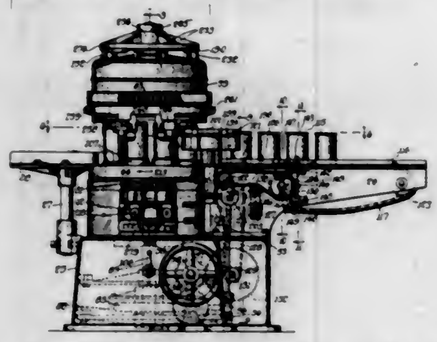
Cotter-pin extracting pliers, comprising a pair of jaw members of substantially rectangular cross-section pivotally connected at one end and formed with handle exten-

sions, the opposite ends of said jaws having opposed gripping faces terminating in recesses formed in the jaws, the extremities of said jaws having studs formed thereon at one side extending in opposed alined relation and terminating substantially in the plane of the gripping faces, the ends, sides, and corners of said jaws being formed with angularly arranged beveled faces converging toward the studs and forming a plurality of fulcrum faces.

1,621,577. LEATHER-WORKING MACHINE. WILLIAM F. BLANEY, Newark, N. J., assignor to The Turner Tanning Machinery Company, Peabody, Mass., a Corporation of Maine. Filed Sept. 12, 1923. Serial No. 662,219. 16 Claims. (Cl. 149—16.)

1. In a machine of the character described, a work operating member, feed rolls for feeding the work, means comprising a rotary member for spreading and smoothing the work for the operation of said operating member, and a member movable to press the work against the rotary member.

1,621,578. METHOD OF MAKING PISTON RINGS. RICHARD A. BOOKER, Richmond, Ind., assignor to Richmond Piston Ring Co., Richmond, Ind., a Corporation of Indiana. Original application filed Mar. 30, 1922, Serial No. 548,111. Divided and this application filed Aug. 21, 1923. Serial No. 658,567. 2 Claims. (Cl. 29—156.6.)



1. The method of peining piston rings, which consists in densifying the metal in the interior wall of the ring over a substantially lune shape area so that the impression will have its greatest depth and width at the center point of the interior arc of the lune, said impression decreasing gradually and uniformly towards the apex of the interior and exterior arcs of the lune, and then splitting the ring.

1,621,579. SHOCK ABSORBER. JAY SAMUEL BURWELL, Sharon, Pa. Filed Jan. 8, 1926. Serial No. 80,036. 3 Claims. (Cl. 267—48.)

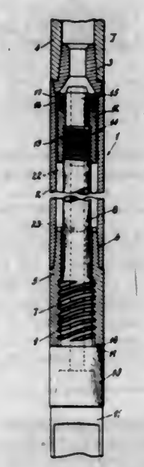
1. A shock absorber of the class described including a bowed plate having its intermediate portion adapted to abut the convex side of a spring and its ends spaced therefrom, a U-shaped bolt at one end of the plate for engagement with the spring, a U-shaped clip at the other end of the plate for straddling the spring, a second bowed plate having its ends in abutment with the concaved side of the spring and having its intermediate portion curved inwardly and spaced from the spring, means engaging the U-shaped clip with the intermediate portion of the second plate.

1,621,580. DOUBLE-SEAMING MACHINE. WILLIAM CAMERON, Chicago, Ill., assignor to Cameron Can Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 22, 1923. Serial No. 626,733. 63 Claims. (Cl. 113—14.)

1. In a seaming machine, the combination of a plurality of seaming rolls stationarily disposed relatively to each other but movable together as a unit, and means for moving a can body and cap past said rolls in a continuous movement and in cooperative relation thereto to effect the seaming of the cap onto the can body by said rolls.

1,621,581. FLAME PLUG FOR INTERNAL-COMBUSTION ENGINES. JOHN M. CLARK, New York, N. Y. Filed Oct. 2, 1923. Serial No. 666,184. 3 Claims. (Cl. 123—169.)

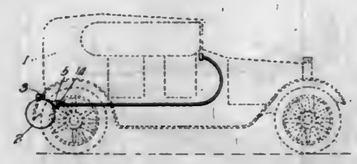
1. A flame plug for internal combustion engines comprising a metallic body member having a chamber therein and in direct communication with the interior of the cylinder of an engine and an intensifying means within said chamber, said intensifying means comprising an insulating member having a metallic supporting stem, a plurality of metallic members upon said insulating member and spaced thereon, the innermost metallic member being electrically connected to said stem and a flange upon said body member and adjacent to the outermost metallic member.



1,621,582. FRAME FOR AUTOMOBILE LICENSE PLATES. KENELM W. COLLAMORE, Grand Haven, Mich. Filed Apr. 9, 1926. Serial No. 100,852. 1 Claim. (Cl. 40—125.)

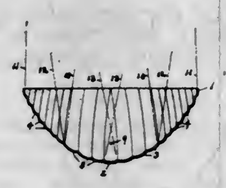
In a structure of the character described: a frame adapted to hold an automobile license-plate and comprising spaced opposite members having portions spaced inwardly therefrom provided with threaded holes, one of said members having a rearwardly extending flange provided with an opening therethrough; a support extending through said opening and having orifices therethrough;

screws extending through said orifices and through the license-plate and turning in said threaded holes respectively.



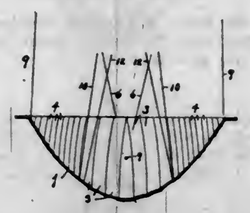
1,621,583. RELEASABLE DRILL COLLAR. THOMAS A. CREIGHTON, Long Beach, Calif. Filed Nov. 23, 1925. Serial No. 70,868. 5 Claims. (Cl. 255—27.)

1. A drill collar comprising a housing, an elongated pin, a bit adapted to be secured to the pin, releasable means connecting said pin and said housing, a nut on said pin, said housing being adapted for longitudinal movement along said pin when said releasable means is released and means coupling said nut and said housing whereby said nut be removed from said pin to release said housing from the pin.



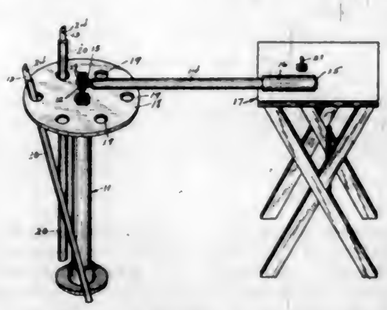
1,621,584. LIQUID-LEVEL GAUGE. GEORGE J. DUNNAUGH, Jr., Chicago, Ill., assignor to Champion Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 14, 1923. Serial No. 662,651. 2 Claims. (Cl. 73—82.)

1. In a device of the kind described and in combination, a tank having an opening therein, a hollow fitting adapted to surround said opening, an annular flange formed upon the fitting and provided with apertures of different sizes, a bracket, a plate formed integral with said bracket adapted to engage the end of said fitting, an elongated bearing formed centrally of said plate, different sized dowel pins on said plate to fit said different sized apertures in said flange so as to correctly position said bracket in assembling, a pin projecting from said bracket, a gear mounted on said pin, a shaft inserted through said bearing, a second gear mounted on said shaft and meshed with said first gear, a float, an arm for connecting the float to the first gear, a clamping ring cooperating with the fitting for clamping the plate thereagainst, an indicator, a flexible shaft having one end inserted through said bearing



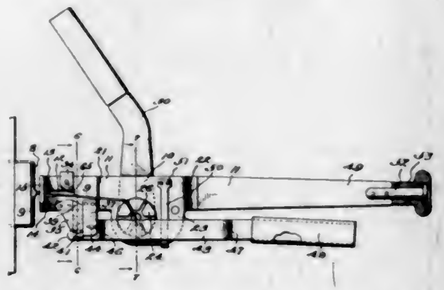
and connected with one end of said first-mentioned shaft, the other end of said flexible shaft being connected to said indicator, a sheathing for the flexible shaft having one end inserted into said bearing, and a nut for clamping said sheathing to said bearing.

1,621,585. LAMP. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds & Jones Corporation, Detroit, Mich., a Corporation of New York. Filed May 19, 1922. Serial No. 562,065. 11 Claims. (Cl. 240—41.)



1. A paraboloidal reflector composed of a group of panels on each side of the center of the reflector, the panels having parallel sides and the panels of each group being parallel to each other, each panel being transversely concave relative to the general focus of the reflector and its transverse curvature at each point being the same as that of the general curve of a parabola at that point, the adjacent edges of the two inner panels of the two groups being curved apart at the center of the reflector.

1,621,586. REFLECTOR. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds & Jones Corporation, Detroit, Mich., a Corporation of New York. Filed May 8, 1922. Serial No. 559,204. 13 Claims. (Cl. 240—41.)

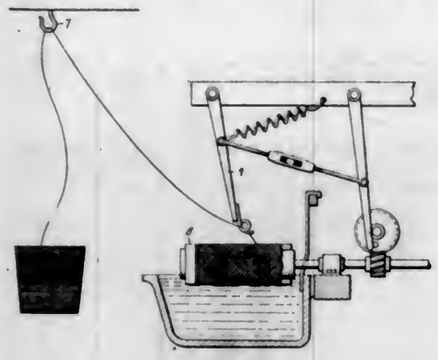


5. A paraboloidal reflector whose reflecting surface is scored to form panels which are all convex toward the general focus of the reflector, the transverse curvature of each portion of each panel being the same as that of the general curve of a parabola at that point but in the opposite direction.

1,621,587. BRANDING. DANIEL E. HENNESSY, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 21, 1922. Serial No. 583,418. 3 Claims. (Cl. 101—3.)

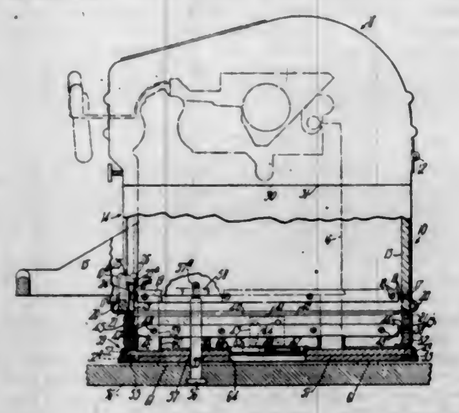
1. The method of branding tubes comprising placing the tube upon a somewhat smaller mandrel, placing said mandrel and the tube upon a support to form a cavity between the upper part of the mandrel and the tube, and pressing a stamp against the tube to form a flat surface while stamping.

1,621,588. TOOL FOR TENSIONING AND TWISTING WIRES. LEROY F. HINTZ, Chicago, Ill. Filed Sept. 28, 1925. Serial No. 59,109. 10 Claims. (Cl. 140—93.)



9. A tool of the character described provided with a body portion slotted at its end for the reception longitudinally therethrough of two wire end portions disposed side by side therein, said body portion being axially rotatable, a tensioning means to receive each wire end portion, and a wire cutting device to sever both wire end portions.

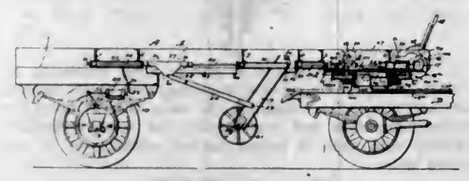
1,621,589. TAB END. WILLIAM S. HUNKINS, Hollywood, Calif. Filed Dec. 28, 1926. Serial No. 157,474. 4 Claims. (Cl. 24—76.)



1. In a tab end, a sheet metal plate, the opposite edges of which are slitted, a strip of fabric covering the back of said plate having its opposite edges folded into said slits and partly over the front surface of said plate at one side of said slits, said plate being folded upon itself to embrace between the two layers thereof the aforesaid fabric folds, said plate and fabric being rolled into tubular form to produce a finished tab end with a fabric covered metallic bushing in one end thereof.

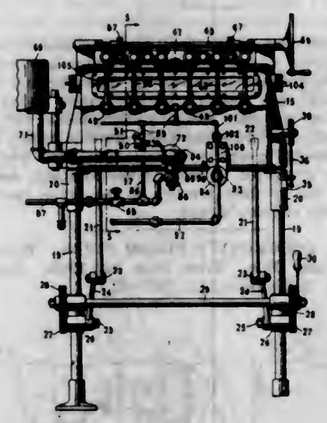
1,621,590. METHOD OF MANUFACTURE OF ARTIFICIAL SILK. CHARLES C. JESSEN, Wilmington, Del., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 20, 1925. Serial No. 17,133. 4 Claims. (Cl. 18—54.)

1. The herein described step in the manufacture of artificial silk which consists of winding the thread in a centrifuge into a cake and then winding all of the thread of a cake upon a cylinder and from the outside of said cake, said cylinder being of such proportion, with respect to the diameter of the cake, that as the thread is wound upon the cylinder those portions of the thread which were subjected to the greatest tension, by centrifugal force in the centrifuge, will be subjected to the least tension during such winding and those portions of the thread which were subjected to the least tension in the centrifuge will be subjected to the greatest tension during winding.



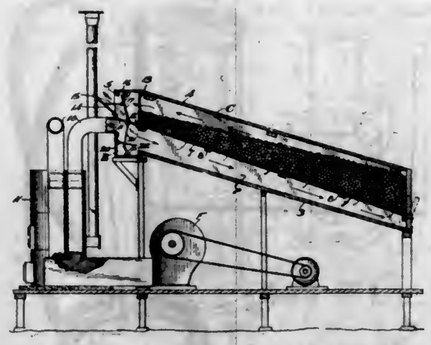
1,621,591. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Original application filed Sept. 27, 1922, Serial No. 590,736. Divided and this application filed July 23, 1925. Serial No. 45,548. 10 Claims. (Cl. 197—186.)

1. A sound-deadening casing for a typewriting machine, comprising a body-portion, a base-piece having a hole



therethrough for the removal of dirt, a door for closing the hole, and means whereby the door may be opened from the interior of the casing.

1,621,592. TRACTOR TRAILER. CHARLES H. LAND, Detroit, Mich. Filed Mar. 12, 1926, Serial No. 94,120. Renewed Feb. 12, 1927. 11 Claims. (Cl. 280—33.1.)



1. In combination with a tractor and trailer; a plurality of cylinders carried by the trailer; a supporting leg for the trailer; mechanism for automatically operating said supporting leg interposed between the pistons of two of said cylinders and adapted to co-operate therewith, co-ordinating means carried by the tractor adapted upon either backing the tractor or on driving it in a forward direction to alternately and automatically actuate said leg operating mechanism, whereby the leg may be shifted to either a supporting or non-supporting position.

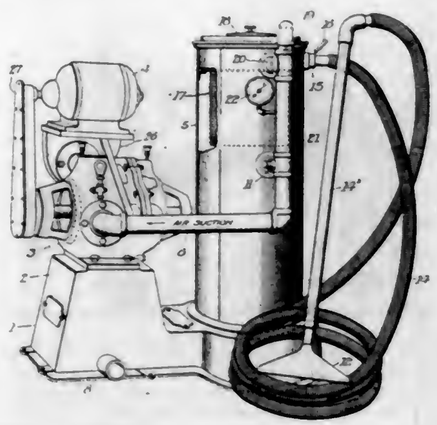
1,621,593. PULP-MOLDING MACHINE. FELIX LOUISOT, New York, N. Y., assignor to Vacuum Pulp Products Corporation, New York, N. Y., a Company of Virginia. Filed July 11, 1923. Serial No. 650,789. Renewed Aug. 16, 1926. 47 Claims. (Cl. 92—54.)

1. In apparatus of the character described, a mold chamber open at its lower end, a pulp supply conduit leading through a side wall of the mold chamber, a movable closure for said open lower end and a sectionalized mold within the mold chamber, the closure having a pulp supply passage extending upwardly into communication with the interior of the mold and having at its lower end a detachable coupling for engagement with the pulp supply conduit enabling free movement of the closure.

1,621,594. REVERSIBLE-DRAFT, INDIVIDUAL-BIN CIRCULATING APPARATUS. FRANK J. MAHONEY, Saticoy, Calif. Filed Jan. 21, 1926. Serial No. 82,747. 5 Claims. (Cl. 34—33.)

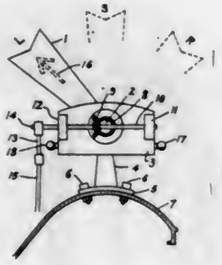
1. Apparatus for drying nuts, comprising a bodily inclined horizontally disposed bin, means for serving heated air to the bin, and means for alternately inverting the flow of air in up and down movement through the batch of nuts in the bin; said inverting means including an air inlet and outlet device at the higher end of the bin.

1,621,595. VULCANIZING APPARATUS. JOSEPH F. MINCHER, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 21, 1922. Serial No. 583,399. 5 Claims. (Cl. 18—2.)



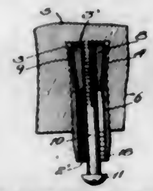
1. Means for supporting a circular mandrel comprising a hanger adapted to engage one end of the mandrel and extended beyond and across the mandrel circumference to permit free suspension of the mandrel.

1,621,596. VACUUM CLEANER. GUSTAVE WILLIAM MINUTH, Chicago, Ill., assignor to Max I. Heldman, Chicago, Ill. Filed Apr. 6, 1925. Serial No. 21,116. 5 Claims. (Cl. 15—2.)



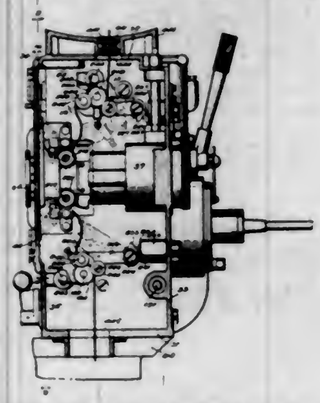
2. In combination in a vacuum cleaner, a vacuum tank, a separator in said tank to remove solid material from air and liquid, an air pump having a suction inlet and an outlet, a connection from said tank to said pump inlet,

a suction cleaner nozzle connected to said tank, an ejector having a nozzle, a discharge pipe connected from the



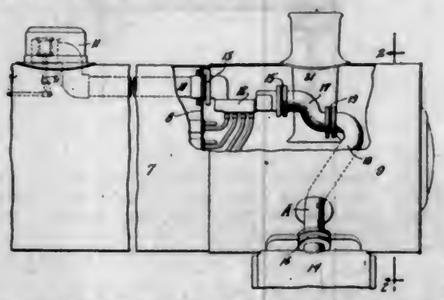
bottom of the tank to the ejector, a check valve in said pipe, and said ejector nozzle connected to said pump outlet.

1,621,597. DIRECTION INDICATOR. RAJA KARAN PERSHAD, Hyderabad, Deccan, India. Filed Dec. 2, 1924, Serial No. 753,490, and in British India Sept. 23, 1924. 1 Claim. (Cl. 116—51.)



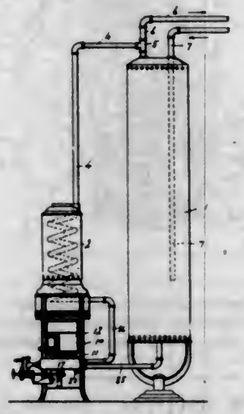
An indicating device for an automobile, comprising a base adapted to the mounting on the front fender of the automobile, a support on said base, a stand mounted upon the upper end of said support, a shaft journaled in said stand, an indicating arm on one end of said shaft adapted to swing to the right and to the left to indicate the direction in which the automobile is about to turn, a bevel gear on the opposite end of said shaft, a second shaft extending transversely of said fender and at right angles to the shaft carrying the indicating arm, a second bevel gear located centrally of said second shaft for engagement with said first mentioned bevel gear, bearings on said stand for rotatably supporting said second shaft, the said second shaft projecting beyond one of said bearings and the stand, a crank arm mounted upon the projecting end of said shaft, and actuating means connected to said crank arm to move the indicating arm into the desired position, the said actuating means being located adjacent to the steering shaft of the automobile.

1,621,598. EXPANSION-ANCHOR-SHELL DRILL. JOHN H. PHILLIPS, Chicago, Ill. Filed Jan. 15, 1923. Serial No. 612,854. 11 Claims. (Cl. 85—22.44.)



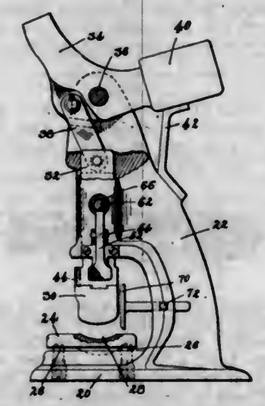
1. A self-drilling expansion anchor shell consisting of a shell body-part constructed for expansion at its cutting end, and means for expanding the same thereat during a drilling operation and maintaining the same expanded, whereby said shell is locked against withdrawal in the drilled hole.

1,621,599. PROJECTING APPARATUS. JOHN PROKSA, Chicago, Ill., assignor to Helios Corporation, Chicago, Ill., a Corporation of Delaware. Filed Mar. 21, 1925. Serial No. 17,340. 7 Claims. (Cl. 88—17.)



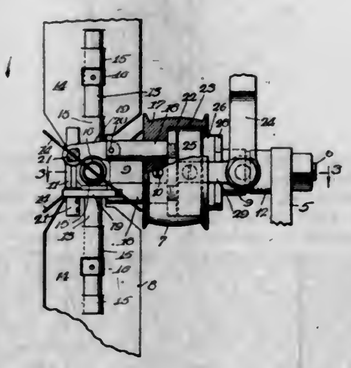
1. In apparatus of the kind described and in combination, rotatable means for intermittently advancing the film, a second rotatable means for intermittently advancing the film, said second rotatable means being spaced from the first rotatable means, yielding means for causing relative motion between the first rotatable means and the second rotatable means to tension the film, and means operatively connected to each of the rotatable means for displacing one of them relative to the other against the action of the yielding means.

1,621,600. LOCOMOTIVE STEAM PIPES. WILLIAM L. REID, Lima, Ohio. Filed June 22, 1923. Serial No. 647,138. 2 Claims. (Cl. 105—47.)



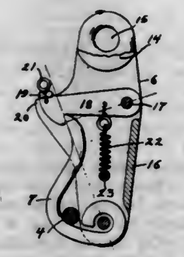
1. In a locomotive, the combination of a smoke box, a dry pipe, a steam supply casting in the smoke box receiving steam from said dry pipe, a valve chest, a section of steam pipe having a jointed connection to said steam supply casting, a second section of steam pipe angularly disposed with respect to the first section and having a jointed connection to said valve chest, and a jointed connection between the other ends of said sections.

1,621,601. THERMOSTATICALLY-CONTROLLED WATER-HEATING SYSTEM. MARC RESEK, East Cleveland, Ohio, assignor to Perfection Stove Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 27, 1923. Serial No. 665,243. 13 Claims. (Cl. 236—20.)



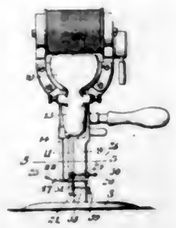
1. In a water heating system involving a storage tank and a water heater in communication therewith, said water heater incorporating a liquid fuel burner by which the water heater is fired and a water chamber in close proximity to the burner, said chamber being in the connections leading from the storage tank to the water heater, a thermostat so situated as to be operated by the temperature of the water in said connections when the same reaches a predetermined degree or by the temperature of the burner parts when the same becomes excessively high, and operative connections through which the thermostat acts to reduce the heat of the burner.

1,621,602. BLANK-PREPARING APPARATUS. FRED RICKS, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 31, 1922, Serial No. 598,219, and in Great Britain Nov. 21, 1921. 21 Claims. (Cl. 12—64.)



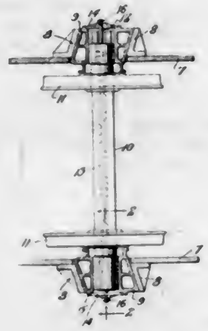
1. A counter-molding apparatus comprising, in combination, an inner convex form, means to engage with an unslipping grip opposite ends of a counter blank and to tension it longitudinally over the inner form, and an outer concave form to mold the central part only of the counter blank against the inner form.

1,621,603. ADJUSTABLE FAN. CONRAD ROSINE, Chicago, Ill. Filed May 22, 1926. Serial No. 110,890. 4 Claims. (Cl. 170—163.)



1. In an adjustable fan, the combination of a rotatively mounted hollow fan pulley having a hub extension of smaller diameter than the pulley, fan blades swiveled on one end of said hub extension, sliding collar mechanism slidably mounted in the hollow of said fan pulley, an operating rod connected to said sliding collar mechanism, fan blade adjusting plungers, one for each fan blade, slidably mounted in the fan pulley body and located externally of the hub extension thereof, said plungers being rigidly secured to a member of said sliding collar mechanism, and connecting links, one for each fan blade, and directly connected thereto, and pivotally connecting a plunger with an associated fan blade externally of said hub extension.

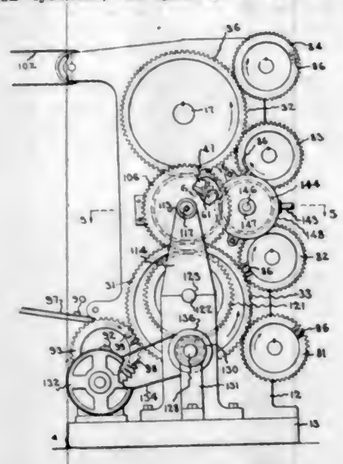
1,621,604. SLING HOOK. HORACE F. RUGGLES, Brooklyn, N. Y. Filed Aug. 11, 1922. Serial No. 581,057. 2 Claims. (Cl. 294—83.)



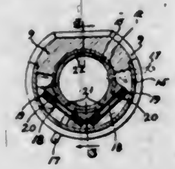
1. A trip hook comprising in combination a recessed block, a hook pivoted in said recess, a dog pivoted in said block and lying wholly within said recess and adapted to engage said hook, said block having an exterior shoulder and means on the dog adapted to engage said shoulder outside of the block to prevent said dog from receding to an unaccessible position within said block.

1,621,605. CLOTH-CUTTING MACHINE. MILTON G. SACKERMAN and ISRAEL E. HELLER, Buffalo, N. Y., assignors to Eastman Machine Company, Buffalo, N. Y. Filed Oct. 9, 1924. Serial No. 742,536. 18 Claims. (Cl. 164—75.)

1. A cloth cutting machine having a base freely movable over a supporting surface and underneath the material to be cut, a standard rising upwardly from said base, a knife guided on said standard, said machine being adapted to advance in a forward direction to cut through a stack of material supported on said surface from the top to the bottom of the stack and said standard being movable through the cuts made by said knife, and means mounted on said machine and movable therewith and adapted to cooperate with the edge of the material to stop the further forward movement of said machine to limit the penetration of said knife through the stack of material.



1,621,606. TRUCK. EUGENE L. SCHELLENS, Pointe Claire, Quebec, Canada, and JOEL S. COFFIN, Jr., Lisbon, N. H., assignors, by direct and mesne assignments, to C-S Engineering Company, a Corporation of Delaware. Filed May 15, 1925. Serial No. 30,435. 2 Claims. (Cl. 105—174.)

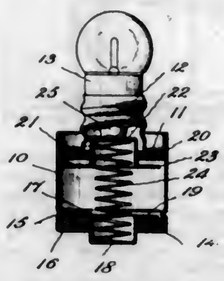


1. A radial trailer truck for locomotives comprising in combination a frame with one end open and the other adapted to be pivoted to the locomotive, an axle having wheels, boxes for said axle at the open end of said frame, and tying means for fixing the boxes relative to one another.

1,621,607. MULTICOLOR-PRINTING MACHINERY. STEWART L. SHARPLESS, Milwaukee, Wis. Filed May 29, 1925. Serial No. 33,781. 13 Claims. (Cl. 101—183.)

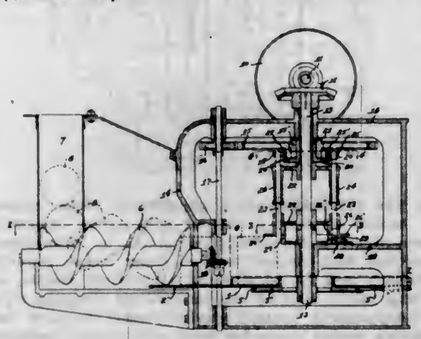
1. In a multi-color printing machine, the combination of a pair of impression cylinders, a plate cylinder coacting with each of said impression cylinders, a transfer cylinder between said impression cylinders, a train of gearing independent of driving connection with said plate cylinders and said transfer cylinder for rotating said impression cylinders, and gearing between said impression cylinders and said plate cylinders and said transfer cylinder for rotating said plate cylinders and said transfer cylinder from said impression cylinders.

1,621,608. TONE MODIFIER. THOMAS J. SLECHTA, Minneapolis, Minn. Filed Dec. 4, 1924. Serial No. 753,852. 2 Claims. (Cl. 84—383.)



1. A wind instrument having in a wall thereof an air port and outward of said air port an air chamber, a diaphragm stretched across said air port and subject to the musical tone-producing air vibrations from within the instrument, and a valve-acting element movable to close said air port and cut said diaphragm out of the influence of said air vibrations, said valve-acting element being in the form of a sleeve having a port that cooperates with the port over which said diaphragm is stretched, to open and close said latter port.

1,621,609. CALCULATING DEVICE. THEODORE J. SMULSKI, Chicago, Ill., assignor to John W. Anderson, Gary, Ind. Filed Feb. 2, 1923. Serial No. 616,544. 4 Claims. (Cl. 235—78.)

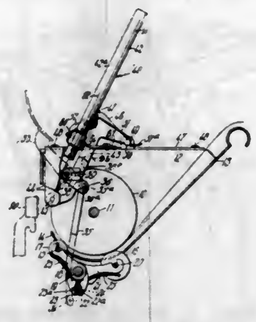


1. A calculator comprising a series of movable disks of progressively varying diameters and orders mounted above one another with their centers spaced so that all of said disks have a point in common at their circumference, each of said disks having a series of numbers thereon and a recess therein, and yieldably-held means between each pair of adjacent disks and engageable in the recess in the adjacent disk to carry-over said adjacent disk when the other of said disks has been moved a predetermined amount and automatically disengaging from said recess as soon as the carrying-over has been effected.

1,621,610. SHOCK-ABSORBING SUPPORT FOR ELECTRIC LAMPS. SAMUEL SOKOLOW, Brooklyn, N. Y., assignor to Bright Star Battery Company, a Corporation of New York. Filed Dec. 31, 1924. Serial No. 759,023. 3 Claims. (Cl. 240—10.5.)

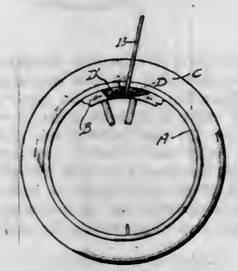
1. A connecting shock absorbing support for electric lamp bulbs comprising an exterior casing, means at one end thereof for receiving a lamp bulb, a single compressible spring under the lamp bulb, a movable conducting terminal at each end of said spring, one terminal being adapted to make contact under the central terminal of the lamp bulb, and an insulating guide for each of said terminals.

1,621,611. CAN FEEDER. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed Apr. 26, 1926. Serial No. 104,674. 13 Claims. (Cl. 198—21.)



1. A feeder for containers to be filled, comprising a conveyer for supplying a procession of containers; means for passing said procession by a filling station; and means for returning any given container, after passing said station, and introducing it into the procession supplied by said conveyer.

1,621,612. PROCESS OF TANNING. JOHN K. TULLIS, New York, N. Y. Filed Oct. 3, 1923. Serial No. 666,250. 5 Claims. (Cl. 149—4.)

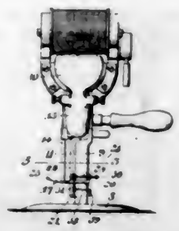


5. The process which comprises partially tanning hides in a weak tanning liquor, drying to a bone dry condition, and then completing the tanning in about half its weight of strong tanning liquor in a rotating drum.

1,621,613. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 3, 1925. Serial No. 34,542. 28 Claims. (Cl. 197—127.)

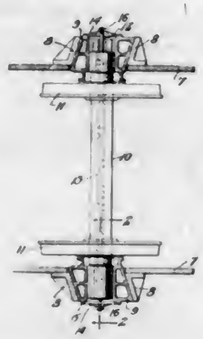
1. The combination with a typewriting machine having a platen and lower feed-rolls engaging the platen, of a displaceable collating table, a work-sheet-holding clip mounted on said table, and mechanism actuating said feed-rolls and said clip to provide co-operative work-sheet-holding action between the latter and said feed-rolls, whereby one or the other will always hold a collated work-sheet against displacement.

1,621,614. VEHICLE RIM. JAMES WALLACE, Affton, Mo. Filed June 5, 1925. Serial No. 35,091. 3 Claims. (Cl. 301—30.)



1. A one-piece, transversely-split tire rim equipped with a substantially channel-shaped member projecting inwardly from one end portion of said rim and provided with a reduced extension and internal and external shoulders, a member projecting inwardly from the other end portion of the rim and provided with side flanges that co-operate with said extension and said external shoulders and provided with a prong that co-operates with said internal shoulders, and holes in said members arranged to receive a pair of transversely-disposed pins on a rim tool that is used to move the end portions of said rim into and out of overlapping relationship.

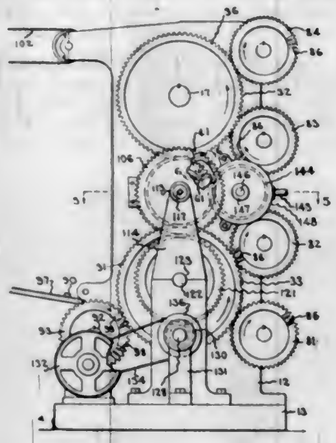
1,621,615. TREATING RUBBER SURFACES. GEORGE F. WIKLE, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 8, 1924. Serial No. 703,960. 7 Claims. (Cl. 18—47.)



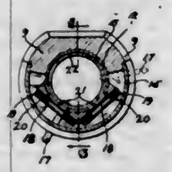
1. A coating solution for rubber surfaces comprising hypo-sulphite of soda and a softening agent.

1,621,605. CLOTH-CUTTING MACHINE. MILTON G. SACKERMAN and ISRAEL E. HELLER, Buffalo, N. Y., assignors to Eastman Machine Company, Buffalo, N. Y. Filed Oct. 9, 1924. Serial No. 742,536. 18 Claims. (Cl. 164—75.)

1. A cloth cutting machine having a base freely movable over a supporting surface and underneath the material to be cut, a standard rising upwardly from said base, a knife guided on said standard, said machine being adapted to advance in a forward direction to cut through a stack of material supported on said surface from the top to the bottom of the stack and said standard being movable through the cuts made by said knife, and means mounted on said machine and movable therewith and adapted to cooperate with the edge of the material to stop the further forward movement of said machine to limit the penetration of said knife through the stack of material.



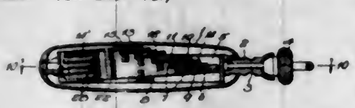
1,621,606. TRUCK. EUGENE L. SCHELLENS, Pointe Claire, Quebec, Canada, and JOEL S. COFFIN, Jr., Lisbon, N. H., assignors, by direct and mesne assignments, to C-S Engineering Company, a Corporation of Delaware. Filed May 15, 1925. Serial No. 30,435. 2 Claims. (Cl. 105—174.)



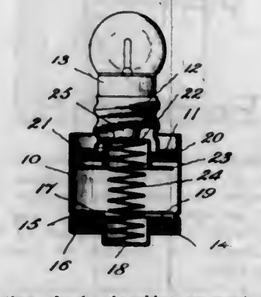
1. A radial trailer truck for locomotives comprising in combination a frame with one end open and the other adapted to be pivoted to the locomotive, an axle having wheels, boxes for said axle at the open end of said frame, and tying means for fixing the boxes relative to one another.

1,621,607. MULTICOLOR-PRINTING MACHINERY. STEWART L. SHARPLESS, Milwaukee, Wis. Filed May 29, 1925. Serial No. 33,781. 13 Claims. (Cl. 101—183.)

1. In a multi-color printing machine, the combination of a pair of impression cylinders, a plate cylinder coacting with each of said impression cylinders, a transfer cylinder between said impression cylinders, a train of gearing independent of driving connection with said plate cylinders and said transfer cylinder for rotating said impression cylinders, and gearing between said impression cylinders and said plate cylinders and said transfer cylinder for rotating said plate cylinders and said transfer cylinder from said impression cylinders.

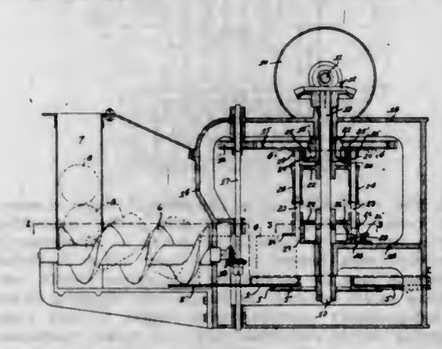


1,621,608. TONE MODIFIER. THOMAS J. SLECHTA, Minneapolis, Minn. Filed Dec. 4, 1924. Serial No. 753,852. 2 Claims. (Cl. 84—383.)



1. A wind instrument having in a wall thereof an air port and outward of said air port an air chamber, a diaphragm stretched across said air port and subject to the musical tone-producing air vibrations from within the instrument, and a valve-acting element movable to close said air port and cut said diaphragm out of the influence of said air vibrations, said valve-acting element being in the form of a sleeve having a port that cooperates with the port over which said diaphragm is stretched, to open and close said latter port.

1,621,609. CALCULATING DEVICE. THEODORE J. SMULSKI, Chicago, Ill., assignor to John W. Anderson, Gary, Ind. Filed Feb. 2, 1923. Serial No. 616,544. 4 Claims. (Cl. 235—78.)

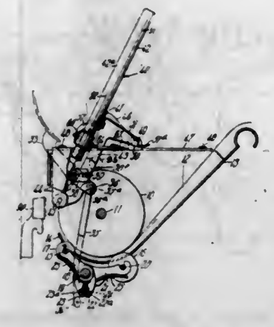


1. A calculator comprising a series of movable disks of progressively varying diameters and orders mounted above one another with their centers spaced so that all of said disks have a point in common at their circumference, each of said disks having a series of numbers thereon and a recess therein, and yieldably-held means between each pair of adjacent disks and engageable in the recess in the adjacent disk to carry-over said adjacent disk when the other of said disks has been moved a predetermined amount and automatically disengaging from said recess as soon as the carrying-over has been effected.

1,621,610. SHOCK-ABSORBING SUPPORT FOR ELECTRIC LAMPS. SAMUEL SOKOLOW, Brooklyn, N. Y., assignor to Bright Star Battery Company, a Corporation of New York. Filed Dec. 31, 1924. Serial No. 759,023. 3 Claims. (Cl. 240—10.5.)

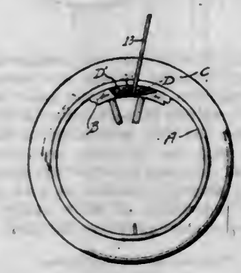
1. A connecting shock absorbing support for electric lamp bulbs comprising an exterior casing, means at one end thereof for receiving a lamp bulb, a single compressible spring under the lamp bulb, a movable conducting terminal at each end of said spring, one terminal being adapted to make contact under the central terminal of the lamp bulb, and an insulating guide for each of said terminals.

1,621,611. CAN FEEDER. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed Apr. 26, 1926. Serial No. 104,674. 18 Claims. (Cl. 198—21.)



1. A feeder for containers to be filled, comprising a conveyer for supplying a procession of containers; means for passing said procession by a filling station; and means for returning any given container, after passing said station, and introducing it into the procession supplied by said conveyer.

1,621,612. PROCESS OF TANNING. JOHN K. TULLIS, New York, N. Y. Filed Oct. 3, 1923. Serial No. 666,250. 5 Claims. (Cl. 149—4.)

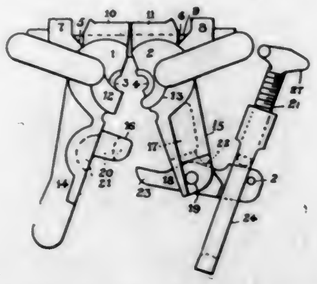


5. The process which comprises partially tanning hides in a weak tanning liquor, drying to a bone dry condition, and then completing the tanning in about half its weight of strong tanning liquor in a rotating drum.

1,621,613. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 3, 1925. Serial No. 34,542. 28 Claims. (Cl. 197—127.)

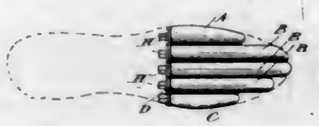
1. The combination with a typewriting machine having a platen and lower feed-rolls engaging the platen, of a displaceable collating table, a work-sheet-holding clip mounted on said table, and mechanism actuating said feed-rolls and said clip to provide co-operative work-sheet-holding action between the latter and said feed-rolls, whereby one or the other will always hold a collated work-sheet against displacement.

1,621,614. VEHICLE RIM. JAMES WALLACE, Affton, Mo. Filed June 5, 1925. Serial No. 35,091. 3 Claims. (Cl. 301—30.)



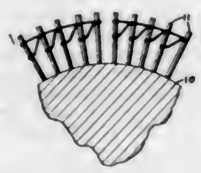
1. A one-piece, transversely-split tire rim equipped with a substantially channel-shaped member projecting inwardly from one end portion of said rim and provided with a reduced extension and internal and external shoulders, a member projecting inwardly from the other end portion of the rim and provided with side flanges that co-operate with said extension and said external shoulders and provided with a prong that co-operates with said internal shoulders, and holes in said members arranged to receive a pair of transversely-disposed pins on a rim tool that is used to move the end portions of said rim into and out of overlapping relationship.

1,621,615. TREATING RUBBER SURFACES. GEORGE F. WIELE, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 3, 1924. Serial No. 703,960. 7 Claims. (Cl. 18—47.)



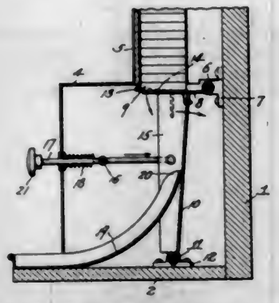
1. A coating solution for rubber surfaces comprising hypo-sulphite of soda and a softening agent.

1,621,616. WIRE-LINE DRILLING CLAMP. CLYDE S. WRIGHT, Toledo, Ohio, assignor to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 18, 1926. Serial No. 155,565. 10 Claims. (Cl. 24—135.)



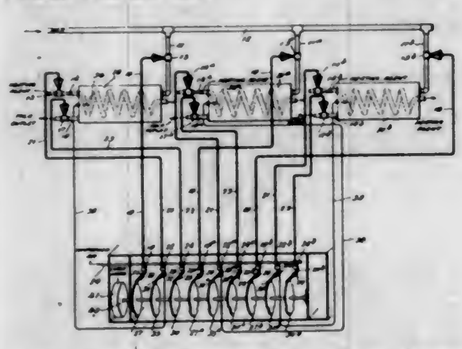
1. In a clamp, a pair of pivotally connected jaws, operating arms connected thereto, a lever pivoted to one arm and fulcrumed on the other arm, and power means pivoted to the latter arm and arranged to be applied to the lever to move the jaws toward each other.

1,621,617. INDIVIDUAL TOE EXPANDER FOR SHOE UPPERS. EDWARD O. YOUNG, Cleveland Heights, Ohio. Filed Feb. 18, 1926. Serial No. 89,093. 6 Claims. (Cl. 12—129.2.)



1. In a device of the character described, a multiple number of longitudinally divided toe members closely assembled for insertion between the upper and sole of a shoe in parallel relation to each other, a common transverse support for the rear extremities of said toe members in which said toe members are revolvable upon their longitudinal axes and in which the divisions of each toe member are pivotally secured in such a manner as to permit the separation of their outer ends and a separate internal expanding means for each toe member.

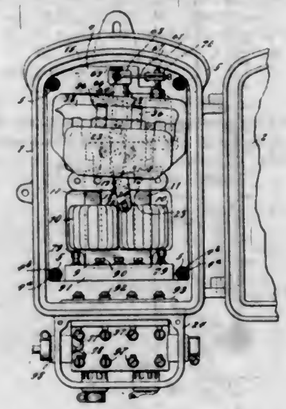
1,621,618. TURBINE-BLADE LASHING. ROBERT C. ALLEN, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 24, 1925. Serial No. 45,788. 9 Claims. (Cl. 253—77.)



1. Means for lashing a row of turbine blades comprising a lashing member extending along the row and secured to each blade, and other lashing members extending diagonally between adjacent blades in a row and secured to said blades, all of said lashing members lying in a plane normal to the axis of the turbine rotor.

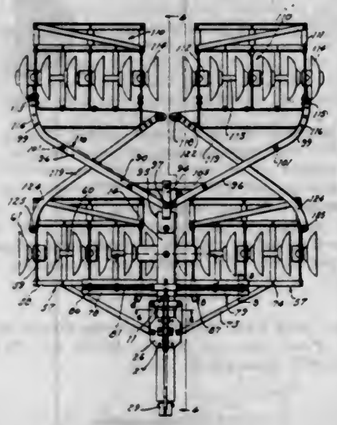
1,621,619. DELIVERY MECHANISM. MARSELIUS T. ASHE, Brooklyn, N. Y. Filed Oct. 21, 1925. Serial No. 63,819. 4 Claims. (Cl. 211—8.)

1. The combination with a magazine to contain a stack of articles, of a movable base support for the stack, shiftable means for releasably holding said base support in its operative position, and other means carried by said shiftable means, for supporting the stack when the base support is released to permit delivery of the bottom article.



1,621,620. CONTROLLING APPARATUS. FRANK J. BAST, New York, N. Y., assignor to Charles J. Tagliabue Mfg. Co., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 1, 1924. Serial No. 696,405. 2 Claims. (Cl. 236—46.)

1. The combination of a plurality of tanks, conducting means common to all of said tanks, controlling valves whereby the conducting means is independently controlled with respect to each tank, means connected with each tank for varying the temperature therein, controlling valves whereby the temperature changing means is independently controlled with respect to each tank, emptying means connected with said tanks, controlling valves whereby said emptying means is independently controlled with respect to each tank, a plurality of devices for operating said controlling valves in predetermined relation to each other to automatically produce operative cycles consisting of a filling period, a constant temperature period and an emptying period in each of said tanks in predetermined nonsynchronism with respect to each other.



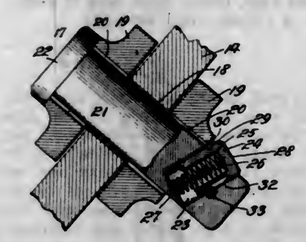
1,621,621. FLASHER. GILBERT L. BOSSARD, Loudonville, N. Y. Filed June 17, 1925. Serial No. 37,693. 21 Claims. (Cl. 200—90.)

1. An electric flasher comprising a driver element and a driven element relatively movable and acting upon one another for a snap operation of the driven element in opposite directions when the driver element moves alternately in opposite directions beyond critical intermediate positions, electrically controlled means for operating the driver element in opposite directions, a circuit controller including a pivotally mounted tube containing contacts

and a conducting fluid operated by said driven element and controlling the activity of said means to cause alternate movements of said driver element, and means for retarding the progress of the movements of the driver element.

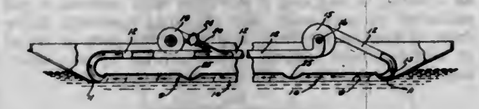
1,621,622. DISK HARROW. LOUIS BRENNEIS, Oxnard, Calif., assignor to Brennels Manufacturing Company, Oxnard, Calif., a Corporation of California. Filed July 26, 1926. Serial No. 124,856. 20 Claims. (Cl. 55—83.)

2. In a disk harrow, the combination of: a main frame; a rear frame pivoted to said main frame; front gangs pivoted at their inner ends to said main frame; rear gangs pivoted at their outer ends to said rear frame; means for changing the position of said front gangs; and operating bars each connected to one of said front gangs and one of said rear gangs for changing the position of said rear gangs.



1,621,623. EXPANSION STEAM TRAP. RICHARD J. BURNS, Lowellville, Ohio. Filed July 18, 1925. Serial No. 44,491. 1 Claim. (Cl. 236—60.)

In a structure of the class described, a relatively long expansible and contractible steam pipe, a casing at the discharge end of said pipe, a coupling between the pipe and casing, said coupling being provided with a restricted passage and a valve seat and being threaded on the pipe and in the casing, a stuffing box carried by the end of said casing remote from the coupling, a valve rod slidable through said stuffing box, the inner end of said valve rod

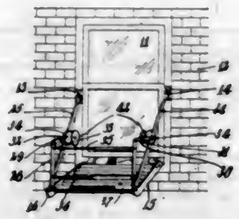


being cooperable with said seat of the coupling, and means mounted upon said pipe and connected with said valve rod for actuating the latter, said means comprising a cross head connected to the outer end of said valve rod, a plate anchored on the intake end of said pipe, and connections between said cross head and plate.

1,621,624. COUPLING PIN. JAMES A. CAMPO, Woodridge, N. J., assignor to Buffalo Brake Beam Company, a Corporation of New York. Filed Jan. 15, 1926. Serial No. 81,364. 5 Claims. (Cl. 85—3.)

1. A coupling pin for railway equipment comprising a body portion having an enlarged head on one end and a recess adjacent its other end, a keeper reciprocable in the recess, the outer end of said keeper extending beyond the side of the body portion and inclined toward said side in a direction away from the head end, the high side of said keeper being notched to provide a flat surface for engagement with part of a mechanism to which the pin is applied, and a coil spring disposed between the plunger and the bottom of the recess.

1,621,625. AIR-FLOATED BARGE. VASCO F. CASEY, Minneapolis, Minn. Filed Sept. 14, 1925. Serial No. 56,189. 5 Claims. (Cl. 114—67.)



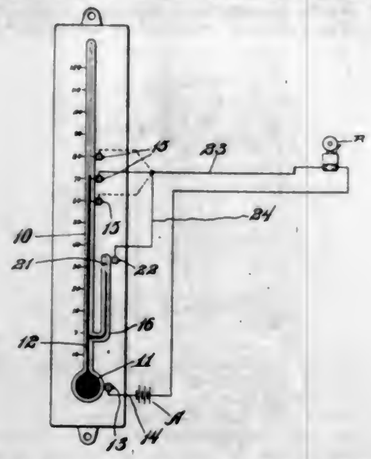
1. A boat equipped with means for maintaining under the bottom thereof a sheet of air on which the boat is floated, and means for maintaining an endless circulation of the air and for forcing rearwardly the air on which the boat is floated.

1,621,626. SAFETY WINDOW-CLEANING DEVICE. HENRY P. CHIEFFO, Weehawken, N. J. Filed Mar. 26, 1925. Serial No. 18,380. 1 Claim. (Cl. 304—26.)

A window-cleaner's longitudinally adjustable platform with associated holding means, comprising a pair of transverse supporting bars, longitudinally disposed slats

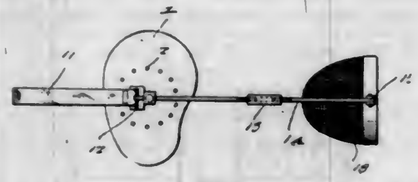
hingedly secured to the inner side of one of said transverse bars, said slats each being formed along one edge with a groove, and along the other edge with a tongue, longitudinally disposed slats secured to the inner side of the other of said transverse bars, by means of

latches, and being formed with complementary grooves and tongues, engaging the before mentioned grooves and tongues, the joint formed by the grooves and tongues being very tight to provide frictional engagement between said slats, forming a unit.



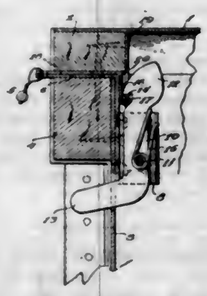
1,621,627. WELL BAILER. GEORGE WOODING CLARKE, Oklahoma City, Okla. Filed May 7, 1925. Serial No. 28,665. 4 Claims. (Cl. 166—19.)

1. In a device of the class described, a cylinder having an opening in one end, a valve for said opening, a rod connected to said valve and extending upwardly therefrom, a loop on said rod, a latch in the path of travel of said loop and adapted to be operated by the latter, and means for holding said latch against operation.



1,621,628. THERMOSTATIC ALARM. JOHN J. COMERFORD, Philadelphia, Pa., assignor of one-third to Michael J. Martley, Bronxville, N. Y., and one-third to Harry Byrne, New York, N. Y. Filed Dec. 8, 1925. Serial No. 74,197. 3 Claims. (Cl. 200—141.)

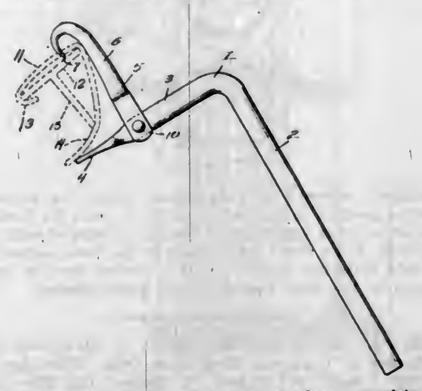
1. A thermostatic control of the character described including a thermometer having a tube, the tube being provided with a contact point disposed in the upper end of the tube and with which the mercury is adapted to engage when the mercury rises to a predetermined point and also having a contact point adjacent the lower portion of the tube with which the mercury is at all times in electrical engagement, said contact points having binding screws, the tube having an upwardly extending branch extending from the lower portion of the tube, and means



within this branch actuated by the falling of the mercury in the branch adapted to close a circuit through the said electrically actuated means.

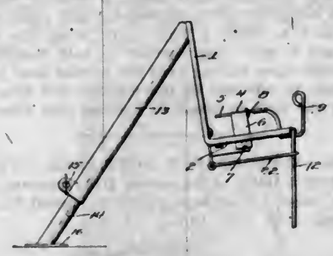
1,621,629. GOGGLES. PAUL A. DAWSON, Akron, Ohio. Filed Apr. 15, 1926. Serial No. 102,223. 2 Claims. (Cl. 2—14.)

1. In combination, lens frames, lenses therein, a nose piece interposed between and joining the lens frames, mufflers shaped to fit over the ears and provided with minute openings and also provided with outwardly extending projections having longitudinal bores and equipped with set screws, temple bars connected with the lens frames and extending through the said longitudinal bores of said projections and adapted to be engaged by said set screws.



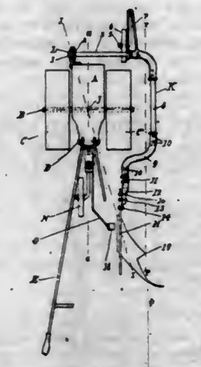
1,621,630. BOX FASTENER. SANDERS DEBUS, Hastings, Nebr. Filed Nov. 19, 1925. Serial No. 70,144. 1 Claim. (Cl. 292—128.)

A box fastener comprising a stop including angularly disposed wings and a loop in the plane of one of the wings and at a right angle to the other wing, the outer



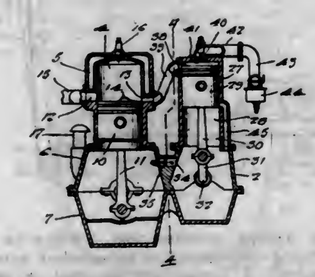
member of the loop having a latch opening, an angle base adapted to fit within the angle formed by the said loop and the wing disposed at an angle thereto, a keeper attached to the wing of the base in contact with the loop portion of the stop, a latch comprising a body pivoted intermediate its ends within the keeper and having a locking head at its upper end and a forwardly projecting finger piece at its lower end, and a spring normally urging the locking head forwardly.

1,621,631. CLAMPING TOOL FOR WIRE-FENCE STAPLES. JAMES A. GAFFNEY and MERRIL J. HANSON, North Redwood, Minn. Filed June 10, 1925. Serial No. 36,178. 1 Claim. (Cl. 140—55.)



A clamping tool for wire fence staples, comprising a bar bent intermediate its ends to form a handle and a right-angularly disposed shank provided with an opening for a pivot pin and having its extremity flattened, and a jaw including a shank having a pair of spaced ears at one end provided with openings for said pivot pin and straddling the intermediate portion of the shank of the bar and at its other end a curved hook portion having a crotch at its ends, and a pivot pin passing through the openings in the ears and the opening in the shank of the bar to pivot the jaw thereto on a side of said shank of the bar opposite to that from which extends the handle.

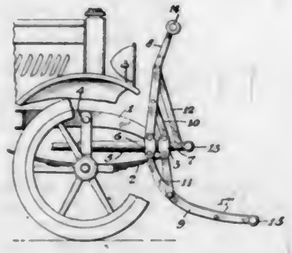
1,621,632. BOOK REST. ARTHUR GRUMBLES, Fort Worth, Tex. Filed June 5, 1925. Serial No. 35,172. 2 Claims. (Cl. 45—61.)



1. A book rest comprising a backing plate, a right-angular shelf carried thereby, said shelf being provided with an opening, a rod supported on the under side of the shelf and located beneath said opening, a substantially U-shaped clamping member, the arms of said member extending downwardly through said opening and being pivotally mounted upon said rods, a spring coiled around said rod and having one end bearing against the bight portion of the U-shaped member for maintaining it in a predetermined position, and a handle connected with the intermediate portion of the U-shaped member, said handle extending downwardly through said opening and terminating in an upwardly projecting hand-grip, whereby to limit the movement of the U-shaped member in one direction and permit it to be pulled downwardly through said opening and below said shelf.

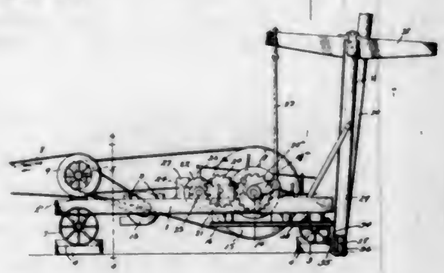
1,621,633. ANTI-SIDE-DRAFT PLOW HITCH. PAUL HANSMANN and HERMAN STRACK, Long Prairie, Minn., assignors, by mesne assignments, to the said Hansmann. Filed Nov. 12, 1920. Serial No. 423,673. 10 Claims. (Cl. 97—48.)

1. In an implement connection of the class described, the combination with a tractor and a plow positioned relative to the tractor to cut a furrow in the trail of one of the traction wheels, of a draft tongue connected with the plow and extending around the tractor to a point forward of the traction wheels thereof and to and beyond the longitudinal central axis of the tractor, means for supporting said draft tongue in elevated position relative to the ground, and a pivotal connection between the forward end of said draft tongue and the tractor at a position located beyond said longitudinal central axis of the tractor.



1,621,634. INTERNAL-COMBUSTION ENGINE. HENRY R. JONES, Bedford, Va., assignor of one-third to William P. Hurt and one-third to Nelson Sale, Bedford, Va. Filed Jan. 11, 1926. Serial No. 80,675. 3 Claims. (Cl. 123—70.)

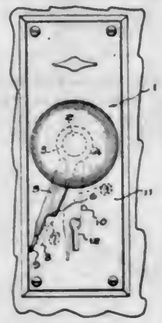
2. In an internal combustion engine, an engine unit having a working cylinder and a working piston, a charger unit having a double acting cylinder adjacent said working cylinder, a passage establishing communication between said cylinders for admitting a working mixture to the working cylinder from the charger cylinder, an exhaust from the working cylinder controlled in a predetermined manner, a double acting piston in the charger cylinder, a valved air inlet to the charger cylinder at one side of said piston, a valved fuel mixture inlet communicating with the cylinder at the opposite



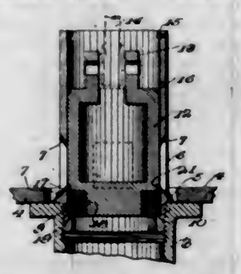
side of the piston, a by-pass in the charger cylinder to permit passage of air from the first mentioned side of the piston to the last mentioned side thereof, and means for operating said piston in timed relation, whereby in one stroke of the charger piston, a charge of air will be drawn into one end of the charger cylinder and a charge of fuel and compressed air will be intermixed and compressed in the other end of said charger cylinder and supplied at the end of the stroke of the piston to the working cylinder, and in the opposite stroke of said charger piston the charge of air in the first named end of the charger cylinder will be compressed, while a charge of fuel mixture will be drawn into the last named end of said charger cylinder, and at the end of this stroke of the piston will uncover the by-pass to permit a charge of compressed air to enter the opposite end of the cylinder for intermixture under pressure with the fuel mixture therein.

1,621,635. SAFETY DEVICE AND BUMPER. CHARLES KIRCH, Pasadena, Calif. Filed Oct. 22, 1925. Serial No. 64,171. 10 Claims. (Cl. 293—15.)

3. In a buffer controlled fender a pair of sleeves, shafts slidable therein, arms pivoted to the sleeves and means for actuating said arms, said means consisting of links connecting the arms and shafts, and means for actuating said shafts.



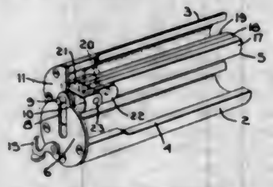
1,621,636. WELL-DRILLING MACHINE. GEORGE L. LANE and WILLIAM E. SYKES, Marietta, Ohio. Filed Sept. 14, 1921. Serial No. 500,486. 6 Claims. (Cl. 255—11.)



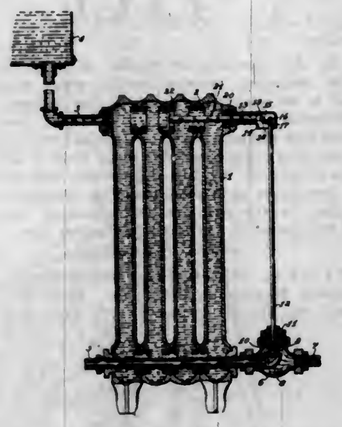
1. In a drilling machine, the combination with a frame carrying shafting, of an independent normally detached mud-sill, a Samson-post mounted on said mud-sill, a walking-beam mounted on said post, and means connecting the walking-beam with the shafting to transmit a reciprocating motion thereto.

1,621,637. KEY GUIDE. HUGH F. MCDONALD, Burlingame, Calif. Filed July 27, 1925. Serial No. 46,312. 1 Claim. (Cl. 70—16.)

A key-guide of the character described, comprising, in combination, a door-lock bearing an escutcheon-plate and knob-shank, a guide-member in the form of a stamping having a ring at one end adapted to completely encircle said knob-shank and be dependent therefrom, the said member having a key-engaging notch formed in one edge adapted to receive and guide the shank of the key and to also normally register with the key-hole of the lock, a stop-pin mounted in the escutcheon-plate immediately adjacent to and slightly above the key-hole and adapted to engage said member to limit its further movement when said notch is brought to register with the key-hole, and a finger grip formed at the lower extremity of said stamping constituted of a portion bent at right angles to the main section of the guide member.

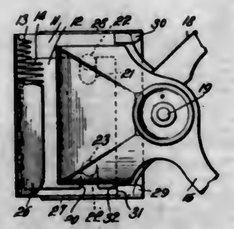


1,621,638. TANK VALVE. ROYAL A. MCINTYRE and ALBERT D. HASTINGS, West Tulsa, Okla. Filed Apr. 9, 1925. Serial No. 21,936. 7 Claims. (Cl. 251—36.)



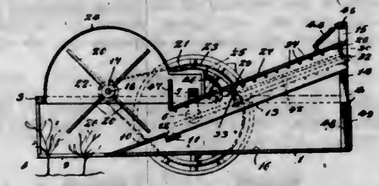
3. A valve comprising a barrel having a beveled seat, a relatively movable valve head, a member carried by the head being beveled to correspond and coact with the beveled seat to make a tight joint when the valve is closed, and a split ring carried by said member being compressible upon moving over the beveled seat to scrape the surface in advance of the member and then closely engaging the seat to assist in making said joint.

1,621,639. SUPPORT FOR PORTIÈRES, CURTAINS, AND THE LIKE. ALEKSANDER MARCZUKOWSKI, South Boston, Mass. Filed Mar. 25, 1926. Serial No. 97,248. 6 Claims. (Cl. 156—19.)



1. In a device for supporting window hangings, the combination with a tubular member divided longitudinally into two separable sections, a slotted plate secured to each end of one section, a forked member carried by each end of the other section, each forked member having a shank which operates in the slot of the adjacent plate and guides the two sections as they move from open to closed position and vice versa, and a core removably secured to said forked members and about which the hanging may be folded.

1,621,640. COMBINATION HEATING APPARATUS. WILLIAM MOONEY, Waterloo, Iowa, assignor of one-half to Satolli F. McGinn, Waterloo, Iowa. Filed Jan. 7, 1926. Serial No. 79,778. 1 Claim. (Cl. 236—43.)

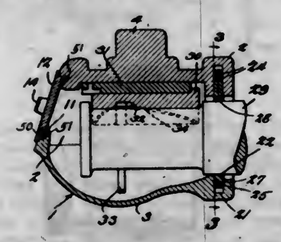


A combination heating apparatus, comprising a water-containing radiator, a water containing supply reservoir above, in communication with said radiator, to supply water thereto under head and to also serve as an expansion receiver for water heated in the radiator, a valve-controlled steam conduit in said radiator, an operating element also in said radiator spaced from said conduit and responsive to the temperature of the water, and operating connections between and moved by said element when so influenced to actuate the steam-conduit valve to regulate steam-passage and the heating of the water in the radiator.

1,621,641. GUARD FOR HAIR CLIPPERS. CHARLES H. REDMAN, East Orange, N. J., assignor to H. Boker & Co. Inc., New York, N. Y., a Corporation of New York. Filed Nov. 7, 1925. Serial No. 67,597. 3 Claims. (Cl. 30—1.)

1. A hair clipper guard, comprising a plate provided with means on its front edge for guarding the teeth of a hair clipper, edge-guarding means extending transversely of the guarding means, and a locking member overlying a portion of the lower clipper plate and abutting the rear edge of the upper clipper plate when the latter is in its extreme position of rest, said guard being capable of sliding movement in the direction of said edge-guiding means when the upper clipper plate is moved to an intermediate position.

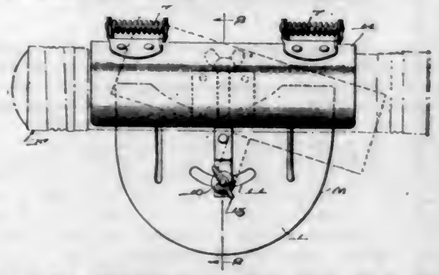
1,621,642. BEAN AND PEA HARVESTER. MILTON B. SAMPLE, Elizabeth City, N. C. Filed July 1, 1925. Serial No. 40,919. 4 Claims. (Cl. 56—125.)



1. In a harvester of the character described, a vehicle having a body provided with a guide way in its forward end, a rotary beater supported above said guide way for stripping pods from bean or pea plants entering said guide way as said vehicle moves forward, a screen supported rearwardly of said guideway in position to receive pods from said beater, and a thresher plate movable close to said screen for cooperating with the latter to thresh the beans or peas from said pods and to discharge the chaff and hulls from said vehicle, said screen and said thresher plate being inclined upwardly toward their rearward ends and the supporting means for said screen being formed to provide a rearwardly facing rigid shoulder at the forward end of the screen.

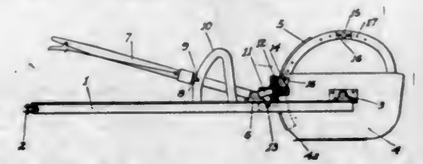
1,621,643. ARTIFICIAL TEETH. WILMER T. SMITH, Baltimore, Md. Filed Feb. 9, 1925. Serial No. 7,911. 4 Claims. (Cl. 32—9.)

1. An artificial tooth comprising a porcelain body part having a shoulder and a central vertical recess with an undercut portion at the end of said recess opposite said shoulder, combined with a backing part provided with two dowel pins arranged to enter and fit in said recess, one of said dowel pins having a hooked part to fit in said undercut portion of said recess in said porcelain body, said backing part having a shoulder corresponding to the said shoulder of the said porcelain part.



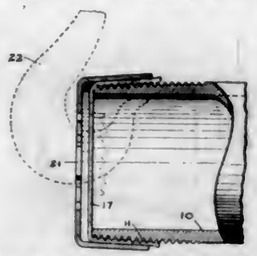
1,621,644. LUBRICATING DEVICE. ALVIN THORNBRUGH, Manly, Iowa, assignor of one-half to Carl Henry Hass, Manly, Iowa. Filed Sept. 22, 1925. Serial No. 57,879. 1 Claim. (Cl. 308—51.)

In a device of the class described, a casing comprising an upper member and a lower member provided with transverse pockets, a packing in the pockets, a journal rotatable in the packing, means for hingedly connecting the members of the casing to enable the packing to be placed in the pockets, a connecting device joining the members of the casing to prevent them from opening hingedly and releasing the packing from the pockets, and supplemental mechanism for preventing the members of the



casing from opening hingedly and releasing the packing from the pockets should the connecting device fail, said supplemental mechanism comprising a closure having a rib, both of the members of the casing having a groove receiving the rib, and spring means for holding the closure against the casing to maintain the rib engaged with the groove.

1,621,645. FLASH-LIGHT HOLDER. EARL I. THORP, Superior, Wis. Filed June 2, 1926. Serial No. 113,220. 2 Claims. (Cl. 240—52.)



1. A flash light holder comprising means for mounting a flash light on a support, a post pivoted intermediate its ends to said mounting means, means for securing the post in any angular position, a holder having a sleeve rotatably fitted on the post, and means for securing the sleeve in any desired angular position on the post.

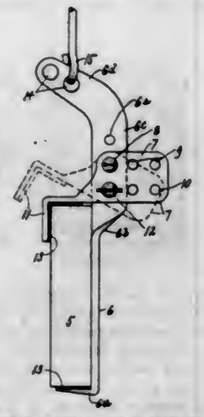
1,621,646. REVOLVING SCRAPER. DAMON R. THROOP, Stockton, Calif. Filed May 11, 1926. Serial No. 108,258. 7 Claims. (Cl. 37—140.)

1. A scraper comprising a frame, a bowl pivoted thereon and resting on the ground, a pin projecting laterally from the bowl in offset relation to the pivot thereof, a stop member projecting laterally from the frame beyond the bowl, and means releasable from the stop, normally engaging the stop and engaged by the pin.

1,621,647. PIPE-THREAD PROTECTOR. HERMAN A. UNKE, Cleveland, Ohio. Filed Jan. 17, 1925. Serial No. 3,047. 11 Claims. (Cl. 137—91.)

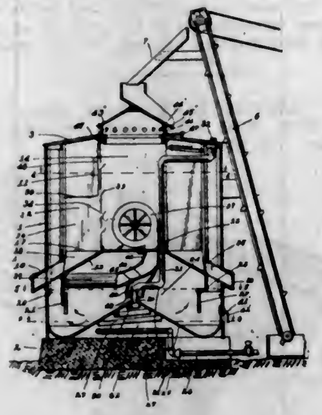
1. In a device of the class described, the combination of an article having a tapered threaded end, a cup-shaped cap having a continuous frusto-conical wall adapted to surround said threaded end and the taper of which conforms substantially to the taper of said end, and a cup-shaped member of relatively soft material interposed between said cap and said threaded end and into which the threads are mashed when the cap is forced onto said threaded end.

1,621,648. METHOD OF CONSERVING HEADER PLUGS. CARL A. S. SWANSON, Malden, Mass., assignor to Carl A. S. Swanson, trustee, Malden, Mass. Filed Sept. 23, 1925. Serial No. 58,065. 2 Claims. (Cl. 137—76.)



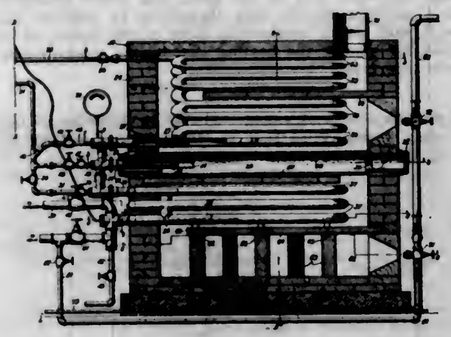
1. In the operation of tubular oil stills and the like having elongated tapered header plugs which are required to be removed at more or less frequent intervals, for cleaning purposes, the method which consists in retapping and thereby enlarging damaged threaded openings for the plugs, cutting off the small ends of such plugs as would project too far into the headers and interfere with free circulation after retapping the openings, reinserting the plugs in the openings and repeating the operations until the plugs are too short for further use.

1,621,649. SUPPORTING STRUCTURE. CARLETON SCHWAB WAGNER, Danville, Pa. Filed Nov. 21, 1925. Serial No. 70,722. 1 Claim. (Cl. 189—23.)



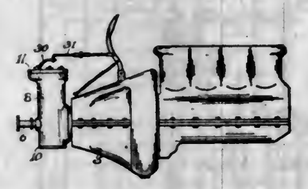
A structural member consisting of a rolled steel strip adapted to be formed by re-rolling from old rail stock and comprising a central portion of U-shape having substantially parallel side portions connected by a curved portion formed on a radius which in transverse section is less than the width of said side portions in said section, and outwardly extending flanges each of which has a width substantially equal to one quarter of the width of said side portions and connected to said side portions by curved portions having radii in transverse section greater than the thickness of said strip material.

1,621,650. ASHLAR-SETTING CLAMP. DENNIS N. ANGEL, North St. Paul, Minn. Filed Jan. 22, 1926. Serial No. 82,982. 3 Claims. (Cl. 72—128.)



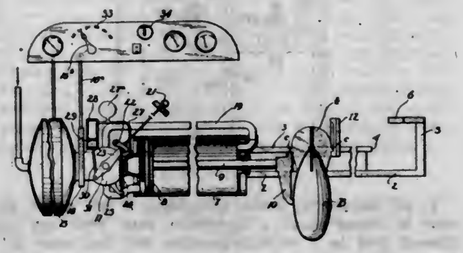
1. An ashlar setting device comprising a vertically disposed suspension bar the lower extremity of said bar directed at right angles to engage the lower edge of an ashlar and the adjacent vertical part of the bar adapted to bear against a face of the ashlar, the upper part of said main bar directed angularly from its main vertical part toward the same side as its lower extremity, a vertically and horizontally adjustable member pivotally mounted intermediate the extremities of the bar and having an inverted L-shaped extension adapted to engage the upper edge and adjacent face of the ashlar diagonally opposite to the parts engaged by the lower extremity of the bar, said angular upper end of the bar adapted to be engaged by suitable hoisting means.

1,621,651. WALNUT DEHYDRATOR. GEORGE I. BAUER, Santa Ana, Calif. Filed Nov. 24, 1925. Serial No. 71,108. 19 Claims. (Cl. 34—34.)



1. A dehydrator comprising a series of bins arranged substantially in a circle, said bins having foraminous side walls and means for circulating air from outside inwardly through the walls and transversely through the bins.

1,621,652. METHOD OF PRODUCING GAS. ORESTES U. BEAN, New York, N. Y., assignor to Bean Process Syndicate, Incorporated, a Corporation of Delaware. Filed Mar. 24, 1925. Serial No. 18,024. 5 Claims. (Cl. 48—214.)

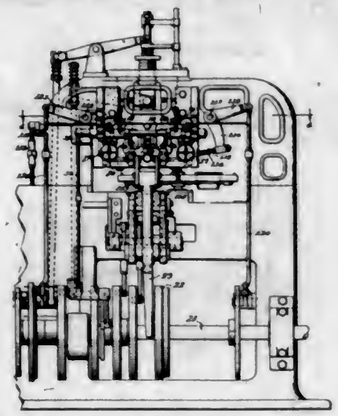


2. A method of producing gas, which comprises dissociating superheated steam into its chemical elements, then mixing said elements with hydrocarbon vapor, subjecting said mixture to alternate expansions and constrictions, and increase of heat to the temperature at which the hydrogen combined with the hydrocarbon vapor to produce a mixture of gases.

1,621,653. FLUID BRAKE MECHANISM FOR MOTOR SHAFTS. JOHN R. BINGAMAN, West Reading, Pa. Filed June 11, 1926. Serial No. 115,204. 9 Claims. (Cl. 188—99.)

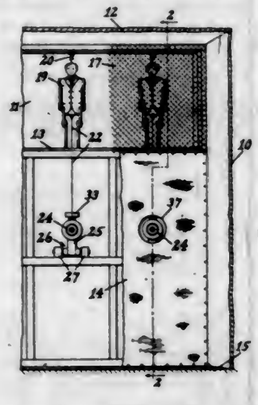
1. A fluid brake mechanism for motors comprising a power shaft, a brake housing enclosing a portion of said shaft and extending at right angles therefrom, a central piston chamber open at one end within said housing, an annular chamber within said housing surrounding said piston chamber and in free communication with the open end of the latter, ports at the closed end of said piston chamber communicating with said annular chamber, a rotatable sleeve covering said ports and having apertures adapted to register with the latter, a fluid medium completely filling said housing and its interior chambers, and means within said housing operative from outside the latter for determinedly rotating said sleeve.

1,621,654. BOMB-DROPPING DEVICE FOR AIRCRAFT. ORLANDO J. BOOS, Los Angeles, Calif. Filed Apr. 12, 1923. Serial No. 631,511. 8 Claims. (Cl. 244—1.)



1. A bomb discharging apparatus for airplanes comprising a cylinder, a piston reciprocable in said cylinder, means for releasably holding a bomb associated with said piston so that the bomb may be quickly carried rearwardly and released, means for admitting fluid pressure to said cylinder at either end thereof, and means for automatically admitting the fluid pressure to that end of the cylinder to return the piston to its initial position after the bomb has been released.

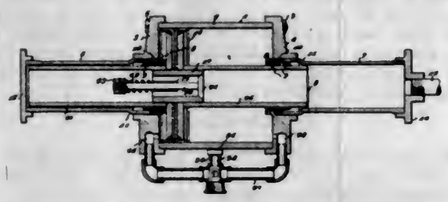
1,621,655. BOX-MAKING MACHINE. CHARLES BURNHAM, Washington, D. C. Filed July 29, 1925. Serial No. 46,872. 25 Claims. (Cl. 153—1.)



1. In a machine of the type set forth, a carriage carrying the rim side folders and means for reciprocating

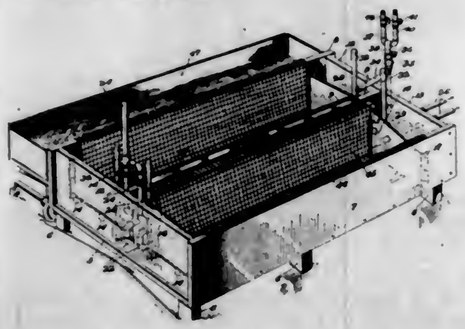
said carriage toward and from the basket-former, said means embodying a rocking lever and a double buffer

connection between said rocking lever and the carriage adapted to cushion the movement of the carriage on its advance stroke as well as its return stroke.



1,621,656. AMUSEMENT APPARATUS. FRANK V. BURROW, Glendale, Calif., assignor of one-third to George H. Winchell, sr., Muskogee, Okla. Filed Aug. 12, 1926. Serial No. 128,728. 2 Claims. (Cl. 273—102.)

1. An amusement device comprising a bell crank, pivoted to swing about a horizontal axis, with one arm thereof held in a vertical position and the other in a horizontal position; a jointed figure, simulating the form of a human being, resiliently suspended above said bell crank; a target disc fixed on the vertical arm of said bell crank; a cord connecting said jointed figure to the horizontal arm of said bell crank, so that a downward pull is exerted on said jointed figure when said horizontal arm swings downwardly; means for restoring said bell crank to its normal position and means for holding it in that position.



1,621,657. GREASE GUN. CHARLES G. COOPER and ANDREW J. DINKEL, Yuma, Ariz. Filed July 14, 1924. Serial No. 725,963. 4 Claims. (Cl. 221—47.3.)

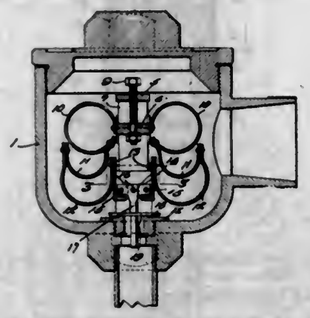
1. In a device of the class described, a cylinder including heads having internal shoulders, reduced extensions removably mounted in the heads, one of the extensions having means for admitting grease, and one of the extensions having a grease outlet, packings engaged between the shoulders and the ends of the extensions, alined tubular members slidable in the packings and movable in the extensions, a coupling connecting the inner ends of the tubular members detachably, a piston slidable in the cylinder and mounted on the coupling, the piston being

bound between the tubular members, a valve movably supported by the coupling, the coupling forming a seat for the valve, and means for admitting fluid pressure to the cylinder upon opposite sides of the piston to secure a reciprocation of the piston and the tubular members.

1,621,658. RETTING TANK. DAVID EARL DE LAPE, Boston, Mass. Filed Nov. 1, 1924. Serial No. 747,248. 14 Claims. (Cl. 92—5.)

1. A retting tank having a bottom, end and side walls, partitions spaced from the end walls, a partition spaced from one side wall and terminating short of the upper end of said side wall, a baffle located above the last mentioned partition, and heating coils located between the last mentioned partition and the adjacent side wall for heating liquor in the tank for causing the same to boil over and be discharged over the edge of said partition and into the main body of the tank, and means connecting said partition at the ends thereof to an adjacent side wall, said means terminating short of the bottom of the tank for placing the heating chamber in communication with the tank.

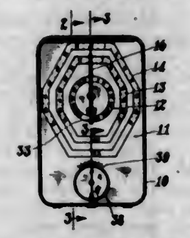
1,621,659. CONDENSER. JAMES B. DEMPSTER, Iowa City, Iowa. Filed Dec. 14, 1922. Serial No. 606,898. 2 Claims. (Cl. 175—41.5.)



1. In a condenser, fixed plates, coacting pivoted similar plates each having each half thereof outlined by two dissimilar curves, the radius of one of said curves at any point therein equaling the square root of the sum of

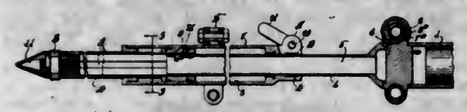
the square of the radius of the other curve to a point in the same radius plus the product of a constant times the angle through which the radius is drawn, thus:

$$R=\sqrt{r^2+mP},$$



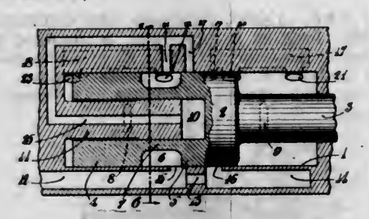
substantially as shown and described.

1,621,660. THERMOSTATIC VALVE. JESSE L. FERRIS, La Crosse, Wis. Filed Sept. 30, 1925. Serial No. 59,645. 4 Claims. (Cl. 236—59.)



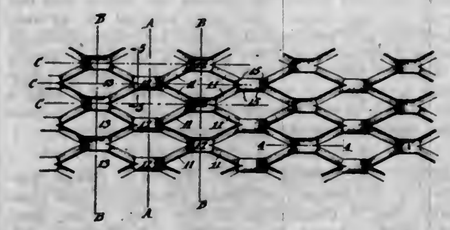
1. A thermostatic valve comprising a frame adapted to be contained within a casing, a valve seat surrounding an aperture in said frame, a carriage vertically movable in said frame, thermostatic members mounted on said carriage and a valve carried by said members and adapted to seat on said valve seat.

1,621,661. WATERPROOF VEST-POCKET SUN WATCH. MARTIN FRANK, Brooklyn, N. Y. Filed Feb. 12, 1924. Serial No. 692,363. 3 Claims. (Cl. 33—62.)



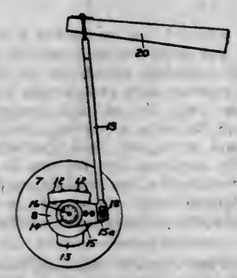
1. A sundial timepiece comprising a casing, a dial thereon, a post in said casing, a style hinged to said post, an adjustable stop element on said post, and a part carried by said style to engage the said stop element and limit outward swinging movement of the style at different selected positions of the stop.

1,621,662. FEEDING MECHANISM. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 2, 1921. Serial No. 474,406. 20 Claims. (Cl. 121—9.)



1. In a drilling apparatus, a drilling tool, and feeding means therefor comprising an extension member secured to and movable with said tool, a normally stationary cylindrical hollow member, a member disposed about said cylindrical hollow member and connectible in various positions to said first mentioned member, and means for effecting relative movement between said cylindrical hollow member and said third mentioned member.

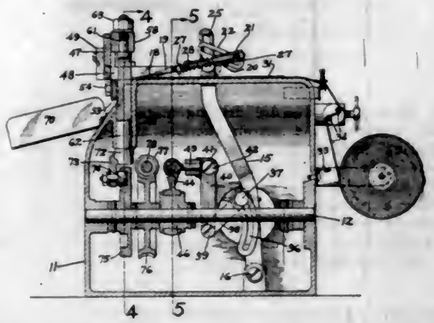
1,621,663. FLUID-PRESSURE MOTOR. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed July 11, 1921. Serial No. 483,778. 22 Claims. (Cl. 121—17.)



1. In a fluid pressure drilling motor, the combination with, a cylinder, a piston therein, and means for distributing fluid under pressure alternately to the opposite ends thereof and for exhausting used fluid, of fluid cushioning means controlled by said piston for subjecting a portion thereof to fluid pressure resisting the rearward movement thereof, before the moment when the first mentioned fluid distributing means for the rear end of said cylinder is operative.

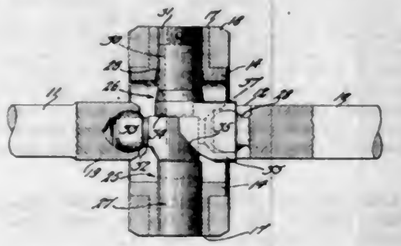
1,621,664. EXPANDED SHEET METAL. HARVEY M. GERSMAN, Chicago, Ill. Filed June 1, 1923. Serial No. 642,870. 13 Claims. (Cl. 72—117.)

1. Expanded sheet metal having strands and junction portions delimiting hexagonal voids wherein the voids and junction portions are disposed in rows extending longitudinally of the sheet and the sheet is longitudinally corrugated, the strands by virtue of the corrugations extending from the junction portions at an angle to the mean plane of the sheet and the junction portions being transversely concave relatively to the face of the sheet to which they are presented and also being substantially symmetrically angular relatively to said mean plane.



1,621,665. CRANK FOR DRILLING RIGS. EDGAR E. GREVE, Bellevue, Pa. Filed Aug. 17, 1922. Serial No. 582,527. 5 Claims. (Cl. 255—13.)

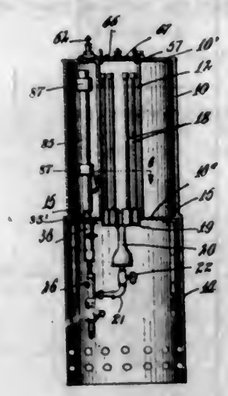
1. A crank mechanism comprising a driven shaft, a crank loosely mounted thereon, means fixed to said shaft having a laterally projecting portion having two crank



engaging faces thereon adapted to move the crank, and yieldably supported contact members on each of said faces of said projecting portion for engagement with the crank.

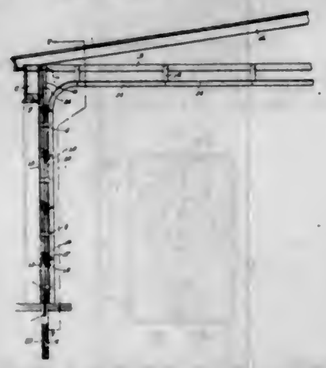
1,621,666. LABEL FEEDING AND CUTTING MACHINE. BERNARD B. GUENTHER, Minneapolis, Minn., assignor of one-third to Charles E. Ovenshire and one-third to George F. Dickson, Minneapolis, Minn. Filed Aug. 20, 1923. Serial No. 658,334. 13 Claims. (Cl. 164—48.)

1. In a label-cutting machine, a table having guides, a pivoted feed arm having an arcuate slot and a feed dog pivoted to said lever, said arm adapted to advance to and stop at a predetermined point and correspondingly advance strip material in the guides, a drive-shaft having an eccentric thereon, a bell-crank, and extending transversely between said lever and feed arm and having a pivot slidable in the arcuate slot, the center of curvature of the slot being at the pivotal center of the link.



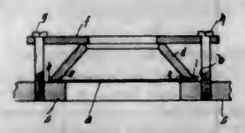
1,621,667. UNIVERSAL JOINT. FRANK A. HAYES, Keyport, N. J., assignor to Healey-Aeromarine Bus Company, Inc., a Corporation of New York. Filed Sept. 27, 1926. Serial No 137,981. 7 Claims. (Cl. 64—102.)

1. In a joint adapted for connecting a driving and a driven member and provided with spaced apart axially aligned bearings, a control means for the joint comprising a two-part member each part having a journal slidably engaged in only one of said bearings for relative oscillation of its parts, a portion extending laterally from each of said parts and rigid therewith; said portions respectively engaging the driving and the driven member in a rotationally free manner, and an integral pintle portion formed upon one of said parts on which the other of said parts is mounted for oscillation.



1,621,668. HEATER. STEVEN HEITLER, New York, N. Y. Filed July 30, 1924. Serial No. 729,139. 3 Claims. (Cl. 236—26.)

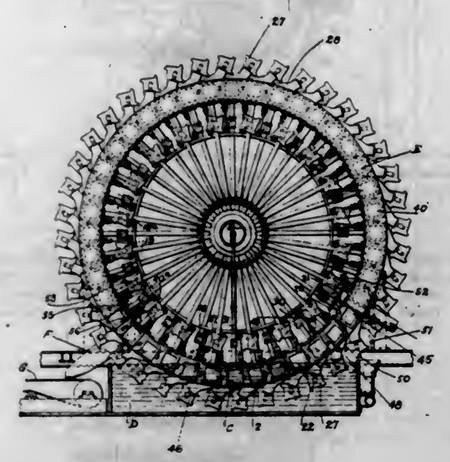
1. A water heater comprising a boiler, a heat generating element, means communicating with the bottom of said boiler adapted to be actuated by steam pressure in the boiler for controlling said heat generating element,



and means for eliminating the height of water in said boiler as a factor in the operation of the heat generating element controlling means.

1,621,669. GARAGE DOOR AND OPERATING MECHANISM THEREFOR. CLARENCE G. JOHNSON, Detroit, Mich. Filed Dec. 8, 1923. Serial No. 679,345. 3 Claims. (Cl. 20—20.)

1. In a garage having a doorway, a slatted shiftable door for the doorway, tubular slotted housings, means carried by the slatted door engaging said housings and adapted to guide said door when shifted, and an expansible and retractible spring in each housing counterbalancing said door in all of its positions.



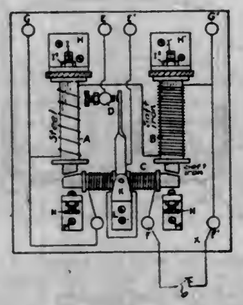
1,621,670. SOUND-BOX DIAPHRAGM FOR USE IN TELEPHONES, LOUD SPEAKERS, ACOUSTIC APPARATUS, AND THE LIKE. FRANZ JOKEL, Berlin, Germany, assignor to Carl Lindström Aktiengesellschaft, Berlin, Germany. Filed Oct. 1, 1924, Serial No. 741,021, and in Germany May 1, 1924. 5 Claims. (Cl. 181—31.)

1. In a sound box the combination of a base having an opening, a diaphragm on the base and covering the opening and provided with a peripheral flange, an elastic

pressure ring on the diaphragm and bearing against the flange thereof and means exerting pressure on said ring to cause it to expand radially and thereby exert corresponding pressure on the diaphragm and hold the same flat.

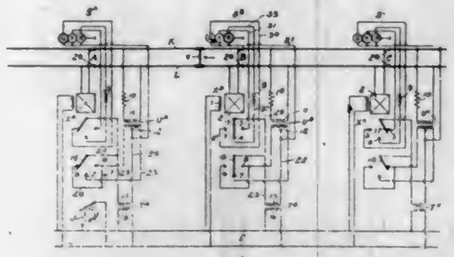
1,621,671. PULP-FORMING MACHINE. CHARLES J. KEENAN, Piedmont, EUGENE P. KENNEDY, San Francisco, and GEORGE H. KIRSCH, Larkspur, Calif., assignors to Alaska Pulp and Paper Company, a Corporation of California. Filed Feb. 9, 1926. Serial No. 86,972. 10 Claims. (Cl. 92—57.)

4. In a machine of the character described, a mold mounted for movement through a pulp tank and a drying chamber, means for applying a layer of pulp to the mold while passing through the tank by subjecting the mold to a suction action, said mold having a trap chamber formed therein for the collection of water admitted during the application of the pulp, a drain valve in communication with the trap chamber, means for discontinuing the suction action when the coating of pulp has been applied, means for automatically opening the drain valve when the suction ceases to permit the water in the trap to drain away from the mold, means for automatically closing the valve after the water has been drained off, means for automatically subjecting the mold to a suction action when it enters the drying chamber, and means for automatically ejecting the dried pulp when the mold leaves the drying chamber.



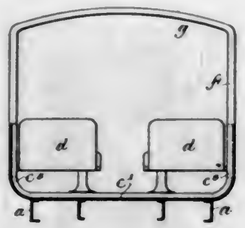
1,621,672. ROPE CUTTER. JOHN H. KOEHN, Atkins, Iowa. Filed Oct. 30, 1924. Serial No. 746,856. 1 Claim. (Cl. 30—14.)

A cutting device of the class described including in combination a supporting plate, a pair of guides disposed on the supporting plate in alinement with each other and in spaced relation to each other, a ledge block mounted on the supporting plate between the guides and provided with a slot registering with the guide, a pair of rods slidable through the guides and the slot of the ledge block, a saw blade mounted between the rods, a U-shaped member having the intermediate portion of its legs pivoted to the ends of the rods and its terminals in the form of eyes, a pair of springs attached to the eyes and to one of the guides for normally holding the rods in raised position with the blade out of the slot of the ledge block, a link attached to the U-shaped member, said supporting plate provided with a slot in its lower end, a pedal extending through the slot in the supporting plate and pivoted thereto, means for attaching the link to an intermediate portion of the pedal whereby the pedal may be swung downwardly to pull upon the rod and thus force the blade into the slot of the ledge block



to sever a rope which may be mounted thereon, said springs being thus expanded so that they will return the rods and the blades to their initial positions when the pedal is released.

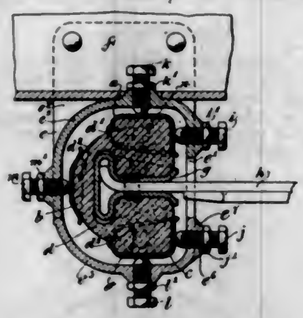
1,621,673. ELECTRICAL INTERRUPTER. ALAN LEIGHTON, Washington, D. C., assignor to the Government and the People of the United States of America. Filed Apr. 23, 1926. Serial No. 104,233. 1 Claim. (Cl. 200—93.) (Granted under the act of Mar. 3, 1883, 22 Stat. L. 625.)



An electrical interrupter, comprising two stationary electromagnets, a movable electromagnet supported in position opposite the two stationary electromagnets, the two stationary electromagnets wired so as to present the same magnetic poles to the movable electromagnet, the movable electromagnet carrying a contact arm for the making and breaking of a controlled circuit, the wires of the controlling circuit being suitably shunted across the wires of the stationary electromagnets, the movable electromagnet having one pole that corresponds magnetically to the pole of one of the stationary electromagnets and having another pole that is opposite magnetically to the pole of the other stationary electromagnet, and the stationary electromagnet that has a pole corresponding to the pole of the movable electromagnet possessing greater strength than the other stationary electromagnet.

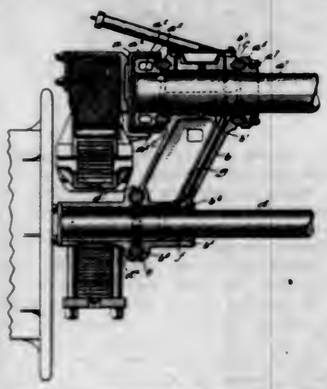
1,621,674. RAILWAY SIGNALING. SAMUEL M. LUCAS, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 29, 1922, Serial No. 591,252. Renewed Dec. 2, 1926. 3 Claims. (Cl. 246—34.)

3. In combination, a relay capable of energization in opposite directions, a normal contact closed when the relay is energized in one direction, a reverse contact closed when the relay is energized in the other direction, a third contact closed when the relay is deenergized and also closed momentarily when the direction of energization of the relay is reversed, a light signal comprising proceed, caution and stop lamps controlled respectively by the normal, reverse and third contacts of said relay, and a reactance included in circuit with said stop lamp for delaying the lighting of the lamp to full brilliancy, whereby the said lamp does not flash during reversal of said relay.



1,621,675. SECTIONAL VEHICLE BODY. ALFRED F. MASURY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 8, 1923. Serial No. 673,419. 2 Claims. (Cl. 296—28.)

1. The combination with the chassis of a vehicle, of a body fabricated from a series of similar interchangeable standardized U-shaped members of unitary structure disposed transversely of the chassis and each having a horizontal portion and two vertically extending side portions, vertical posts at opposite sides of the body and spaced a distance apart equal to the width of a member, and means carried with the standardized sections to connect detachably adjacent sections by means of the post disposed therebetween whereby the posts serve as spacing members.

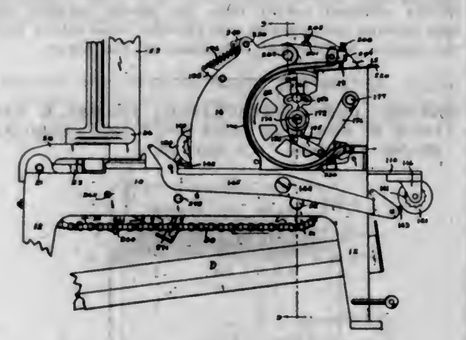


1,621,676. CUSHION CONNECTION FOR VEHICLE CONSTRUCTION. ALFRED F. MASURY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 29, 1925. Serial No. 78,111. 2 Claims. (Cl. 267—30.)

1. In a cushion connection between parts to be connected wherein a housing is carried with one of the parts and has an open side through which the other part enters the housing, yielding non-metallic material disposed within the housing and engaging the entering part, and a

plurality of adjustable devices engaging the non-metallic material and means to adjust the position of the entire block with respect to the housing.

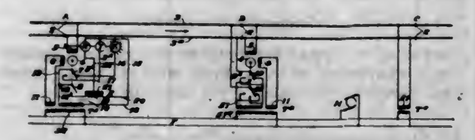
1,621,677. SPRING SUSPENSION. ALFRED F. MASURY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed June 21, 1926. Serial No. 117,300. 8 Claims. (Cl. 267—52.)



1. In a vehicle construction, a plurality of pivoting axles, means to support one from another, and means to cushion the side thrust of one upon the other through the supporting means.

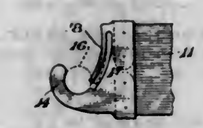
1,621,678. PAPER-FEEDING MECHANISM. LAWRENCE H. MORSE, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 22, 1924. Serial No. 757,352. 39 Claims. (Cl. 101—54.)

1. In an addressing machine, the combination of a conveyor for address plates, a rotary drum adapted to act as a paper conveyor and having an impression platen, an eccentric mounting for the drum, and means for automatically and periodically turning such eccentric mounting.



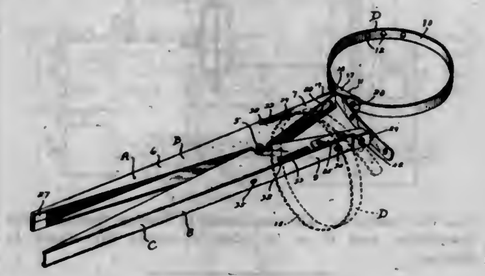
8. In an addressing machine, the combination of a rotary drum carrying a segmental platen, elastic rings around the drum, belts lying in engagement with said rings, and carried by rollers mounted independently of the drum, and means for moving one of said rollers to grip paper and feed it toward the drum.

20. The combination with a series of address plates having differently positioned index tabs thereon, a magazine for holding such address plates, means for progressing such address plates, means for feeding paper thereto, and mechanism whereby the tabs may control the paper feed.



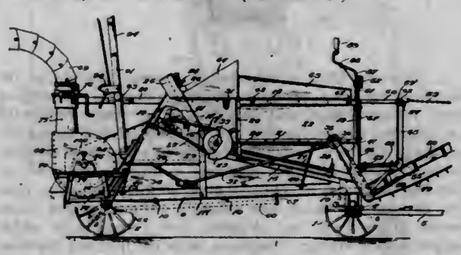
35. In an addressing machine, the combination of a magazine for address plates, a stock of address plates in such magazine some of which have tabs projecting from an edge of the plate, and a selecting device having a stationary series of movable members acting on the tabs on the endmost plate while it is in the magazine.

1,621,679. RAILWAY SIGNALING. FRANK H. NICHOLSON, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 13, 1922, Serial No. 560,568. Renewed Dec. 2, 1926. 19 Claims. (Cl. 246—34.)



18. An electric circuit comprising an electric lamp, and means associated with said circuit and operating when the circuit is closed momentarily to prevent the flow of sufficient current to said lamp to light the lamp.

1,621,680. SLEEVE-HOLDER FASTENER. HARRY P. NISSEN, Oakland, Calif. Filed Mar. 13, 1926. Serial No. 94,439. 3 Claims. (Cl. 24—15.)

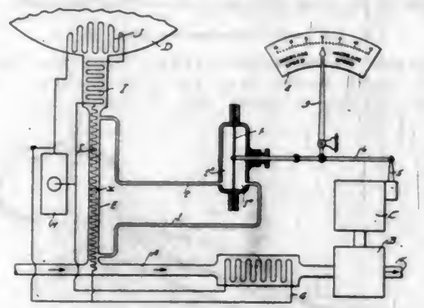


1. A fastener for sleeve holders comprising a body portion having means at one end for connecting it to an elastic strip, a hook projecting from the opposite end of the body portion and located at one side thereof, said hook having a semi-circular recess for receiving the shank of a cuff button, said hook being arranged at an angle to the longitudinal center line of the body portion, a spring finger integrally connected at one end to the side of the body portion opposite the hook and at the same end of the body portion as the hook, said spring finger extending transversely to a point short of the inner side of the recess of the hook and partly obstructing the same.

1,621,681. PISTON-RING-CONTRACTING TOOL. JESSE L. OLIVER, Beeville, Tex. Filed June 3, 1924. Serial No. 717,645. 4 Claims. (Cl. 29—86.4.)

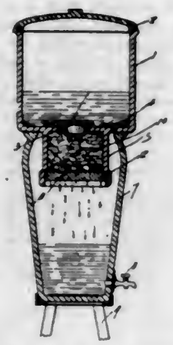
1. In a piston ring contracting tool, the combination of a pair of pivotally connected members, each including a handle and a jaw, a flexible strip swivelly connected at one end to the forward end of one of said jaws and having its free end provided with a plurality of spaced apart apertures, a rotatable plate having flat marginal edges carried by the forward end of the companion jaw, a lug formed on one marginal edge of said plate for engaging in any of the apertures of said strip, and resilient means for engagement with the marginal edges of said plate whereby the lug will be held at various adjusted angles with respect to the pivotally connected members.

1,621,682. CORN-HUSKING MACHINE. THEODORE H. OPPENHEIM and BERNARD SELHORST, Coldwater, Ohio, assignors to New Idea Spreader Co., Coldwater, Ohio, a Corporation of Ohio. Filed Nov. 29, 1924. Serial No. 753,007. 6 Claims. (Cl. 130—5.)



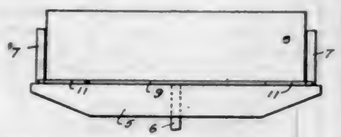
1. A corn-husking machine comprising a frame, husking rolls mounted in the frame, a feeding conveyor mounted in the top of the frame, a side board detachably mounted upon the side of the frame adjacent said feeding conveyor and constituting a receiving table, a back board detachably mounted at the opposite side of the frame and constituting a bundle stop, supporting arms secured to the front end of the frame and projecting forwardly therefrom and then upwardly at the side of the front end of the side board, and a platform resting upon the forwardly projecting portions of said arms.

1,621,683. PIPE-LINE SYSTEM. GEORGE D. POGUE, Mount Vernon, N. Y. Filed Feb. 23, 1923, Serial No. 620,792. 27 Claims. (Cl. 137—78.)



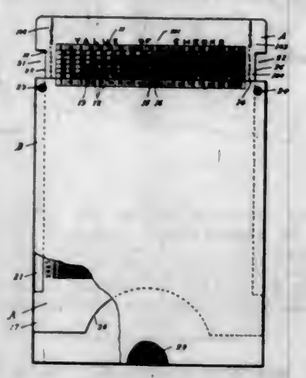
6. In a pipe line system, a main line, a pumping apparatus arranged in series with said main line, a storage

tank joined by a lateral connection with said main line at a point in proximity to the inlet end of said pumping apparatus, and means associated with said lateral connec-



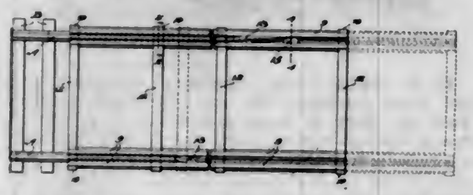
tion for indicating whether liquid is flowing through said connection and if so in what direction the liquid is flowing.

1,621,684. WATER FILTER. LLOYD E. RABJOHN, Burlingame, and RALPH W. HOLLENBERG, Alameda, Calif. Filed Aug. 24, 1925. Serial No. 51,914. 3 Claims. (Cl. 210—105.)



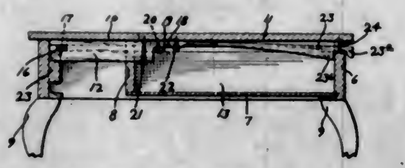
1. A water filter comprising a storage receptacle for water having an integral filtering chamber depending from its lower side and provided on its lower wall with an opening communicating the interior of the receptacle with the filtering chamber, a loose filtering medium contained in said filtering chamber, a filtering element removably mounted in said opening, a filtering stone closing the lower end of said chamber through which stone water filters from the chamber and a receptacle which supports said storage receptacle with the filtering chamber extending into the upper end thereof.

1,621,685. WAGON-BOX SUPPORT. BROER G. RADEMACHER, Burr, Nebr. Filed Jan. 8, 1923. Serial No. 611,353. 1 Claim. (Cl. 280—143.)



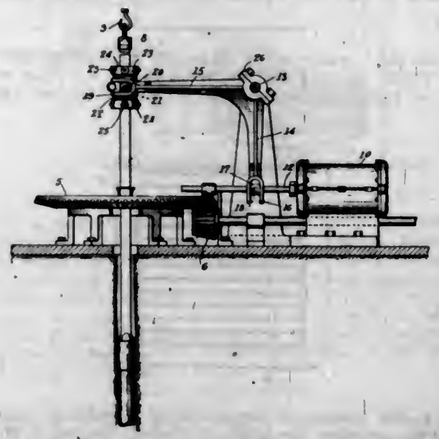
A wagon box support comprising a shim plate having its opposite side surfaces at all points lying in parallel planes and all portions of the plate being of the same transverse thickness, the plate being provided at its side edges and at its end with angularly disposed ears extending inwardly from the end edges of the plate, the ears having both openings located at equal distances beyond the opposite sides of the median longitudinal dimension of the plate and between the end edges thereof and the plate being provided at its end edges with outwardly disposed spaced lugs, the spaces between the lugs forming recesses and said recesses being alined with the median longitudinal dimension of the plate.

1,621,686. CHECK CALCULATOR. CHARLES T. RASCHICK, St. Paul, Minn. Filed Mar. 7, 1923. Serial No. 623,539. 1 Claim. (Cl. 235—89.)



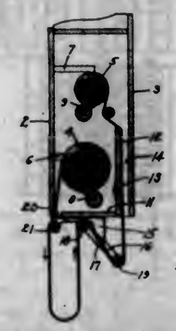
A calculator comprising an enveloping member, a card slidable within said enveloping member having a table thereon, said card being adapted to extend to the bottom of said enveloping member and a notch cut in said card near the central lowermost portion thereof.

1,621,687. TRACK EXTENSION. THOMAS SEIBERT RAY, Charleston, W. Va. Filed May 11, 1926. Serial No. 108,354. 12 Claims. (Cl. 238—10.)



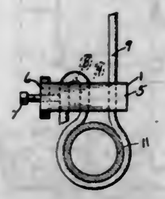
1. A movable rail-extension comprising on each side of the track a pair of rails held comparatively close together and arranged to have permanent rails lie therebetween.

1,621,688. COMBINATION TABLE AND WRITING DESK. FRIDOLIN SCHIMMEL, Faribault, Minn. Filed Oct. 20, 1924. Serial No. 744,642. 6 Claims. (Cl. 45—70.)



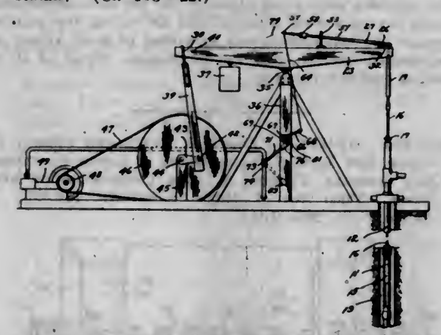
1. The combination with a table frame having a bar guide, of a table top including a slidable board, a guide bar secured to said slidable board and working in said guide and holding said board for true sliding movements, and a latch bar attached to the under side of said slidable board in alignment with said guide bar and constituting a supplemental guide and having interlocking engagement with said table frame to hold said slidable board in normal position.

1,621,689. OIL-WELL-DRILLING APPARATUS. WALDO SHELDON, Greenwich, Conn. Filed Oct. 4, 1922, Serial No. 592,265. Renewed Feb. 28, 1925. 14 Claims. (Cl. 25.5—22.)



1. In oil well drilling apparatus, the combination with means for rotating the vertical drill stem, of means for effecting the feed and controlling the pressure on the rotating drill comprising a horizontally disposed pressure cylinder with a piston therein, said cylinder and piston being movably related and one of such elements being connected with the rotating drive stem and connecting means from such element for translating the horizontal thrust at the cylinder into a vertical thrust at the drive stem.

1,621,690. ATTACHMENT FOR TOWEL CABINETS. GEORGE A. STEINER, Salt Lake City, Utah, assignor to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Aug. 20, 1923. Serial No. 658,326. 5 Claims. (Cl. 45—32.)

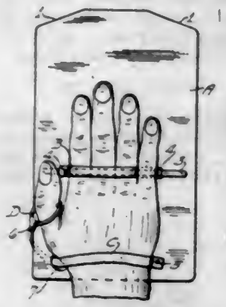


1. A towel cabinet comprising a casing, clean and soiled towel rolls mounted therein, and a driving means for said rolls, a loop of the clean towel depending through the bottom of said casing within convenient reach of the user, a bracket secured to the lower portion of said casing, a frame centrally pivoted in said bracket to oscillate therein, a comparatively light roll provided at one end of said frame, a comparatively heavy roll mounted in the other end of said frame, said rolls engaging the towel web, and said heavy roll normally tending to swing downward to a depressed position, and exert an upward or lifting movement on the towel on one side of the pivot of said frame and a downward pull upon the towel on the other side of the pivot of said frame.

1,621,691. CLAMP. WILLIAM G. STRUTHERS, Oakland, Calif., assignor to Struthers Manufacturing Co., Oakland, Calif., a Corporation of California. Filed June 21, 1926. Serial No. 117,581. 4 Claims. (Cl. 24—115.)

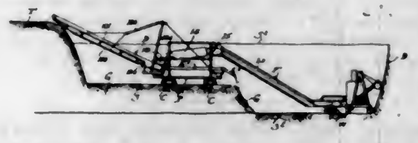
1. A clamp for fastening a flexible element upon an object comprising two adjacent rings having a common wall, the first ring allowing the flexible element to be doubled therethrough so as to form a loop on one side thereof and the second ring allowing the free end of the flexible element to be guided thereinto and having means associated therewith for holding the said end against slipping, the common wall of the two rings having teeth extending from the face on which the flexible element turns to aid in preventing slipping.

1,621,692. SHUT-DOWN DEVICE FOR OIL-WELL-PUMPING EQUIPMENT. JOHN SUTTON, El Monte, Calif. Filed Nov. 23, 1925. Serial No. 70,952. 9 Claims. (Cl. 103—22.)



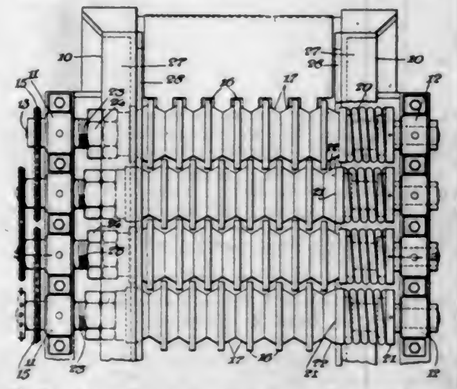
1. In combination; a pump plunger; a walking beam; means for operating said walking beam, said means having a constant driving connection with said walking beam; a string of sucker rods extending from said plunger to said walking beam by means of which said plunger is operated; and means for rendering said means for operating said walking beam inoperative when said plunger is disconnected from said walking beam.

1,621,693. SWIMMER'S HAND PADDLE. CHARLES H. THEOBOLD, St. Louis, Mo. Filed Sept. 7, 1926. Serial No. 133,887. 1 Claim. (Cl. 9—21.)



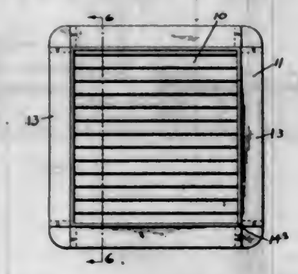
A swimmer's paddle comprising a board or plate containing a hole near one corner and two straps for securing the paddle to the hand of the swimmer, one strap being attached to the paddle at both ends so as to provide a hold for the fingers between the plate and the strap and

the other strap being secured to the paddle near one corner and the strap brought through the hole in the paddle near the opposite corner and the end of the strap provided with a ring, that will fit over the thumb of the



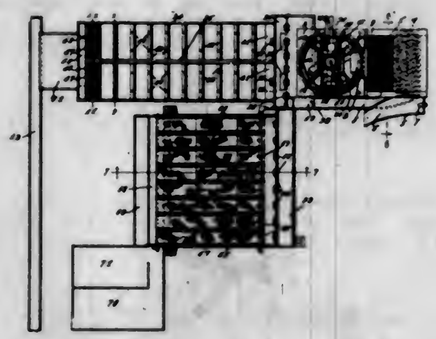
swimmer, and said strap being placed so that the wrist of the swimmer may be placed under the strap between the hole in the paddle and the end where the strap is secured to the paddle, substantially as described.

1,621,694. PLACER-DEPOSIT WASHER AND METHOD OF WASHING. HARMON N. TRACY, Los Angeles, Calif. Filed Jan. 22, 1923. Serial No. 614,138. 9 Claims. (Cl. 262—2.)



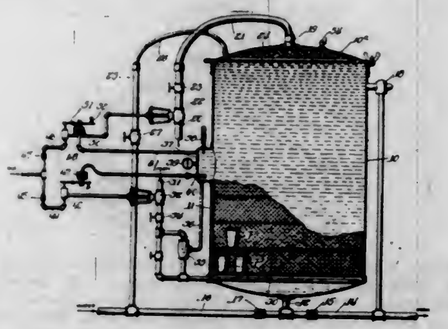
1. The herein described method of treating a placer deposit or the like with a portable ore treating mechanism, that includes excavating ahead of the portable mechanism sizing the excavated material and delivering the smaller sizes to the mechanism, and spreading at least a part of the spent material from the mechanism ahead of it to form a road-bed therefor.

1,621,695. GRIZZLY. FRANK J. TUITE and GORDON F. DODGE, New York, N. Y., assignors to Robins Conveying Belt Company, Passaic, N. J., a Corporation of New Jersey. Filed Nov. 6, 1926. Serial No. 146,595. 4 Claims. (Cl. 209—104.)



1. In a grizzly, the combination with a supporting frame, a plurality of spaced-apart parallel shafts, and means for actuating said shafts, of a series of material feeding and separating elements mounted on each of said shafts so as to be rotatable with, and also adjustable longitudinally of the shaft, said elements comprising spaced-apart disks and converging tapering members between adjacent disks, the series of disks of adjacent shafts being in staggered relation and extending into the spaces between the disks of the respective shafts, whereby the opposing faces of the co-operating disks on adjacent shafts and the inclined surfaces of the associated complemental tapering members on said shafts define the effective area of the screening openings, and means for effecting relative adjustment between the two co-operating series of disks and tapering members on adjacent shafts.

1,621,696. METHOD OF MAKING RADIATOR SHUTTERS. SERGIUS VERNET, Brooklyn, N. Y. Filed Oct. 10, 1925. Serial No. 61,646. 5 Claims. (Cl. 29—148.)

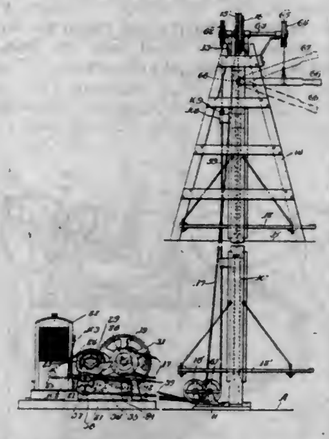


1. The method of manufacturing a radiator shutter which comprises the steps of laterally bending a strip of shutter-making material into an L-shaped section and transversely cutting in one leg of said section, a plurality of spaced slots, transversely bending the other leg of said L-shaped section adjacent said slots, joining the extreme ends of said second mentioned leg to form a rectangular frame, securing integral vane bearing members to the inner sides of two oppositely disposed sections of said second mentioned leg and pivotally mounting a plurality of vanes therebetween.

1,621,697. METHOD OF EXTRACTING GOLD. JOSEPH LOWREY WARNER, Mayer, Ariz. Filed Dec. 19, 1923. Serial No. 681,551. 4 Claims. (Cl. 209—12.)

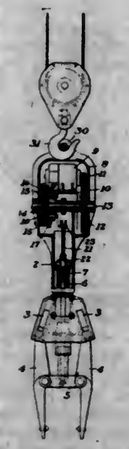
1. The herein described method of separating gold from clay-sand material which consists in effecting a dry separation of the undersized material from the oversized material, crushing and stirring the undersized material in water to release the sand from the clay, washing the oversized material and combining the washings with the treated undersized material and precipitating the sand from the clay particles.

1,621,698. PRESSURE PROCESSING. GEORGE P. WHITE, Chicago, Ill., assignor to White Cap Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 27, 1925. Serial No. 52,950. 11 Claims. (Cl. 99—8.)



7. A method of pressure processing which comprises submerging sealed packages in a body of liquid, heating the liquid, constraining expansion of the liquid incident to its heating to apply a pressure to the packages, and adding cooling liquid to the heated body of liquid to cool it and the packages while it is under constraint, said cooling liquid being added at a rate to maintain pressure on the packages incident to the contraction of the body of liquid in cooling.

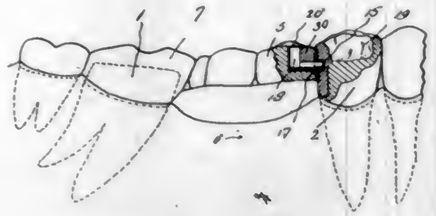
1,621,699. FLUSH-TANK VALVE. GEORGE T. WILHELM, South Amboy, N. J. Filed June 10, 1926. Serial No. 114,878. 2 Claims. (Cl. 137—104.)



1. A flush tank valve mechanism comprising a pipe coupling to be fitted in an opening in the bottom of a flush tank and having an opening arranged at an angle to the axis of the coupling, a valve casing having an inlet opening inclined correspondingly to said opening in said coupling and an outlet opening, a valve in said casing for controlling communication between said inlet opening and said outlet opening, and a pipe having its ends connected to said opening in said coupling and said inlet opening of the valve casing, respectively, whereby the inlet of said valve casing is offset from said coupling to facilitate mounting said mechanism in a tank and adapting said pipe to be easily and quickly replaced.

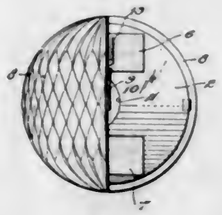
1,621,700. HOISTING MACHINE. ALEXANDER H. WILSON, Oak Park, Ill., assignor to Thomas Elevator Company, Chicago, Ill., a Corporation of Illinois. Filed July 20, 1925. Serial No. 44,672. 5 Claims. (Cl. 187—2.)

3. In a building material hoist of the character described, the combination with a pair of vertical guideways, and cages slidable in said guide-ways, of a drum, cable-supporting and guiding pulleys, a hoisting cable wound on said drum, engaged with said pulleys, and at its ends connected to said cages, a motor, power transmitting mechanism, including a clutch, for rotating said drum in either direction from said motor, clutch shifting means, mechanism actuated by said clutch shifting means for opening the throttle of said motor when said clutch is shifted to working position and for closing said throttle when said clutch is shifted to idle position, and manually operable means for shifting said clutch at any point in the ascent of said cages.



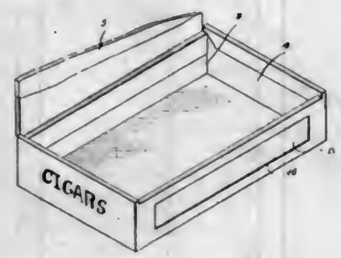
1,621,701. TONGS. GEORGE W. YANNEY and WALTER D. KELLER, Alliance, Ohio, assignors to The Alliance Machine Company, Alliance, Ohio, a Corporation of Ohio. Filed Aug. 11, 1922. Serial No. 581,266. 14 Claims. (Cl. 214—115.)

13. The combination with a crane hook of a main frame supported thereby, a second frame slidably mounted on the first frame, tongs connected to both frames



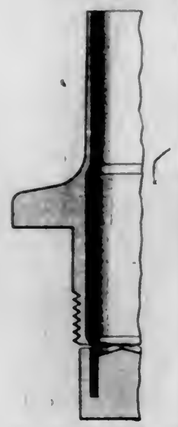
and arranged to close when the main frame is moved away from the second frame, and a motor on the main frame for moving the second frame toward the main frame to operate the tongs, substantially as described.

1,621,702. BRIDGE-RETAINING DEVICE. GEORGE A. YANTIS, Elma, Wash. Filed June 16, 1926. Serial No. 116,416. 5 Claims. (Cl. 32—12.)



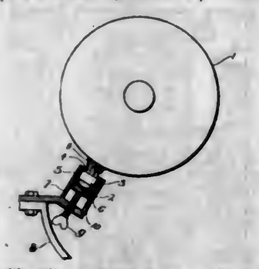
1. As a new article of manufacture, means for effecting a connection between a bridge tooth and an adjacent complemental abutment tooth, said means comprising a keeper adapted to be carried by one of said teeth, a connecting pin adapted to have one end seated in said keeper, a complemental part adapted to be carried by the remaining tooth, said part including a socket for slidable reception of said pin, socket being of a length to allow the pin to be slid entirely within the socket in order to disconnect the pin from the keeper, and retaining means slidably mounted in said complemental part and separate and independent from said pin and adapted to abut one end of the latter.

1,621,703. FOLDING ORNAMENT. SOREN S. ADAMS, Asbury Park, N. J. Filed June 4, 1925. Serial No. 34,872. 3 Claims. (Cl. 41—11.)



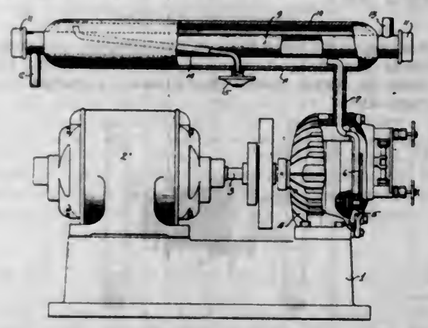
1. A folding ornament, comprising a pair of body members, having straight inner edge portions disposed in adjoining edge to edge alignment, an expansible element interconnected between opposed faces of said body members, hinge means pivotally connecting said body members together at their adjoining straight edges, spring means cooperating with the adjoining marginal portions of said body members, said spring means by its tension operating to turn said body members on said hinge means to expand said expansible element, and said spring means being entirely concealed when said body members are so turned thereby.

1,621,704. CIGAR BOX. ALLAN A. ADAMSON, Rochester, N. Y., assignor to George H. Harris, Rochester, N. Y. Filed Jan. 31, 1925. Serial No. 5,921. 3 Claims. (Cl. 229—6.)



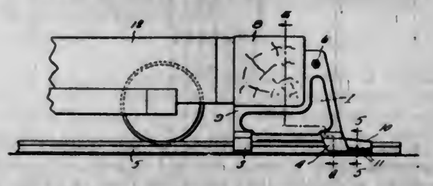
3. In combination with a cigar box having a hinged cover, an edging blank having portions edging the lower horizontal corners of the front and end walls and the upper edges of the front and end walls, and a separate blank edging the rear wall, the lower horizontal corner of the bottom wall and the rear outer face of the cover.

1,621,705. MANUFACTURE OF BOLSTER CASES. WILLIAM O. ALDRICH, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Jan. 20, 1923. Serial No. 613,839. 2 Claims. (Cl. 20—148.)



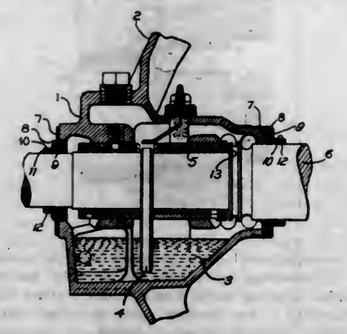
1. In the art of manufacturing textile machinery, the improvement which consists in casting bolster cases out of the same iron metal from which the frame members of said machinery and other heavier parts are cast, boring and threading the so-cast cases, and then by electro-deposition impregnating the surface pores of the cases with a permanent metallic frosting and thereby stopping leakage through the pores of the cast iron.

1,621,706. CLEANING MEANS FOR DRUM DRIERS. JOHN E. ALEXANDER, Port Edwards, and CASPER EDWARD YOUNGCHILD, Nekoosa, Wis.; said Youngchild assignor to said Alexander. Filed Aug. 24, 1925. Serial No. 51,898. 3 Claims. (Cl. 34—4.)



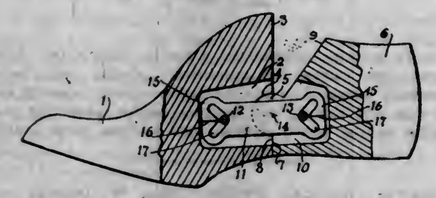
2. The combination with a drying cylinder of a paper machine, of a brush mechanism therefor comprising a slotted tube, a brush rigidly held therein, the bristles of said brush extending through said slot, and means for supporting said tube for holding said bristles in contact with the surface of said cylinder.

1,621,707. WATER-COOLED OIL SEPARATOR. ROBERT L. ALEXANDER and HAROLD W. WISHART, Clinton, Iowa, assignors to Climax Engineering Co., Clinton, Iowa, a Corporation of Delaware. Filed May 29, 1926. Serial No. 112,448. 4 Claims. (Cl. 527—24.)



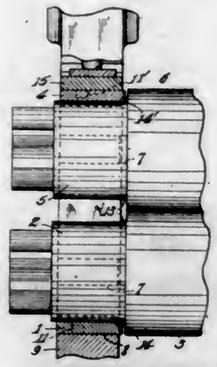
1. A water cooled oil separator comprising an outer casing, a water tube projecting therethrough and having the ends of said casing welded thereto, a water supply pipe connected to one end of said water tube, a water outlet pipe connected to the other end of said water tube, an oil return pipe connected in the bottom of said casing, a gas supply pipe projecting through said oil return pipe and into said casing, and a gas outlet pipe positioned in said casing with the upper end of said gas outlet pipe adjacent the upper surface of said casing and the other end of said gas outlet pipe projecting from said casing.

1,621,708. CAR BUMPER. RUPERT BREYLEY, Painesville, Ohio. Filed Apr. 1, 1925. Serial No. 19,795. 3 Claims. (Cl. 104—254.)



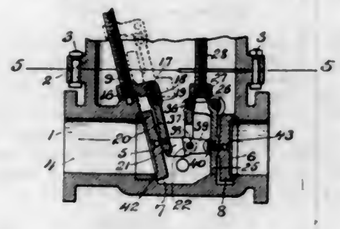
1. A car bumper comprised of chair-shaped housings loosely applied to the opposed rails of a track, each of said housings consisting of an integral member, means tying together and spacing apart the upper ends of the opposed housings, abutments secured to said rails for engagement by the housings, and a timber loosely resting upon the seat portions of said chair-shaped housings in a position to engage the back portions thereof.

1,621,709. CAP FOR BEARINGS. JOHN L. BROWN, Verona, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 27, 1926. Serial No. 111,921. 1 Claim. (Cl. 286—5.)



The combination with a rotating machine having a shaft subject to a certain amount of end play or longitudinal movement back and forth, of a bearing member for said shaft, comprising a bearing housing, and an attachment for the end of said housing comprising a cap, and a washer-like absorbent wiper carried by said cap and wiping on said shaft, the portion of said shaft engaged by said wiper as the shaft moves back and forth longitudinally in accordance with said end play being smooth, said cap having a cylindrical extension in spaced relation to said wiped portion of the shaft and terminating in an inwardly projecting flange having an opening only slightly larger than said shaft, the length of said extension beyond said wiper being at least as great as said end play.

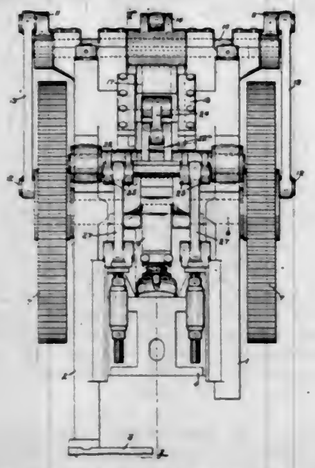
1,621,710. LAST. GEORGE CLAUSING, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Original application filed May 28, 1925, Serial No. 33,352, which has matured into Patent No. 1,586,409. Divided and an application filed Jan. 18, 1926, Serial No. 81,959, which matured into Patent No. 1,592,422. Said last application divided and this application filed June 9, 1926. Serial No. 114,810. 2 Claims. (Cl. 12—136.)



1. In a last, a heel part and a toe part adapted to rock about one another about a given point, a plate link of substantially rectangular form, anchor pins for the ends of said link, the ends of said link being arranged to yield and flex when the parts are removed from one position to the other, said flexing being permitted by V-shaped slots in the ends of said link and slits in said link associated with said slots to permit portions of the link to spread.

1,621,711. ROLLING-MILL BEARING. GEORGE COOKE, Martins Ferry, Ohio. Filed Nov. 12, 1926. Serial No. 148,063. 4 Claims. (Cl. 308—59.)

1. A bearing for rolls, comprising, in combination with a roll housing having therein recesses forming side and bottom bearing seats, and a rider having therein a recess forming a top bearing seat, said top and bottom seats having laterally disposed pockets in communication therewith, of top and bottom bearing brasses received within the top bearing seat of the rider and the bottom bearing seat of the housing, respectively, said brasses having lugs received in said pockets, whereby shifting of the brasses is prevented, and having their inner ends spaced away from the fillets of the rolls, and flat-faced side liners mounted in the side seats of the housings, each of said liners having a member forming a stop for limiting the extent of lengthwise shifting movement of the adjacent roll.



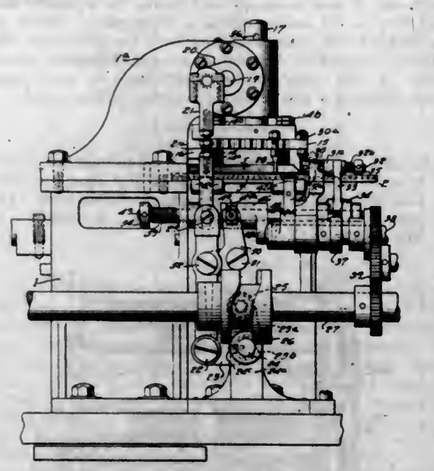
1,621,712. VALVE MECHANISM. WILLIAM A. DAWSON, Kansas City, Mo. Filed July 28, 1925. Serial No. 46,521. 6 Claims. (Cl. 277—33.)

1. In a valve mechanism, a casing having two valve ports, two valves for respectively closing said ports, manually operated means for independently opening and closing said valves, and wedging means connecting said valves in the closed position and holding them seated.

1,621,713. TOGGLE PRESS. NEAL W. DORMAN and MEREDITH R. HATCH, Toledo, Ohio, assignors to the Toledo Machine and Tool Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 24, 1925. Serial No. 64,567. 14 Claims. (Cl. 113—38.)

1. A press comprising a crank shaft, a blankholder, and means for operating said blank-holder, said means comprising rocking parts at each side of the press turning on axes parallel to the crank shaft, toggles between said rocking parts and said blank-holder, an oscillatory rocking part above and approximately coextensive with said crank shaft, connections between said first rocking parts and said oscillatory rocking part for transmitting

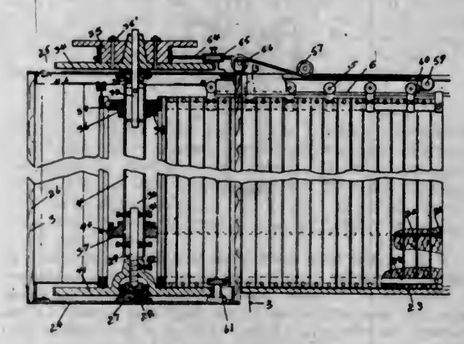
movements from latter to the former, and an operative connection between said crank shaft and oscillatory rocking part.



1,621,714. BULL-WHEEL ATTACHMENT. JOSEPH G. DYER and JOHN C. THOMAS, Parkerton, Wyo. Filed Feb. 12, 1926. Serial No. 87,844. 5 Claims. (Cl. 242—117.)

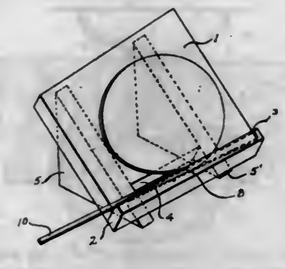
1. A bull wheel attachment comprising an auxiliary drum having a longitudinal cylindrical opening to receive the drum of said bull wheel, said auxiliary drum being divided longitudinally into two sections, hinges connecting the sections at one side, detachable clamping devices at the other side, and means whereby said attachment may be elevated in open position.

1,621,715. SPADING TOOL. PAUL ECKLEY, Walnut Creek, Calif. Filed May 6, 1925. Serial No. 28,340. 3 Claims. (Cl. 294—49.)



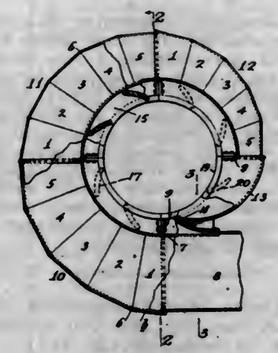
1. An implement comprising a body portion having upturned edges, a shank attached to said body portion, a series of tubular tines projecting from said body portion, and a reinforcing rod secured to the interior of each tine and engaging said body portion.

1,621,716. SELECTIVE CARD-HANDLING APPARATUS. ERWIN A. GEIGER, Ridgewood, N. J., assignor to Rapid Addressing Machine Company, a Corporation of New York. Filed Dec. 3, 1925. Serial No. 73,074. 22 Claims. (Cl. 209—110.)



1. In a device for automatically picking out predetermined cards from a series of cards fed to it, comprising a selective device, the operation of which is determined by the presence or absence of certain classification features on said cards, and a set of guideways for said cards leading to and through said selective device, the combination, with the above described apparatus, of a movable bottom section in said guideways located immediately below said selective device and long enough to permit by its temporary displacement the removal of a card from said guideways, and means for moving said section controlled by said selective device.

1,621,717. COILING DOOR. WILLIAM C. GRANT, EDWARD J. THOMAS, and GEORGE W. DREW, Oakland, Calif., assignors to Acme Partition Company, Oakland, Calif., a Corporation of California. Filed Aug. 29, 1925. Serial No. 53,305. 8 Claims. (Cl. 20—20.)

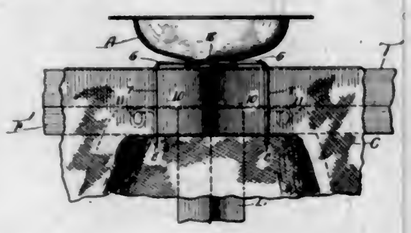


1. In a coiling closure comprising a series of vertical slats, means to suspend the slats from their upper ends, a housing having a rotary turn table adjacent its base, a vertical shaft mounted on said turn table, a core mounted on the shaft, discs mounted on the core, a second shaft extending above the core, a rope drum mounted on the second shaft and a rope extending from the drum to a point adjacent the extreme outer position on the coiling closure.

1,621,718. THONG CUTTER. LESTER E. GRISWOLD, Columbus, Ohio. Filed Apr. 27, 1923, Serial No. 634,994. Renewed Sept. 10, 1926. 3 Claims. (Cl. 164—37.)

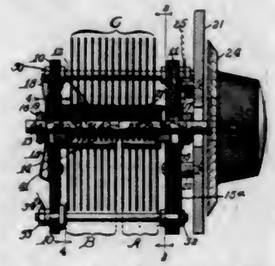
1. In a thong cutting device, the combination of an upright carrier slightly inclined to permit a leather disk to rest easily and freely rotate thereagainst, a slotted guide block outstanding along the lower portion of the carrier board with its slot opening upwardly adjacent to the board to receive the lower edge of a leather disk, and a cutting blade, the upper surface of the said guide block forming a flat rest for the blade whereby the latter may be held transversely of and across the slot and define with the latter the width of the cut thong.

1,621,719. SPIRAL CASING FOR HYDRAULIC TURBINES AND THE LIKE. MAX HAEBERLEIN, Maplewood, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed July 9, 1925. Serial No. 42,349. 4 Claims. (Cl. 253—120.)



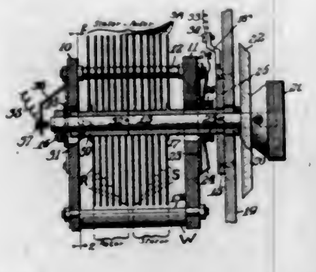
1. The combination with a spiral casing for hydraulic turbines and the like formed of a plurality of tubular plate metal members having their adjacent ends abutted and welded together, of a vane ring to which said tubular member is secured, and a cast section including a nozzle at the end of the spiral, said cast section including a section of the vane ring and having flanges arranged to cooperate with an inlet pipe for securing the latter to said casing.

1,621,720. TABLE-COVER HOLDER. GEORGE H. HARPER, Chicago, Ill. Filed Sept. 15, 1926. Serial No. 135,685. 2 Claims. (Cl. 65—54.)



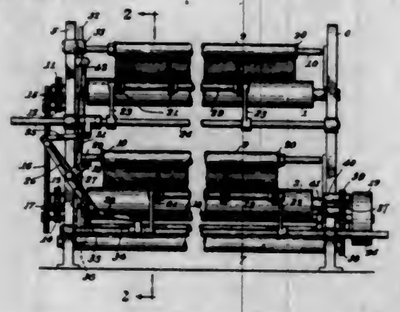
1. A table cover fastener, comprising a spring wire clamp bent to provide a central loop adapted to press upon the cover on the table top, limbs extending at an obtuse angle to each other from said loop, substantially parallel depending limbs extending at a right angle from

said divergent limbs adapted to hold the cover against the edge of the table top on opposite sides of a corner of the latter, and upwardly inclined limbs beyond said de-



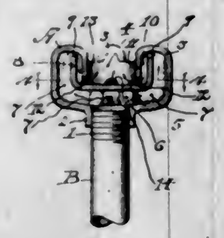
pending limbs adapted to straddle a table leg and at their inner ends press the cover against the under surface of said table top.

1,621,721. VARIABLE CONDENSER. GEORGE W. HAYDEN, Oak Park, Ill. Filed Apr. 16, 1926. Serial No. 102,381. 29 Claims. (Cl. 175—41.5.)



1. In an electrostatic condenser of the character described, the combination of a stator having plates side by side and in spaced relation, a rotor having plates side by side, spaced apart, and mounted for overlapping and spaced relation with stator plates, hand-operable means for moving the rotor in one direction and for freeing the rotor for automatic movement in the opposite direction when the hand-operable means are moved in such opposite direction, automatically-operating means for moving the rotor in such opposite direction, and means for holding the hand-operable means yieldingly in a given relative position to hold the rotor against movement by the automatically-operating means.

1,621,722. ELECTROSTATIC CONDENSER. GEORGE W. HAYDEN, Oak Park, Ill. Filed July 6, 1926. Serial No. 120,535. 14 Claims. (Cl. 175—41.5.)

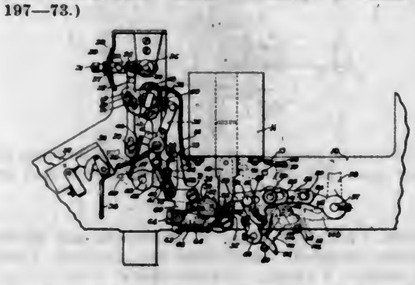


1. In an electrostatic condenser of the character described, the combination of a stator, a rotor member, and a stator-rotor member, each of said members and said stator comprising a plurality of plates side by side and spaced apart, the rotor member and the stator-rotor member being mounted on a common axis for rotative movement and for intermeshing relation with each other, the stator being mounted to have intermeshing relation with one of said members, and means for rotatably moving first one of said members to bring plates thereof into overlapped and spaced relation with plates of the other thereof and then for simultaneously rotatably moving both of said members to bring plates of one thereof into overlapped and spaced relation to stator plates.

1,621,723. WINDING MACHINE. JOHN ALLEN HEANY, New Haven, Conn., assignor to World Bestos Corporation, Paterson, N. J., a Corporation of Delaware. Filed Apr. 17, 1925. Serial No. 23,760. 6 Claims. (Cl. 242—35.5.)

1. In a machine of the class described, the combination with a plurality of winding devices, each comprising a pair of rollers adapted to carry the devices on which the material is to be wound, gears on the shafts of said rollers to rotate the same, a driving gear meshing with the gears of each pair of rollers, and means connecting said driving gears to cause them to rotate in unison.

1,621,724. BUBBLER HEAD FOR FOUNTAINS. JOSEPH P. HEENEY and JOHN G. MITCHELL, Chicago, Ill. Filed Mar. 4, 1926. Serial No. 92,131. 5 Claims. (Cl. 299—15.)

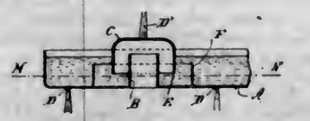


1. A bubbler head comprising in a unitary structure an interior receiving chamber, an open end bubbler chamber, a plurality of conduits leading from the receiving chamber and discharging into and near the bottom of the bubbler chamber and below the level of the highest part of the conduit, each conduit having a tortuous path.

1,621,725. FILTERING MATERIAL AND METHOD OF PREPARATION THEREOF. HENRY A. HILLS, Grand Rapids, Mich. Filed July 3, 1920. Serial No. 393,957. 3 Claims. (Cl. 210—263.)

1. A water proof filtering material comprising a flannel cloth impregnated with oil of citronella.

1,621,726. CASE-SHIFT MECHANISM FOR TYPEWRITERS. OTTO A. HOKANSON and JAMES F. KOCA, Woodstock, Ill., assignors to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Oct. 5, 1925. Serial No. 60,395. 9 Claims. (Cl. 197—73.)

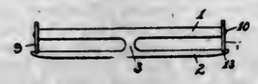


1. The combination with a typewriter having case shift mechanism, of a solenoid for actuating said case shift mechanism, a shift key for controlling said solenoid, means for automatically de-energizing said solenoid at the close of an operation thereof, a detent movable into position to retain said case shift mechanism in shifted position, a spring for moving said detent into operative relation with said case shift mechanism, and means connected with said shift key for holding said detent out of operative position when said shift key is released but permitting operation of said detent when said shift key is depressed.

1,621,727. FRAME FOR FLEXIBLE SHEET MATERIAL. EARL R. JOHNSON, Chicago, Ill. Filed Aug. 27, 1926. Serial No. 131,830. 3 Claims. (Cl. 40—156.)

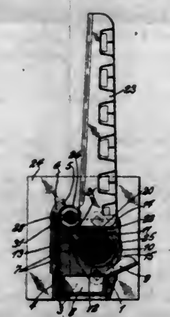
3. A combined mirror and sheet-holder of the character described comprising a mirror, a frame encompassing the marginal edges of the mirror, and means for retaining a sheet of thin and flexible material carried by said mirror frame and comprising narrow flange-like parts normally overlying edge portions of the sheet, said flange like parts having opposed gaps therein to provide entrance for such sheet beneath the flange-like parts.

1,621,728. TRAY FOR GAS AND LIQUID CONTACT APPARATUS. EUGENE JORDAN, Franconville, France, assignor to Societe l'Air Liquide (Societe Anonyme pour l'Etude et l'Exploitation des Procedes Georges Claude), Paris, France. Filed Apr. 21, 1922, Serial No. 555,875, and in France Apr. 21, 1921. 3 Claims. (Cl. 261—113.)



3. A substantially horizontal plate for causing contact between liquids and gases having capillary openings to discharge the liquid from the plate, means for the passage of the gas through the liquid and walls projecting upwardly from the plate and arranged around the passages for the gas.

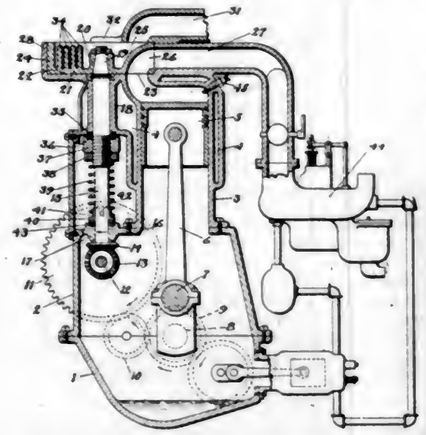
1,621,729. COMBINATION SWITCH. WILLIAM KAISLING, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 15, 1922. Serial No. 607,045. 13 Claims. (Cl. 200—44.)



1. In a switch of the character described including a back mounting plate, a pair of supporting studs secured to said mounting plate, a pair of rotor elements rotatably supported by said pair of studs, said pair of rotor elements provided with transverse slots in their one end, a front mounting plate, a pair of rotatable members rotatably secured in said front plate, said pair of rotatable members having a rectangular portion for engaging the transverse slots in said rotor elements so that when said rotatable members are operated the said rotor elements are caused to rotate, and a locking plate pivotally supported on said back mounting plate for locking said rotor elements and rotatable members against rotation.

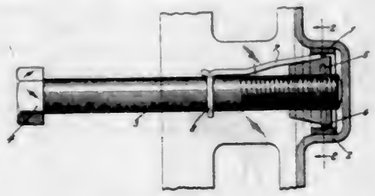
1,621,730. SOFT-COLLAR CLASP. MICHAEL KASPER, Cleveland, Ohio. Filed May 19, 1926. Serial No. 110,093. 3 Claims. (Cl. 24—81.)

1. A collar clasp comprising a rear bar and a front bar, the front bar being supported by the rear bar, gripping members eccentrically pivoted to the rear bar for cooperation with the front bar, and means for limiting the gripping members rotating beyond the point of maximum gripping effect.



1,621,731. OIL BURNER. CHARLES M. LOEFFE, St. Louis, Mo., assignor to Cottonwood Fiber Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 2, 1925. Serial No. 12,597. 6 Claims. (Cl. 158—65.)

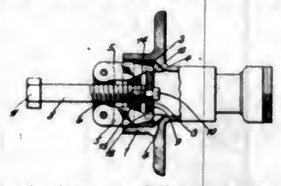
1. In a heater the combination with a gas chamber provided with an inclined back wall and parallel series of perforated discs in its upper side, of a vaporizing tube supported above said inclined wall and over one of said series of perforated discs, a pan for containing



a liquid located beneath the gas chamber and said inclined wall thereof, and a wall located at one side of said pan and arranged to cooperate with said inclined wall to deflect the flame from the pan against the vaporizing tube.

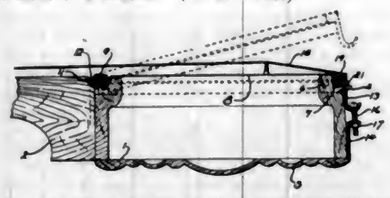
1,621,732. ROTARY-VALVE MECHANISM FOR ENGINES. RALPH M. LOVEJOY, Meredith N. H. Continuation of application filed Nov. 14, 1916, Serial No. 131,335, now Patent No. 1,460,722. This application filed Oct. 28, 1921. Serial No. 510,995. 8 Claims. (Cl. 123—190.)

1. An internal combustion engine comprising a cylinder having a single port and an intake conduit arranged to deliver an explosive mixture to said port, an exposed, air-cooled, rotary disk valve having a flat base normally covering said cylinder port and provided with a cylindrical peripheral flange, a conduit leading through said base and flange presenting a port adapted to establish communication between said cylinder port and said intake conduit.



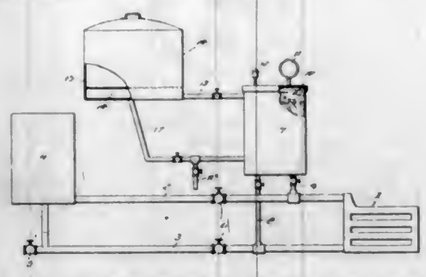
1,621,733. BEARING AND BUSHING REMOVER. CLAUDE M. MCCORD, Richmond Heights, Mo. Filed Sept. 19, 1925. Serial No. 57,281. 5 Claims. (Cl. 29—88.2.)

1. A device of the character described comprising a tapered body, a bolt arranged to screw through and project beyond the end of said body, and an expansible ring having sliding connection with said body and arranged to be expanded by said body when slid toward the larger end of the body.



1,621,734. BEARING RACE AND BUSHING REMOVER. CLAUDE M. MCCORD, Richmond Heights, Mo. Filed Nov. 7, 1925. Serial No. 67,570. 5 Claims. (Cl. 29—88.2.)

1. A device for removing a bearing ring element from a support, comprising an abutment arranged to bear against the support, a rotative threaded bolt bearing against said abutment, a pair of arms arranged to engage the ring element to be removed from said support, and a tapered body screwed on the bolt and operative thereby to spread said arms apart into engagement with

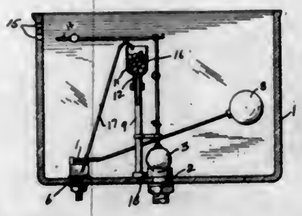


said removable element and then to move said arms and thereby said ring element longitudinally from said support.

1,621,735. BANJO. HARRY E. MENZEMER and MANUEL CAMBRE, Oakland, Calif. Filed Feb. 13, 1926. Serial No. 88,019. 8 Claims. (Cl. 84—269.)

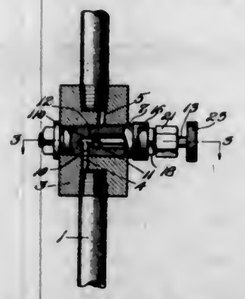
1. In a banjo, a banjo head, a neck extending therefrom, a membrane for the head, a flesh hoop secured thereto and telescoped over the upper end of the head for holding the membrane in place and a hinged element adapted to bear on the hoop for placing the membrane under tension.

1,621,736. DOMESTIC STEAM-GENERATING APPARATUS. FRANK L. MIDDLETON, Darien, Ga. Filed Mar. 4, 1926. Serial No. 92,207. 1 Claim. (Cl. 126—20.)



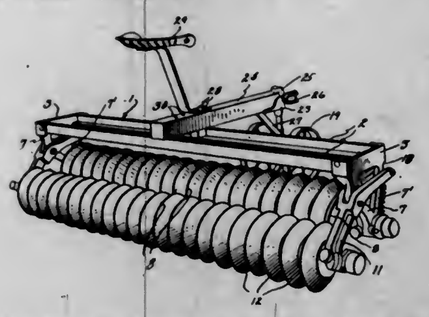
A domestic fluid circulating system of the class described comprising a generating unit adapted to be disposed in a fire bed, supply and circulating pipes connected with said unit, a supply tank connected with said pipes and having its bottom disposed on a plane slightly above a predetermined portion of said unit, a steam accumulator disposed adjacent to and above said unit, valved pipes connecting said accumulator with said first named pipes, valves in said first named pipes, a boiler having its bottom arranged on a plane substantially even with the top of said steam accumulator, a false bottom in said boiler dividing the same into upper and lower compartments, and valved pipes connected with said accumulator and with said boiler and communicating with said lower compartment.

1,621,737. TOILET FLUSHING MEANS. JOHN MOORE, Berkeley, Calif. Filed Nov. 9, 1925. Serial No. 67,732. 2 Claims. (Cl. 4—227.)



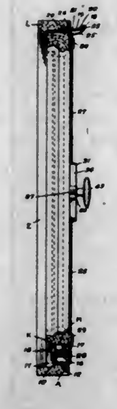
1. A device of the type described, comprising a tank, a discharge port carried by said tank, an overflow pipe

communicating with said discharge port, a deodorant carrying cup fixed to the upper end of said overflow pipe so as to form a symmetrical enlargement thereof, a



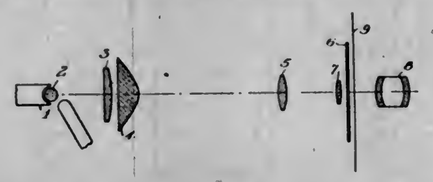
valve for admitting water into said tank, and an auxiliary tube communicating with said valve and terminating in said cup for conveying a portion of the water flowing thru said valve into said cup.

1,621,738. RETARD DEVICE. JOSEPH W. MOTHERWELL, Melrose, and HARRY S. BAKER, Arlington, Mass., assignors to The Ashton Valve Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Aug. 18, 1925. Serial No. 51,075. 11 Claims. (Cl. 277—32.)



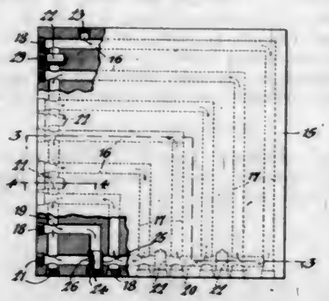
1. A device of the character described comprising a conduit leading from a source of pressure to a gauge; a port leading from said conduit to the atmosphere; a needle valve to control the passage of the material through said conduit to retard pulsation and to control said port, said valve, when seated, preventing passage through said conduit and to said port; and a plug cock controlling said conduit and said port and movable so as to permit passage of the material to said gauge or to the atmosphere as desired.

1,621,739. SOIL PULVERIZER. JOHN PARKER, Richmond, Mich. Filed Apr. 23, 1925. Serial No. 25,213. 3 Claims. (Cl. 55—77.)



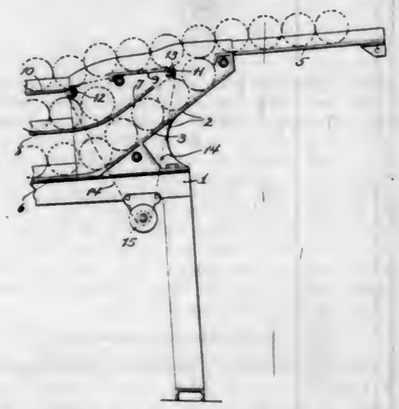
1. A soil pulverizing machine comprising a main frame having depending end portions, bearings provided in the respective end portions, a series of disks, a shaft for the disks supported in the said bearing, a bifurcated arm pivotally supported on each of the said depending portions in the bifurcation of which the end portion is positioned, the opposite end of each of the said arms having a bearing, a second series of disks positioned in staggered relation to the said first series, a shaft therefor carried in the said arm bearings, a spring at the bifurcated end of each arm tending to raise the said end and to force the second series of disks downwardly, and a stop engaged by the said bifurcated end limiting the downward movement of the second series of disks.

1,621,740. WINDOW LATCH AND GUARD. ALFRED PAVOLA, New York, N. Y. Filed Apr. 27, 1925. Serial No. 26,106. 6 Claims. (Cl. 20—68.)



1. The combination with the hinged sashes of a casement window, having in their lower edges registered grooves and a guard element on the sill of the frame of the window for being adjusted into and out of the grooves of the sashes, of a socket projecting from the guard element, a pin protruding from a bar for removable insertion in the socket of the guard element, and means operative to move the bar when the sashes are closed and when the pin is seated in the socket of the guard element for raising the socket and moving the guard element into the grooves of the sashes to fasten the sashes and said means being operative to reversely move said parts for releasing the sashes.

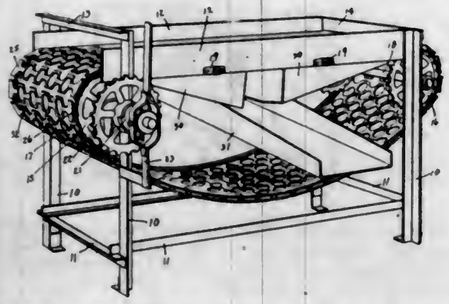
1,621,741. PROJECTING SYSTEM FOR CINEMATOGRAPHS. GUSTAV A. H. KELLNER, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 20, 1924. Serial No. 733,137. 12 Claims. (Cl. 88—24.)



3. In a projecting system for cinematographs and the like, a source of illumination, an aperture plate, and a relaying lens system between the said source and said plate including a multi-lens condenser adjacent the illumination source and having a parabolic lens as one of its component lenses.

1,621,742. FLUID-CIRCULATING PLATE. ARMIN GEORGE KESSLER, Buffalo, N. Y., assignor to Farrel Foundry and Machine Co., Inc., Buffalo, N. Y., a Corporation of Connecticut. Filed Aug. 20, 1925. Serial No. 51,374. 4 Claims. (Cl. 18—17.)

1. A circulating plate of the character described, provided with a plurality of spaced fluid-circulating channels having a common inlet and a common outlet and passages intersecting said channels near their ends, said channels and said passages being formed by drilling holes in the plate, plugs fitted in the ends of the channels and passages, and filler-pieces extending across said passages and disposed in the alternate spaces between said channels, whereby the fluid is diverted in a sinuous course therethrough.

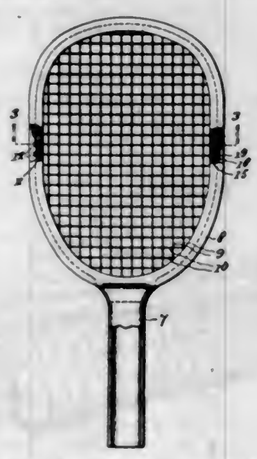


1,621,743. MACHINE FOR BOXING OR CASING CANS. ALBERT HERBERT KYLER, Westminster, Md. Filed Jan. 8, 1925. Serial No. 1,231. 3 Claims. (Cl. 193—2.)

1. In can-feeding mechanism, the combination of a plurality of guideways arranged one above another in parallel relation, a supply guideway common to all the first-mentioned guideways, and constantly rotating elements in the supply guideway at the entrances to the several parallel guideways, said elements having can-engaging portions of non-circular cross section.

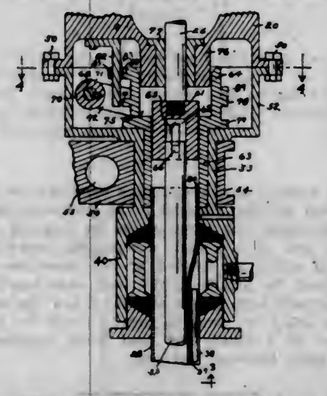
1,621,744. GRADING TABLE FOR VEGETABLES AND FRUITS. STACEY B. LINDLEY, Indianapolis, Ind., assignor to Indiana Canning Machinery Company, Indianapolis, Ind., a Corporation. Filed Mar. 20, 1925. Serial No. 17,018. 3 Claims. (Cl. 209—84.)

1. A horizontally extending smooth surfaced grading belt of the character described comprising a pair of endless chains, a plurality of rigid plates extending from one chain to the other and secured thereto at their respective ends independently of each other, each of said plates having a plurality of annular openings positioned centrally and longitudinally thereof, and a plurality of semi-annular recesses formed along the edges thereof in



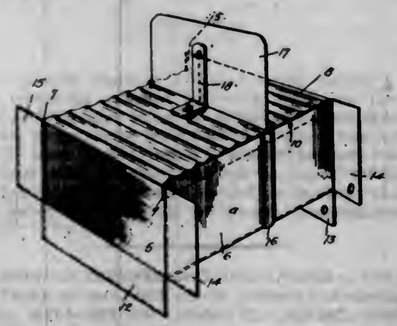
staggered relation to said openings for forming similar openings in conjunction with the edges of the adjacent plates.

1,621,745. WELDING-ROD HOLDER. CLYDE M. MILLER, Madison, Ind. Filed Mar. 25, 1925. Serial No. 18,321. 4 Claims. (Cl. 81—3.)



1. A welding rod holder including a body formed on a pair of complementary sections one extremity of each of the said sections normally assuming an expanded position, oppositely disposed jaws carried by the ends of the sections, a plurality of co-acting ridges formed in each jaw adapted to retain a welding rod in various positions, a pair of eye bolts secured adjacent the said extremities of the body sections, a movable plate member mounted adjacent the opposite extremity of the body, a lever pivoted beside the plate engageable therewith, a rod connecting the said lever and eye bolts for contracting the sections, and means for locking the said lever in adjusted positions.

1,621,746. TENNIS RACKET. LOUIS G. MORTEN, Jersey City, N. J. Filed Mar. 6, 1924. Serial No. 697,243. 1 Claim. (Cl. 273—73.)

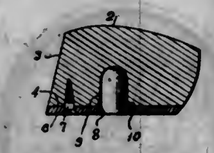


A tennis racket comprising a frame having at one side an opening just wide enough to receive a string and provided with a recess at the outer end of the opening, a string knotted at one end, the string adapted to pass through the opening and the knot to lie in said recess, said frame having at its diametrically opposite portion an opening of greater diameter, a plug secured in this opening, said threaded opening being open at both ends and said plug having a passage axially therethrough of a diameter to snugly receive the string and being substantially in alinement with the opening at the opposite side of the frame, the opposite end of the string being passed through the passage in said plug, said plug having divided diametric slots on one end to receive a tool whereby to rotate the plug, and a washer upon the outside of the plug adapted to receive the other knotted end of the string to avoid cutting of the string by the rotating plug.

1,621,747. ANTITILTING LOCK FOR REVERSIBLE OUTBOARD MOTORS. JAMES A. MOULD, Milwaukee, Wis., assignor to Evinrude Motor Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 7, 1924. Serial No. 684,719. 43 Claims. (Cl. 115—18.)

1. In a device of the character described, the combination with a bracket and an outboard motor pivotally connected therewith for tilting movement and provided with a normally upright drive shaft, of a sleeve encircling said drive shaft and provided with an arcuate lock element substantially concentric with said sleeve, and a supplementary arcuate lock element connected with said bracket and normally out of engagement with said first mentioned lock element, said arcuate elements being adapted for interlocking interaction upon the occurrence of relative axial movement between said elements in a given direction, whereby said outboard motor may be secured against pivotal movement.

1,621,748. HEADGATE. WILLIAM MURDOCK, Deeth, Nev. Filed Aug. 8, 1925. Serial No. 49,119. 1 Claim. (Cl. 61—12.)

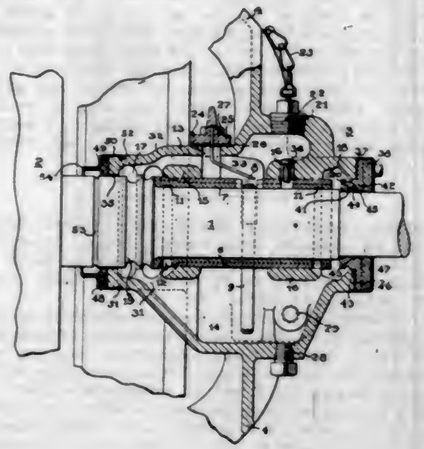


A headgate for irrigation systems comprising a non-cylindrical open-ended metallic casing formed of a single piece of sheet metal and having a straight corrugated top provided intermediate its ends with a transversely disposed recess, vertical side walls provided intermediate their ends with vertical guides alining with the ends of the recess, and outwardly extending portions at the opposite ends of the sides and bottom, and a gate slidable within the recess of the top and within the guides of the side walls and having its upper end portion extending upwardly and beyond the top and providing a hand hold in the gate vertically from a position exteriorly of the casing, and means for securing the gate in any of its adjusted positions said means comprising a bracket secured to said corrugated top and having in a vertical portion thereof a series of apertures and a bolt through one of said apertures and said gate.

1,621,749. DUPLICATE SOUND RECORD AND PROCESS OF MAKING THE SAME. ROBERT QUAIT, Jr., Brooklyn, N. Y., assignor of one-half to Jacob M. Ehrlich, New York, N. Y. Filed Feb. 8, 1924. Serial No. 691,515. 18 Claims. (Cl. 18—48.3.)

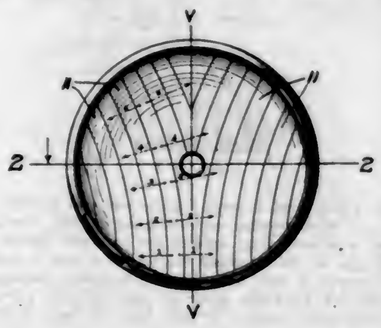
1. A method of producing sound records which consists in printing upon a base of suitable material; treating said base with a filler or sizing composition; removing substantially the volatile portion from said sizing layer; applying to said sized base an intermediate layer of a highly thermoplastic cellulose ester in solution in volatile solvents; substantially removing said volatile solvents from said intermediate layer; applying upon said intermediate layer as a surface coating a cellulose ester in solution of low thermoplasticity relative to the intermediate layer; removing substantially all the volatile solvent from said surface coating; and impressing thereon and therein by heat and pressure the ridges of a record matrix; and cooling the same to form a pressed record sufficiently transparent or translucent that the aforesaid printing may be visible thereon, substantially as described.

1,621,750. GOLF CLUB. WILLIAM L. QUESTEL and HUGH M. RHIND, Portsmouth, Ohio, assignors to The Hugh Rhind Golf Shaft Company, Portsmouth, Ohio, a Corporation of Ohio. Filed Apr. 15, 1926. Serial No. 102,301. 4 Claims. (Cl. 273—77.)



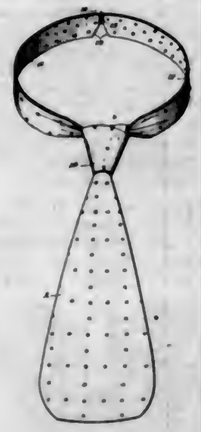
1. In a golf club, a head, a plate mounted therein, said plate and head having coinciding apertures, means extending from said plate around the aperture therein into the margin of the aperture in the head, and a common plug inserted in said apertures, said means surrounding said plug on all sides, whereby said plate is prevented from movement relative to said head by said head and plug.

1,621,751. BEARING. RAOUL PRUGER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 15, 1923. Serial No. 668,479. 5 Claims. (Cl. 308—128.)



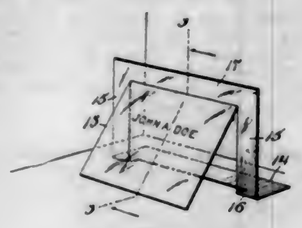
2. The combination with a rotating machine having a journal, of a journal bearing comprising a bearing sleeve surrounding said journal and having an oil-supply slot in the upper portion thereof, a housing entirely surrounding said sleeve and comprising a seat member for holding the sleeve and an oil receptacle disposed beneath said seat member, an oiling ring disposed in said slot and extending into said receptacle for oiling said journal, said housing having an opening therein, a steadying screw ex-

tending through said seat member for retaining said bearing sleeve, said steadying screw being accessible for insertion and removal through said opening, said oil-supply



slot being offset from said opening, said housing having a separate opening for removing said oil ring, and means for covering said housing openings.

1,621,752. HEADLIGHT REFLECTOR. JOHN F. RAYNOLDS, Minneapolis, Minn., assignor to The Paraflector Company, Minneapolis, Minn., a Corporation of Delaware. Filed Apr. 27, 1925. Serial No. 26,105. 2 Claims. (Cl. 240—41.)

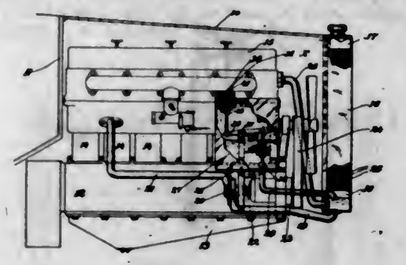


1. A concave reflector having its surface divided into two series of strips or zones; each strip being formed so that its mean radius of curvature, in the plane containing a transverse element of said strip, is greater than the mean radius of curvature of the same section of the original surface; said strips or zones arranged symmetrically with respect to the vertical meridian of said reflector and having their edges in curved lines on the reflector surface, the projections of said lines on a plane perpendicular to the main axis of said reflector forming two series of concentric circular arcs having their centers on opposite sides of the projected vertical meridian, equidistant from it and below the horizontal axial plane, said arcs lying between the projected vertical meridian and their respective centers.

1,621,753. NECKTIE. WILLIAM N. ROMANOFF, Chicago, Ill. Filed Aug. 16, 1926. Serial No. 129,353. 2 Claims. (Cl. 2—155.)

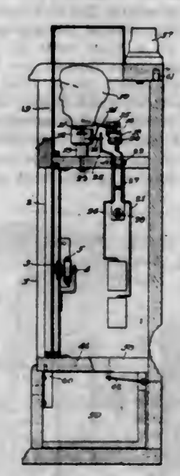
1. In a necktie, a sectional neck band for the tie, the ends of said sections adapted to be positioned adjacent, but not touching each other when the band is disposed about the neck of a wearer, a separable connection the elements of which are carried by the respective ends of the neckband for attaching the said ends together, the portions of said ends of the sections below the separable connection being cut away to form a notch for receiving the button of a collar, and said notch communicating with the space between the ends.

1,621,754. COMBINED CARD AND DISPLAY SIGN. LOUIS ROMMEL, Newark, N. J., assignor to Ethel B. Rommel, Newark, N. J. Filed Nov. 11, 1924. Serial No. 749,116. 3 Claims. (Cl. 40—148.)



1. A display device formed of a single piece of sheet material comprising a vertical frame, a horizontal base hinged to the lower edge of the frame and extending rearwardly, and a display panel hinged to the upper portion of the frame and forming a forwardly bent brace to said frame, the height of the panel being greater than the distance between the bottom edge of the frame and the hinge connection between the panel and the frame.

1,621,755. ENGINE-COOLING SYSTEM. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Oct. 9, 1924. Serial No. 742,638. 13 Claims. (Cl. 123—174.)

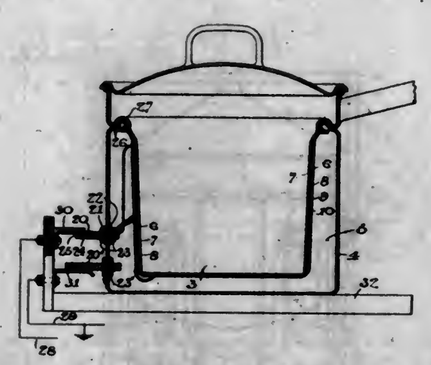


1. A cooling system operating by the boiling and condensing method, having a circulating system including a

jacketed element to be cooled, a radiator having a lower water chamber below the level of the jacket element through which the cooling medium is short circuited and a plurality of upflow condensing passages above said

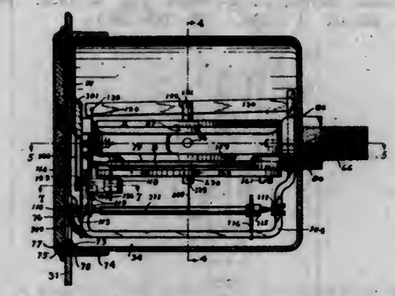
chamber, means for withdrawing water from the chamber and delivering it to the jacket and means for returning the heated fluid to the chamber, in combination with means for maintaining a substantially constant water level in the water chamber.

1,621,756. COIN-CONTROLLED MACHINE. JOHN J. SCHARLI, Jr., Philadelphia, Pa., assignor to John F. Meyer, Chicago, Ill. Filed June 20, 1925. Serial No. 38,405. 12 Claims. (Cl. 194—9.)



1. In a device of the class described, means for receiving a coin, a plurality of paths any one of which said coin may take, an oscillatorily mounted object, and means to cause said object to give any one of a plurality of signals, said means being actuated by said coin and the particular signal being determined by the path which said coin takes.

1,621,757. ANTISPASMODIC. PAUL SEYDEL, Nitro, W. Va., assignor to The Seydel Chemical Co., a Corporation of West Virginia. Filed May 14, 1923. Serial No. 638,978. 2 Claims. (Cl. 260—106.)

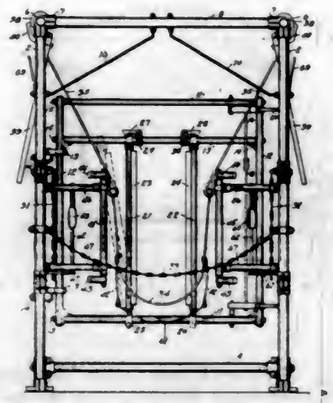


2. As a new composition of matter a non-toxic benzyl succinate of an alkali earth metal.

1,621,758. UTENSIL. DAVID E. SHAW, Milwaukee, Wis. Filed May 17, 1922. Serial No. 561,673. 7 Claims. (Cl. 219—44.)

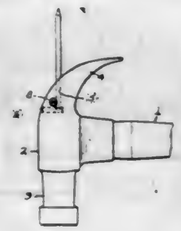
1. In an electrically-heated utensil, the combination with a heat-conducting container, of a heating element comprising a copper wire coated with a very thin heat-conducting, moisture-proof insulating film, said wire being closely wound with contiguous convolutions about said container, and means for supplying current to said element.

1,621,759. GAUGE. LYLE K. SNELL, Detroit, Mich. Filed Sept. 19, 1923. Serial No. 663,557. 14 Claims. (Cl. 73—110.)



1. In apparatus of the class described, the combination of a hollow expansible member, means for subjecting said member to the pressure to be measured, a shaft, indicating means carried by said shaft, a laterally flexible filament having one end connected to said member and its other end connected with said shaft so that the movements of said filament will rotate said shaft in one direction, and means for rotating said shaft in the opposite direction.

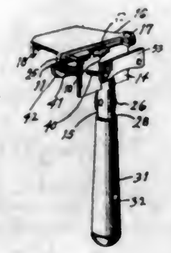
1,621,760. OPERATING STALL FOR ANIMALS. OTTO STADER and JOHN B. OLSON, Fort Atkinson, Wis., assignors to James Manufacturing Company, Fort Atkinson, Wis., a Corporation of Wisconsin. Filed Aug. 24, 1921. Serial No. 495,086. 9 Claims. (Cl. 119—98.)



1. An operating stall for animals, said stall comprising a skeleton framework, lateral clamping members

pivotally linked to the respective sides of said framework for parallel movement, means for latching said members in adjusted position, a gate in the forward end of said stall, means centrally positioned within said gate and engageable with the neck of an animal posi-

tioned between said clamping members to secure said animal against forward or rearward motion, and means for supporting the body of an animal so secured, said skeleton framework being open to permit access to said animal from a wide variety of positions.

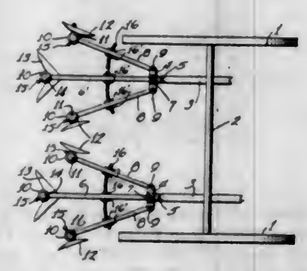


1,621,761. NAIL-DRIVING IMPLEMENT. ARTHUR E. TAYLOR, Elyria, Ohio, assignor of one-half to Scott Hinman, Elyria, Ohio. Filed Aug. 5, 1925. Serial No. 48,248. 1 Claim. (Cl. 145—30.)

In a nail-driving implement of the hammer type, the combination with a head including a poll and an oppositely directed pair of claws, of nail-holding means including a slot at the base of said claws at the convex side, the bottom of the slot being substantially parallel with the axis of the hammer head, two aligned recesses, one at either side of said slot spaced from the bottom of said slot, and conoidally pointed nail-engaging plungers yieldably projecting from such recesses for pressing a nail toward the bottom of said slot, and forming a three-point engagement therewith.

1,621,762. DENTAL VIBRATORY MATRIX. TAKNO TERAGAWA, Los Angeles, Calif. Filed Feb. 1, 1926. Serial No. 85,270. 9 Claims. (Cl. 32—10.)

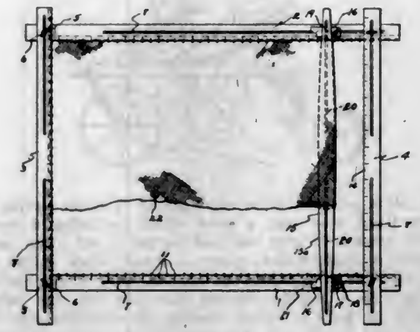
1. In a dental matrix of the character set forth, the combination with a main plate member having an aperture therein to receive a tooth form, of a spring-actuated movable jaw mounted in opposed relation to the main plate member, a cover pivotally mounted relative to the



main plate member and to swing to an operative position in opposed relation to the movable jaw member, and means for holding the said cover in any adjusted position.

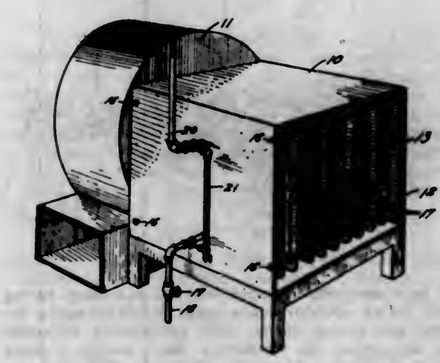
1,621,763. PROCESS OF MAKING FRIED RICE FOOD. BUNKICHI YOKOYAMA, Los Angeles, Calif. Filed Oct. 12, 1926. Serial No. 141,245. 2 Claims. (Cl. 99—11.)

2. The herein-described process of making fried rice food, which consists in first preparing a flour from roasted peanuts, then washing a quantity of glutinous rice, then separating the rice from the water, then steeping the rice for ten hours in pure water, then taking the steeped rice from the water, then steaming the rice for one hour, then pounding the rice into a paste, and, while pounding the rice, adding the peanut flour thereto, in small quantities at a time until all is well mixed, then drying the dough thus formed for two days, then cutting the dough into small pieces, then further drying the dough for seven days, then frying the dried dough in a boiling salad oil for twenty minutes, then removing the fried pieces from the oil, then adding a flavoring substance to the fried pieces by spreading the flavoring thereon, and finally in drying the fried pieces of dough.



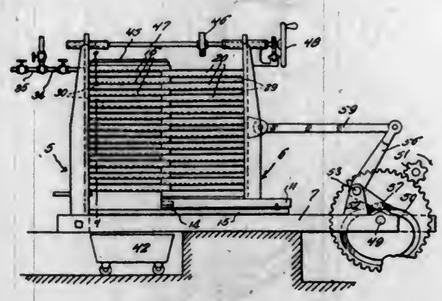
1,621,764. CULTIVATOR. WESLEY P. ALLEN and ELBERT H. FINCHER, Mannsville, Okla. Filed Sept. 14, 1925. Serial No. 56,279. 1 Claim. (Cl. 97—179.)

In an agricultural implement, a pair of wheels, a frame mounted on said wheels, a pair of main beams, an extension secured to each of said main beams, a plow carried by each of said extensions, auxiliary beams pivotally secured on each side of each of said main beams, each of said auxiliary beams having an eye, a disc having a cylindrical shank arranged to enter each eye, a set screw for holding each of said shanks in adjusted position, arc-shaped rods secured to said extensions



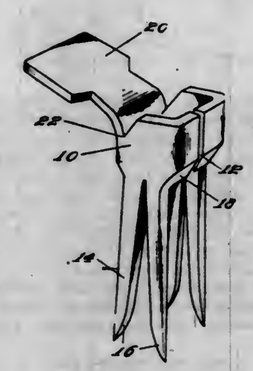
and arranged to pass through said auxiliary beams, and means carried by the rods for securing said auxiliary beams in various angular positions with respect to the extensions.

1,621,765. CURTAIN STRETCHER. FLORENCE BONSWOR, Detroit, Mich. Filed June 14, 1924. Serial No. 719,957. 8 Claims. (Cl. 45—24.)



1. A curtain stretcher comprising a plurality of bars forming a rectangular frame, certain of said bars being longitudinally slotted, and a pair of sheet metal brackets engaging in the longitudinal slots of two of said bars and adjustable longitudinally of said slots, and having portions frictionally engageable in the longitudinal slot of another of said bars to detachably mount said bar upon the frame.

1,621,766. AIR COOLER AND HUMIDIFIER. JAMES R. BULMER, Fort Collins, Colo. Filed May 25, 1925. Serial No. 32,667. 2 Claims. (Cl. 261—30.)

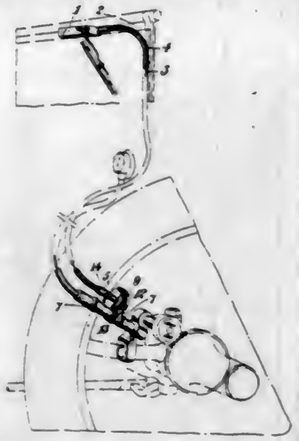


1. An air cooling device comprising the combination of a series of parallel flexible fabric water cells having passages allowing seepage of water through the walls thereof; a relatively short tube passing through and carried by each of said cells and projecting beyond the sides thereof for admitting water thereto, said tube being adapted to hold the sides of said cell apart and having an opening for communicating with the interior of the cell; and relatively short tubes connecting the projecting extremities of the first tubes of adjacent cells.

1,621,767. FILTER PRESS. ANGELO M. CAPRA, Philadelphia, Pa., assignor, by mesne assignments, to Capra Filter Press Corporation, a Corporation of Delaware. Filed Jan. 12, 1925. Serial No. 1,936. 7 Claims. (Cl. 210—152.)

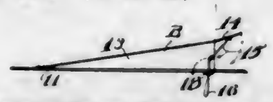
4. In a filter press of the class described, a relatively movable unit comprising a supporting board and a plurality of horizontal vertically spaced filters, each filter comprising an open frame, a sheet of foraminous material carried thereby, a filtrate collecting pan disposed below said sheet, and a discharge opening, said pan being formulated to provide a gutter leading to said discharge opening.

1,621,768. SPIKE RETAINER. HERBERT O. CRIPPEN, Chicago, Ill. Filed June 22, 1925. Serial No. 38,758. 8 Claims. (Cl. 238—294.)



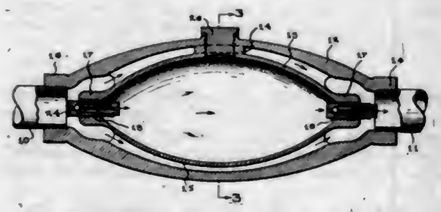
1. A spike retainer, comprising in combination, a body formed to encircle a spike, material gripping members extending from the body, a spike retaining element also integral with said body, and means for automatically spreading the material gripping elements upon application of the same.

1,621,769. MEANS FOR OPERATING AUXILIARY APPARATUS ON MOTOR-DRIVEN VEHICLES. PRIMUS OTTO DORER, Lee, London, England, assignor to Allan Gordon Smith, London, England. Filed Jan. 7, 1925, Serial No. 1,125, and in Great Britain Jan. 11, 1924. 1 Claim. (Cl. 74—7.)



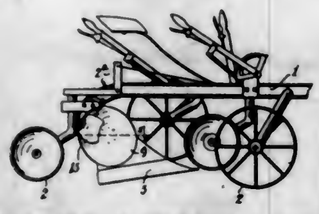
In combination, a disconnectible transmission line, a casing, a shaft journaled in said casing and adapted for operative attachment to the disconnected transmission members, a spur gear on said shaft within said casing, an auxiliary shaft journaled in said casing parallel to said first mentioned shaft, a second spur gear of different size on said auxiliary shaft also within said casing

and in mesh with said first mentioned spur gear, an eccentric secured to said second spur gear, a strap cooperating with said eccentric, a rod pivoted to said strap, a



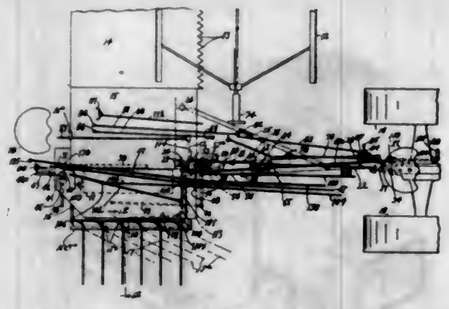
flexible wire member connected to the rod and passing through said casing, and a tubular guideway on said casing forming a bearing for said rod.

1,621,770. BUS VENTILATOR. CHARLES J. ECKLAND, Minneapolis, Minn. Filed Aug. 12, 1925. Serial No. 49,746. 1 Claim. (Cl. 98—22.)



An air evacuator for ventilating a bus, comprising a tapered housing having the enlarged end thereof open, said housing being mounted below an overhanging portion of the roof of said bus, closure means pivotally connected to the enlarged open end of said housing, said closure means having an open condition wherein said closure means extends outwardly and rearwardly of the evacuating vent to draw air from the interior of the bus, and a closed condition wherein the closure means is positioned across the evacuating vent and a handle lever pivotally mounted adjacent said housing and having link connection with said closure means to actuate said closure means upon an operation of said handle lever.

1,621,771. AUTOMATIC OILER. DANIEL JOSEPH EGAN, Picher, Okla. Filed June 3, 1925. Serial No. 34,668. 2 Claims. (Cl. 184—55.)

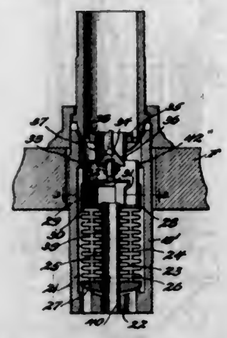


2. In an automatic oiler, the combination of a casing having a fluid chamber provided with oppositely disposed inlet and outlet openings to permit the passage of fluid therethru and a chamber in said casing adapted to contain a quantity of oil and having inlet and outlet openings adjacent, respectively, the openings of the fluid chamber; an inwardly opening check valve in the inlet opening of said oil chamber; and an outwardly opening check valve in the outlet opening of said oil chamber.

1,621,772. REVOLUBLE MOLDBOARD FOR PLOWS. JOSEPH N. ELLENBURG, McKinney, Tex., assignor of one-half to James J. Thompson, McKinney, Tex. Filed Mar. 12, 1925. Serial No. 15,099. 1 Claim. (Cl. 97—121.)

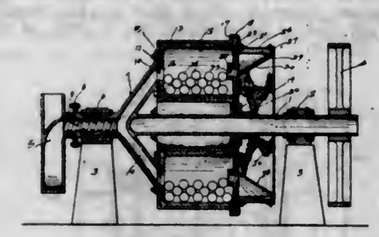
A plow comprising, in combination, a beam having a downturned rear end, a plow share including a mold board secured to said end and having a cut away part leaving a semicircular recess, a thrust block bolted to one side of said turned down end, said block having through it a spindle bearing hole and one end being shaped to form a thrust bearing, a revoluble disk to fit in said recess and attached thereto having a spindle, said spindle including an enlarged foot portion with a bottom surface curved to fit the disk and bolted thereto, said foot also having a hollowed out portion to fit around the thrust end of said block with a ball bearing between the thrust end of the block and the hollowed out portion of the foot, said spindle passing through the hole in the block with means to hold the block to the spindle, and said disk extending from the front to the rear of the plow share.

1,621,773. CONTROLLING DEVICE FOR MOTOR-DRAWN BINDERS. THEOPHIL J. FETCHER, Norwalk, Wis. Filed July 29, 1921. Serial No. 488,341. 5 Claims. (Cl. 56—22.)



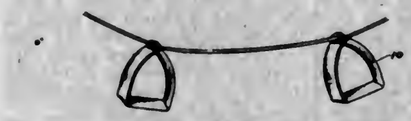
1. In a controlling device between a tractor having a seat for an operator and a grain binder drawn by the tractor and having carrier with horizontally swingable tines supporting the bundles, a shaft having a crank operatively connected with the tines to swing them, the front end of said shaft having a lateral arm of stirrup shape near the seat, and the portion of the shaft near the stirrup forming a journaled stub shaft connected by a universal joint to the rest of the shaft.

1,621,774. THERMOSTATIC TRAP. HAROLD D. FITZGERALD, Danville, Va. Filed Nov. 6, 1925. Serial No. 67,368. 21 Claims. (Cl. 236—42.)



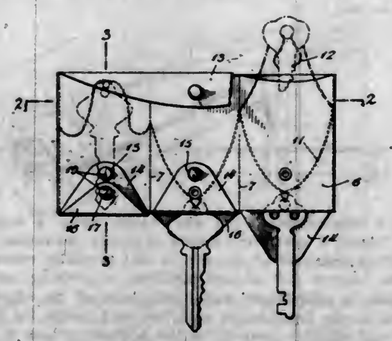
1. A hollow supporting leg forming a fluid passage and comprising a collar having a circumferential flange

adapted to engage the surface of a floor or other support around a pipe opening, and to cover the opening, a relatively short leg section fitting within said collar and having means for attachment to a radiator section, and a second relatively short leg section having



means for attachment to said collar and adapted to make a substantially fluid tight joint with said first mentioned section within the collar, said leg having means for supporting a thermostatic trap adapted to control the travel of fluid through said leg.

1,621,775. MILL. WILLIAM WALLACE GIBSON, Alameda, Calif. Filed Aug. 25, 1924. Serial No. 733,972. 2 Claims. (Cl. 83—9.)

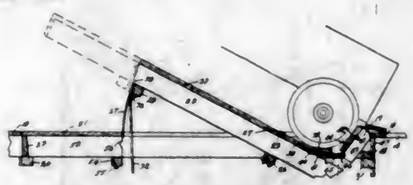


1. An ore crushing mill comprising a plurality of crushing cylinders, a shaft around which said cylinders are arranged in equidistantly spaced relation to one another and to the shaft, means for attaching the cylinders to the shaft, means for rotating the shaft, a plurality of crushing members in each of the cylinders, an ore scoop attached to the shaft for picking up ore on rotation of the shaft and a plurality of ore feed tubes of equal length in communication with the scoop and said cylinders.

1,621,776. APPARATUS FOR SUPPORTING TREE LIMBS AND THE LIKE. CHARLES D. GILMAN, Oakland, Calif. Filed July 27, 1926. Serial No. 125,176. 2 Claims. (Cl. 47—42.)

1. A tree limb supporting device comprising a supporting wire, a clamping band to fit around the object to be supported, lugs formed at the terminating ends of said band, said lugs having aligned openings therein through which the wire is threaded, said lugs having aligned notches at opposite sides with which the wire is engaged when bent around the lugs.

1,621,777. KEY HOLDER. WILLIAM DAVID GLADSTONE, New York, N. Y. Filed Dec. 16, 1925. Serial No. 75,679. 8 Claims. (Cl. 150—40.)

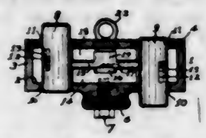


3. A key holder including a body having outer and inner walls, a partition extending longitudinally between said walls and secured at intervals thereto for dividing said body into a plurality of open-ended compartments, flexible key supporting means within each compartment permitting a key therein to be withdrawn from its compartment at either of the open ends thereof, a common closure for certain of the open ends of said compartments, another closure for each of the opposite open ends of certain of said compartments attachable to one of said walls, and still another closure for each of the open ends of the remaining compartments adjacent the last named open ends, each of the last named closures being attachable to one of the second named closures.

1,621,778. CALIPER. AXEL HAGLUND, Oakland, Calif., assignor of one-half to Oscar B. Linder, Oakland, Calif. Filed Oct. 27, 1924. Serial No. 746,109. 1 Claim. (Cl. 33—148.)

A caliper comprising an arm having a circular head, a pin concentrically disposed with respect to and rigidly mounted in said head, a gear rotatively mounted on said pin, a second arm pivotally secured to said head, and having a segmental gear adapted to mesh with said first named gear, a dial secured to said first named gear and adapted to rotate therewith, said dial having a diameter equal to the diameter of said head, and a circular cover plate of the same diameter as said dial and head, and being disposed over said dial, and rigidly mounted on said pin, said plate being provided with an aperture through which said dial is visible.

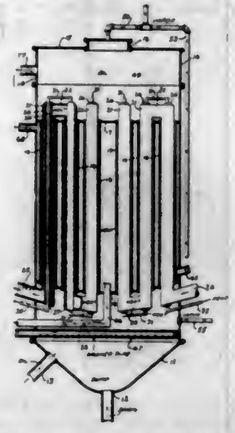
1,621,779. COMBINATION TRUCK AND WAGON DUMP. FRANZ S. HARSHBARGER, Des Moines, Iowa, assignor to Globe Machinery and Supply Company, Des Moines, Iowa, a Corporation of Iowa. Filed Nov. 18, 1925. Serial No. 69,854. 6 Claims. (Cl. 214—49.)



1. A combination truck and wagon dump, a supporting frame, a platform, means pivotally mounting said platform near one of its ends, a leaf pivotally connected to the shorter end of said platform, a blocking member pivoted to said frame and having one of its edges adjacent to the free edge of said leaf, and means for pivotally and slidably connecting the adjacent edges of said leaf and said blocking member.

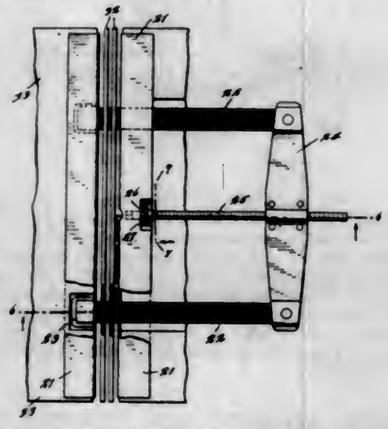
1,621,780. METHOD AND COMPOSITION FOR POLISHING SURFACES COMPOSED OF CELLULOSE ESTER COMPOSITIONS. JOSEPH B. HIRSH, Brooklyn, and ARTHUR D. ROBSON, New York, N. Y., assignors to Standard Varnish Works, New York, N. Y., a Corporation of New York. Filed Sept. 29, 1924. Serial No. 740,629. 11 Claims. (Cl. 51—278.)

1. An improved method of levelling, smoothing, and polishing surfaces containing cellulose esters, which comprises simultaneously subjecting the surface to a softening and an abrasive action.



1,621,781. DUPLEX-CONTROL SWITCH. SMITH A. HOGE, Rices Landing, Pa. Filed Dec. 13, 1924. Serial No. 755,630. 1 Claim. (Cl. 200—42.)

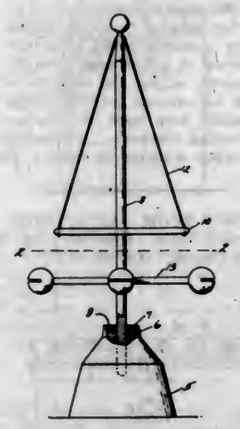
In combination, a duplex switch comprising a casing including a cover plate, a pair of vertically shiftable push plugs mounted in said casing, each of said pair of push plugs formed with an elongated longitudinally disposed slot, a contact plate fixed to the upper end of the outer wall of each of slots, a resilient horizontally disposed conductor secured in said casing centrally of its length, the free ends of said conductor extending into the respective slots of said pair of push plugs, said contact plates engaging said conductor when said pair of push plugs are depressed and disengaging said conductor when shifted to the elevated position, the engagement of said conductor in the slots of said pair of push plugs limiting the vertical movement of the latter in said casing.



1,621,782. APPARATUS FOR TREATING CRUDE OILS. HARRY A. HOPKINS, Taft, Calif. Filed Feb. 16, 1925. Serial No. 9,457. 3 Claims. (Cl. 196—5.)

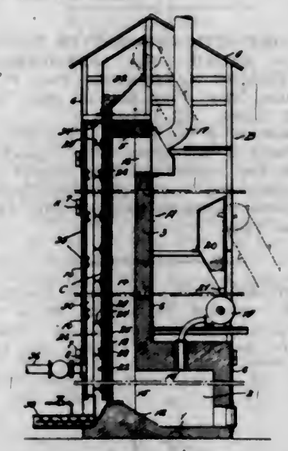
1. In an apparatus for dehydrating and cleansing crude hydro-carbon oils, including a casing divided into upper and lower oil chambers with a heating chamber interposed therebetween, a plurality of open ended tubes connecting the oil chambers, each of said open ended tubes having a plurality of tubes concentrically mounted therein and spaced apart to form a plurality of heat and oil passageways, the oil passageways opening at their ends into the oil chambers, the heat passageways being connected together to form a continuous conduit, said conduit having heat inlet and outlet openings, and means

to cause a circulation of oil from the lower oil chamber upwardly through the tubular passageways to the upper oil chamber and outwardly therefrom.



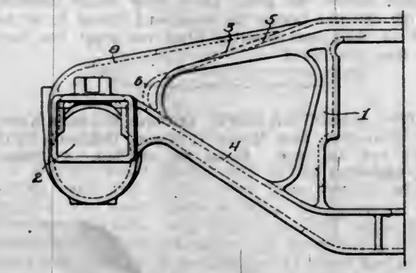
1,621,783. LOOSE-LEAF BOOK OR BINDER. WALTER R. HORSFIELD, Selly Oak, Birmingham, England, assignor to Morland and Impey, Limited, Northfield, Birmingham, England. Filed May 1, 1924, Serial No. 710,237, and in Great Britain May 9, 1923. 6 Claims. (Cl. 129—41.)

1. In a loose leaf book or binder, and in combination, a pair of edge bars adapted to serve as the rear edges of a cover, binding thongs passing freely through one of said edge bars and being secured to the other, a movable cross bar to which one end of each of the thongs is secured, a screw in threaded engagement with the cross bar and in rotatable connection with the first-named edge bar, and interacting means on the screw and first-named edge bar whereby the tension of the thongs is transmitted through the cross bar and screw to the edge bar.



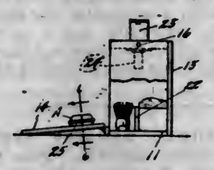
1,621,784. WHIRLIGIG. EARL RAYMOND JENKINS, New York, N. Y. Filed May 27, 1926. Serial No. 112,035. 1 Claim. (Cl. 46—14.)

In a whirligig of the character described, a weighted base formed with a vertical socket in its upper end, a spinning shaft having one end journaled in said socket, a pair of cross arms fixed to the shaft, bells mounted on the ends of the cross arms, a cross member provided with a central opening through which the spinning shaft



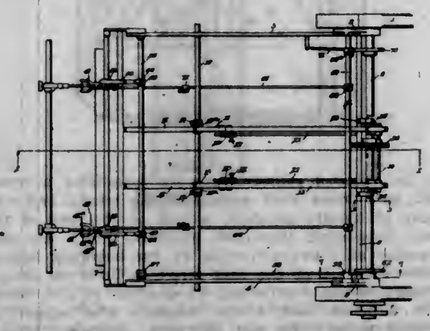
extends, said cross arm being freely slidable on the shaft, and a flexible cord connected at its upper ends to the opposite ends of the member and having its intermediate portion extending through an opening in the top of the shaft, said member being disposed above the cross arms.

1,621,785. RETORT. GEORGE McD. JOHNS, Rockdale, Tex. Filed Nov. 12, 1923. Serial No. 674,376. 13 Claims. (Cl. 202—14.)



13. An upright gravity feed retort for finely divided flowable material having no definite angle of repose including a shell and walls within the shell dividing the same into a heating-chamber, a vapor-collecting-chamber, and an intermediate treating-chamber, the wall separating the heating and treating chambers being flat and imperforate and the wall separating the treating and vapor collecting chambers being parallel to and spaced from the first wall and comprising a plurality of rectangular transversely corrugated plates disposed obliquely upwardly and outwardly in a spaced imbricated series and reversed the one to the other, said plates providing vapor-outlets from the treating chamber and retaining the material being treated in an approximately vertical thin layer against the heated wall.

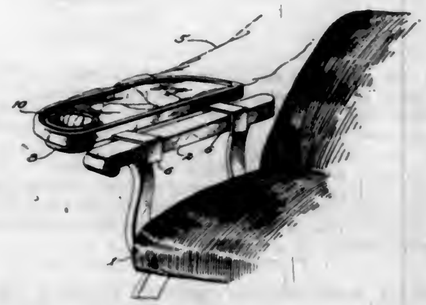
1,621,786. CAST CAR-TRUCK SIDE FRAME. GEORGE T. JOHNSON and HARRY W. STERTZBACH, Columbus, Ohio, assignors to The Buckeye Steel Castings Company, Columbus, Ohio. Filed Mar. 25, 1926. Serial No. 97,342. 1 Claim. (Cl. 105—205.)



A cast side frame for car trucks comprising a column, a journal box, and compression and tension members extending from the column to the top of the journal box, the tension member having the form of an inverted channel with its side walls united with the journal box, the compression member including a top plate which is disposed obliquely relative to the side walls thereof and unites said walls and merges through an arcuate web in the region of the journal box into the top plate of the tension member.

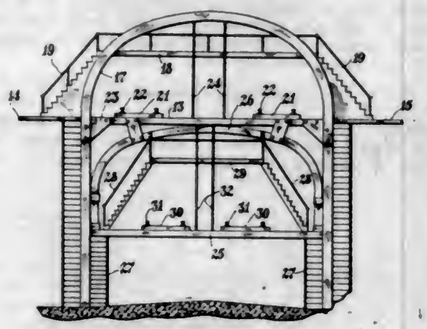
1,621,787. SHOE-SHINING CABINET. WALTER B. JOHNSON, Breckenridge, Tex. Filed Nov. 6, 1925. Serial No. 67,232. 4 Claims. (Cl. 15—265.)

2. In a shoe shining cabinet, a box comprising an invertible pivoted top member having pins on one side, a hinged front member having latches adapted to be engaged by said pins to hold the top and front rigid, and a back member having keepers adapted to be engaged with said pins, when said top is inverted.



1,621,788. SHEET-FEEDING MECHANISM. WILLIAM M. KELLY, Westfield, N. J. Filed Oct. 24, 1923. Serial No. 670,599. 31 Claims. (Cl. 271—46.)

1. Sheet feeding mechanism including in combination, a feed board, means to feed sheets along said board, slow-down fingers at the delivery end of said board each



having a shoulder, and means to move said fingers in the same direction as the sheet being fed after the forward edge of the sheet engages said shoulders, but at less velocity than said feeding means, then to cause said fingers to pause, then to advance again to carry said shoulders beyond the point where they would interfere with the cylinder taking the sheet and finally to be returned to their first position after the sheet has been taken from the board.

1,621,789. MANICURE REST. DOLORES WILKENS KENT, San Francisco, and MILAN C. GALE, Oakland, Calif. Filed Apr. 19, 1926. Serial No. 102,940. 4 Claims. (Cl. 132—73.)

1. A manicure rest comprising an oblong arm support, means carried thereby for clamping the same to the arm of a chair parallel therewith, and a basin detachably carried by the support at the outer end thereof, the body portion of the basin being located beneath the top surface of the support.

1,621,790. OVERHEAD RAILWAY SYSTEM. JOHN CHARLIE KING, Daiby, Australia. Filed May 13, 1926. Serial No. 108,830. 7 Claims. (Cl. 104—124.)

1. An elevated railway structure comprising a frame work, said frame work supporting two tracks, and consisting of upright members, located at the curb of the street, supporting transverse members, which are also supported at their extremities by the buildings located at the sidewalk of the said street, re-inforcing arched members having re-inforcing tie members to said transverse members, said arched members also supporting overhead cross walks and stairways, stairways extending from the said sidewalk to the said transverse members, which supports ties and rails for the said two tracks.

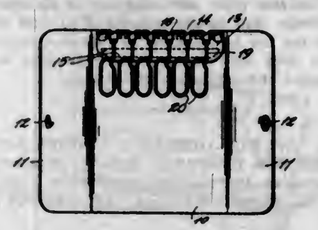
1,621,791. PROCESS OF MAKING WATERPROOF COMPOSITION AND PRODUCT PRODUCED THEREBY. LESTER KIRSCHBRAUN, Chicago, Ill. Filed Oct. 20, 1920, Serial No. 418,316. Renewed Oct. 8, 1926. 7 Claims. (Cl. 92—21.)

1. A process for making a felted fibrous composition comprising fluxing a waterproofing substance with a fatty acid dispersing same in an aqueous medium by means of an emulsifying agent, mixing the emulsion with a fibrous pulp contained in an aqueous vehicle, adding a reagent to produce an insoluble soap upon the surface of the particles of waterproofing substance and passing the mixture over a paper-forming machine to form a sheet-like web.

1,621,792. CHECK-ROOM APPLIANCE. FRED E. KLEIN, Cincinnati, Ohio. Filed May 28, 1925. Serial No. 33,577. 8 Claims. (Cl. 45—13.)

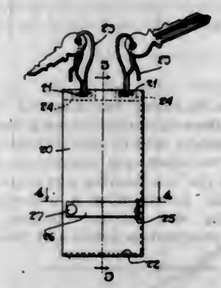
2. In a coat rack having a row of hooks, a row of identification numbers arranged above the hooks, a slider mounted to move along above the row of hooks, and an indicator on the slider pointing to numbers and pointing to hooks, for the purpose described.

1,621,793. COMPOSITION OF MATTER FOR CAPPING PULPS IN TEETH AND IMPROVEMENTS IN DENTAL FILLING MATERIALS. PAUL W. KRUGER, Attala County, Miss. Filed Aug. 11, 1924. Serial No. 731,489. 3 Claims. (Cl. 106—6.)



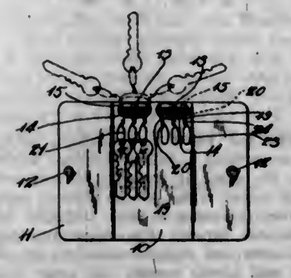
3. A composition of matter for filling in cavities in teeth, comprising a magnesium silicate powder coated with paraffine, and a germicidal fluid suitable for dental uses whose principal liquid germicidal ingredient is guaiacol, containing guaiacol methyglycolate dissolved in the germicidal fluid.

1,621,794. BRAKE SHOE. LUDGER E. LA BRIE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 2, 1925. Serial No. 66,254. 8 Claims. (Cl. 188—250.)



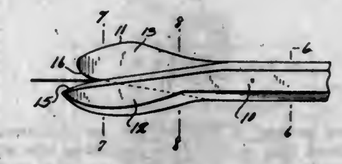
8. A pressed metal brake shoe built up of two sections, each having a cylindrical flange and a radial flange, arranged back to back with the radial flanges fastened together, a pair of right-angled lugs secured to the insides of the opposite cylindrical flanges and having their ends projecting inwardly from the side edges of the shoe, together with a steady-rest pin projecting from one side of the radial flanges opposite one of said lugs.

1,621,795. KEY CASE. CHARLES LORBER, Louisville, Ky. Filed Apr. 14, 1926. Serial No. 101,987. 6 Claims. (Cl. 150—40.)



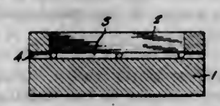
1. In a key case, a member doubled on itself and provided with a series of spaced slots at the doubled portion, a flexible chain housed within the doubled portion and having ball sockets spaced lengthwise of the member to lie opposite the slots, and key hooks each having a shank extending through a respective slot and provided with a ball head engaged in a respective socket.

1,621,796. KEY HOLDER. CHARLES LORBER, Louisville, Ky. Filed May 15, 1926. Serial No. 109,318. 8 Claims. (Cl. 150—40.)



1. In a device of the kind described, a body formed of a strip of material, key holding elements pivotally and swivelly connected to one end of the body, a strap carried by the body and free at one end from the body, and means to detachably secure the free end of the strap to the body, said strap being positioned to engage over a key held by one of said elements and resting on the body, said strip being spaced from the end of the body carrying the key holding elements, whereby the keys held by the strip are exposed to view.

1,621,797. KEY CASE. CHARLES LORBER, Louisville, Ky. Filed July 10, 1926. Serial No. 121,553. 4 Claims. (Cl. 150—40.)



1. In a key case, a body, a key hook holding member swingingly mounted on the body, and key hooks slidably and swivelly connected to said member.

1,621,798. SHEET-METAL-CUTTING TOOL. FREDRICK J. MCFARLAND, Bremerton, Wash. Filed Jan. 9, 1926. Serial No. 80,289. 6 Claims. (Cl. 164—80.)

1. A sheet metal cutting tool having a shank and a cutting head, the cutting head being formed with an upper and a lower blade or wing, the wings at their forward ends being separated from each other by an approximately V-shaped space, said wings being laterally offset with relation to each other, the inner face of each blade being flat and disposed in approximately the same plane.

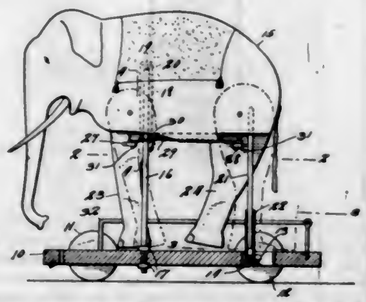
1,621,799. CAPSTONE FOR PORCHES. CARL MARCH, Chicago, Ill. Filed July 2, 1926. Serial No. 120,248. 1 Claim. (Cl. 47—39.)

A cap stone for porches and the like having a recess in its upper face for holding a flower pot or the like, the bottom of the recess being grooved and the stone having ports passing through its sides and communicating with the grooves, said grooves permitting air to circulate under the flower pot as well as acting as a drain to drain water from the bottom of the recess through the ports.

1,621,800. ELECTRIC WATER HEATER. ALPHONSE MARTIN, Ogdensburg, N. Y., assignor of fifty-one one-hundredths to Max Katzman, Ogdensburg, N. Y. Filed Sept. 26, 1922. Serial No. 590,584. 3 Claims. (Cl. 219—40.)

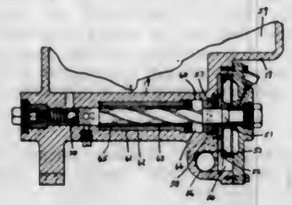
1. In an electric water heater, a pair of upright conductors, each provided with a plurality of vertically spaced electrodes having their axes extending horizontally, the electrodes of each conductor being arranged in axially opposed spaced relation to those of the other conductor to form vertical watergaps between adjacent ends of opposed electrodes.

1,621,801. COLLAPSIBLE TUBE CLOSURE. JOHN D. MILLER, Newton, N. C. Filed Mar. 19, 1926. Serial No. 95,941. 1 Claim. (Cl. 221—60.)



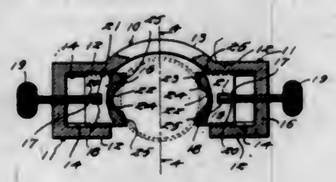
As a new product of manufacture, an attachment for a conventional type of collapsible dispensing tube wherein said tube embodies a conical discharge end having a central externally screw-threaded discharge nipple, said attachment being in the form of a closure for said nipple and including a cylindrical body having a conical recess in its bottom to engage the conical end portion of said tube, a central screw-threaded bore into which said nipple is adapted to tap, a spherical socket in communication with said bore, and a discharge opening of a diameter less than said bore, and a ball valve fitted snugly in said socket but freely movable therein and having a portion to project through and beyond said discharge opening when the valve is in closing position, said valve having a passage adapted to register with said bore and discharge opening, and an operating crank for the valve extending at right angles to the longitudinal axis of the passage in said valve and mounted for movement upon said body.

1,621,802. VEHICLE BODY DOOR. JAMES MORRISON, Cincinnati, Ohio, assignor to The Highland Body Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 23, 1922. Serial No. 570,397. 14 Claims. (Cl. 296—47.)



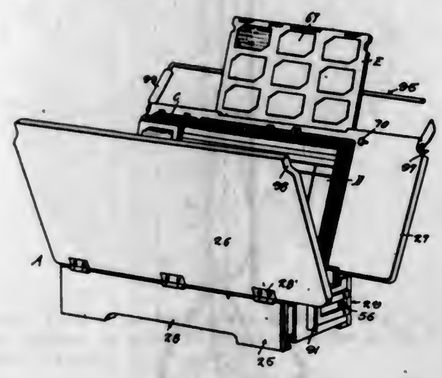
4. In a vehicle cab, the combination of a door, an element on which the door will ride, means behind which the door will move, and a resiliently pressed bar on the door, and means beneath the said element, said bar having means at its end to engage said means beneath said element to hold the door tightly down on the said element.

1,621,803. ANIMAL TOY. CARL WHEELER MOTT, Rock Falls, Ill., assignor to The Rich Manufacturing Company, Sterling, Ill. Filed Feb. 18, 1926. Serial No. 89,159. 6 Claims. (Cl. 46—45.)



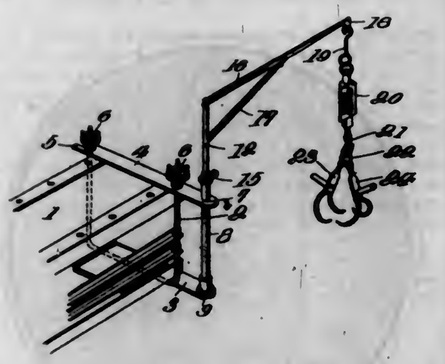
1. A toy comprising a support having traction wheels, an animal figure pivotally supported thereon for movement in a vertical plane and having transversely opposed legs pivoted to the body, a vertically disposed pivot mounted on the body, and a transversely extending member mounted on said pivot and engaging at its opposite ends with the legs, and means connected to said wheels for acting as the toy is propelled to rock the body upon its pivot and rock said transversely extending member to thereby cause the oscillation of the legs.

1,621,804. FLUID-OPERABLE LUBRICATOR AND FEEDER FOR ENGINES. FRED K. MURPHY and RAY W. RETTERER, Indianapolis, Ind. Filed July 13, 1925. Serial No. 43,249. 6 Claims. (Cl. 184—76.)



2. A lubricator including an elongated chamber open at both ends, a sleeve mounted in said elongated chamber, a screw positioned within and secured to said sleeve to prevent relative rotational movement therebetween, said chamber and the combination screw and sleeve being relatively rotatable for forming a pressure pump, and means for causing said relative rotation between the chamber and the combination screw and sleeve.

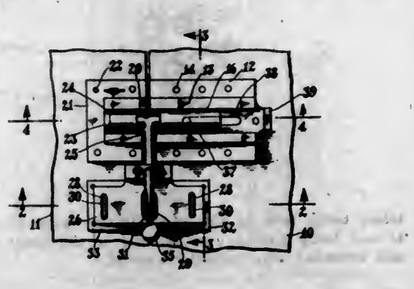
1,621,805. REST AND HOLDER FOR WATCH MOVEMENTS. JOHN I. NASSIT, Fergus Falls, Minn. Filed Mar. 30, 1926. Serial No. 98,587. 2 Claims. (Cl. 81—6.)



1. A clamp for small or peculiarly shaped watch movements comprising a pair of opposed U-shaped members having the arms at one side thereof connected by an outwardly bowed bridge, blocks slidably supported and guided between the arms of each U-shaped member and means adjustable through the connecting bar of each U-shaped member and engaged with the associated block for shifting said blocks toward and away from one another, adjacent faces of said blocks being each formed with a V-shaped notch, the end walls of the blocks at opposite sides of the notches being grooved.

1,621,806. BANK LEDGER. ANDREW J. NORMAN, California, Pa.; Katie I. Norman executrix of said Andrew J. Norman, deceased. Continuation of application Serial No. 11,532, filed Feb. 25, 1925. This application filed Jan. 16, 1926. Serial No. 81,749. 15 Claims. (Cl. 129—1.)

3. The combination, with a ledger case, of means in the ledger case for holding ledger sheets, signature cards and stop payment notices in displaying position.



1,621,807. HAY REMOVER AND WEIGHER FOR HAY PRESSES. JOHN GARY OWENS, Barnwell, S. C., assignor of one-fourth to R. C. Holman, Barnwell, S. C., and one-fourth to John I. Rice, Columbia, S. C. Filed Feb. 4, 1924. Serial No. 690,426. 3 Claims. (Cl. 214—2.)

1. The combination with the bale chamber of a hay press, of a pair of bars arranged above and below said chamber, a U-shaped yoke embracing said chamber for securing said bars in position on said chamber, a tubular support mounted in said bars, a mast revolubly mounted in said support, a crane carried by said mast and a weighing scale carried by said crane having hay hooks for engaging the bale of hay.

1,621,808. LATCH. JOSÉ PALACIOS, New York, N. Y. Substitute for application Serial No. 702,301, filed Mar. 27, 1924, abandoned Mar. 18, 1926. This application filed May 18, 1926. Serial No. 108,713. 5 Claims. (Cl. 292—57.)

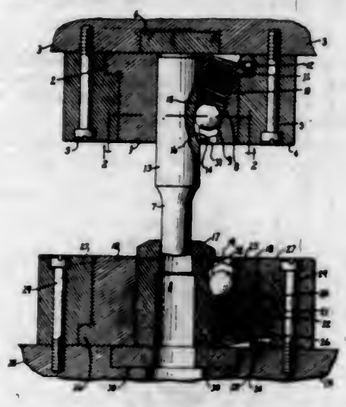
1. A latch comprising a bolt, a keeper therefor, a block in which said bolt is rotatably mounted, a guide element for said block permitting longitudinal movement of the latter with the bolt, an arm projecting laterally from the bolt, a hasp plate fixed to the free end of said arm and formed with a plurality of slots, said slots being

spaced from one another longitudinally of the bolt, and extending transversely with respect to the latter, and staple elements adapted for mounting respectively on a door and door frame and adapted to individually engage the respective slots on the said hasp plate.

1,621,809. MOORING DEVICE. EMIL PETERSEN, Hamilton Beach, N. Y., assignor of one-half to Edward A. Pulaski, New York, N. Y. Filed Feb. 4, 1926. Serial No. 85,891. 3 Claims. (Cl. 114—230.)

3. A mooring device comprising an outer sectional casing having open upper and lower ends, a vertical tube positioned centrally in said casing having its extremities disposed in said openings, a stop adjustably secured intermediate the extremities of said tube, pistons disposed in said tube adjacent opposite ends of said stop, springs engaging said pistons normally holding the latter against said stop, rods attached to said pistons and extending outside of said casing, said rods being adapted to be attached to mooring ropes, said rods and pistons being movable in opposite directions to provide in a resiliently extensible tension absorber, and water tight sealing means disposed in the ends of said tube adapted to permit the passage of said rods therethrough.

1,621,910. IDENTIFYING TAG. CHARLES M. RICE, St. Louis, Mo. Filed July 19, 1923. Serial No. 652,469. 1 Claim. (Cl. 40—19.)



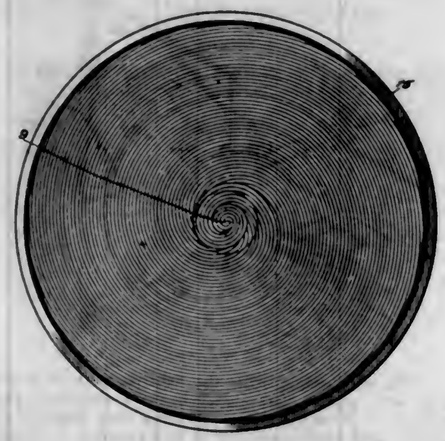
An identifying tag comprising a pair of telescoping members, one of which is transparent, said telescoping members being provided with a plurality of flat faces, said flat faces of one telescoping member being located adjacent to the flat faces of the associated member when said members are telescoped one within the other, and a

plurality of labels interposed between the flat faces of said telescoped members so that said labels may be read through the flat faces of said transparent member, said

labels being bent in the approximate shape of a letter U and being passed over an end of the inner member and extended longitudinally thereof.

1,621,811. PUNCH AND DIE RETAINER. OTIS K. RICHARD and CLEMENT C. RICHARD, Detroit, Mich. Filed Aug. 24, 1922. Serial No. 583,989. 10 Claims. (Cl. 279—30.)

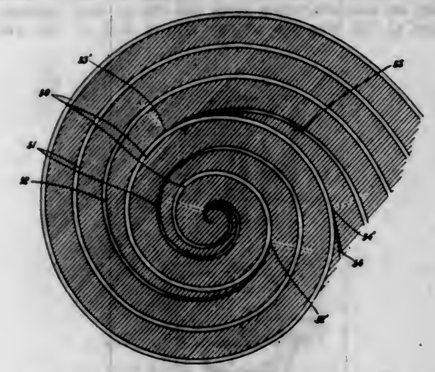
1. In a retainer for punches, dies, and similar tools, a base having a hardened plate set therein, a centrally apertured retainer detachably secured to the base over the plate, the tool having a shank adapted for insertion in the apertured retainer and being a sliding fit therein, the hardened plate providing a backing for the tool and the tool being provided with a groove in the side thereof extending at an angle to the longitudinal axis thereof, the retainer also having an aperture in the wall thereof extending at a slightly greater angle to the longitudinal axis of the tool than the said groove and opening into the central aperture, a ball in the annular aperture of the retainer and a coiled spring secured in the said aperture and adapted to force the ball into engagement in the groove of the tool shank.



1,621,812. DRILL-HOLE REAMER. JOSEPH ROSS, New Albany, Ind. Filed Sept. 14, 1925. Serial No. 56,334. 1 Claim. (Cl. 255—75.)

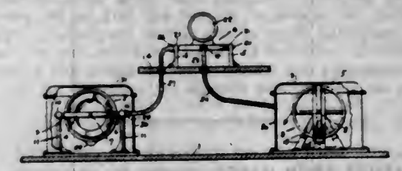
A drill hole reamer comprising an elongated body consisting of spaced parallel side plates and spacing blocks secured between the ends thereof, one of said blocks having an opening disposed axially of the body and also having a blade-receiving recess in its inner end whereby the blades are held against outward movement while the reamer is being inserted in the drill hole, the inner end of the other block being formed with opposed blade-expanding cams, a driving shank for the body passing slidably through the aforesaid opening, and a pair of blades pivoted to the inner end of said shank and normally confined between the aforesaid side plates, the free end portions of said blades being engageable with

the aforesaid cams when the shank is forced downwardly, the other ends of said blades being normally seated in the above-named recess.



1,621,813. SCREEN FOR REDUCING SECONDARY RADIATION FROM X RAYS. HAROLD S. SAWFORD, Brooklyn, N. Y. Filed Jan. 26, 1924. Serial No. 688,761. 14 Claims. (Cl. 250—34.)

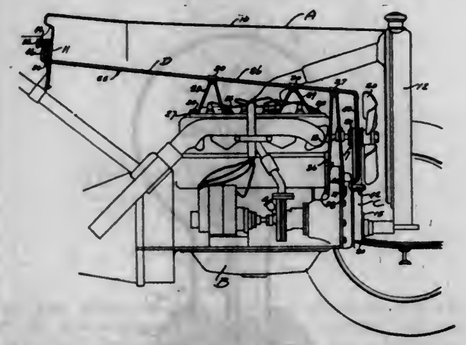
1. A screen for suppressing secondary rays in X-rays comprising a plurality of spirally wound ribbons of material impervious to X-rays, certain of said spirally wound ribbons terminating short of the centre of the screen.



1,621,814. X-RAY SCREEN. HAROLD S. SAWFORD, Brooklyn, N. Y. Filed July 24, 1925. Serial No. 45,734. 23 Claims. (Cl. 250—34.)

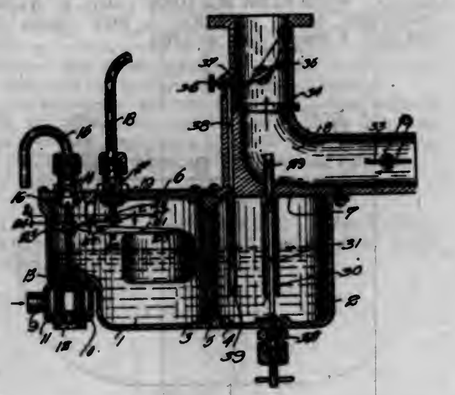
1. The method of making an X-ray screen which comprises providing a winding core or templet locating a multiplicity of composite transparent and impervious strips around the templet with their inner ends abutting the same, removing the templet, trimming the inner ends

of said strips to bevel them along a smooth volute curve, and winding in additional composite strips to fill the space vacated by the templet.



1,621,815. GYROSCOPIC STABILIZER. CASPER E. SCHUELLER, Berkeley, Calif. Filed Aug. 5, 1926. Serial No. 127,460. 5 Claims. (Cl. 74—78.)

1. A gyroscopic stabilizer comprising two gyroscopes pivotally mounted on a support, the supporting pivots of each gyroscope being on a normally horizontal axis at right angles to the axis of the gyroscope, and the axis of the supporting pivots of one gyroscope being at right angles to the axis of the supporting pivots of the other gyroscope; a gimbal consisting of an inner element mounted on a pivotal axis within an outer element and adapted to have an instrument mounted thereon, the outer element being pivotally mounted upon said support on an axis at right angles to the axis of the inner element; a shaft connecting a pivot of one of the gyroscopes with one of the pivots of the inner element of the gimbal; and another shaft connecting one of the pivots of the other gyroscope with one of the pivots of the outer element of the gimbal.



1,621,816. TEMPERATURE REGULATOR. GEORGE E. THORNE, Trenton, N. J. Filed Apr. 17, 1923. Serial No. 632,689. 2 Claims. (Cl. 123—171.)

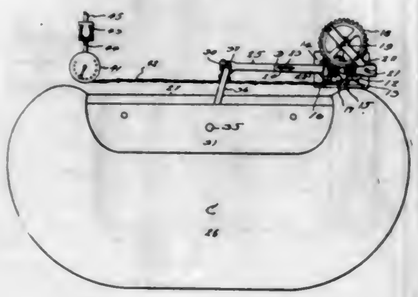
1. In a temperature regulator for the engines of automobiles the combination with an internal combustion engine including a fan and driving belt therefor, of an operating rod including an elongated straight body portion having a transverse crank off-set at one end thereof, means rotatably supporting the elongated body of the operating rod on a fixed axis longitudinally of the internal combustion engine so that upon oscillative movement of said body portion the crank offset will be moved transversely of the internal combustion engine in a plane parallel with the plane of rotation of the fan belt, the crank offset portion at the free end thereof having a roller adapted to engage at the outer surface of the endless belt, the crank offset being disposed entirely outwardly of the confines of said belt, said body portion of the rod being adapted for extension rearwardly along the automobile to the instrument board thereof, and detent means for mounting on the instrument board of the automobile for positively holding the body portion of the rod in any of a number of positions

whereby the roller on the crank offset of the rod may engage the external surface of the fan belt with a desired pressure to regulate the efficiency of fan speed or whereby the roller may be entirely lifted free of the fan belt and held in such position.

1,621,817. VACUUM FEED SYSTEM. JESSE L. VAN PELT, Pullman, Wash. Filed Aug. 31, 1926. Serial No. 132,841. 2 Claims. (Cl. 158—36.1.)

1. The combination with a vacuum tank having alined, spaced, ports and valve seats therefor and a suction valve seat and port, of a stem having heads thereon forming a gasoline valve and a vent valve for coaction with the alined seats, a valve for the suction valve-seat and a stem thereon, a float having a lever arm pivoted in the tank and co-acting with said headed-stem, a pin in the suction valve-stem for co-action with the lever arm, and a spring plate on said arm for coaction with the last mentioned stem.

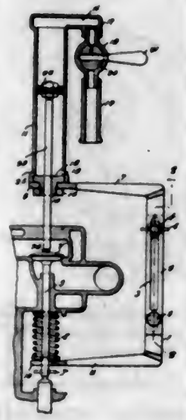
1,621,818. METHOD OF SUPPORTING LIFE IN LIVING ORGANISMS IN SEALED CONTAINERS AND DEVICE THEREFOR. RAYMOND H. WALLACE, Livermore, Iowa. Filed June 10, 1926. Serial No. 115,094. 9 Claims. (Cl. 47—38.)



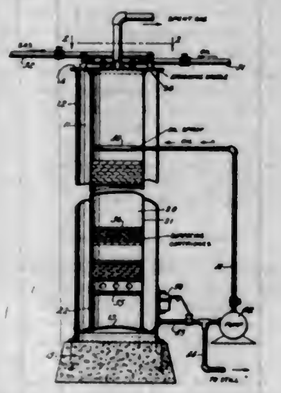
1. The method of supporting plant life in a hermetically closed system which consists in retaining oxygen

and carbon dioxid given off by the plant during photosynthesis and respiration in proximity to the plant to be reabsorbed thereby, and returning metabolic and respiration water to the roots of the plant.

3. A device of the character described comprising a hermetically sealed container, a vertical plant support in said container including a tubular lower stem, and a capillary medium in said stem for returning to the roots of the plant metabolic and respiration water given off by the plant.



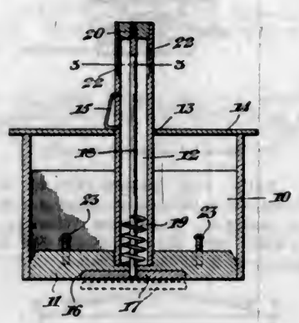
1,621,819. WAVE-BATH MACHINE. JOHN B. WANKO, Sioux City, Iowa. Filed May 1, 1926. Serial No. 106,173. 2 Claims. (Cl. 4—176.)



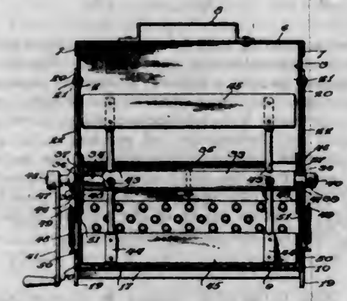
1. In a washing machine, a tub having side walls, a bottom and end walls, a partition spaced from one of the side walls to form a large and small compartment, and having its edges spaced uniformly a slight distance from the bottom and side walls so as to substantially form a complete side wall for the large compartment, and a paddle pivoted in the small compartment, said paddle having a depending portion adapted to swing longitudinally of the tub and to transmit to water in the large compartment longitudinally rocking motion.

1,621,820. VALVE LIFTER. WILLIS L. ALLEN, Nacogdoches, Tex. Filed Nov. 14, 1924. Serial No. 749,986. 1 Claim. (Cl. 29—86.3.)

In a valve lifter, a yoke including longitudinally slotted members arranged side by side and in contact, a bolt carried by each member and extending transversely therethrough and in the slot in the adjoining member, means carried by the bolts for binding the members together, an arm extending from the end of each member, an eye at the free end of one arm, a fork at the free end of the other arm, said arms being offset laterally to position the centers of the eye and fork in the plane of the contacting faces of the slotted members, a cylinder detachably connected to the eye, a piston therein, and a valve-engaging rod connected to the piston and extending from the cylinder and through the center of the eye.



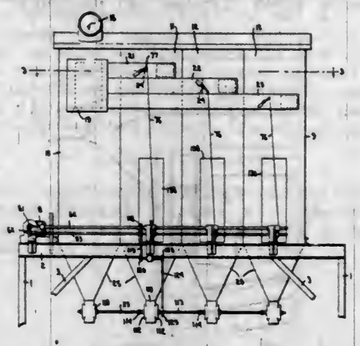
1,621,821. PROCESS OF RECOVERING CONDENSABLE VAPORS FROM GASES. HARRY H. ARMSTRONG, Los Angeles, Calif. Filed July 11, 1923. Serial No. 650,802. 8 Claims. (Cl. 183—114.6.)



1. A process of recovering condensable vapors from a gas which comprises: atomizing a liquid absorbent agent by means of the gas; allowing the atomized particles of absorbent medium to pass through an enclosed space in intimate contact with said gas; and passing the mixture of gas and atomized particles into a chamber in which said mixture is brought into intimate contact with unatomized liquid absorbent which is circulated through said chamber.

1,621,822. BUTTER MOLD. ALGOTT ARONSON, Vantage, Saskatchewan, Canada. Filed Mar. 10, 1926. Serial No. 93,755. 2 Claims. (Cl. 31—44.)

2. In a device of the character described the combination, with a piston member having a hollow stem, of a spring actuated plunger plate normally held within the piston, a stem for the plunger plate within the piston stem, means on the piston stem for limiting the downward travel of the piston and means in the piston stem and on the plunger stem for closing the piston stem and limiting the downward travel of the plunger, respectively.



1,621,823. COLANDER. CLAUDE E. AYRES, Axtell, Nebr. Filed Dec. 3, 1925. Serial No. 73,015. 6 Claims. (Cl. 146—174.)

1. A colander comprising a housing having opposed walls and a bottom formed with outlet openings, an operating element in said housing, and bearings to rotatably support said operating element, said bearings being slidably supported by said walls and yieldably held against movement away from said bottom.

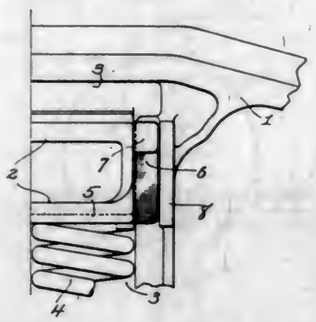
1,621,824. DUST ARRESTER. GEORGE A. BOESSER, Cleveland, Ohio, assignor to The W. W. Sly Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 6, 1924. Serial No. 690,902. 17 Claims. (Cl. 183—55.)

1. In a continuous dust arrester, the combination of a settling chamber having a dust-laden air intake, a plurality of screen chambers individually connected to said settling chamber, suction exhaust means connected to said screen chambers, continuous discharge means for said chambers adapted to prevent ingress of air therethrough into said chambers, and means for selectively shutting off the dust-laden air supply to said chambers and for rapping the screens therein to remove the accumulated dust.

1,621,825. INSECTICIDE AND FUNGICIDE. KINNISON S. BOYNTON, Oakland, Calif., assignor, by direct and mesne assignments, to E-Z-Way Co., Oakland, Calif., a Corporation of California. Filed July 25, 1923. Serial No. 653,808. 10 Claims. (Cl. 167—6.)

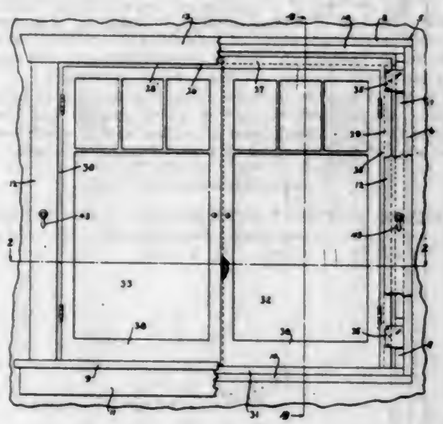
1. An insecticide formed of sodium sulphide which is melted and to which is added sulphur to form polysulphides of sodium, the mixture is allowed to partly cool and soap is added to form a paste when cold.

6. The method of producing a paste like insecticide which consists of adding sulphur to sulphide of sodium melted in its own water of crystallization to substantial saturation then partly cooling the mixture and then adding soap until the mixture has a paste consistency.



8. An insecticide material formed of sodium sulphide which has been melted and to which sulphur has been added to form polysulphides of sodium and to which soap has been thereafter added and 2% of copper sulphate.

1,621,826. GARMENT ATTACHMENT. PETER T. BURTCHAELL, San Rafael, Calif. Filed Mar. 22, 1926. Serial No. 96,587. 1 Claim. (Cl. 2—250.)



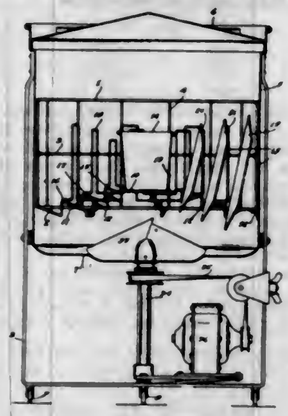
A reinforcing sheath of the class described comprising a body formed of a sheet of stiff and flexible material bent upon itself adjacent to one end to provide oppositely disposed side portions of different widths, said side portions being adapted for receiving between them the marginal portions of the outer wall of the pocket of a garment and conforming in width, substantially to the width of said pocket wall, one of said side portions being provided with upstruck portions for engaging the wall of a pocket when the same is inserted between the side portions, the bent portion of said body being arranged so as to overlie the edge of a pocket wall when the same is inserted between the side portions, and the outer of said side portions being provided with a longitudinal groove and an in-turned edge portion located adjacent to the groove for the purpose described.

1,621,827. CAR TRUCK. SAMUEL PRESCOTT BUSH, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Filed Dec. 7, 1925. Serial No. 73,895. 2 Claims. (Cl. 105—207.)

1. In a car truck, the combination of a side frame, a bolster engaged therethrough and provided on its side with a lug in spaced relation to the side frame, a key extending beneath the bolster and having an upstanding terminal portion fitting between the side frame and the lug on the bolster, and a guard carried by the side frame and extending over the terminal of the key to hold it to the bolster.

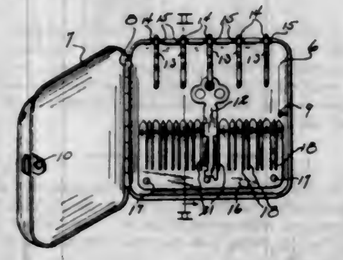
1,621,828. WINDOW-SASH CONSTRUCTION. DAVID R. CANNY, Los Angeles, Calif. Filed May 10, 1926. Serial No. 107,877. 3 Claims. (Cl. 20—53.)

1. In swinging window sash construction, a window frame of usual form including inner and outer sills and top and side guide ways, an auxiliary frame mounted in the guide ways to move vertically and laterally, a swinging sash hingedly secured to said auxiliary frame, said sash when in closed position being locked by the main window frame against movement, and means for moving the auxiliary frame vertically and laterally to disengage the sash from the window frame to permit the same to swing clear of the main and auxiliary frames.



1,621,829. COMBINATION JACK AND PULLER. HJALMAR CARLSON, Duluth, Minn. Filed Mar. 15, 1926. Serial No. 94,641. 1 Claim. (Cl. 254—166.)

A pulling device of the character described comprising a driving shaft carrying spaced gears thereupon, a shaft carrying a drum and gear the latter optionally engageable with either of the spaced gears, a pulling cable about the drum and extendible in opposite directions, and



means whereby the pull exerted upon the cable when the device is in action will hold the cooperative gears in mesh.

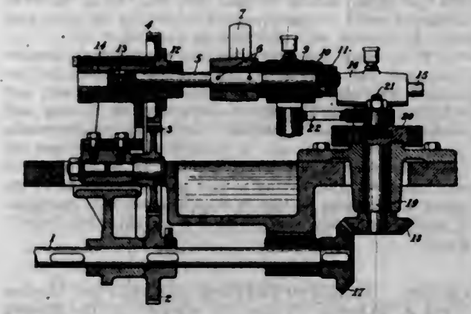
1,621,830. RACK FOR DISHWASHING MACHINES. GUY S. CLARKSON, Winnipeg, Manitoba, Canada, assignor to David R. Finkelstein, Winnipeg, Manitoba, Canada. Filed Sept. 25, 1923, Serial No. 664,762, and in Canada Aug. 2, 1923. 4 Claims. (Cl. 141—9.)

1. A plate supporting rack having spaced, upwardly inclining, plate supporting rods and with the rods bent to present opposing pockets contained in vertical planes and adapted to receive the lower edges of the standing plates with the lower edge of each plate resting in two adjacent pockets and having the rod portions forming the pockets inclined to cant the upper edges of the plates in a direction away from the upper ends of the rods and upstanding stationary arms interposed between adjacent rods and engaging the upper edges of the several plates and supporting them in their canted position.

1,621,831. KEY COMPACT. HENRY M. COLVIN, Kansas City, Mo. Filed May 22, 1926. Serial No. 110,942. 5 Claims. (Cl. 59—96.)

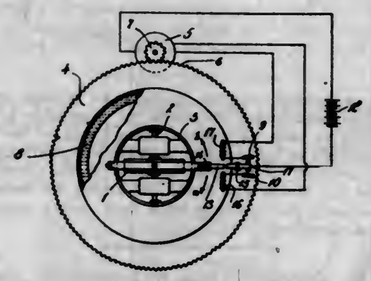
1. A key compact of the class described comprising a back and cover member hingedly attached along one side to form a hollow casing, a plurality of key carrying hooks pivotally carried by said back member along its upper edge, a slot plate carried within said casing and adjustable clips carried by said plate for engaging each key carried by said plurality of hooks.

1,621,832. GRID LEAK. JAMES CONNERS, Crescent City, Calif. Filed June 29, 1926. Serial No. 119,339. 1 Claim. (Cl. 201—76.)



A grid leak comprising an elongated cylinder of non-conducting material containing a solution of mercury, nitric acid and distilled water and hollow spherical caps of conducting material hermetically sealing the ends of the cylinder.

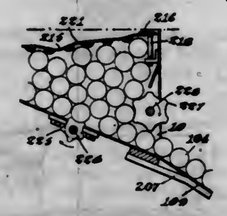
1,621,833. CAR-DOOR MECHANISM. CHARLES HOWARD CRANE, Kansas City, Mo. Filed May 11, 1925. Serial No. 29,636. 5 Claims. (Cl. 20—21.)



1. In a car door mechanism, a car body having a doorway, a door frame fastened to said car body and having a horizontal upwardly facing channel, a door movable in said channel to and from a position closing said doorway, and a door sill having a portion movable to and from a position extending across said channel to cover the latter and in the path of said door.

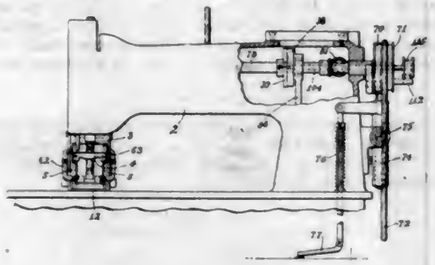
1,621,834. CUTTING DEVICE FOR CIGARETTE MACHINES. ETIENNE DANCHE, Paris, France, assignor to Société Anonyme des Usines A. E. Decouflé, Paris, France. Filed Nov. 10, 1925, Serial No. 68,206, and in France Jan. 8, 1925. 1 Claim. (Cl. 131—37.)

In a device for cutting off the cigarette roll which is discharged at a given speed from a cigarette machine, the combination of a slide having a reciprocating motion, the said motion being parallel with the motion of the cigarette roll and its speed being equal to that of the said roll, the said slide containing at least one rapidly rotating knife, a rotatable shaft mounted on the said slide and adapted to follow the reciprocating motion of the slide, a driving sleeve in which the said shaft is disposed, means connecting the shaft with the said sleeve whereby the shaft may slide within the sleeve and may also be rotated by the latter, a support whereon the said sleeve is mounted and which prevents the lengthwise sliding of the said sleeve, a rotatable driving shaft, and means for driving the said sleeve from said driving shaft.



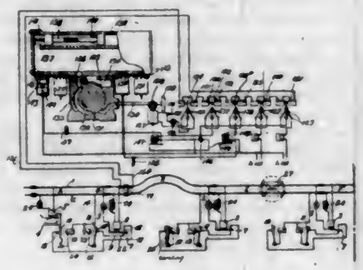
1,621,835. ELECTRICAL CONTACT DEVICE FOR FOLLOW-UP SYSTEMS. ARTHUR P. DAVIS, Brooklyn, N. Y. Filed Jan. 9, 1923. Serial No. 611,680. 7 Claims. (Cl. 33—204.)

1. In a system of the type described, the combination of a controlling element, a controlled element, an electrical contact device carried by said controlled element, means for moving said controlled element, responsive to the action of said contact device, and magnetic means associated with said controlling element for actuating said contact device, said means being incapable of transmitting mechanical vibrations from said controlling element to said contact device.



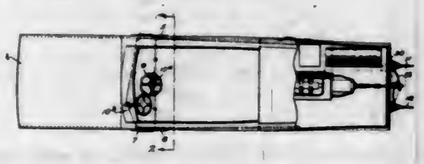
3. In a system of the type described, the combination of a controlling element, a controlled element, an electrical contact device carried by said controlled element, means associated with said controlling element for exerting a force on said contact device to actuate the same, and means for neutralising the reaction on said controlling element, of said actuating means.

1,621,836. BOBBIN MAGAZINE. WILLIAM FLETT, Wakefield, Mass., assignor to Lawrence Duck Company, Lawrence, Mass., a Corporation of Massachusetts. Original application filed Mar. 28, 1921, Serial No. 456,814. Divided and this application filed Apr. 18, 1922. Serial No. 555,095. 19 Claims. (Cl. 139—245.)



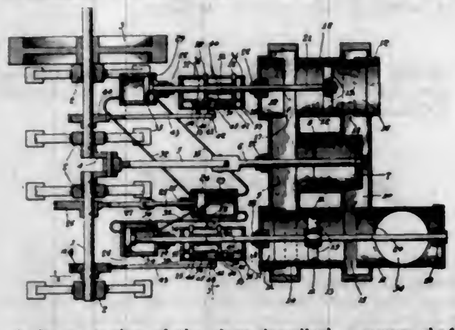
1. A bobbin-magazine having a bottom on which filled bobbins may roll, and having a discharge opening through which a series of bobbins may pass while resting on said bottom, means arranged to urge the bobbins toward said opening, and means arranged to clear the bobbins of the lowest course and act on one or more other bobbins so as to urge them away from said opening.

1,621,837. LABEL-SEWING MACHINE. PERCY W. HATFIELD, Wakefield, Mass., assignor to Winship, Bolt & Co., Wakefield, Mass., a Copartnership consisting of Charles N. Winship and Elizabeth S. Bolt. Filed Apr. 17, 1922. Serial No. 553,433. 16 Claims. (Cl. 112—104.)



1. In a sewing machine having two needles spaced apart, the combination of means for presenting a label in position to have its opposite edges sewed to the work simultaneously by said needles, mechanism for causing said needles to make overlapping stitches at the start and finish of the sewing operation, and means for automatically stopping the machine when said sewing operation has been completed.

1,621,838. AUTOMATIC RAILWAY CONTROL. GEORGE M. B. HAWLEY, Geneva, N. Y. Filed Jan. 9, 1918. Serial No. 211,061. 23 Claims. (Cl. 246—41.)



1. A railway system having normally inoperative means for producing a predetermined speed mechanically tuned, means controlled by pulsating current for releasing said first means, and a block having a source of pulsating current of a frequency to actuate said tuned means for controlling said release upon entry of the train into the block.

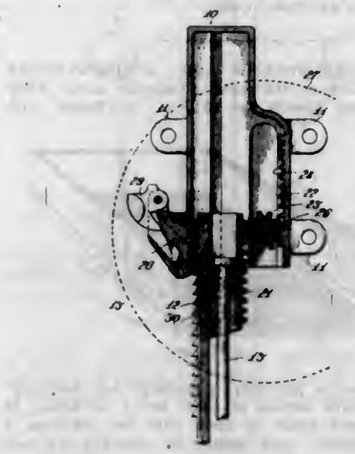
1,621,839. BOAT. WILLIAM ALBERT HICKMAN, West Mystic, Conn. Filed Jan. 10, 1923. Serial No. 611,889. 10 Claims. (Cl. 114—66.5.)

2. A boat having a hull presenting inverted V-bottom sections broadening aft and rudders pivoted to the sides of the bow on axes, the upper ends of which are nearer the bow than the lower ends, said rudders adapted to swing over board.

1,621,840. HYDRAULIC ENGINE. HOKON HOXOSS, Chicago, Ill. Filed July 28, 1922. Serial No. 578,204. 2 Claims. (Cl. 121—124.)

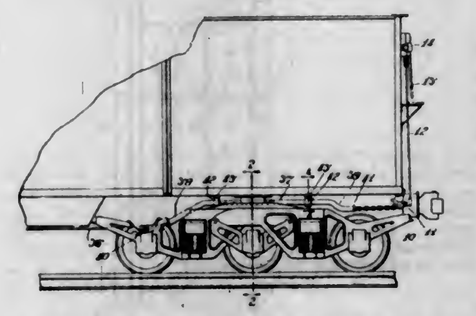
1. In an engine of the class described, a power shaft, a power cylinder having inlet ports and outlet ports, a power piston therein and operatively connected to said power shaft, valves for controlling said inlet and outlet ports, fluid pressure means for actuating said valves in opposite directions, controlling means for retaining said valves in a predetermined position against said pressure, and means actuated by said power shaft when said piston is on dead center for actuating said controlling means for releasing said valves.

1,621,841. CAMP BED. ROBERT CLYDE JOHNSTON and JAMES ROYDEN ESTEY, Vancouver, British Columbia, Canada. Filed Apr. 11, 1923, Serial No. 631,386, and in Canada Sept. 2, 1922. 5 Claims. (Cl. 5—114.)



3. In a camp bed, a longitudinal rail, an end rail resting on said longitudinal rail, means connecting said end rail to said longitudinal rail, a leg pivotally connected to the end of said longitudinal rail to fold alongside said rail or to turn down at right angles thereto, said leg having a portion projecting upwardly above the longitudinal rail and alongside the end rail when in the latter position and adapted to engage said end rail to limit the turning movement and prevent lateral movement of the leg, and adjustable fastening means connected to said end rail and adapted to engage the upper end of said legs to pull the same inward longitudinally, the point of connection of said fastening means to the end rail being laterally within its point of engagement with the leg, so as to also exert an inward pull laterally on said leg.

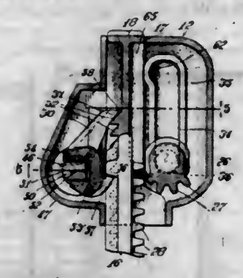
4. In a camp bed, an extensible longitudinal member comprising rail sections slidingly connected together, releasable latch means for automatically securing said rail sections in extended position, and means for moving said sections to extended position comprising longitudinally spaced apertures in one of said rail sections and an operating lever having a lug adapted to fit any one of said apertures and having a cam portion adapted to engage the other rail section in such manner that operation of said lever causes said sections to be extended longitudinally.



1,621,842. BRAKE-OPERATING APPARATUS. AUGUSTUS F. KLASING, Chicago, Ill., assignor to The Klasing Car Brake Company, a Corporation of Colorado. Filed Feb. 1, 1922. Serial No. 533,268. 4 Claims. (Cl. 74—119.)

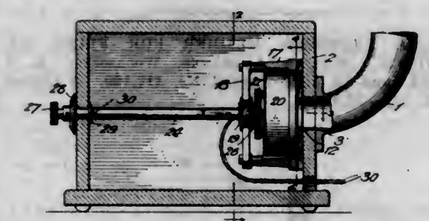
1. Brake operating apparatus comprising a frame, a hand wheel rotatably mounted on said frame on a vertically movable horizontally disposed axis, means adapted upon the rotation of said hand wheel in one direction to

give the wheel a vertical movement, and brake operating means actuated by the vertical movement of said hand wheel.



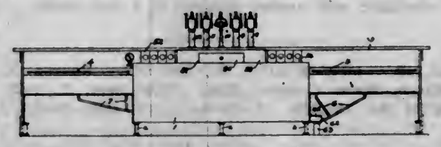
1,621,843. BRAKE MECHANISM. AUGUSTUS F. KLASING, Chicago, Ill., assignor to The Klasing Car Brake Company, a Corporation of Colorado. Filed Jan. 22, 1923. Serial No. 614,199. 3 Claims. (Cl. 188—33.)

1. The combination with the body and trucks of a railway car, of a brake setting device on the end of the car, a flat bar bent edgewise into the form of an arch operatively connected at one end to said brake setting device, means engaging the intermediate portion of the bar for holding it slidably in position over the truck at one end of the car, and means operatively connecting the other end of said arched bar with the brake rigging for applying the brakes.



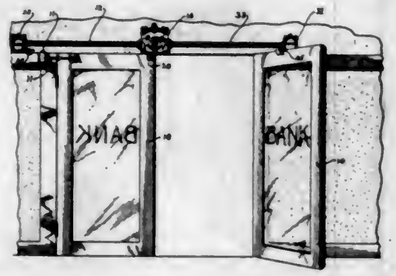
1,621,844. CAR BRAKE. AUGUSTUS F. KLASING, Chicago, Ill., assignor to The Klasing Car Brake Company, a Corporation of Colorado. Filed Mar. 1, 1923. Serial No. 622,009. 13 Claims. (Cl. 74—110.)

1. In a mechanism for manipulating brakes of a railway car, the combination of a housing having a side wall provided with an opening for the passage of a pinion, a rack bar slidably mounted within the housing upon one side of said opening and being provided at one end of its teeth with a longitudinally extending obstructing portion, a mutilated pinion adapted to be passed into the housing through said opening and to engage with the teeth of the rack bar, the longitudinal obstructing element being adapted to prevent the movement of the



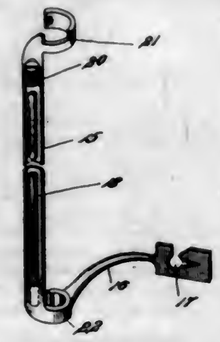
pinion in a direction to permit of its withdrawal through said opening, means for turning said pinion and brake mechanism actuated by the movement of said rack bar.

1,621,845. LOUD-SPEAKING TELEPHONE RECEIVER. HENRY KOCH, Jamaica, N. Y., assignor to Dictograph Products Corporation, a Corporation of Virginia. Filed Mar. 30, 1923. Serial No. 628,709. 11 Claims. (Cl. 179—115.)



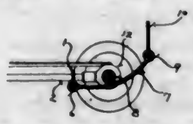
1. A telephone receiver comprising a diaphragm support, a diaphragm mounted therein, an electromagnetic device mounted for rotation relative to said diaphragm support, a screw threaded connection between the diaphragm support and the electromagnetic device whereby upon rotation of the electromagnetic device the diaphragm and said device will be relatively adjusted toward or from each other, axially rotatable actuating means, and gear connections between said means and said electromagnetic device whereby axial rotation of said means effects rotation of the electromagnetic device.

1,621,846. SODA FOUNTAIN. HARRY J. MCCUE, Cleveland, Ohio, assignor to The H. J. McCue Company, a Corporation of Ohio. Filed Mar. 25, 1921. Serial No. 455,379. 6 Claims. (Cl. 225—29.)



1. A soda fountain cabinet comprising a housing for fluid dispensing apparatus and a cold storage supply space open at its top, said cabinet being provided with interior partition walls, dividing the same into a plurality of chambers, and passage ways for cooling fluids connecting said chambers, said passage ways being spaced above the floor of such chambers to retain predetermined amounts of said cooling fluids in contact with the walls of said compartments, said partition walls and the other walls of said cabinet being formed integral with each other in one monolithic block.

1,621,847. AUTOMATIC DOOR CLOSING AND LOCKING MEANS. JAMES B. MCCUTCHEN, Bakersfield, Calif. Filed Sept. 3, 1924. Serial No. 735,558. 7 Claims. (Cl. 70—50.)

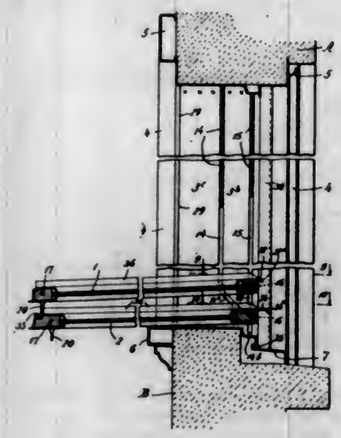


1. In a device of the class described, a door pivoted to swing about a vertical axis, means to hold said door open, means to close said door when open, means to release said holding means, a latch independent of said door holding means for holding said door closed, the operation of said releasing means serving to move said latch to operative position.

1,621,848. PRESSER MEMBER FOR FLIER MACHINES. WILLIAM J. MAHER, Woonsocket, R. I. Filed June 19, 1926. Serial No. 117,189. 4 Claims. (Cl. 118—57.)

1. A presser member for a flier frame comprising a hollow shank, a foot portion attached thereto, weighting means in said hollow shank adapted to be varied to regulate the effective weight of the presser, and means for attaching said presser member to a flier frame.

1,621,849. AUTOMOBILE ACCESSORY. ROBERT A. MAYER, Hales Corners, Wis. Filed Sept. 2, 1926. Serial No. 133,206. 3 Claims. (Cl. 280—33.44.)

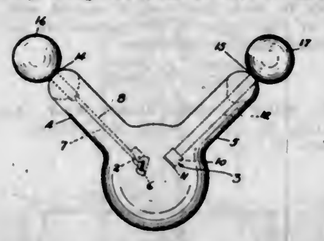


1. A device for use in towing automobiles comprising a pair of rods adapted to be placed beneath the axle of an automobile, said rods having inner eyeleted ends provided with means for engaging over a portion of the automobile and having upwardly extending outer eyeleted ends, a U-shaped member adapted to receive the hook of a hoist and joining the outer eyeleted ends of said rods, said rods being arched downwardly between the inner and outer ends.

1,621,850. GREENHOUSE OR CONSERVATORY BENCH. RAPHAEL METTETAL, Plymouth, Mich. Filed Aug. 27, 1926. Serial No. 131,849. 6 Claims. (Cl. 47—18.)

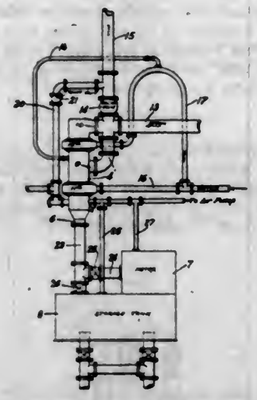
1. In a bench, a platform; a metallic rail surrounding said platform formed of sheet metal consisting of two walls spaced apart to form with the platform a closed air chamber; and means for securing the rail to said platform.

1,621,851. TILTING-SASH WINDOW. FRANK W. MINICH, Port Washington, N. Y. Filed Apr. 28, 1923. Serial No. 635,250. 3 Claims. (Cl. 20—42.)



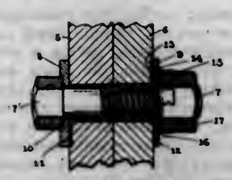
1. In a multiple tilting-sash window-construction, the combination of a plurality of sash having respectively pins at the top and bottom projecting from their sides, the top pins being retractable at will; and a window frame whose sides are each provided with adjacent inner and outer vertically extending guides for the pins of said sash, the lower part of each inner guide inclining downwardly and outwardly and terminating under the lower end of the adjacent outer guide but without communicating therewith.

1,621,852. X-RAY TUBE. MONTFORD MORRISON, New York, N. Y. Filed Mar. 1, 1922. Serial No. 540,141. 4 Claims. (Cl. 250—35.)



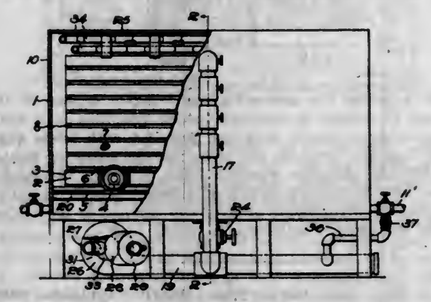
1. An X-ray tube comprising an evacuated envelope consisting of a main chamber provided with anxiliary

extensions therefrom of substantially equal length, with approximately 90° therebetween, electrodes extending approximately along the axes of the extensions, con-



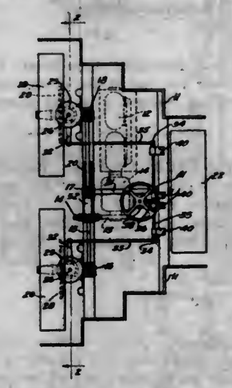
verging toward each other and each provided with an external, substantially spherical, terminal of large size, for avoiding corona effects therebetween.

1,621,853. WATER-HEATING SYSTEM. JAMES A. POWELL, Reading, Pa. Filed June 27, 1922. Serial No. 571,267. 8 Claims. (Cl. 261—118.)



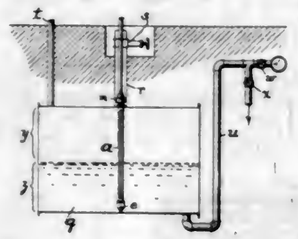
1. A jet type water heater including a casing provided with a steam inlet port, an air offtake port, separate series of spray nozzles arranged to deliver a water spray between said ports and separate inlets for said series of nozzles arranged so as to deliver water to one series under all conditions of water flow and to deliver water in excess of the capacity of said series of nozzles to the other series.

1,621,854. BOLT-LOCKING MEANS. MARTIN SALOUN, Milwaukee, Wis. Filed Sept. 28, 1922. Serial No. 590,074. 2 Claims. (Cl. 151—53.)



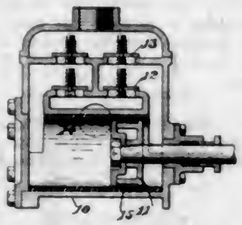
1. The combination with a bolt having a nut threaded thereon, of a locking means therefor, comprising a washer member mounted on the bolt adjacent the nut and having equi-spaced radial biting ribs on its inner side and radial grooves in its outer side which extend from the washer opening to the periphery of the washer, and an independent locking washer mounted on the bolt between the washer member and the nut and having correspondingly spaced radial ribs on its inner side which enter the radial grooves of the washer member, the nut being freely turnable with relation to the washer and the locking washer also having bendable ears which bear against all of the side portions of the nut when said nut is in adjusted position to prevent turning of the nut.

1,621,855. APPARATUS FOR DRYING. FREDERICK A. SECORD, Portland, Me. Filed Oct. 30, 1919, Serial No. 334,478. Renewed Aug. 12, 1926. 24 Claims. (Cl. 34—46.)



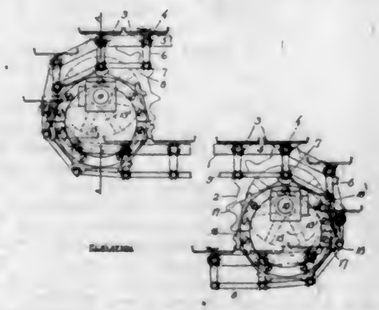
1. A drying apparatus having, in combination, a casing for the material to be dried, means to transmit heat to said material, means to supply to said casing a drying medium having a relatively lower temperature than said material to effect the vaporization of moisture on said material and means to increase the temperature of said moisture-laden medium above the critical zone of the drying operations to facilitate the removal of said moisture from said casing.

1,621,856. THREE-WHEELED TRACTOR. ISHAM SEDGWICK, Riverside, Calif. Filed Nov. 20, 1922. Serial No. 602,159. 3 Claims. (Cl. 180—25.)



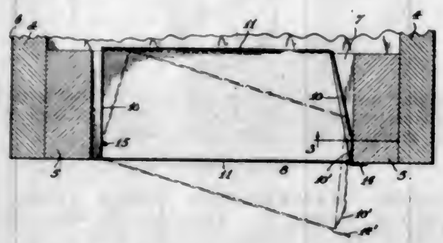
1. In a triple drive tractor, the combination of: a frame; a single wheel on one side of said frame; a pair of tandem wheels on the other side of said frame; a longitudinal shaft for driving said pair of tandem wheels; gears at the ends of said longitudinal shaft through which power may be transmitted to said tandem wheels; a lateral shaft for driving said single wheel; an engine mounted in said frame; and means for differentially driving said longitudinal and said lateral shafts from said engine, said driving means including: a gear on said lateral shaft, a sleeve on said longitudinal shaft, means on said sleeve for rotating said gear on said lateral shaft, and a differential having one major gear thereof mounted upon said sleeve and the other major gear mounted upon said longitudinal shaft.

1,621,857. AUTOMATIC TANK GAUGE. THEOPHILUS A. SERAPHIN, Philadelphia, Pa. Filed Apr. 7, 1923. Serial No. 630,550. 5 Claims. (Cl. 73—120.)



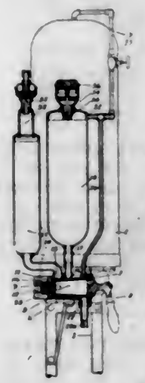
3. A gauge for measuring the relative depths of the strata of liquids of different specific gravities in a tank, comprising a hollow body and provided with inlets adjacent opposite ends of the body for the entry of liquids of different gravities whereby, when the gauge is inserted in a tank containing liquids of different specific gravities, the liquids of different gravity will assume in the hollow body the same relationship as in the tank.

1,621,858. RECIPROCATING PUMP. CHARLES FREDERIC SHERWOOD, San Francisco, Calif. Filed Jan. 19, 1921, Serial No. 438,355. Renewed Mar. 25, 1926. 4 Claims. (Cl. 74—108.)



1. A liquid pump including a cylinder, a reciprocating piston and a lining for the walls of the cylinder formed of rubber for sliding contact with the piston.

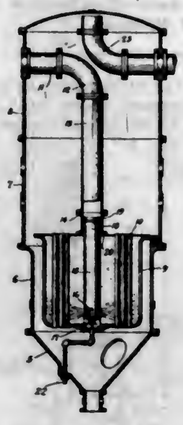
1,621,859. CONVEYER CHAIN. EARL P. WEBSTER, Niagara Falls, N. Y., assignor to The Shredded Wheat Company, Niagara Falls, N. Y., a Corporation of New York. Filed Apr. 12, 1922, Serial No. 552,037. Renewed Feb. 15, 1926. 4 Claims. (Cl. 198—138.)



1. In a conveyer, an endless conveyer chain having end sprockets, trays carried by said chain, and means for maintaining said trays in horizontal position including crank extensions of the pivots of the links of said chain, and a supplementary chain having pivot studs mounted at the outer ends of said crank extensions, the links of the supplementary chain embodying means acting independently to limit the pivotal movement thereof towards each other in both directions in accord with the arcs assumed by the chains in the passage of the conveyer chain around said end sprockets.

1,621,860. BOLT BOARD. ALBERT WOLF, Canton, Ohio. Filed July 20, 1926. Serial No. 123,700. 4 Claims. (Cl. 206—50.)

2. A receptacle for sample pieces of fabric adapted to be pivotally mounted in an end recess in a bolt-board for said fabric, said receptacle being made from a single blank of sheet material, said blank including an end wall bent laterally to form a bow-spring element.

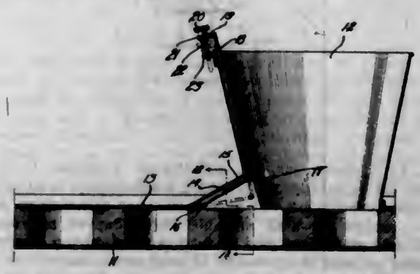


1,621,861. DISPENSING DEVICE. GROVER H. WOODS and ADAM B. DENISON, Cleveland, Ohio, and WILLIAM A. WILEY, Erie, Pa., assignors to American Sterilizer Company, Erie, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1923. Serial No. 628,967. 11 Claims. (Cl. 221—107.)

1. In a dispensing device, the combination of a concentrate liquid receptacle; a dilute liquid tank; a mixing chamber; a measuring device having a measuring space therein; connections between the dilute liquid tank and the measuring device, between the measuring device and the mixing chamber, and between the tank and the measuring device; and valve mechanism controlling said connections to throw the receptacle and measuring device into communication and to close such connection and open connection between the measuring device, mixing chamber and tank.

1,621,862. EVAPORATOR. CHARLES W. AIKEN, Brooklyn, N. Y. Filed Apr. 5, 1923. Serial No. 629,980. 5 Claims. (Cl. 159—27.)

1. An evaporator comprising, a reservoir for the liquid to be treated, a steam drum in the lower end thereof, a steam conduit connected to the upper head of said drum, a steam nozzle telescopically mounted in the lower end of

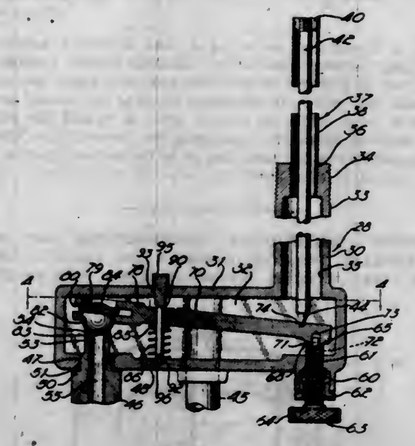


said conduit and having its discharge end extending into the lower part of said drum, and a support for the discharge end of said nozzle.

1,621,863. METHOD OF MARKING SHREDDED WHEAT BISCUIT. GEORGE M. ANDERSON, Washington, D. C., assignor to The Shredded Wheat Company, a Corporation of New York. Filed May 17, 1918, Serial No. 235,144. Renewed Aug. 3, 1926. 1 Claim. (Cl. 99—11.)

A method of making and simultaneously distinctively marking shredded cereal biscuit, consisting in laying down superposed bands of shredded cereal to form a composite band of the proper thickness, treating cereal material with a coloring agent and laying down from the same a distinctively colored top band upon said composite band and finally dividing the composite band and said top band transversely to form biscuit.

1,621,864. CAN-FILLING MACHINE. CHARLES H. AYARS, Salem, N. J., assignor to Ayars Machine Company, Salem, N. J. Filed Apr. 1, 1922. Serial No. 548,564. 2 Claims. (Cl. 226—102.)

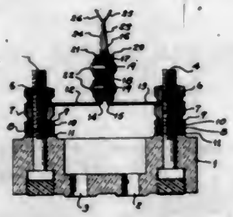


1. In a can filling machine, the combination with a turret provided with measuring receptacles; a hopper; an extension leading from the hopper and extending over the path of travel of the measuring receptacles; and an inclined pressure plate against which the materials are forced by rotation of the turret and thereby forced into the measuring receptacles without being crushed.

1,621,865. TRAVELER'S CHECK. JOHN T. BACON, Williamsport, Pa. Filed June 15, 1926. Serial No. 116,067. 4 Claims. (Cl. 283—6.)

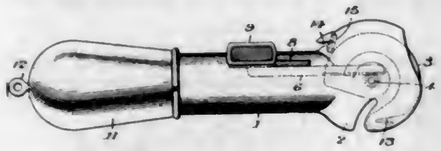
1. A check including a body part provided with a space appropriately designated for the signature of the payee; a concealing stub integral with said part and having a space appropriately designated for the payee's signature, a space on the body of said check appropriately designated to receive a light re-acting chemical, said stub being partially scored and thereby adapted to be folded to conceal the signature and said chemical, and means for fastening the folded stub to the body part.

1,621,866. QUICK-THROW THERMOSTAT VALVE. WILLIAM B. BASTIAN, Los Angeles, Calif. Filed May 11, 1926. Serial No. 108,248. 10 Claims. (Cl. 236—48.)



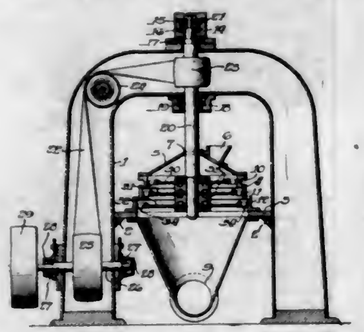
1. In a quick throw valve, the combination of: a spherical valve member; a valve seat upon which said member is adapted to rest; means for limiting the movement of said member from said seat; a garter spring disposed about said member; and means for shifting said garter spring towards and away from said valve seat.

1,621,867. TESTING JACK. JOHN A. BEODDY, Roanoke, Va. Filed Mar. 5, 1924. Serial No. 696,967. 1 Claim. (Cl. 200—2.)



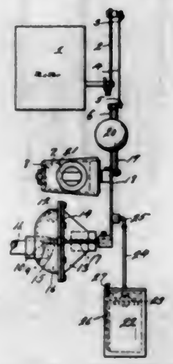
In a testing jack, an insulating support, a pair of spaced binding posts thereon, each of said binding posts having means for securing electrical conductors, a pair of conductor strips each secured to a respective binding post and each consisting of a free portion extending toward the opposite binding post and an outwardly directed resilient bowed portion substantially at right

angles to the first portion, said first portions being alined and spaced from each other at their inner ends, said bowed portions contacting adjacent their ends to form the



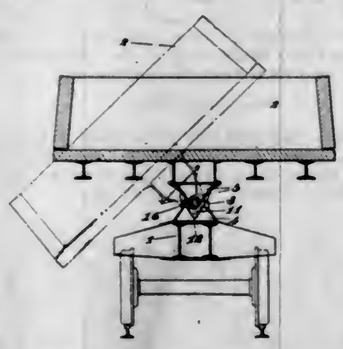
jaws of the jack, and an insulating block between the bowed portions adjacent the inner ends of the first portions and having the bowed portions secured thereto.

1,621,868. THREAD TIER. HARRY BOEDKER, Plymouth, N. C., assignor of twenty-seven-and-one-half one-hundredths to W. H. Lowe, Kilmarnock, Va., and twenty-seven-and-one-half one-hundredths to R. W. Lowe, Chester, Va. Filed Sept. 22, 1924. Serial No. 739,115. 9 Claims. (Cl. 289—17.)



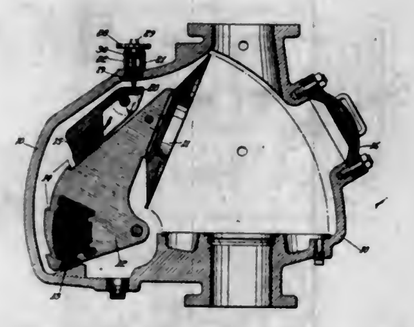
8. A thread tier including a head having a notch at one edge, a lever pivoted in the head having a hook at the free end and a slot curved inwardly from the hook around the pivot, in position to clear the inner ends of said notch while the hooked lever is closing the outer end thereof, means for springing the lever in one direction, and means for returning it to its normal position in the formation of a knot.

1,621,869. METHOD OF GRANULATING DRY MATERIALS. FRANK L. BRYANT, Joliet, Ill. Filed July 12, 1924. Serial No. 725,548. 2 Claims. (Cl. 83—11.)



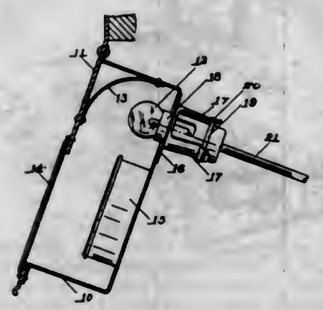
1. The method of granulating materials by impact without substantial attrition or excessive heating, which consists in placing all of the particles thereof in suspension and feeding the same downwardly through successive annular granulating zones, and while in suspension imparting to them a succession of impact blows at different horizontal planes while constricting the material to move in substantially a vertical path through the granulating zones, causing said blows to be delivered with successively increasing force during the gravitation of said particles until the material is reduced to a substantially uniform degree of fineness, and causing a substantially free passage of the material throughout the granulating zones and annular final discharge.

1,621,870. VALVE-CONTROLLING MECHANISM. RANDOLPH J. BUEHLER, South Bend, Ind. Filed Apr. 5, 1924. Serial No. 704,530. 2 Claims. (Cl. 137—144.)



1. A valve combination comprising a rotatable plug valve having a port transversely therethrough, a rotatable threaded valve stem axially movable, a valve carried by said valve stem, said valve cooperating with a valve seat and means connecting said plug valve and threaded valve stem, said last named means and threaded valve stem forming means whereby when the plug valve is in full open position the valve carried by the threaded valve stem will unseat.

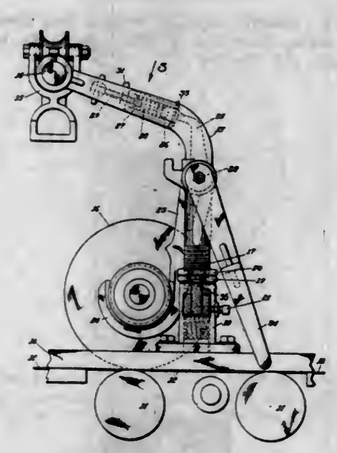
1,621,871. DUMP CAR. WILLIAM L. BURNER, Koppel, and OSCAR E. KANTENWEIN, New Castle, Pa., assignors to Koppel Industrial Car and Equipment Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 11, 1924. Serial No. 737,028. 8 Claims. (Cl. 105—270.)



1. In a dump car, an underframe, a tilting body, a hinge for said body comprising a stationary part attached to said underframe and a movable part attached to said body, means on said movable part adapted to engage with said stationary part to form a pivot during a partial tipping of said body, means on said parts adapted to cooperate to move said first mentioned means out of its pivotal position during the rest of the tipping movement of said body, and means for preventing the separation of said parts.

1,621,872. LATCH-RELEASING DEVICE FOR DRY PIPE VALVES. HJALMAR G. CARLSON, Worcester, Mass., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 4, 1926. Serial No. 86,073. 4 Claims. (Cl. 196—22.)

1. In a dry pipe valve, the combination with the valve, a lever connected with it and having ratchet teeth on its surface, and a pivoted gravity latch, the long arm of which engages said teeth to prevent the accidental closing of the valve, of means extending through the valve casing for engaging the short end of the latch and swinging it into a position in which the long end of the latch is out of contact with the lever.

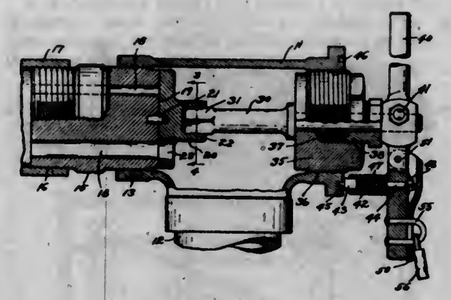


1,621,873. SUPPORT FOR CONCEALED DASH LAMPS. CARL H. CULVER, Detroit, Mich., assignor to Culver Stearns Manufacturing Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 17, 1926. Serial No. 102,776. 1 Claim. (Cl. 240—8.16.)

The combination with an automobile—, a casing set therein, a lamp in the casing, a reflector curved around the lamp for concealing it and directing its rays in one direction, and a transparent cover at one side of the reflector permanently mounted on the dash, of means at the back of the casing behind the reflector for holding a lamp in a position to be concealed by the reflector and arranged to receive the lamp and its socket from the rear.

1,621,874. DANDY-ROLL SUPPORT FOR PAPER MACHINES. ERNEST N. DAULTON, Fitchburg, Mass. Filed Nov. 27, 1925. Serial No. 71,676. 5 Claims. (Cl. 92—48.)

1. In a paper machine, a wire apron, a dandy roll, bearings for said roll, a pair of arms on which said bearings are mounted and by which said roll is entirely supported and positioned above said apron, said arms being pivotally mounted, springs effective to apply yielding pressure to said arms to partially counterbalance said



roll and tending to swing said roll away from said apron, means to adjust the tension of said roll, and means to swing said arms simultaneously to lift said roll from said apron.

1,621,875. FERTILIZER. EDUARD DEDOLPH, Hedley, British Columbia, Canada. Filed May 29, 1925, Serial No. 33,647, and in Canada June 5, 1924. 3 Claims. (Cl. 71—9.)

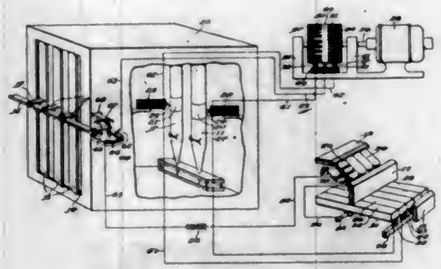
1. A fertilizer for application to the soil of fields in which crops are grown, comprising an intimate mixture of finely divided limerock and sulphur.

1,621,876. FLOW NIPPLE. LOUIS H. DOMER, Ventura, Calif. Filed June 2, 1924. Serial No. 717,246. 9 Claims. (Cl. 137—75.)

1. In a flow line device for a following well, the combination of: a hollow body constituting a valve chamber having an inlet through which to receive fluid under pressure and provided with an outlet opening; a rigid flow nipple secured in said opening in fixed relation to said body and having a plurality of orifices of different relative diameters through which fluid may be discharged from said valve chamber, said body and nipple being

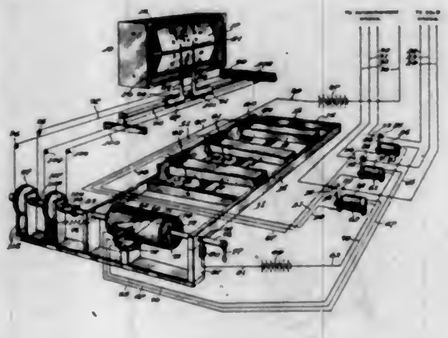
adapted to be incorporated in and form a fixed portion of a flow line; and valve means within said chamber and freely operable in relation to said fixed body and nipple to close all but one of said orifices.

1,621,877. VENEER WALL. JOHN J. FITZ GERALD, Medford, Mass. Filed Feb. 6, 1926. Serial No. 86,528. 2 Claims. (Cl. 72—101.)



1. An undercut slot shell for use in making undercut slots in building construction comprising a body formed with an undercut slot, a filler strip for closing the slot opening removably attached to the body, and end caps for the slot.

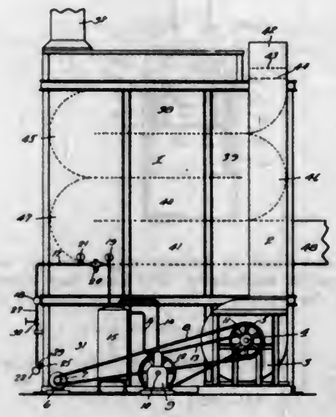
1,621,878. SYSTEM OF GUIDE LIGHTS. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Feb. 26, 1920, Serial No. 361,408. Renewed May 5, 1923. 2 Claims. (Cl. 114—21.)



1. In a system of guide lights, a movable body, a plurality of different combinations of lamps mounted on said body, each combination corresponding to a predetermined direction of movement of said body, means to automatically select the combination corresponding to the course of said body, and means to light only the lamps of the selected combinations.

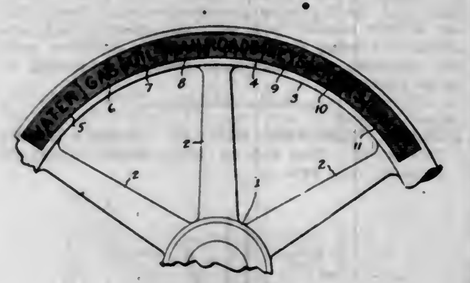
1,621,879. PIPE ORGAN. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Apr. 1, 1921, Serial No. 457,773. Renewed July 27, 1926. 19 Claims. (Cl. 84—337.)

6. The combination of an organ pipe for producing a tone of predetermined pitch and quality, a key for actuating said pipe to produce a tone, means controlled at the will of an operator for imposing upon said tone a secondary predetermined tone having the same pitch as the pipe but having the quality of the tone of a brass wind instrument, and means for automatically varying the intensity of the imposed tone proportional to the changes in intensity of tone emitted from said pipe.



1,621,880. SOLO CONTROL FOR AUTOMATIC PLAYER INSTRUMENTS. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed July 6, 1921, Serial No. 482,789. Renewed July 27, 1926. 20 Claims. (Cl. 84—83.)

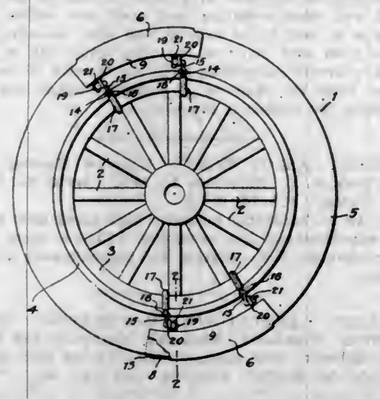
15. In a musical instrument including a solo instrument and an accompaniment instrument, a mechanical player device including a note sheet, selective means for causing the player device to sound any desired notes on either instrument, and means connected to said selective means and movable across the note sheet for indicating on the note sheet the notes sounded on the solo instrument.



1,621,881. HEATING SYSTEM. JAMES M. HARRISON, Cleveland, Ohio, assignor of one-half to Harry P. McCann, Cleveland, Ohio. Filed Feb. 15, 1924. Serial No. 693,007. 9 Claims. (Cl. 158—4.)

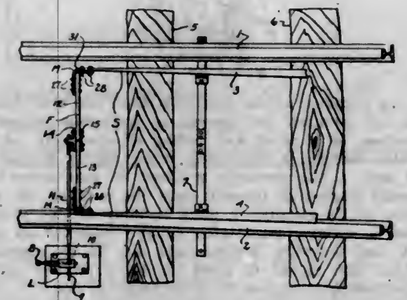
5. The combination, with an air heater, of a combustion chamber in operative relation thereto, means for forcing air through said heater, a pressure-creating device, means driven by the air-forcing means for operating said device, fluid fuel burner mechanism, means for supplying fluid under pressure from said device to said

burner mechanism, and means for maintaining under a a predetermined pressure the fluid supplied to said mechanism.



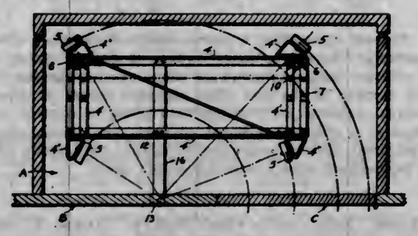
1,621,882. STEERING-WHEEL REMINDER. HARRIETTE E. HODGSON, New York, N. Y. Filed Feb. 2, 1924. Serial No. 690,136. 1 Claim. (Cl. 40—125.)

An automobile requirement reminder to be secured to the upper surface of the forward arc of the steering wheel, comprising a series of independent and distinctly and different colored reminder sections arranged in uninterrupted continuation, with the contrastingly-colored sections arranged in adjacent relation, each section being permanently marked to indicate to the driver certain acts to be performed by him in connection with the automobile, the width of the sections approximating the diameter of the steering wheel.



1,621,883. ANTISKID DEVICE. HARRIETTE E. HODGSON, New York, N. Y. Filed Apr. 18, 1924. Serial No. 707,338. 1 Claim. (Cl. 152—14.)

An individual anti-skid device comprising an elongated segmental block formed with a channel in its back to seat on the pneumatic tire of an automobile wheel and provided with fastening means to pass about the felly, said block comprising a thin central tread portion adapted to present an inconsiderable intervening thickness between the tire and the ground, and heavy side wing portions the tread surfaces of which are in lateral continuation with the under surface of the thin central tread portion, said

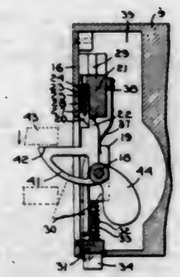


tread surfaces being provided with serrations which extend both laterally and longitudinally and which are deeper under said wings than in the central portion.

1,621,884. FRONT ROD. SAMUEL P. HULL, Yonkers, N. Y. Filed Apr. 11, 1924. Serial No. 705,808. 9 Claims. (Cl. 246—449.)

3. A switch lug formed of a plurality of plates bent intermediate their ends to form approximately a right angle and one leg bent in another plane at an angle to the other leg.

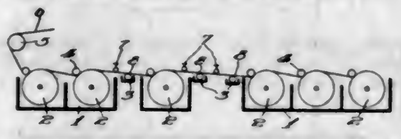
1,621,885. WALL BED. BURRELL L. JONES, Oakland, Calif. Filed Apr. 15, 1924. Serial No. 706,662. 1 Claim. (Cl. 5—172.)



In combination, a wheeled frame having a bed pivotally mounted thereon so that the bed can be raised to an upright position or lowered to a horizontal position, pivotal

means rigidly secured to one side of the centre of said frame and rotatably mounted on a single pivot in the vertical plane of and adapted to swing through a wall adjoining the doorway of a closet, a cut out portion in said wall accommodating said pivot and rollers at the corners of said frame having their axes extending along radii from said pivot so that the frame can be swung by one circular movement from the interior of the closet away from the door to a position outside the closet allowing the closing of the door.

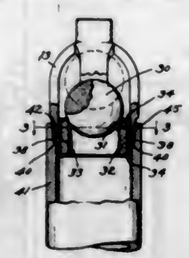
1,621,886. ALLOY STEEL. WILLIAM HERBERT KEEN, Albany, N. Y. Filed May 10, 1924. Serial No. 712,454. 7 Claims. (Cl. 75—1.)



1. An air-hardening forgeable high speed steel containing approximately 3% vanadium, 0.85% or more carbon, approximately 18% tungsten and approximately 4% chromium.

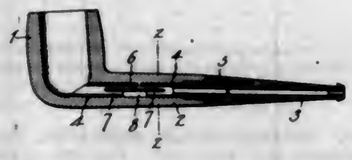
1,621,887. ELEVATOR-GATE-OPERATING MECHANISM. EDWARD L. KERRIGAN, Arlington, and WALTER J. MURPHY, West Roxbury, Mass. Filed May 16, 1925. Serial No. 30,672. 8 Claims. (Cl. 187—60.)

5. In a device of the class described, the combination with an elevator car having a projection extending therefrom, of a rising and falling elevator gate for an elevator landing, a supporting frame rigidly secured to said gate, a dog pivotally mounted on said frame and normally projecting laterally into the path of the projection on the elevator, a block movably carried by said frame, a spring-pressed latch slidably mounted on said block and normally holding said dog in its operative position, and means to move the block relative to the frame thereby to release the latch from the dog.



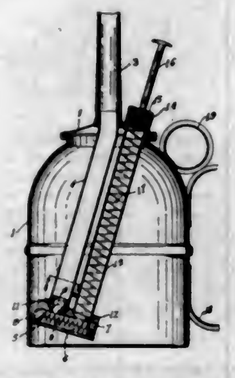
1,621,888. PROCESS FOR MAKING PAPER. LESTER KIRSCHBRAUN, Chicago, Ill. Filed Mar. 27, 1924. Serial No. 702,316. 3 Claims. (Cl. 92—41.)

1. Process of making a grease-repellant multiply sheet comprising felting separately plies of fibrous stock on the cylinder molds of a paper machine, interposing between certain of the wet plies separate layers of grease repellant material by causing said plies to contact the surface of a rotating element carrying said greaseproofing material, and in subsequently uniting the fibrous plies and greaseproof layers into a multiply sheet.



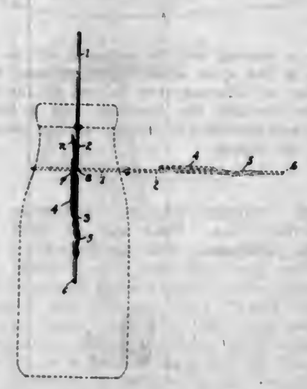
1,621,889. BALL AND SEAT VALVE. JAMES F. LARKIN, Los Angeles, Calif. Filed Apr. 18, 1925. Serial No. 24,077. 7 Claims. (Cl. 251—121.)

1. In a valve construction, the combination of: a seat member devoid of supporting projections; a retainer surrounding said seat member throughout its length and having an inturned lip engaging the lower end of said seat member; a body member having a seat for engagement by



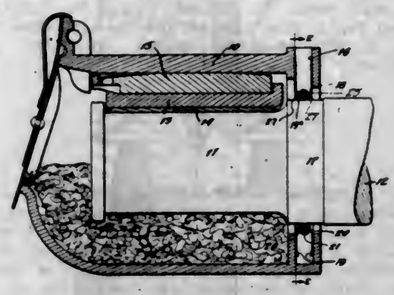
said retainer; and an annular clamp member having a screw-threaded engagement with said body member and engaging the retainer to clamp said retainer in place.

1,621,890. TOBACCO PIPE. WILLIAM H. LEWIS, New York, N. Y. Filed May 22, 1926. Serial No. 110,913. 1 Claim. (Cl. 131—12.)



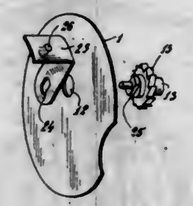
An inner tube for removable placement in the stem of a tobacco pipe, comprising a tubular member having an intermediate portion of its length provided with separated upper and lower parallel passageways, each communicating at their opposite ends with said member, said lower passageway being divided to provide a moisture escaping clearance, and said upper passageway serving for smoke conveyance.

1,621,891. PUMP-FEED OIL CAN. GUSTAVE LIDSEEN, Chicago, Ill. Filed Feb. 14, 1924. Serial No. 692,637. 1 Claim. (Cl. 221—51.)



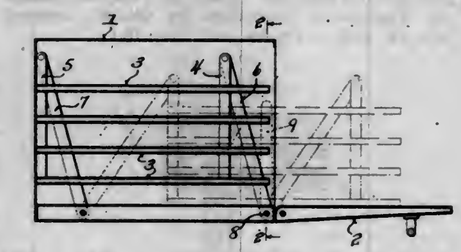
An oil can comprising a lubricant container, a removable cover therefor, a nozzle mounted thereon, a pump mechanism mounted on said cover and projecting into said container, an inclined valve housing supported by said pump mechanism and open at both ends, a plug closing the lower end of the valve housing, a spring controlled intake valve for closing the upper end of said valve housing, an outlet valve in the side of said valve housing, said valve housing having an opening in the side thereof communicating with said pump mechanism, and a pipe extending from said nozzle to said valve housing for enclosing said outlet valve.

1,621,892. NOTE HOLDER AS NEW ARTICLE OF MANUFACTURE. CLARENCE LILE, Granite City, Ill. Filed Mar. 11, 1926. Serial No. 93,946. 2 Claims. (Cl. 40—11.)



1. An article of manufacture comprising a shank of substantial length and capable of insertion into a bottle, said shank having two components twisted together for part of their length, and each terminating in an eye, one of said components extending beyond the other, and having a kink bent into it intermediate its ends, said kink lying adjacent to the eye in the shorter component and entering slightly therein.

1,621,893. DUST GUARD FOR THE JOURNAL BOXES OF RAILWAY CARS. JOHN L. MOHUN, Omaha, Nebr. Filed Dec. 10, 1923. Serial No. 679,542. 4 Claims. (Cl. 286—6.)

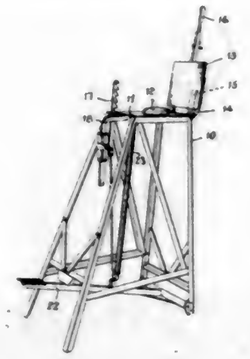


1. A journal box dust guard comprising a pair of side plates adapted to fit in the dust guard chamber of a journal box, said side plates having openings therein through which the axle may be inserted and having sloped surfaces around said openings, compressible packing material held between said side plates and engaging said sloped surfaces, a spring embedded in said packing and disposed between and forcing said side plates into frictional engagement with the walls of said dust guard chamber, and additional means to restrain said packing against outward movement.

1,621,894. CLOCK-SPRING SUPPORT. SAMUEL H. MOSCOVITS, New Haven, Conn. Filed Jan. 20, 1926. Serial No. 82,889. 3 Claims. (Cl. 58—87.)

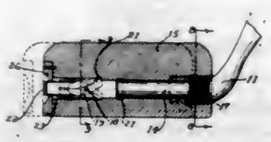
2. A support for driving spring in clocks consisting of an angle bar, one face upon which the spring is adapted to be supported and the other face of which one extremity of the spring is adapted to be attached.

1,621,895. OVEN GRID. CHARLES H. NAPIER, Milwaukee, Wis. Filed June 1, 1926. Serial No. 112,910. 2 Claims. (Cl. 126—339.)



1. The combination of an oven having bottom, top, back, and side walls and having an open front, a door for said open front, two pair of levers mounted within said oven and located on opposite sides thereof and pivoted adjacent their lower ends, a plurality of vertical bars suspended from the upper ends of said levers, channel members carried by said bars for the reception of a grid, a transverse rock shaft secured to certain of said levers and projecting through a side wall of the oven, a manually operable lever secured to said rock shaft and located on the outer side of said oven, said levers being adapted to occupy either of two positions on opposite sides of dead center, one position with the channel members within the oven, and the other position with the channel members projecting from said oven, certain of said vertical members when in the last position resting upon the bottom of the oven and locking the parts against further outward motion.

1,621,896. APPARATUS FOR FORMING CAKES. JOSÉ PEGUERO, Port Arthur, Tex. Filed Apr. 1, 1924. Serial No. 703,347. 3 Claims. (Cl. 107—15.)

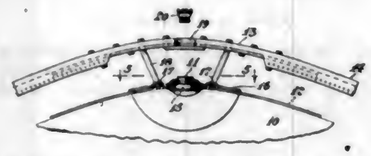


3. An apparatus for fashioning cakes formed of food products comprising a table upon which the material for the cake may be placed, a press board pivotally secured to said table and adapted to be moved into position over the material on the table, a vertically movable bar formed with a plurality of notches so that when moved

downwardly it may engage with the press board at varying elevations or inclinations thereof, a friction member pivotally connected to said movable bar, a

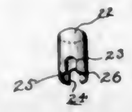
bracket carried by the table upon which said friction member travels and means for actuating said movable bar having a pivotal connection therewith.

1,621,897. GOLF CLUB. FLOYD R. PERKINS, Chicago, Ill. Filed Feb. 6, 1924, Serial No. 690,917. Renewed Aug. 13, 1926. 2 Claims. (Cl. 273—79.)



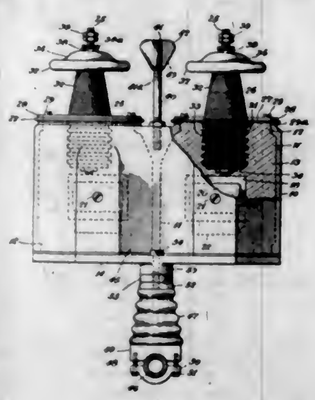
1. An adjustable golf club comprising a shaft, a pivot member rigidly secured thereto, a head having a longitudinal cylindrical passage adapted to receive said member, longitudinal serrations on said member for a portion of its length adapted to slidably engage corresponding serrations on the interior of said passage, a shoulder on the wall of said passage, a spring pressed member pivotally secured to said pivot member adapted to engage said shoulder and thereby prevent axial movement of the head relatively to said pivot member and means carried by said pivot member for moving said spring pressed member out of engagement with said shoulder.

1,621,898. PLAYING BALL. GEORGE L. PIERCE, Brooklyn, N. Y., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Mar. 3, 1926. Serial No. 91,888. 8 Claims. (Cl. 273—65.)



1. In a playing ball, a cover, an opening in said cover for insertion of a bladder, and lacing means for closing said opening, said lacing means being substantially concealed when the ball is inflated and the area of said cover about said bladder-insertion opening being imperforate.

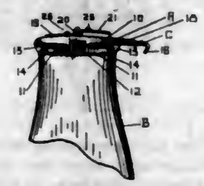
1,621,899. PLAYING BALL. GEORGE L. PIERCE, Brooklyn, N. Y. Filed May 10, 1926. Serial No. 108,080. 5 Claims. (Cl. 173—65.)



1. In a playing ball, a cover, a slit in said cover, notches in the sides of said slit forming an aperture, a bladder, an inflating stem carried by the bladder and accessible through the aperture, and a lacing closing the slit and holding the bladder against movement relative to the casing.

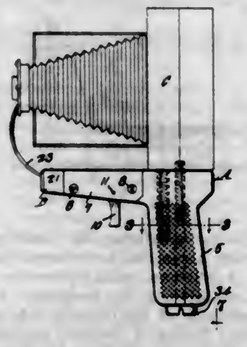
1,621,900. TOILET BRUSH. FREDERICK E. PRETAT, Waterville, Conn. Filed Apr. 10, 1925. Serial No. 22,136. 2 Claims. (Cl. 15—206.)

1. In a handleless toilet brush, a closed loop of twisted bristle-holding wires, the ends of said loop being bent inwardly, means for locking said inwardly-bent ends together, the bristles of said brush projecting inwardly and outwardly, the outer portions of said bristles forming a continuous brushing surface extending around the periphery of said brush and completely covering the joint of the ends of said loop and said locking means, whereby all possibility of injury to the user will be avoided.



1,621,901. ELECTRICAL APPARATUS. WILLIAM H. PRICE, Montclair, N. J., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Original application filed Dec. 5, 1921, Serial No. 519,868. Patent No. 1,499,403, dated July 1, 1924. Divided and this application filed Dec. 5, 1923. Serial No. 678,557. 31 Claims. (Cl. 175—41.)

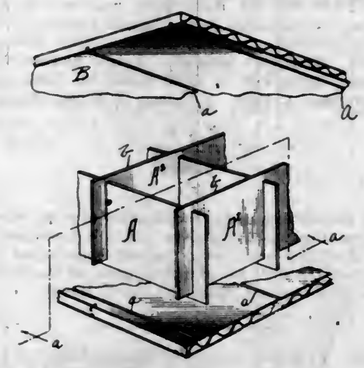
1. An electrical condenser comprising a plurality of sheet-stacks; a common metal casing therefor and connected therewith; a corresponding plurality of stack



terminals extending outside the casing; and a metal member electrically connected with and mounted on the outside of the casing and spaced from said terminals to constitute a common spark-gap electrode establishing protective spark-gaps with said terminals.

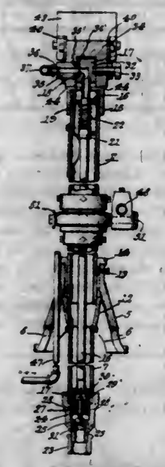
1,621,902. BOTTLE COVER AND CAP REMOVER. CHARLES T. RASCHICK, St. Paul, Minn. Filed Feb. 25, 1925. Serial No. 11,453. 8 Claims. (Cl. 215—38.)

1. A bottle cover and cap remover including a cover body portion, spring fingers extending from said body portion, a cap removing finger extending from said body portion having a cap piercing point formed thereon, a ticket holding finger formed on said cap removing finger and indicating fingers associated with indicia on said body portion in a manner to permit the fingers to indicate the articles to be ordered by the customer by the setting of the fingers.



1,621,903. PISTOL GRIP FOR CAMERAS. WAYNE F. ROSSITER, Vallejo, Calif. Filed Dec. 30, 1924. Serial No. 758,884. 4 Claims. (Cl. 95—53.)

1. A device of the class described including a body, a trigger lever pivoted in the body, a plunger slidable in the body and operable by the trigger lever, a spring in the body holding the plunger rod in a retracted position, said body provided with a recess registering with the plunger rod for supporting the handle of a shutter actuating means for a camera so as to be operable by the plunger when moved by the trigger lever, and a spring for normally holding the plunger in an inactive position.



1,621,904. EGG CRATE. DAVID M. RUSSELL and JOSEPH H. SHLEY, Chicago, Ill. Filed Feb. 26, 1924. Serial No. 695,189. 2 Claims. (Cl. 217—34.)

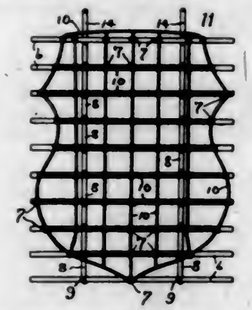
1. In a container for eggs and the like, the combination with a crate of alternate flats and fillers therefor, each filler consisting of series of parallel slabs arranged at right angles to each other and in interlocking connection, one series having its margins extended above and the other having the margins extending below the adjacent edges of the other series, and each flat consisting of rectangular pieces of relatively thick material having a

single series of parallel grooves on their opposite faces adapted to receive the extended margins on the adjacent face of the cell unit.

1,621,905. DISPENSING STAND. GEORGE H. RUSSELL, Florence, Ala. Filed Mar. 17, 1925. Serial No. 16,178. 1 Claim. (Cl. 299—80.)

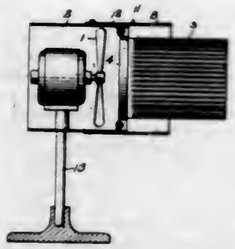
A dispensing stand including a base, an elongated housing supported by the base, a valve housing supported under the first mentioned housing and in communication therewith, said valve housing having lateral and upwardly extending bores to permit fluid to pass upwardly therethrough, said valve housing having bores disposed between the first mentioned bores and establishing communication between the interior of the valve housing and atmosphere, a vertically movable piston valve operating in the valve housing, said piston valve adapted to normally lie between the laterally and upwardly extending bores to close the bores, said piston valve adapted to move to uncover the laterally and upwardly extending bores to allow fluid to pass therethrough, and a vertically movable discharge pipe operating in the housing, and on which the valve member is mounted, and means for delivering fluid from the discharge pipe.

1,621,906. CLEANSING COMPOUND. ROBERT SCHLESS, Emporium, Pa. Filed Aug. 10, 1925. Serial No. 49,459. 4 Claims. (Cl. 87—5.)



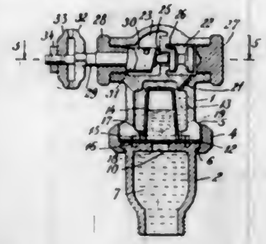
1. A cleansing composition comprising vegetable ivory mixed with an alkaline carbonate.

1,621,907. SEALING MEANS. ANTON SCHUH, Vienna, Austria. Filed Feb. 6, 1925, Serial No. 7,353, and in Austria Mar. 1, 1924. 2 Claims. (Cl. 292—313.)



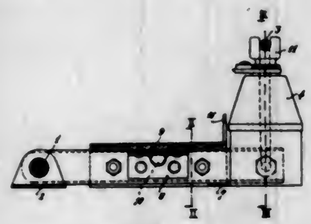
1. In sealing means, the combination of a flat disc of a soft metal forming a complete and self contained seal, with a shell of a hard but compressible plate and means provided on the shell for grappling parts of the shell into the disc of soft metal, when the seal is closed.

1,621,908. PYROTECHNIC LANCE HOLDER. JAMES H. SHUNK, Roscoe, Ill. Filed Sept. 3, 1925. Serial No. 54,336. 5 Claims. (Cl. 102—20.)



1. In a pyrotechnical lance-holder, a plurality of bars disposed side by side, lances projecting approximately at right-angles from one of the sides and secured to said bars, a plurality of rigid spacing-links each engaging that side of a bar opposite to the lances thereon and having a pivotal mounting at one of its ends on said bar and having a pivotal mounting for its opposite end upon an adjacent bar permitting each bar to be swung into engagement with a bar adjacent thereto, and fuses carried by and arranged to connect said lances one with another.

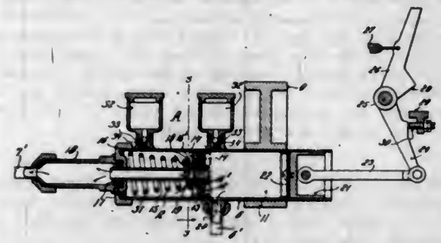
1,621,909. DRYING MOP. SIDNEY L. SMITH, Pittsburgh, Pa. Filed Sept. 21, 1925. Serial No. 57,573. 6 Claims. (Cl. 34—26.)



1. In an apparatus for removing moisture from surfaces the combination of a fan and a body of stranded absorbent material arranged in the stream of air formed by the fan whereby the strands are yieldingly held in contact with the moist surfaces.

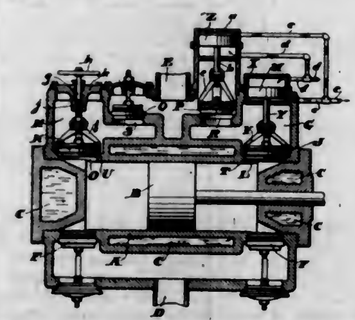
1,621,910. VALVE. ALEXANDER THOMSON, Summit, and JOHN W. ESKHOLME, Glen Ridge, N. J.; said Eskholme assignor to said Thomson. Filed May 23, 1925. Serial No. 32,282. 12 Claims. (Cl. 137—104.)

8. In a fluid escape valve comprising an inlet chamber, an outlet chamber, passages from the inlet and outlet chambers having adjacent openings in a flat surface, a flexible diaphragm covering the openings, a dome-shaped element fitted on said diaphragm and forming therewith a pressure chamber, channels connecting the inlet chamber to the pressure chamber and means for reducing pressure in the pressure chamber, comprising an inverted cup-shaped element loosely positioned in the pressure chamber and resting on the diaphragm and provided with a small aperture near its open end.



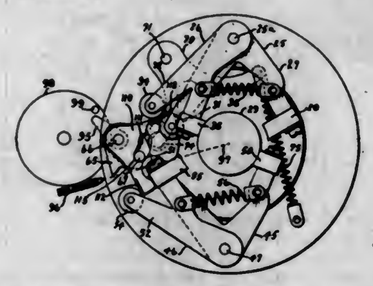
1,621,911. WEIGHING SCREW JACK FOR DETERMINING THE WHEEL PRESSURE OF VEHICLES. ABRAHAM VAN L. VAN DEN HEUVELL, Zwolle, Netherlands. Filed Nov. 17, 1922, Serial No. 601,630, and in the Netherlands Oct. 4, 1922. 6 Claims. (Cl. 265—52.)

1. An apparatus for measuring the wheel pressure of vehicles, comprising, a support, a horizontal axle carried by said support, a platform, means pivotally supporting the platform at one side on the horizontal axle, and a weighing jack positioned at the opposite side of the platform and directly connected thereto independently of said support for lifting the platform by tilting it about said axle.



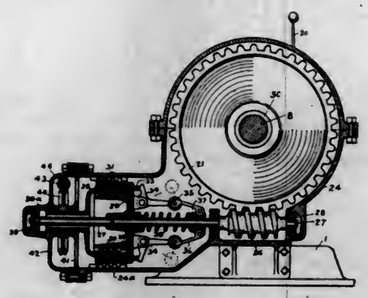
1,621,912. VEHICLE BRAKE. JOHN D. VAN DERWYK, Los Angeles, Calif., assignor to Thomas A. Wells, Los Angeles, Calif. Filed May 18, 1925. Serial No. 31,073. 3 Claims. (Cl. 188—152.)

1. A four-wheel brake for vehicles, comprising pressure operated brake devices associated with the respective wheels, conduits connecting said brake devices in pairs, a pressure device comprising a cylinder containing a slidable partition piston dividing the cylinder into a main pressure chamber and a secondary pressure chamber, said main chamber communicating with the conduits leading to one pair of said brake devices and said secondary chamber communicating with the conduits leading to the other pair of said brake devices, a pressure piston in the main chamber, and control means maintaining the partition piston against movement until an initial braking pressure is first built up in the main pressure chamber by movement of the pressure piston and transmitted to the said one pair of brake devices, said control means permitting subsequent movement of the partition piston



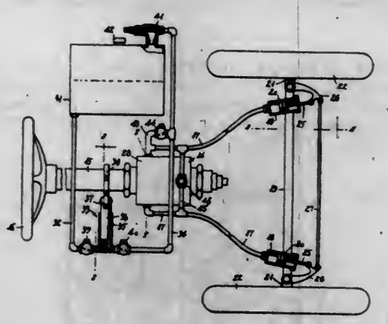
upon further movement of the pressure piston to build up pressure in both pressure chambers for transmission to both pairs of brake devices.

1,621,913. CLEARANCE UNLOADER. FREDERICK VAN DUZER LONGACRE, Yonkers, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 19, 1925. Serial No. 63,308. 5 Claims. (Cl. 230—24.)



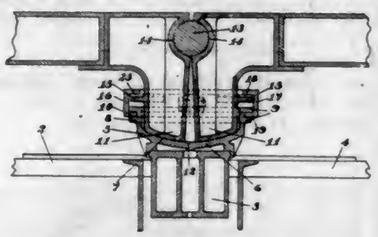
1. In a compressor, the combination of a cylinder and piston, an inlet valve, a discharge connection, a clearance chamber, a main discharge valve for discharging the compressed fluid through said clearance chamber to the discharge connection, means for rendering said main discharge valve inoperative, whereby free communication is afforded between the cylinder and clearance chamber for unloading the compressor by reducing the cylinder capacity, and an auxiliary discharge valve between the clearance chamber and the said discharge connection.

1,621,914. ELECTRICAL APPARATUS. CORNELIS VAN RENNES, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Sept. 4, 1923. Serial No. 660,664. 6 Claims. (Cl. 172—240.)



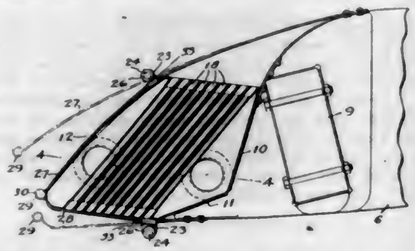
3. An automatically reversible motor, comprising in combination, a field member; an armature; movable brushes for engaging the commutator; means for moving either brush from the commutator; a spring connecting the brushes whereby movement of either brush away from the commutator will cause the other brush to be yieldingly urged toward the commutator; means for moving said brushes away from the commutator; and means for staying the movement of the brush toward the commutator until said first means is rendered operable.

1,621,915. VARIABLE-SPEED DEVICE. MILTON T. WESTON, New York, N. Y. Filed Apr. 6, 1922. Serial No. 550,041. 11 Claims. (Cl. 188—187.)



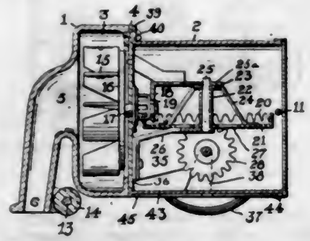
1. In a device of the character described, a rotary shaft, a friction disk rotating with said shaft, a non-rotatable friction disk cooperating with said rotating friction disk, an abutment for limiting the axial displacement of said disks, a pressure ring between which and said abutment the friction disks are confined, means operating by centrifugal force for pressing said pressure ring against said disks, and means for adjusting said disks and resisting the displacement of said disks under the pressure imparted by said centrifugally operated means.

1,621,916. HYDRAULIC STEERING GEAR. CHARLES H. WILLIAMS and MAURICE L. TUCKER, Piqua, Ohio. Filed June 23, 1925. Serial No. 39,156. 8 Claims. (Cl. 180—80.)



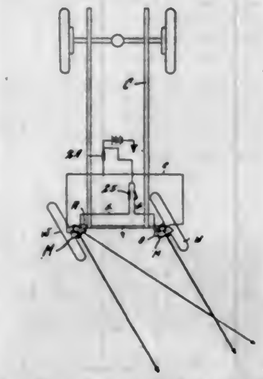
1. A steering gear comprising manually operable means; steering means; a hydraulic connection between said means including a liquid pump operated by said manually operable means, and liquid operated means connected with and operated by said pump and operably connected with said steering means; and means for supplying liquid under pressure to said pump and liquid operated means including a pump operated by said manually operable means.

1,621,917. ARTICULATED CAR. KARL O. WINELL, Pittsburgh, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Oct. 28, 1925. Serial No. 64,290. 15 Claims. (Cl. 105—4.)



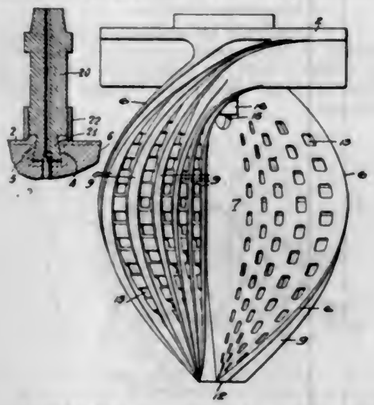
1. In an articulated car comprising a plurality of bodies, a truck supporting the adjacent ends of said bodies and a ring member for locking together said truck and bodies against accidental vertical movement.

1,621,918. WING-NOSE RADIATOR. PAUL G. ZIMMERMANN and BORIS V. KORVIN-KROUKOVSKY, Keyport, N. J., assignors, by mesne assignments, to Healey-Aeromarine Bus Company, Inc., a Corporation of New York. Filed Apr. 1, 1924. Serial No. 703,359. 9 Claims. (Cl. 244—31.)



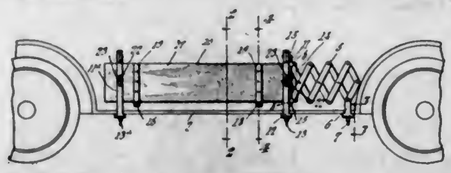
1. In an aerofoil, an engine-cooling radiator comprising a front water chamber, a rear water chamber and an interposed core having upwardly inclined air-passages extending upwardly therethrough, the whole being embodied within and of a form with the nose of the aerofoil.

1,621,919. VACUUM SWEEPER. CARL C. BAIN, Pittsburgh, Pa., assignor to Wolverine Supply and Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 3, 1925. Serial No. 47,744. 3 Claims. (Cl. 15—18.)



3. In a vacuum sweeper, the combination of a substantially vertically disposed fan chamber having a suction inlet opening and a discharge opening, a fan in said chamber rotating on a substantially horizontal axis, a fan shaft extending rearwardly from said chamber, a pair of horizontally disposed brackets extending rearwardly from said fan chamber and spaced apart vertically, a vertically disposed hub member rotatably mounted between said brackets, a gear concentrically disposed to and rigid with said hub member, said gear having inner and outer concentric series of teeth, a pinion mounted on the fan shaft meshing with teeth of one of said series, a driving axle, traction wheels fixed on the driving axle, a second pinion loosely mounted on the driving axle and meshing with teeth of the other series, and a clutch mechanism for locking the second pinion to the axle when the sweeper is moved forwardly.

1,621,920. LIGHT MECHANISM FOR VEHICLES. ROGERS W. BERRY and GEORGE W. BIRD, Great Falls, Mont. Filed Oct. 8, 1925. Serial No. 61,274. 7 Claims. (Cl. 240—62.)

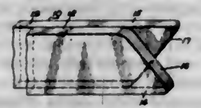


1. In combination with a vehicle and a front steering wheel therefor, a vertically disposed post carried by the forward portion of the vehicle, means operated upon steering movement of the wheel for correspondingly turning the post, and a pair of lamps mounted upon the post, the beams of light emitted from said lamps being angularly related laterally with respect to the direction of travel of the vehicle, one of said lamps directing a beam at all times in the direction of travel of the steering wheel, the beam from the second lamp being disposed across the front of the machine.

1,621,921. ROTARY-DRILL BIT. LESTER C. BLACK, Los Angeles, Calif. Filed June 18, 1923. Serial No. 646,030. 13 Claims. (Cl. 255—69.)

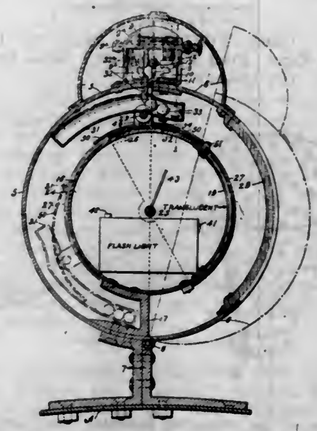
1. A rotary drill bit comprising a cutting blade having a helicoidal surface forming a sharp angle with the formation to be cut and helicoidal ribs on the rear surfaces of the blade on opposite sides of the axis of the helicoid, said surface terminating in substantially alined cutting edges, the ribs extending to the cutting edge of the blade, the end faces of the ribs lying in a horizontal plane.

1,621,922. COMBINATION TABLE AND LUGGAGE CARRIER. ROLAND GUY BRYANT, Carterville, Mo. Filed Aug. 1, 1925. Serial No. 47,569. 1 Claim. (Cl. 224—29.)



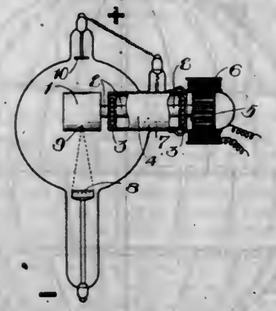
A combined running board luggage carrier and table including standards having clamps at their lower ends to clamp the device to a running board, a pair of leaf sections, hinges for connecting the leaf sections, said hinges connecting the lower edges of the leaf sections, hinges connected with one edge of one of the leaf sections and having connection with the standards to allow the sections to swing upwardly and outwardly beyond the outer edge of the running board to which the device is connected to provide a table, and removable leg sections secured to one of the leaf sections for supporting the leaves as a table beyond the running board.

1,621,923. NONREFILLABLE BOTTLE. ARTURO CRISCI, New York, N. Y. Filed Apr. 13, 1925. Serial No. 22,640. 2 Claims. (Cl. 215—21.)



1. In a nonrefillable device of the character described the combination of a cup shaped shell with outlet ports, clamping lugs extending from the lower end of the shell, a plug inserted in the open end of said shell, said plug having an outlet port therethrough, and clamped to said shell by the clamping lugs of the latter, said plug having a valve seat on the end opposite the clamping lugs of the shell, guide lugs extending from the end of the plug having the valve seat and a discharge valve adapted to seat on valve seat and guided by said guide lugs.

1,621,924. HAIRPIN. WILLIAM H. H. DAVIS, San Francisco, Calif. Filed Apr. 27, 1926. Serial No. 104,887. 6 Claims. (Cl. 132—50.)

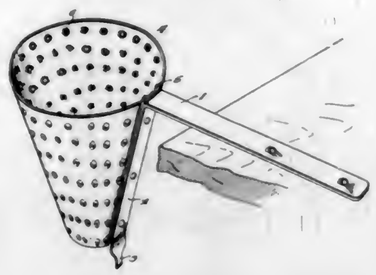


1. A hair pin comprising a looped portion and a pair of branches formed of a single flat strip of spring metal, said branches being retained with their flat inner sides in contiguous relationship by the natural resilience of the strip, the free ends of the branches being of substantially the same length and laterally beveled.

1,621,925. THEFT-PREVENTING DEVICE. THOMAS E. DAUGHERTY, Baltimore, Md. Filed Sept. 27, 1921. Serial No. 503,579. 10 Claims. (Cl. 40—61.)

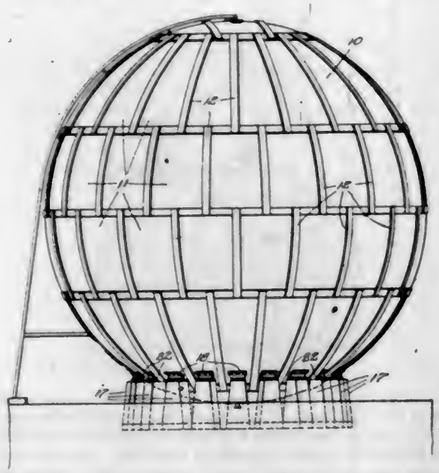
1. A signalling device which includes a casing attachable to a road-vehicle; a sign in the casing; means manually settable to hide the sign and being mounted for shifting in consequence of traveling movements of the road-vehicle, for displaying the sign; and means including a lock to combine with the casing, for securing the said manually settable means against being operated by said traveling movements or by any person without unlocking said lock.

1,621,926. X-RAY TUBE. UKICHI FUJIMOTO, Tokyo, Japan. Filed July 23, 1923, Serial No. 653,237, and in Japan Dec. 22, 1922. 2 Claims. (Cl. 250—35.)



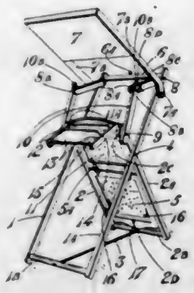
1. In an X-ray tube having a side tube, a cylinder fixed within said side tube; bearings in said cylinder; an axle rotatably mounted in said bearings; an anti-cathode wheel mounted on said axle; a rotor on said axle; coils mounted around the side tube adjacent the rotor; and means for electrically exciting said coils whereby said rotor will be rotated.

1,621,927. PROCESS OF DECREASING THE RATE OF CRYSTALLIZATION OF BORAX FROM BRINE. ALFRED W. GAUGER and HENRY HERMAN STORCH, Westend, Calif., assignors to Burnham Chemical Company, Reno, Nev., a Corporation of Nevada. Filed Aug. 29, 1925. Serial No. 53,425. 4 Claims. (Cl. 23—38.)



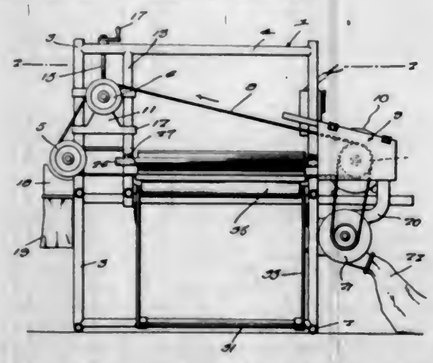
1. The process of decreasing the rate of crystallization of borax from brine containing sodium, potassium, chloride, carbonate, sulfate, metaborate, and tetraborate which comprises adding a resinous organic material to the brine and subjecting the brine to treatment to crystallize out other salts.

1,621,928. CORN NUBBINER. ELLIS W. HOPKINS, Oberlin, Kans. Filed May 13, 1925. Serial No. 30,062. 1 Claim. (Cl. 130—10.)



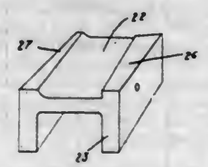
A device of the character described comprising a hollow shell having internal operating teeth adapted to remove kernels from an ear of corn inserted into the shell, said shell consisting of a strip of material coiled to form the shell and having its end portions overlapped, a mounting bracket adapted to be secured to a support and including an arm extending longitudinally upon the overlapped portions of the shell forming strip, and fasteners passed through the arm and overlapped portions of said strip to retain the strip in shell forming position and the shell in engagement with the bracket arm.

1,621,929. GAS HOLDER. GEORGE T. HORTON, Chicago, Ill. Filed Sept. 18, 1925. Serial No. 57,084. 8 Claims. (Cl. 220—1.)



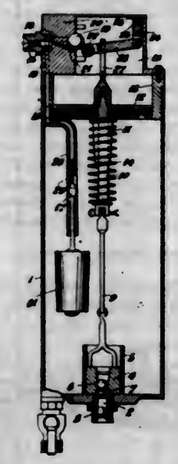
5. A gas holder comprising a substantially spherical shell substantially supported by supporting legs resting on foundations and attached at their upper ends to the shell on the line of a circle lying in a horizontal plane and having a diameter substantially less than the diameter of a great circle of said shell.

1,621,930. COLLAPSIBLE CHAIR FOR INFANTS. HENRY WILLIAM SEW HOY, Dunedin Otago, New Zealand. Filed Sept. 1, 1925. Serial No. 53,907. 2 Claims. (Cl. 155—139.)



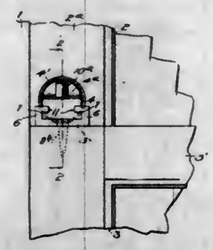
1. A collapsible chair for infants, comprising pivotally connected front and back legs, the front legs being extended above the upper limit of the rear legs, a bar connecting the extended portions of the front legs, and a combined seat and back including hingedly connected sections with the free edge of the seat movably connected to the upper ends of the rear legs, said seat and back being of such combined length and width to permit them to swing down in line between the rails of the short leg, and means carried by the back to detachably engage with the bar connecting the extended portions of the front legs to hold the seat and back in proper relative positions.

1,621,931. DESK-SANDING MACHINE. MARTIN E. JOHNSON, Tillamook, Oreg. Filed Oct. 20, 1925. Serial No. 63,719. 1 Claim. (Cl. 51—135.)



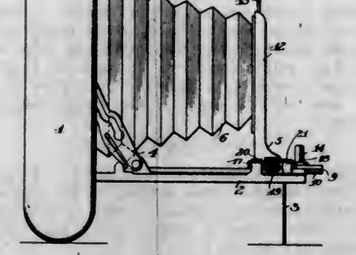
In a structure of the class described, a supporting frame, a plurality of pulleys mounted on said frame, a belt trained over said pulleys, said belt being provided with an abrasive surface, rocker arms pivotally mounted on said frame, an abutment rotatably supported between said arms, said abutment being flat on one side and rounded on its opposite side and being adapted for cooperation with the inner side of one stretch of the belt for maintaining said one stretch rigid, a work-pressing roll located beneath said one stretch of the belt, additional arms pivotally mounted on said support beneath the aforesaid rocker arms, said roller being carried by said additional arms, a foot pedal, and connections between said additional arms and said pedal.

1,621,932. VEHICLE WHEEL. CLARENCE S. JOHNSTON, Glendive, Mont., assignor to The United Rim Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Mar. 22, 1920. Serial No. 367,812. 1 Claim. (Cl. 301—17.)



A vehicle wheel comprising a fixed channeled rim the side walls whereof are formed with seats for a demountable rim, a demountable rim, a substantially inverted U-shaped block fitted within the channel of the rim and having one surface formed with a recess extending at an angle to the longitudinal median line of the block and having an inclined base, one wall of the recess being substantially at a right angle to the base and the other wall curved, and a locking lug secured to the demountable rim and shaped conformably to the recess in the block secured to the other rim.

1,621,933. LIQUID-FUEL-SUPPLY ARRANGEMENT FOR INTERNAL-COMBUSTION ENGINES. FRANCIS JOSEPH STAWELL JONES, Porthcawl, South Wales. Filed June 15, 1925, Serial No. 37,264, and in Great Britain July 7, 1924. 7 Claims. (Cl. 103—50.)

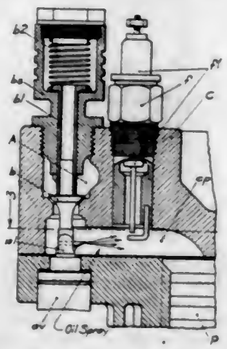


1. In a pump device for elevating liquids, a tank, a large cylinder and a small cylinder carried by said tank, a large piston and a small piston connected together and operating in said cylinders, respectively, the larger cylinder having a pair of ports opening thereto, one for atmosphere inlet and the other for suction connection, valve means operated by piston movement to alternate the dominance of the suction and atmospheric pressure through said ports, respectively, whereby the pistons are caused to reciprocate, valve means in conjunction with said smaller cylinder and piston constituting a pump, said pump being in discharging relation to the interior of said tank, and means contained in the device separate from and independent of said pistons operable by a predetermined rise in the level of liquid in said tank to prevent operation of said pump.

1,621,934. LOCKING DEVICE. ALCUIN E. KINTNER, Painesville, Ohio. Filed Sept. 19, 1923. Serial No. 663,526. 10 Claims. (Cl. 292—150.)

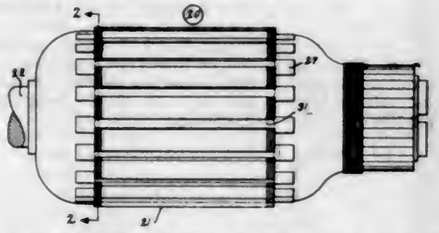
1. In a locking device, the combination with a pair of members supported in sliding relationship, of a plate having guide means and formed with an opening and seats, means extending through said opening to secure said plate on one of said members, a lock member slidably engaging said guide means arranged to project into a recess formed in the other sliding member and having a tail member extending rearwardly from its lower portion, and a locking element movably carried by said tail member and arranged to be seated in one of said seats when said lock member is operated to its locking position and to engage the other seat when said lock member is in its unlocked position.

1,621,935. FOCUSING MECHANISM FOR CAMERAS. ROBERT KROEDEL and CHARLES F. SPEIDEL, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Original application filed Sept. 8, 1922, Serial No. 586,990. Divided and this application filed May 24, 1924. Serial No. 715,529. 1 Claim. (Cl. 95—45.)



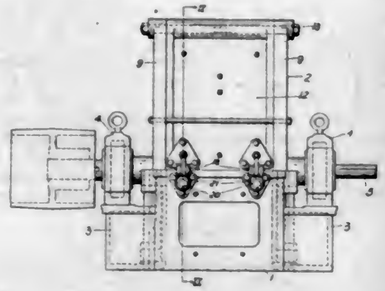
In a photographic camera, the combination with a main bed having an upwardly and inwardly projecting threaded lug on one side thereof and an extension bed guided on the main bed and having an upwardly and laterally projecting threaded lug thereon alined with the first mentioned lug, of a screw having right and left hand threads cooperating with the respective lugs and provided with an operating portion, said operating portion being arranged at a side edge of the bed to be accessible to the thumb of the operator for a downward turning movement as he supports the bed from beneath with his hand.

1,621,936. CONSTANT-PRESSURE INTERNAL-COMBUSTION ENGINE. PAUL ANDREW LAWRENCE, Grand Island, Nebr. Filed May 22, 1922. Serial No. 562,912. 5 Claims. (Cl. 123—27.)



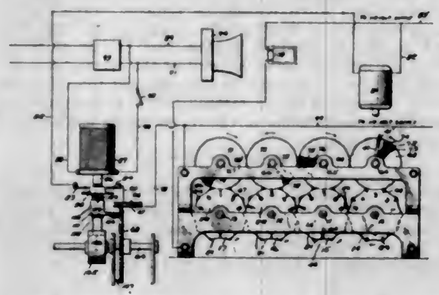
1. In an internal combustion engine of the type described the combination of an air chamber valve, a

spring housing removed from the heat of the head, a neck in said housing to obstruct the conduction of heat,



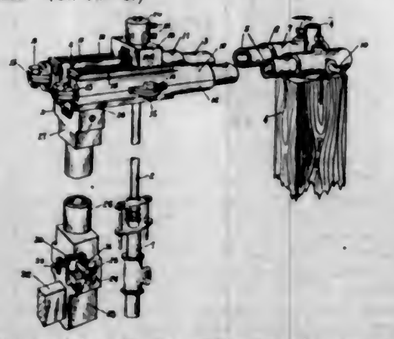
a spring plunger, and a shoulder on said spring plunger for seating the plunger before the seating of the said air chamber valve.

1,621,937. MOTOR. RALPH L. LEE, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 24, 1923. Serial No. 676,831. 3 Claims. (Cl. 172—36.)



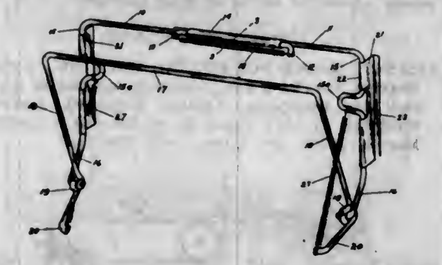
1. An armature comprising, in combination, a plurality of laminæ placed side by side to provide a single core, said core being provided with slots extending axially therewith, armature windings within said slots, and conductor bars within said slots the opposite ends of said bars being secured to a plurality of laminæ at the opposite ends of said core for preventing racing of the armature.

1,621,938. PULVERIZING MACHINE. WILLIAM K. LIGGETT, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed June 8, 1923. Serial No. 644,165. 7 Claims. (Cl. 83—11.)



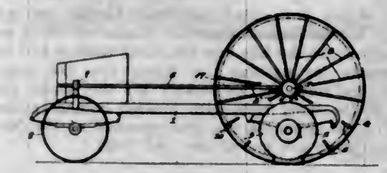
1. In a machine of the class described, the combination of a rotor provided with pulverizing elements which generate a substantially continuous pulverizing surface when the rotor is at speed; a casing of substantially cylindrical form closely surrounding the major part of said rotor; a combined hopper and pulverizing chamber above said casing with the hopper portion disposed on the upwardly advancing side and the pulverizing chamber on the downwardly advancing side of said rotor, said pulverizing chamber having a substantially vertical wall tangentially disposed relative to the path of rotation of said pulverizing elements; an abutment at the lower end of said vertical wall substantially filling the throat between the tangentially vertical wall and said rotor, to intercept the downwardly gravitating, impulverized material and prevent its passing through the machine; and means to adjust said abutment.

1,621,939. METER-READING APPARATUS. JOHN C. LOWE, Minot, N. Dak. Filed Feb. 21, 1925. Serial No. 10,959. 9 Claims. (Cl. 177—352.)



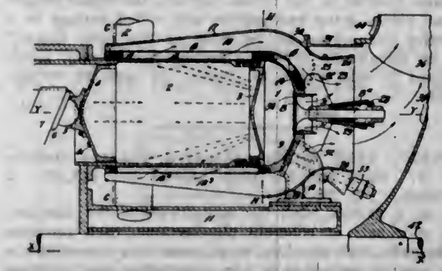
1. In apparatus of the character described, counting mechanism embodying a plurality of rotatable dials, each dial being provided upon its periphery with recesses, different contact units arranged within the recesses and adapted to produce a different signal for each recess, rotatable locking members arranged near the dials and corresponding in number with relation thereto, said locking members being adapted to pass through the recesses of the dials and to hold the dials against turning movement during such passage, contact elements carried by the locking member for co-action with the contact units, circuit means associated with the contact elements and contact units, and means to drive the locking members.

1,621,940. PUMPING RIG. JOHN E. MCCOMB, Rouseville, Pa. Filed Mar. 21, 1925. Serial No. 17,219. 7 Claims. (Cl. 74—5.)



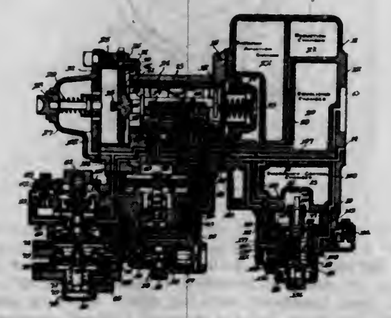
1. In a pumping rig, the combination of a reciprocating actuating member; an actuated member; a joint between said members comprising toothed thrust surfaces having a rolling contact; and a pin normally out of contact supplementing the teeth in maintaining the relation of the surfaces.

1,621,941. AWNING SUPPORT. EARL E. MCGREW, Lincoln, Nebr., assignor to McGrew Machine Company, Lincoln, Nebr., a Corporation of Nebraska. Filed Dec. 6, 1926. Serial No. 152,905. 12 Claims. (Cl. 156—15.)



1. An awning frame which is adapted to be compressed between the side members of a window opening, said awning frame including two horizontal members which are in overlapping relation at their inner end portions and which are slidable on each other, and means secured to one of said members for maintaining the sliding movements of both of said members in straight lines.

1,621,942. MOTOR VEHICLE. JUAN CARLOS MOLINA MASSEY, Buenos Aires, Argentina. Filed Apr. 15, 1925, Serial No. 23,312, and in Argentina Dec. 11, 1924. 4 Claims. (Cl. 180—10.)



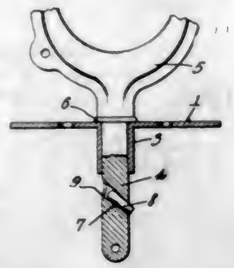
1. A motor vehicle comprising a frame; a driving wheel mounted in said frame; a circular rail, said wheel being adapted to contact on the inside of and drive said rail; and a bar slidably guided in said frame for mounting said circular rail on the frame in order to permit longitudinal movement relative to said frame.

1,621,943. AIR COOLING OF THE CYLINDERS AND PISTONS AND OTHER WORKING PARTS OF INTERNAL-COMBUSTION ENGINES, COMPRESSORS, AND THE LIKE. ANTHONY GEORGE MALDON MICHELL, Melbourne, Victoria, Australia, assignor to Crankless Engines (Aus) Proprietary Limited, Melbourne, Australia. Filed June 29, 1923, Serial No. 648,543, and in Australia July 18, 1922. 12 Claims. (Cl. 123—171.)

1. In a cylinder cooled by circulation of air, multiple channels formed circumferentially around the cylinder and having each a plurality of lateral inlets alternating with a corresponding plurality of lateral outlets for the circulating air, each inlet and outlet slot common to a plurality of channels, the length of each channel between inlet and outlet being many times greater than its smaller transverse dimension.

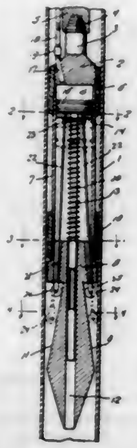
1,621,944. TRIPLE VALVE. BLYTHE J. MINNIER and CHARLES A. CAMPBELL, Watertown, N. Y.; said Campbell assignor to The New York Air Brake Company, a Corporation of New Jersey. Filed May 2, 1925. Serial No. 27,472. 18 Claims. (Cl. 303—38.)

1. The method of minimizing the undesired reapplication of brakes controlled by quick acting triple valves having local brake pipe vents opening in service which consists in suspending the function of the brake pipe vent as an incident to overcharging of the corresponding auxiliary reservoir.



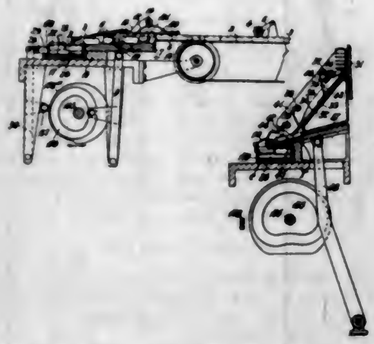
1,621,945. PENCIL. JULIUS MITCHELL, Cleveland, Ohio. Filed Feb. 12, 1926. Serial No. 87,804. 1 Claim. (Cl. 120—19.)

In a pencil of the class described, a hollow casing open at both ends, one end thereof being beveled to simulate a pencil point, the bore of the beveled end portion of the hollow casing being reduced, said casing being provided with a slot throughout substantially the entire length, one end thereof opening at the end of the casing remote from said point, a sleeve frictionally and slidably disposed in the casing, a lead fitted at one end within the sleeve and adapted to be expelled at its other end outwardly of the pencil casing through the reduced bore, a ring surrounding the casing in concentric relation with said sleeve, the portion of said ring which extends across the slot being of substantially the same width as the length of said sleeve to conceal the same, a pin having its shank extending through the widened portion of the ring and through the slot in the casing,



the inner end of said pin being threaded into the sleeve whereby said sleeve and said lead may be moved in either direction, and removable means within the other open end of the casing for limiting the movement of the lead carrying sleeve in said direction.

1,621,946. OAR LOCK. JOHN L. MOORE, Alexandria, Minn. Filed May 24, 1926. Serial No. 111,334. 2 Claims. (Cl. 9—26.)



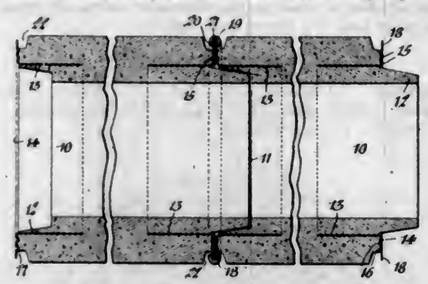
1. The combination with a sleeve constituting a bearing, of an oar lock including a yoke and a stem, said stem being insertable into the sleeve so as to project therebelow, there being a tapered inclined opening extending through the stem and normally positioned below the sleeve, a tapered pin movably mounted within the opening and having its small end normally projected by gravity beyond the stem, said projecting end constituting means for engaging one end of the sleeve to hold the stem against withdrawal therefrom.

1,621,947. CASING PULLER. WILLIAM N. MOORE, Abilene, Tex. Filed July 30, 1926. Serial No. 125,973. 2 Claims. (Cl. 294—96.)

1. A casing remover comprising a tubular body, a head at each end of the body, a wedge shaped member depending from the lower head, a disk adapted for vertical movement in the upper portion of the tubular body and cooperating with the upper head to provide a chamber therebetween, rods secured at their upper ends to the disc and extending downwardly through the lower head on opposite sides of the wedge shaped member, casing gripping elements carried by the lower ends of the rods, means for actuating the disc and said rods to move the gripping elements downwardly along said wedge shaped member into gripping relation with the inner wall of the casing, said means comprising a floating piston arranged in the aforementioned chamber and adapted to engage the top of the disc for moving the same downwardly under the action of fluid pressure.

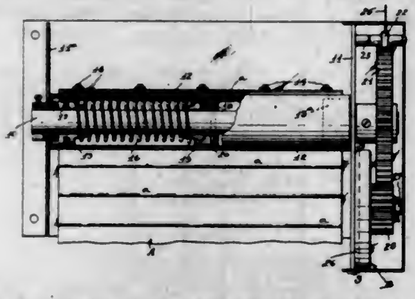
1,621,948. MATCH-BOX-FILLING MACHINE. ANDREW FRANCIS NEY, East Kew, Australia, assignor to Bryant and May Proprietary Limited, Richmond, Australia. Filed Jan. 25, 1926, Serial No. 83,696, and in Australia Mar. 9, 1925. 20 Claims. (Cl. 226—10.)

1. In match box filling machines having an intermittingly moved endless conveyor formed of links each with pockets for the box and the inner thereof and having plungers for pushing the inners into the pockets therefor, the sides of the pockets for the inners being formed at the inner ends with tapered notches adapted to receive and compress the lower corners of the inners when the latter are moved into the links.



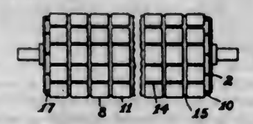
1,621,949. VIBRATING SCREEN. GUSTAVE A. OVERSTROM, Pasadena, Calif. Filed Sept. 28, 1920. Serial No. 413,376. 12 Claims. (Cl. 209—367.)

1. In a vibrating screen structure, a screen adapted to support the material to be screened, coiled supporting springs for said screen, said spring coils disposed in a plane vertical to the screen surface, the whole weight of the screen being imposed on said coiled springs in a direction transverse to the axes of the coils thereof, and an unbalanced revolving member wholly and freely mounted to said screen to vibrate the same in vertical planes.



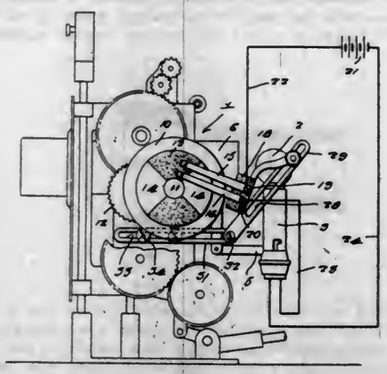
1,621,950. PIPE JOINT. ALBERT G. PERKINS, Buffalo, N. Y. Filed Oct. 21, 1926. Serial No. 143,253. 2 Claims. (Cl. 72—53.)

2. In a flexible joint for concrete-pipes, the combination of a pair of concrete pipe-sections, each provided at its ends with coupling rings, each ring comprising a base portion embedded in the pipe-section and a flange projecting therefrom having a series of concentric corrugations extending substantially from the base portion to a point short of the ends of the flange to provide a marginal attaching portion, and fastening means applied to the opposing marginal portions of said coupling ring



flanges to form a fluid-tight joint, said corrugated flanges being free to flex radially in response to relative movements of the pipe-sections.

1,621,951. ROLLING FIRE DOOR. FREDERICK E. PERKINS, St. Paul, Minn. Filed Mar. 5, 1923. Serial No. 622,924. 5 Claims. (Cl. 189—58.)



1. In a device of the class described, a roller, a curtain adapted to be wound upon and unwound from said roller, a spring arranged and normally tensioned to balance the curtain, means for normally retaining the balancing tension in said spring, said means being adapted to be rendered inoperative upon a dangerous rise in temperature, a centrifugal brake to control the release of said spring, said brake comprising a stationary drum, a revoluble head connected with and turned by said spring, brake shoes pivoted on said head, a cam arm and a cam lever pivoted on a common axis between the adjacent free ends of said shoes, a guide on said member diametrically opposed to the pivotal mounting for said arm and lever, a slide in said guide, a link pivoted to said slide and to said lever at one side of the center of said head, a second lever having a pivotal connection with the arm at the other side of said center and also with said slide, and weights on the ends of said levers.

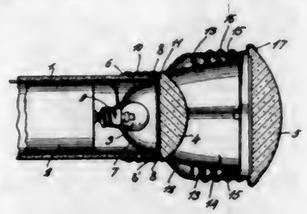
1,621,952. PLATE FOR PRINTING UPON TIN AND THE LIKE. MICHAEL J. PICKETT, Cleveland, Ohio. Filed Feb. 16, 1926. Serial No. 88,559. 3 Claims. (Cl. 101—375.)

1. Plates for attachment to the plate-cylinder of a printing press, consisting of a metallic plate having a raised ink receiving surface, and the ink receiving surface being provided with longitudinal grooves extending to the edges thereof.

1,621,953. MOVING-PICTURE MACHINE. EDMOND JOHN ROY, New York, N. Y. Filed June 10, 1926. Serial No. 115,027. 1 Claim. (Cl. 88—18.)

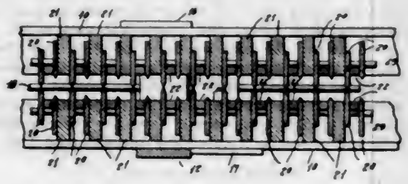
In combination, a shutterless moving picture projection apparatus, a source of illumination associated therewith, means for intermittently turning on and off said source of illumination, said means comprising a rotatable insulator disc mounted on the projection apparatus, spaced contacts arranged in the outer face of the insulator disc, brushes engaging the outer face of the disc and said contacts, supporting means for said brushes, said supporting means comprising an insulated block on which the inner ends of the brushes are secured, an arm carrying said block, and additional means for adjustably mounting the arm on the projection apparatus, the last mentioned means comprising a pair of members having their adjacent ends pivotally secured, one of said members being secured on the projection apparatus, a bolt extending transversely from the other member, the outer end of said bolt extending through said arm.

1,621,954. CHAIN. MILTON SABIN, New York, N. Y., assignor to Alex. Sabin & Sons, New York, N. Y. Filed July 31, 1926. Serial No. 126,215. 1 Claim. (Cl. 63—2.)



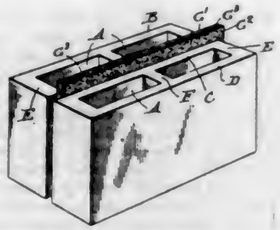
In a device of the class described in combination, a mesh fabric having a continuous flexible chain attached to both edges thereof to prevent the said fabric from unraveling, the entire length of each link of said chain rigidly secured to the edge of said fabric throughout the entire length of the fabric.

1,621,955. FLASH LIGHT. JOSEPH A. SCHIFFNER, Denver, Colo., assignor, by direct and mesne assignments, of one-third to Harry Shwartz and one-sixth to Marcelus Witherwax, Denver, Colo. Filed Feb. 19, 1926. Serial No. 89,325. 2 Claims. (Cl. 240—10.5.)



1. A flash light comprising, in combination, a cylindrical casing adapted to contain a plurality of dry cells, a threaded ferrule secured to one end of said casing, a reflector provided with a flange, said reflector extending into the casing and provided with a threaded opening adapted to receive a lamp, the flange of the reflector being secured to the outer end of the ferrule so as to be held from movement with respect thereto, a lens holding member having a cylindrical threaded portion adapted to engage the threaded ferrule, and another threaded cylindrical portion of larger diameter, the two threaded por-

tions being connected by a conical section, said holding member having a groove at the juncture of the smaller threaded section and the conical section, a lens in this groove whereby when the holding member is rotated the distance from the lamp to the optical center of the lens may be varied, a second lens holding member threadedly

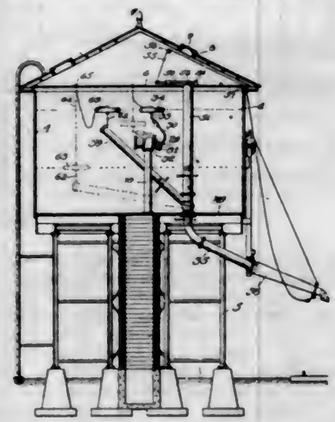


connected with the larger threaded portion and a lens secured to the outer end of said second lens holding member whereby when it is rotated with respect to the first lens holding member the distance between the optical centers of the two lenses will be altered without altering the distance between the optical center of the first lens and the lamp.

1,621,956. CANDY MACHINE. ALBERT F. SCHMAND, Little Rock, Ark. Filed June 17, 1924. Serial No. 720,603. 4 Claims. (Cl. 107—21.)

4. A candy machine of the character specified, comprising two members hingedly secured together, each member comprising parallel angle bars having the outer edges of a flange of each bar notched, hinged spacers fitted in the notches of the angle bars, fixed spacers intermediate the hinged spacers, adjustable cutters disposed between the sets of spacers and having vertical slots and lateral notches, and rods passing through openings in the fixed spacers and co-acting with the slots and notches of the cutters to hold the latter in the required adjusted position.

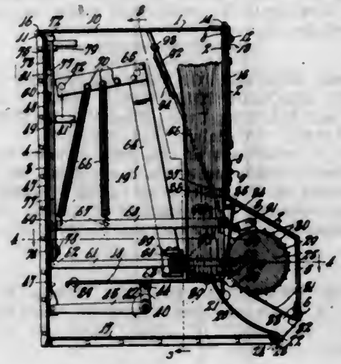
1,621,957. BUILDING BLOCK. WILLIAM H. SCHWEIZER, Baltimore, Md. Filed Apr. 3, 1926. Serial No. 99,608. 1 Claim. (Cl. 72—41.)



In a building block, an integral layer of material impervious to moisture and projecting beyond two faces thereof, the opposite faces being correspondingly grooved, to receive the projecting portions of the adjacent blocks when assembled in a wall or the like each projecting portion of the layer being provided with series of holes in its outer end, for the purpose specified.

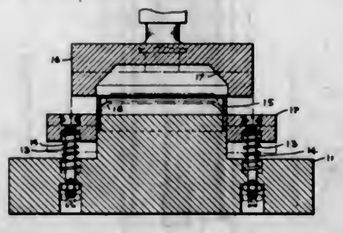
1,621,958. VULCANIZER. LEWIS O. SNARR, Toledo, Ohio. Filed Apr. 17, 1926. Serial No. 102,648. 5 Claims. (Cl. 18—18.)

1. In a vulcanizing shoe formed of heat conducting material and having a relative thick central portion and tapering toward the edges of the shoe, an electrical heat unit located at the central portion for heating the shoe.



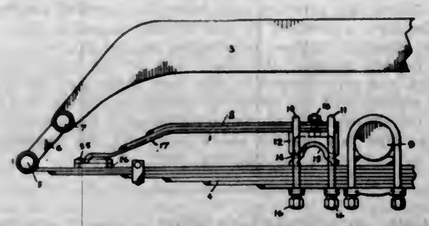
1,621,959. STORAGE TANK. BARTON S. SNOW, Batavia, Ill., assignor to T. W. Snow Construction Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 19, 1925. Serial No. 70,033. 4 Claims. (Cl. 137—21.)

1. Water-storage apparatus, comprising a tank, a valve controlling the flow of water therefrom and comprising a valve body in said tank containing an inlet and an outlet and a valve proper controlling the flow of water through said valve body, and means controlling the flow of water into said inlet, said valve body having an upwardly projecting extension and said valve proper being bodily liftable out of said body and extension, said extension projecting close to the top of the tank to prevent draining of the latter through the upper end of said extension when said valve proper is removed.



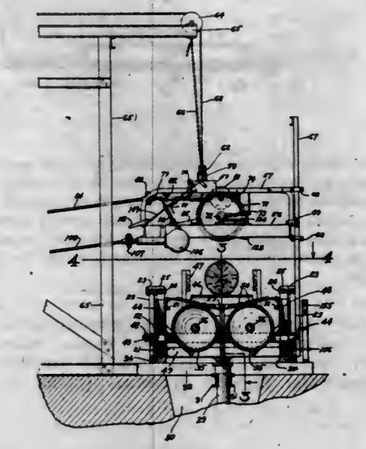
1,621,960. VENDING MACHINE. DAVID H. STEWART and GEORGE W. NELSON, Kent, Ohio, assignors to Stewart Machine Co., Kent, Ohio. Filed Dec. 14, 1923. Serial No. 680,697. 17 Claims. (Cl. 211—8.)

1. In a vending machine of the character described, a delivery mechanism arranged to grip the outermost one of a pack of papers at the lower end thereof, a presser follower comprising a rigid lower portion that exerts pressure against the paper pack in line with the delivery mechanism and a flexible upper portion that yieldingly sustains the upper portion of the paper pack in a vertical position, guideways at the sides of the machine, guides slidable along said guideways, and yieldable means connecting said guides with said rigid portion of the follower whereby said follower may assume various positions in a plane normal to the pack to adapt itself to varying side-



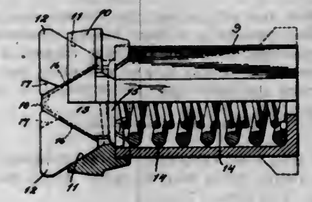
edge thicknesses of the pack and means exerting independent yielding pressures on said guides in the direction of said delivery mechanism.

1,621,961. ANGLE SPLIT RING. MELVIN STRINGER, Pottstown, Pa. Filed Aug. 28, 1924. Serial No. 734,698. 3 Claims. (Cl. 188—250.)



2. The band portion of a band brake mechanism comprising a pair of flanged rings secured parallel, and a loop substantially at the centre thereof upon the inside extending over opposite sides of said adjacent flanges and secured upon the inside of the rim thereof, said loop formed out of an integral piece of metal having bifurcated ends.

1,621,962. SPRING ACTION. MELVIN STRINGER, New York, N. Y. Filed Oct. 26, 1925. Serial No. 64,801. 4 Claims. (Cl. 267—45.)



1. In combination with a vehicle, an axle supported spring having a shackle for supporting the body of said vehicle, a second spring free from the body of said vehicle adapted to continuously oppose the reaction of said first mentioned spring at a point adjacent the shackle thereof, and in combination with said second spring means for varying the degree of its said opposition.

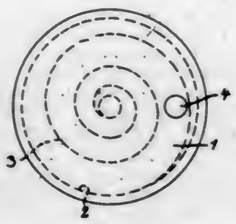
1,621,963. POLE-PUNCTURING MACHINE. ROBERT D. VALENTINE, Minneapolis, Minn., assignor, by mesne assignments, to National Pole & Treating Company, Minneapolis, Minn., a Corporation of Delaware. Filed June 4, 1923. Serial No. 643,256. 27 Claims. (Cl. 144—2.)

1. In a pole puncturing machine, means for supporting the pole, said means being mounted to be raised bodily and tiltable to adapt itself to irregular or crooked poles, and pole puncturing means entering the pole on lines normal to its surface, supported to be correspondingly tiltable to maintain said lines normal.

1,621,964. DRAFT GEAR. EDMUND H. WALKER, New York, N. Y. Filed Mar. 29, 1924. Serial No. 702,795. 10 Claims. (Cl. 213—26.)

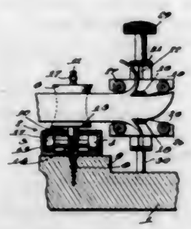
1. A friction shock absorbing mechanism for railway draft rigging involving a spring barrel, a friction box positioned at one end of said barrel, a spring mounted within said barrel, a plurality of wedge blocks cooperating with the friction box, a center wedge block, and means disposed along opposite sides of the center wedge block adapted to interengagingly coact with an adjacent portion of each of the first named wedge blocks, said means serving to facilitate correct assembly thereof.

1,621,965. METHOD OF TREATING ANIMAL TISSUE AND PRODUCTS OBTAINED THEREFROM. FRIEDRICH WILHELM WEBER, Hackensack, N. J., assignor to Maywood Chemical Works, Maywood, N. J., a Corporation of New Jersey. Filed Apr. 4, 1924. Serial No. 704,282. Renewed Aug. 6, 1926. 16 Claims. (Cl. 149—5.)



1. The process of treating animal tissue, comprising acting in the presence of sodium chloride upon the tissue, prepared in any of the well known ways, with a solution of a salt of a rare earth metal capable of forming a basic salt.

1,621,966. CRANK LOCK FOR BOX-CAR DOORS. ADOLPH E. ASHLEMAN and THOMAS E. HANEY, Waco, Tex. Filed July 6, 1926. Serial No. 120,771. 5 Claims. (Cl. 20—22.)

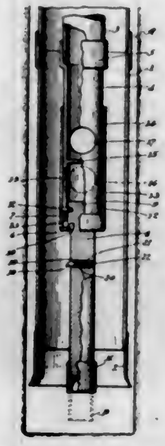


1. A sliding door for cars including an outer section and an inner section pivotally connected to the outer section and adapted to be extended into the door opening, means for operating the door, and said inner section adapted to automatically move to a position in close engagement with the outer section when the door is moved to its open position.

1,621,967. SAFETY PLATE AGAINST BURNING DURING COOKING. ARTHUR BUTZ, Halbau, Silesia, Germany. Filed Nov. 11, 1924. Serial No. 749,350, and in Germany Mar. 12, 1924. 3 Claims. (Cl. 53—1.)

1. A device for preventing the boiling over of milk or like fluids, comprising a plate having downwardly extending supporting means on the edge thereof, a spirally formed recess on the lower face of said plate, and a vapor exit connecting the outer end of said recess to the space above said plate.

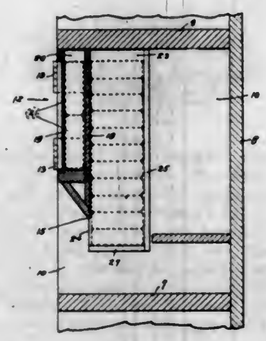
1,621,968. BEAN STRINGER. JAMES HERBERT CARTER, Oakland, Calif. Filed Mar. 3, 1926. Serial No. 92,042. 4 Claims. (Cl. 146—171.)



1. A device of the character described having a pair of knives and movable frames carrying the knives, means limiting the movement of the frames toward each other thereby sustaining the knives in normally spaced relationship, a pair of vertical guide rollers between which an article to be cut is inserted, in combination a carriage upon which one guide roller is mounted, resilient means so connected between the roller as to normally keep the guide rollers together, a transverse track on which the carriage runs upon movement of the respective roller to accommodate said article when moved between the rollers, and transverse rollers carried by said frame being located in advance of the knives thereby to be engaged by said article to separate the frames and knives and gauge the depth of the cut.

1,621,969. PROCESS FOR THE TREATMENT OF ORES WITH CHLORIDE SOLUTIONS. NIELS C. CHRISTENSEN, Salt Lake City, Utah. Filed May 18, 1926. Serial No. 110,025. 27 Claims. (Cl. 75—18.)

1. In the treatment of ores with chloride brines, the improvement which consists in neutralizing the corrosive constituents of the solution by adding a readily soluble oxidized compound to the mixture of ore and brine after the treatment of said ore with said chloride brine.



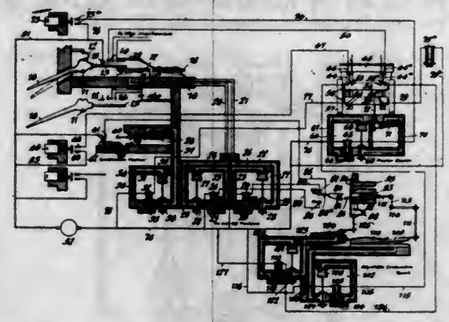
1,621,970. CEMENTING BAILER. SPENCER D. COATES, PAUL H. DAVIS, and ABBOTT B. JENKS, Santa Fe Springs, Calif. Filed Mar. 10, 1926. Serial No. 93,627. 4 Claims. (Cl. 294—72.)

1. A dump bailer comprising a pipe having a transverse partition and a discharge port in the pipe above the partition, an exterior and an interior abutment surface at the lower end of the pipe, a sleeve slidable on the pipe and normally resting on the exterior abutment surface, said sleeve having a port in non-alinement with the discharge port and below the partition for closing the discharge port when the sleeve is in normal position, an impact member slidable in and projecting beyond the lower end of the pipe below the partition and normally extended relative to the pipe, a shoulder on said member engaging the interior abutment surface for limiting normal projection of the impact member, the lower end of the pipe being slotted, and pins slidable in said slots connecting the impact member and the sleeve for raising the sleeve on the pipe by telescoping of the impact member in the lower end of the pipe to aline the sleeve port with the discharge port so as to open the discharge port.

1,621,971. DISPENSING CABINET. RENE C. CURTIS, Martinez, Calif. Filed Jan. 20, 1926. Serial No. 82,548. 2 Claims. (Cl. 211—8.)

1. In an article of the character described, a casing, a door closing the upper portion of said casing, a row of straight vertical chutes on the back of said door and extending below the door but terminating above the bottom of said casing, strips at the lower ends of said chutes for holding packages in said chutes, said casing being open in the lower part thereof so that a hand may reach into said casing under said door, there being a space between

the back of the chutes and the back of the casing large enough for a hand to engage the back of the lowest package in a chute and slidably pull it therefrom.

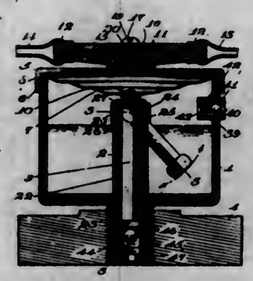


1,621,972. ANTIGLARE SHIELD FOR MOTOR VEHICLES AND THE LIKE. WESLEY C. DARBY, Des Moines, Iowa. Filed Feb. 1, 1926. Serial No. 85,206. 5 Claims. (Cl. 296—97.)

1. In a device of the class described, a casing having a longitudinal slot therein, a shaft mounted in the ends of said casing for rotation, a roller fixed on said shaft in said casing, said shaft being able to slide in the ends of the casing, a spring on the shaft between the roller and one end of the casing, the one end of said roller having a series of holes, a tongue projecting from the adjacent end of the casing and adapted to coact with said holes, a movable member adapted to be moved to position between the tongue and the roller, and a transparent strip mounted on said roller.

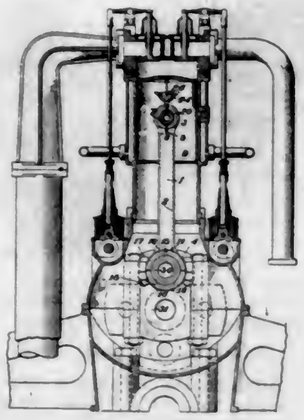
1,621,973. COMBINATION STOP MECHANISM FOR ORGANS. CHARLES N. DEVERALL, Buffalo, N. Y., assignor to The Rudolph Wurlitzer Manufacturing Company, North Tonawanda, N. Y., a Corporation of New York. Filed Aug. 28, 1924. Serial No. 734,598. 24 Claims. (Cl. 84—345.)

15. In an electro-pneumatic organ, the combination of a plurality of stop keys, actuating devices for moving them to their "on" and "off" positions, a combination mechanism connected with said actuating devices for controlling desired stop combinations, a piston for controlling said combination mechanism, an electrical circuit including the aforesaid elements, a plurality of switch arms in said circuit governing said actuating devices, and adjustable mechanism controlled from the organ bench for operating said switch arms, comprising push rods arranged to engage said switch arms for moving them to their "on" or "off" positions, means in said circuit and controlled by said combination piston for actuating said push rods, selecting members connected with said push



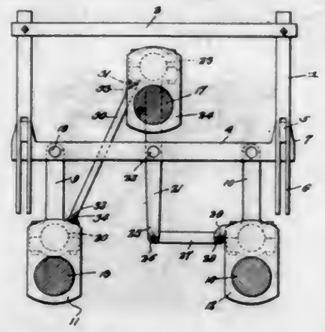
rods for setting them in position preparatory to being actuated, and means in said circuit and controlled by the stop keys for actuating said selecting members.

1,621,974. COMBINED DOOR HOLDER AND CHECK DEVICE. JAMES DENNIHAN, Rodondo Beach, Calif. Filed Dec. 19, 1925. Serial No. 76,430. 3 Claims. (Cl. 16—84.)



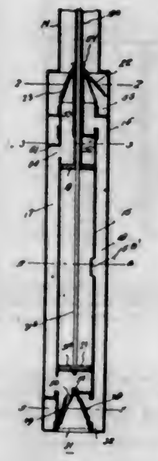
1. A suction door holder comprising a cup shaped member formed of a resilient material adapted for securement to a support and disposed in the path of a swinging door, said suction member adapted to engage and hold the door against movement by the suction of the cup shaped member when the same is brought thereagainst.

1,621,975. PNEUMATICALLY-OPERATED LUBRICATOR. JAMES EDISON ERSKINE, Jacksonville, Fla. Filed Dec. 29, 1924. Serial No. 758,663. 5 Claims. (Cl. 184—7.)



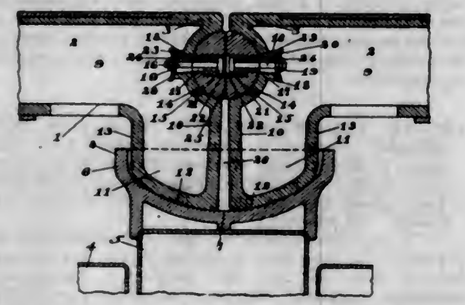
5. A lubricating system comprising a plurality of lubricators, each including a lubricant discharge chamber, a conduit by which all the lubricators are connected, a control by the operation of which pneumatic impulses are produced in said lubricators through said conduit, means in each lubricator comprising a resilient diaphragm adapted to be actuated by said pneumatic impulses, and means operated by actuation of the diaphragm to admit and expel charges of oil to and from the discharge chamber.

1,621,976. SELF-LUBRICATING PITMAN. THOMAS M. FINLEY and ALLEN W. BROWN, St. Louis, Mo. Original application filed Jan. 14, 1920, Serial No. 351,346. Divided and this application filed Jan. 27, 1920. Serial No. 354,454. 8 Claims. (Cl. 184—11.)



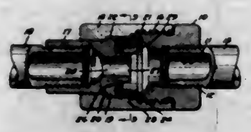
1. In a splash system, a connecting rod arranged substantially vertically and having upper and lower bearings and provided with a longitudinal lubricant passage connecting the said bearings to permit lubricant to pass from the upper bearing to the lower bearing, the lower end of the pitman rod having a slot arranged to catch lubricant and throw the same upwardly, said slot also communicating with the lower bearing and forming an outlet for the lubricant passage to permit lubricant to flow therefrom to the exterior of the pitman and a receptacle carried by the upper end of the pitman and arranged to catch lubricant splashed upwardly by the lower end of the pitman and feed the said lubricant to the bearings.

1,621,977. FLEXIBLE POWER TRANSMISSION FOR INTERNAL-COMBUSTION ENGINES. THOMAS M. FINLEY, St. Louis, Mo. Filed May 21, 1926. Serial No. 110,734. 11 Claims. (Cl. 74—14.)



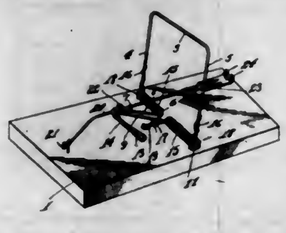
1. In a gearless flexible power transmission, the combination of a plurality of internal combustion engines, having spaced parallel crank shafts, a power transmission crank shaft extending longitudinally of the crank shafts in spaced relation with the same and located beyond the plane of the engine crank shafts, and mechanism including connecting rods for transmitting power from the engine crank shafts to the power transmission crank shaft, and means for producing a rotation of the engine crank shafts in opposite directions.

1,621,978. PUMP. VERLA L. FORMWAY and ROY F. FORMWAY, Roby, Tex. Filed July 23, 1926. Serial No. 124,418. 4 Claims. (Cl. 103—156.)



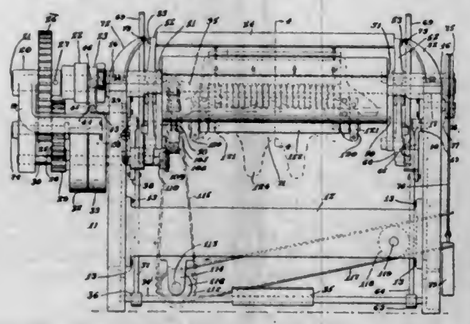
1. In a pump and in combination, an outer cylinder, an inner cylinder, said inner cylinder fixed with respect to the outer cylinder and provided with ports, lower and upper pistons adapted to be synchronously moved in opposite direction in the inner cylinder, a valve frame with ports removably arranged in the lower portion of the inner cylinder and spaced from the outer cylinder, a valve frame with ports removably arranged in the upper portion of the inner cylinder and spaced from the outer cylinder, valves carried by said frames; the lower end of the rod of the lower piston being adapted for detachable connection to the lower valve frame and the said valve frame being also adapted for said detachable connection, means dividing the space between the outer and inner cylinders into chambers, and means dividing the upper valve frame into chambers.

1,621,979. ARTICULATED CAR. CARL G. FRELIN, Bellevue, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Oct. 2, 1926. Serial No. 139,095. 18 Claims. (Cl. 105—4.)



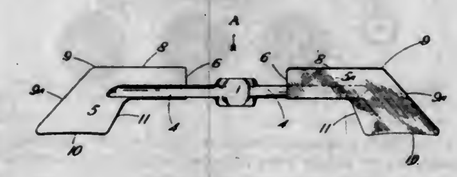
1. In an articulated car comprising a plurality of adjacent car bodies, and buffing means between said bodies, said means comprising a pair of members having contacting bearing surfaces parallel to each other in all directions.

1,621,980. FLEXIBLE COUPLING. LOUIS GOODMAN, San Francisco, Calif. Filed May 29, 1926. Serial No. 112,698. 3 Claims. (Cl. 285—120.)



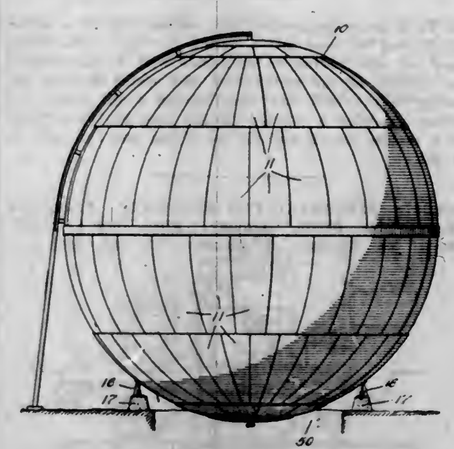
1. A flexible coupling comprising a hollow body portion having its inner end counterbored, a ferrule adapted to be secured to said body portion and having an inner bore of substantially the same diameter as said counterbore, a nipple rotatably retained by said ferrule, the inner end of said nipple being spaced from the junction between said bores, and a cup washer seated against the inner end of the nipple and extended past the junction between said bores whereby both the junctions between the ferrule and nipple, and ferrule and body portion, are sealed.

1,621,981. MOUSETRAP. EDWIN C. HARDESTY, Abernathy, Tex. Filed Nov. 9, 1926. Serial No. 147,296. 5 Claims. (Cl. 43—81.)



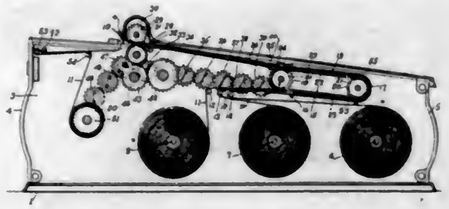
1. A trap comprising a base, a jaw pivoted to said base, spring means yieldably resisting upward movement of the jaw to a set position, a setting lever carried by and extending rearwardly from said jaw and formed with a side arm, and a trigger pivoted to the base and extending forwardly beyond the pivotal mounting of the jaw and provided with bait holding means, said trigger being adapted to engage said lever at the inner end of its side arm and releasably retain the jaw in a set position.

1,621,982. CHEEKING MACHINE. DANA E. HARDING, Arlington, Mass., assignor to Harding Engineering Company, East Boston, Mass., a Corporation of Massachusetts. Filed May 13, 1925. Serial No. 30,031. 5 Claims. (Cl. 149—18.)



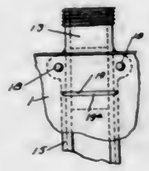
5. An improved cheeking machine, comprising a rotatably mounted shaft, a hide holding sector secured to said shaft and rotatable therewith, a longitudinal groove on said sector, a toggle operated locking device cooperating therewith, and means for automatically holding the hide in clamped position on the sector during the rotation of such sector.

1,621,983. AERIAL PROPELLER. ALEXANDER HARPER and STEWART ALEXANDER HARPER, Dunedin, New Zealand. Filed Dec. 4, 1925. Serial No. 73,227. 2 Claims. (Cl. 170—159.)



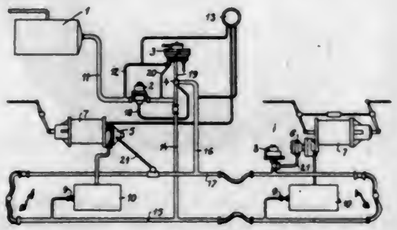
1. A rotatable aerial propeller including a boss member and radius members projecting at diametrically opposite points therefrom, said radius members having a flat surface inclined to the transverse plane of the member and to the axial plane of the boss member, a wing secured to the flat surface of each radius member said wings being positively arranged on the respective radius members and having an edge between the radius member and the leading edge of the wing disposed at right angles to the longitudinal plane of the radius member and an edge leading from the radius member to the trailing edge of the wing at an angle to such plane the free edge of the wing beyond the radius member extending from the leading edge to the trailing edge at an inclination to the longitudinal plane of the radius member.

1,621,984. GAS HOLDER. GEORGE T. HORTON, Chicago, Ill. Filed Nov. 7, 1925. Serial No. 67,547. 2 Claims. (Cl. 220—1.)



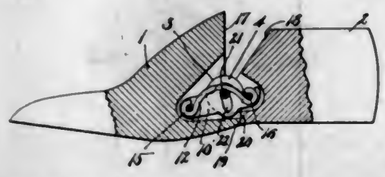
1. A gas holder comprising a spherical shell substantially supported by supporting legs resting on foundations and attached at their upper ends to the shell on the line of a circle lying in a horizontal plane and having a diameter substantially less than the diameter of a great circle of said shell; and stiffening members inside of said shell lying above said legs, each of said stiffening members comprising a substantially rectangular flat piece of material set on edge at its outer edge curved to conform to the curvature of the shell and attached thereto, and its inner edge provided with a stiffening member.

1,621,985. AUTOGRAPHIC REGISTER. PHILIP A. JACKSON, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed Dec. 26, 1924. Serial No. 758,075. 11 Claims. (Cl. 282—16.)



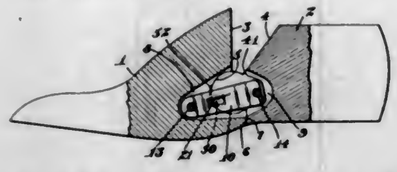
9. In an autographic register, means for supporting a plurality of supply rolls of paper, means of assembling sheets therefrom below and substantially to the rear of a writing table, paper feeding means for feeding the latter in superimposed relation onto the table, and paper guiding means substantially encircling the paper feeding means.

1,621,986. METER CONNECTION. WILLIAM H. KAISER, Harborcreek Township, Pa., assignor to American Meter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 23, 1924. Serial No. 745,485. 2 Claims. (Cl. 73—1.)



1. In a meter connection, the combination of a meter wall having an opening; a fitting having a connection upper end and having an open side with a surrounding face secured to the meter wall and sealed around the opening in the wall, said wall having a slit above the opening exposing a portion of the face of the fitting; and a sealing means uniting the fitting and the wall at the slit.

1,621,987. AIR BRAKE FOR RAILWAYS. FLORENTIN KASANTZEFF, Berlin, Germany. Filed July 11, 1924. Serial No. 725,444. 7 Claims. (Cl. 303—30.)



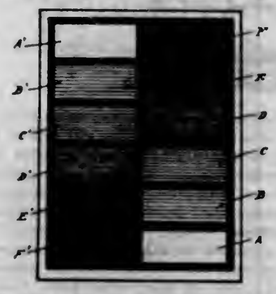
1. Air brake for railways comprising in combination with the engineer's valve, a train air pipe, a handle, a governing chamber, a compressed air inlet and an air outlet on said chamber, means connected to said handle for altering the cross-section of only one of said air passages, the other remaining constant, so as to produce different pressures in said chamber at different positions of said handle, and means for producing corresponding pressures in the train air pipe.

1,621,988. LAST. WALTER A. KRENTLER, Detroit, Mich., assignor to Krentler-Arnold Hinge Last Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 22, 1923. Serial No. 658,806. 6 Claims. (Cl. 12—136.)

1. A two-part last having said parts constructed and arranged for relative movement about a pre-determined axis, means connecting said parts movable on a different axis and means formed on said last named means acting automatically to permit the movement of said last parts and connecting means on the different axes at substantially uniform tension.

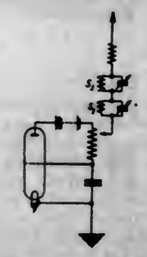
1,621,989. LAST. WALTER A. KRENTLER, Detroit, Mich., assignor to Krentler-Arnold Hinge Last Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 8, 1925. Serial No. 74,166. 1 Claim. (Cl. 12—136.)

A last having a forepart and a heel part relatively movable, a connecting spring member and means associated with said spring member to span the joint between the fore part and heel part and bear upon the adjacent surfaces of said forepart and heel part.



1,621,990. AUTOMATIC PENCIL. LEO H. LIPPERT, Brookings, S. Dak., and RAGNVALD BERGERSON, Chicago, Ill. Filed Nov. 13, 1924. Serial No. 749,699. 1 Claim. (Cl. 120—18.)

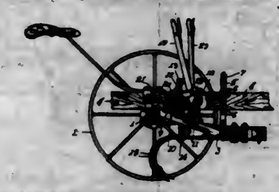
A pencil of the character described, including a tubular body portion, said body portion having internal threads disposed throughout substantially one-half of



the length of the body portion, a tubular magazine having an enlarged upper portion for containing lengths of lead and having a lower restricted portion, and a tapered funnel-shaped portion connecting the enlarged portion and restricted portion to feed lead to the restricted portion, said restricted portion having its side walls cut away at opposite sides providing slots and having inclined surfaces adjacent to the upper edges thereof, a nut slidable on the restricted portion, spring fingers carried by the nut and adapted to extend into the slots to grip a length of lead therebetween to hold and feed the lead towards one end of the body portion, said nut adapted to cooperate with the threads of the body portion, when the magazine is rotated, to move the spring fingers longitudinally of the body portion, and said fingers adapted to move over the inclined surface to move the fingers to release the lead held thereby.

1,621,991. DEVICE FOR DETERMINING PHOTOGRAPHIC EXPOSURES. EMIL MAYER, Vienna, Austria. Filed Aug. 27, 1923, Serial No. 659,455, and in Austria May 30, 1923. 1 Claim. (Cl. 95—10.)

A testing plate for photo-printing purposes and the like, embodying two substantially identical series of sections of varying transparency arranged side by side, the most transparent section of one of said series being adjacent the darkest section of the other series.

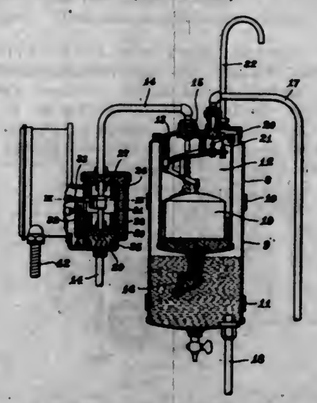


1,621,992. VALVE GENERATOR ARRANGEMENT. ALEXANDER MEISSNER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany, a Corporation of Germany. Filed Sept. 3, 1921, Serial No. 498,418, and in Germany Dec. 22, 1917. 3 Claims. (Cl. 250—36.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. An arrangement for transmitting radio frequency energy comprising a vacuum tube generator, an antenna connected with the generator, and closed circuits in the antenna tuned individually to different harmonics of the basic frequency of the generator for preventing radiation of such harmonics from the arrangement.

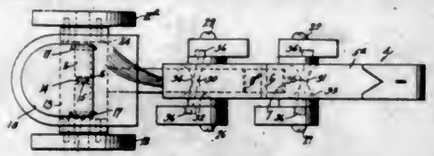
1,621,993. AGRICULTURAL IMPLEMENT. JOHN A. MILLS, Lancaster, Tex. Filed Aug. 21, 1926. Serial No. 130,743. 3 Claims. (Cl. 97—237.)

1. In an implement of the character described including with a wheeled frame having a tongue; a brace connected to the forward portion of said frame and adjustably embracing said tongue; a multiplicity of staggeringly arranged plow shanks pivotally connected with the forward portion of said frame and capable of



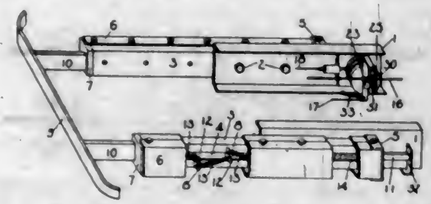
vertical movement; a pair of shafts mounted in parallel relationship on said frame, flexible means carried by said shafts to depend and engage alternate ones of said plow shanks, and means to cause rotation of said shafts independently to elevate alternately arranged plow shanks.

1,621,994. SAUSAGE-TWISTING MACHINE. JOLLY L. MORRIS, Crafton, and CHARLES H. ALLEN, Pittsburgh, Pa., assignors of one-half to William F. Fried, Richard H. Fried, and Edward B. Fried, Pittsburgh, Pa. Filed Aug. 9, 1926. Serial No. 127,996. 19 Claims. (Cl. 17—34.)



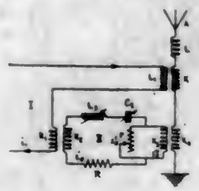
1. In a sausage twisting machine, a pair of oppositely rotatable superimposed annular planes adapted to receive therebetween two sausage-links and rotate same in opposite directions.

1,621,995. INDICATING DEVICE. EDMUND QUINCY MOSES, New York, N. Y., and GERALD E. TERWILLIGER, Newark, and WILLIAM P. HAMMOND, Passaic, N. J.; Laura E. M. Terwilliger executrix of said Gerald E. Terwilliger, deceased. Filed July 26, 1916. Serial No. 111,475. 5 Claims. (Cl. 285—1.)



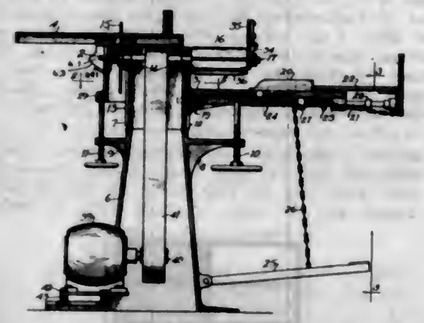
1. Means for resetting the reading of gear driven distance indicator devices for motor vehicles which comprises providing a double worm gear reduction drive as a part of the device, a pivoted bearing mount for the second of said worm gears, and a lever means periodically operated by the vacuum feed device of the motor of said vehicles to engage and rotate said pivoted bearing mount to momentarily disengage the said second worm gear from further parts of the indicating mechanism driven thereby.

1,621,996. FIGURE WHEEL WALKING TOY. FRANCIS M. MULLIGAN, Butte, Mont. Filed Apr. 3, 1926. Serial No. 99,462. 5 Claims. (Cl. 46—45.)



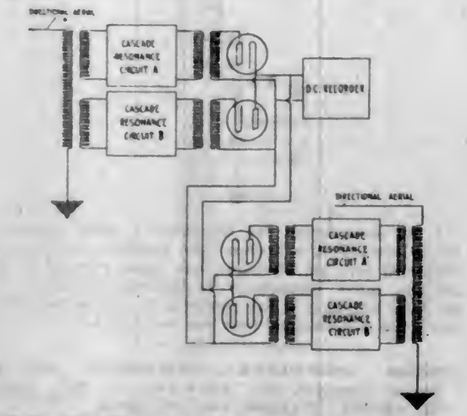
1. A toy of the nature described, comprising ground engaging wheels, a vehicle pivotally associated with said wheels, pins on said wheels cooperating with the vehicle to alternately rock the body of the vehicle in opposite directions on said pivot, a figure at the front of the toy associated with the vehicle and means associated with the figure and vehicle to transmit the rocking motion from the vehicle to the figure.

1,621,997. BUMPER FOR AUTOMOBILES. GAETANO NIGRO, Thompsonville, Conn. Filed May 27, 1926. Serial No. 111,975. 8 Claims. (Cl. 180—83.)



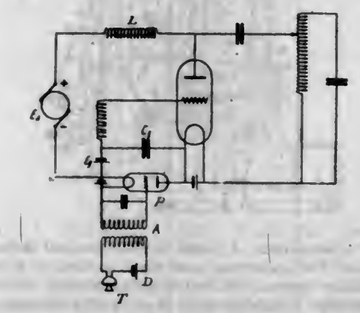
1. The combination, in a bumper for automobiles, with casings adapted to be attached to a chassis, plungers slidingly arranged in said casings, and a cross-bar at the front ends of said plungers, of springs laterally disposed relative to said casings and said plungers, and adapted when expanded to act on said plungers to force them forwardly, and springs axially disposed relative to said plungers, and adapted when contracted also to act on said plungers to force them forwardly.

1,621,998. ARRANGEMENT FOR ELIMINATING DISTURBING WAVES IN RADIOFREQUENCY CIRCUITS. MENDEL OSNOS, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches Ufer 12/13, Berlin, Germany. Filed Apr. 30, 1923, Serial No. 635,413, and in Germany May 8, 1922. 5 Claims. (Cl. 250—17.)



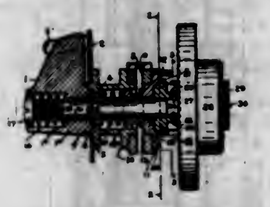
1. A means for eliminating disturbing waves in radio frequency circuits comprising, an antenna circuit, an energy circuit adapted to supply energy to said antenna, a coupling means between said energy circuit and said antenna circuit, a quenching circuit coupled to said energy circuit and also to said antenna circuit, said quenching circuit adapted to be tuned to an undesired harmonic in said antenna, and means for shifting the phase of the harmonic oscillation in said quenching circuit so that the harmonic in the said antenna circuit may be neutralized, said phase shifting being accomplished by varying the degree of coupling between the said energy and quenching circuits.

1,621,999. COMBINATION WOODWORKING MACHINE. JOHN D. PIERCE, Chicago, Ill., assignor to Combination Woodworking Machine Co., Chicago, Ill., a Corporation of Ohio. Filed Feb. 28, 1924. Serial No. 695,712. 7 Claims. (Cl. 144—1.)



1. A woodworking machine comprising a frame, a vertically adjustable table mounted on one side of said frame, an operating spindle journaled adjacent the top of said frame on a horizontal axis and having a portion thereof projecting beyond said frame and overhanging said table, a rotatable cutter-head mounted on the overhanging portion of said spindle, a pair of stationary supporting members rigidly attached to said frame on respectively opposite sides of said spindle and located substantially in the horizontal plane of said cutter-head, and a bearing member located beyond the outer end of said cutter-head and secured to said stationary supporting members to form a bearing for the outer end of said spindle whereby the top of said vertically adjustable table is free from obstruction both underneath and beyond the end of said cutter-head and is adapted to support wider material than said cutter-head while the upper surface of said material is being operated on by said cutter-head substantially as described.

1,622,000. WIRELESS-TELEGRAPH RECEIVING SYSTEM. HENRY JOSEPH ROUND, London, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Feb. 2, 1923, Serial No. 616,452, and in Great Britain Feb. 21, 1922. 7 Claims. (Cl. 250—20.)



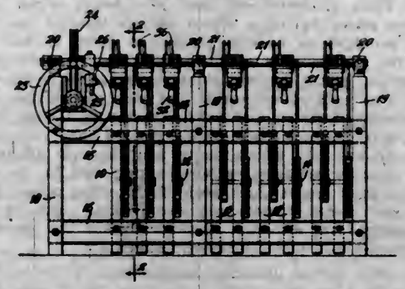
5. In a wireless telegraph receiving system the combination of two directional aerials spaced apart by a fraction of a wave length to be received, two resonance circuits coupled to each aerial, a detector coupled to each of said resonance circuits, and a recording device, all of said detectors being connected in parallel with said recording device.

1,622,001. CIRCUIT ARRANGEMENT FOR GENERATING ELECTRICAL OSCILLATIONS. HANS RUKOP, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany, a Corporation of Germany. Filed Dec. 27, 1922, Serial No. 609,183, and in Germany Feb. 14, 1922. 3 Claims. (Cl. 179—171.)

2. In an alternating current system, a three-electrode tube having an anode circuit, a source of energy in the anode circuit, a modulator tube in the anode circuit between the cathode and the source of energy, and acting as a variable resistance in the anode circuit, and the grid circuit of said first tube connected with the anode circuit between the modulator tube and the source of energy.

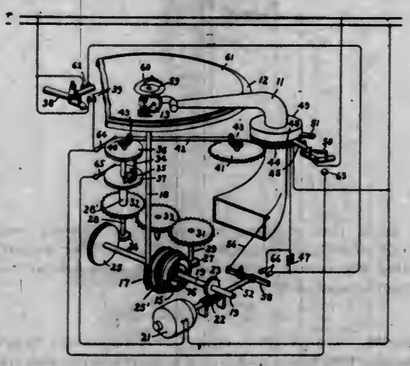
1,622,002. TIMER FOR ELECTRICALLY-OPERATED DEVICES. EDWIN A. RUTENBER, Milwaukee, Wis., assignor to A. J. Lindemann & Hoversen Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 2, 1926. Serial No. 85,413. 10 Claims. (Cl. 185—40.)

1. In a device of the character described, a shaft adapted to rotate to wind and to be oppositely rotated on the unwinding of a spring device, means connected with said shaft for measuring and indicating the winding and unwinding movement thereof, connecting devices between said shaft and said means permitting independent movement of said means with respect to said shaft, a part in rigid relation to said means and another part in the path of rotation of said first part in rigid relation to said shaft.



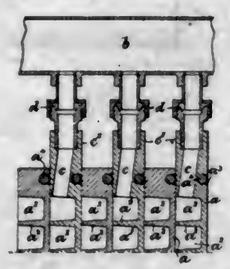
1,622,003. FILE CONTAINER FOR LOOSE-LEAF SHEETS. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Voluntary Trust Association of Copartnership, F. B. Towne, E. S. Towne, J. M. Towne, and F. W. Wilson, trustees. Filed June 11, 1924. Serial No. 719,285. 3 Claims. (Cl. 129—16.)

1. A filing tray for loose sheets, comprising a container, rotary members journaled at the bottom of the container and at the ends thereof and carrying rough and smooth floors, a stationary rear support for said sheets, a slidable



front support guided within the sides of the container, and means for securing said front support when it has been moved rearwardly to clamp the sheets.

1,622,004. APPARATUS FOR CONTROLLING ELECTRIC CIRCUITS. WILLIAM SCHWAGERMANN, Yonkers, N. Y., assignor to Ward Leonard Electric Company, a Corporation of New York. Filed Apr. 1, 1922. Serial No. 548,868. 12 Claims. (Cl. 175—312.)



3. The combination of a plurality of electric circuit controlling devices, a common drive shaft therefor, and a plurality of coupling devices between said shaft and said controlling devices each of said coupling devices comprising a pair of elements loosely mounted on said shaft, connecting means between said elements and certain of said controlling devices, and manually adjustable means for connecting either of said elements with said shaft.

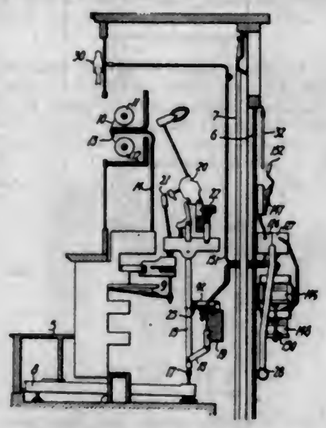
1,622,005. PHONOGRAPH. FRANK J. SEABOLT, Schenectady, N. Y., assignor, by direct and mesne assignments, to The Phonograph Company, a Corporation of Delaware. Filed Aug. 2, 1918. Serial No. 247,908. 21 Claims. (Cl. 274—15.)

1. The combination with a spring operated phonograph for playing disc records of different diameters of means for automatically winding the same when the end of a record of any diameter is reached, and means for simultaneously returning the tone arm to its starting point.

1,622,006. HEAT-INTERCHANGE APPARATUS. RICHARD SELIGMAN, Wimbledon, England, assignor to The Aluminium Plant and Vessel Company Limited, London, England. Filed July 15, 1924, Serial No. 726,084, and in Great Britain July 18, 1923. 11 Claims. (Cl. 257—245.)

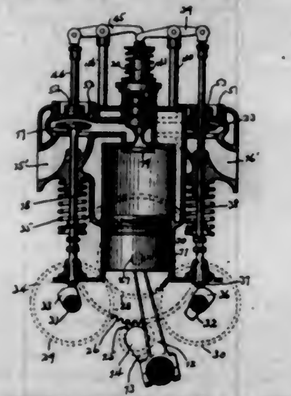
1. Plate apparatus for heat interchange which comprises plates having a ribbed surface whereof the ribs are arranged in parallel order and form, to and fro of the plates, long continuous zig-zag communicating channels, plates having plane surfaces for contacting with the said ribbed plates and side closing the said channels, admission and exhaust passages to and from the said channels, countersunk grooves about the margins of the said ribbed plates and the said admission and exhaust passages resilient packing cord in the said countersunk grooves and means for exerting pressure on the said plates whereby the said packing cords become compressed and distorted diametrically and the joints between the said plates rendered liquid tight.

1,622,007. MACHINE FOR WINDING YARN. RICHARD GREENHALGH SHARPLES, Radcliffe, Manchester, and CHARLES WILBRAHAM, Worsley, Manchester, England. Filed June 26, 1925, Serial No. 39,690, and in Great Britain July 1, 1924. 8 Claims. (Cl. 242—18.)



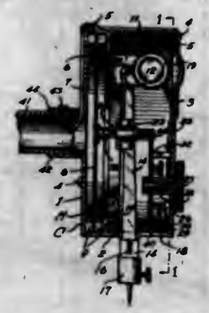
1. In a yarn winding machine, yarn delivery rollers, driving means for said rollers, and means for permitting relative slip between said rollers and said driving means during the operation of the machine.

1,622,008. MAGNETIC ALLOY. WILLOUGHBY STATHAM SMITH, Benchams, and NEWTON POPPLEFORD and HENRY JOSEPH GARNETT, Lymne, Solefields, Sevenoaks, England. Original application filed Jan. 10, 1924, Serial No. 685,432, and in Great Britain Aug. 25, 1923. Divided and this application filed May 2, 1925. Serial No. 27,594. 2 Claims. (Cl. 75—1.)



1. An alloy consisting of nickel 73.75% iron 20%, copper 4.5% and manganese 1.75%.

1,622,009. MUSICAL INSTRUMENT. CHARLES SPRINGHORN, New York, N. Y. Filed Sept. 14, 1922. Serial No. 588,169. 28 Claims. (Cl. 84—6.)



1. In combination, a piano action, manual keys and pneumatics for operating said piano action, a plurality of auxiliary musical instruments, mechanism controlled independently of said manual keys and pneumatics for conditioning said auxiliary musical instruments for operation, and means operated by the piano action in response to the operation of either said keys or pneumatics for causing the actuation of the particular auxiliary musical instrument previously conditioned by the operation of said mechanism.

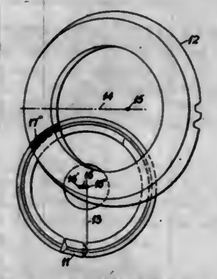
1,622,010. EXTERNAL-COMBUSTION ENGINE. SAMUEL SUMMER, Albany, N. Y., assignor of one-half to Frank S. Sommer, New York, N. Y. Filed Sept. 26, 1922. Serial No. 590,579. 4 Claims. (Cl. 60—44.)

1. In an external combustion engine, a cylinder, a piston, combustion chambers independent of each other and associated with the said cylinder, an intake valve for one combustion chamber, an exhaust valve for the other combustion chamber, valves one of which makes communication between one of the combustion chambers and the interior of the cylinder and another of which makes communication between another combustion chamber and the interior of the cylinder and means for operating the said valves whereby charges of fuel are successively compressed and trapped in the combustion chamber having the exhaust valve and then in the combustion chamber having the inlet valve, and thereafter the fuel charge thus compressed in the combustion chamber having the exhaust is released into the cylinder to operate the piston and then exhausted from the cylinder, and then the charge of fuel compressed in the combustion chamber having the inlet valve is released into the cylinder to operate the piston and then exhausted from the cylinder.

1,622,011. PHONOGRAPHIC REPRODUCING APPARATUS. ADOLPH A. THOMAS, New York, N. Y. Filed July 28, 1926. Serial No. 125,337. 17 Claims. (Cl. 179—100.1.)

1. A phonograph having mechanical and electrical reproducing means adapted to be operated independently of each other, a horn for amplifying the sound vibrations of both reproducing means, and valve mechanism automatically controlled by the operative condition of each reproducing means to connect the operative reproducing means with said horn.

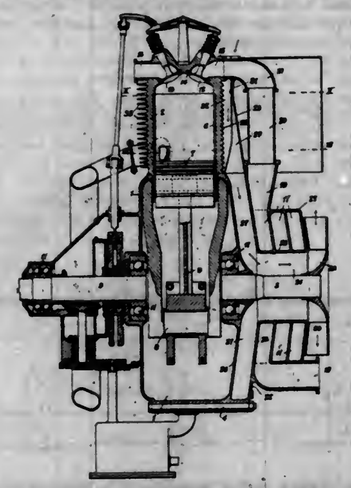
1,622,012. MANUFACTURE, CENTRIFUGALLY, OF PIPES, COLUMNS, AND THE LIKE. COLIN MCGREGOR URE, Bishopbriggs, Glasgow, Scotland. Filed July 12, 1926, Serial No. 121,911, and in Great Britain Aug. 4, 1925. 4 Claims. (Cl. 25—30.)



1. A centrifugal casting mould of the kind described comprising rotatable and longitudinally separable parts and pocket means peripherally arranged so as not to be affected by separation of the mould parts, such pocket means being adapted for branch formation.

1,622,013. PRINTED FABRIC. WILLIAM M. WHITING, East Orange, N. J. Filed July 24, 1925. Serial No. 45,730. 2 Claims. (Cl. 41—26.)

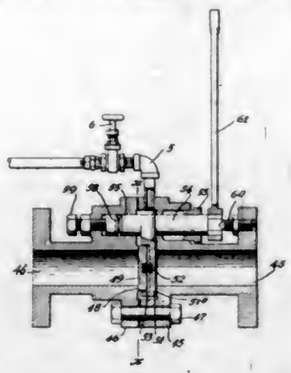
1. A printed fabric for use as portières comprising a continuous fabric body to and including the edges thereof, a main body design wrought upon said fabric exclusive of the edge portions thereof, an identical design but of lighter color wrought upon the opposite side of said fabric exclusive of the border thereof, and an edging wrought upon only the right side of said fabric, said edging simulating stitching.



1,622,014. METHOD OF PRODUCING GEARS. ERNEST WILDHABER, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Feb. 23, 1926. Serial No. 90,056. 16 Claims. (Cl. 90—5.)

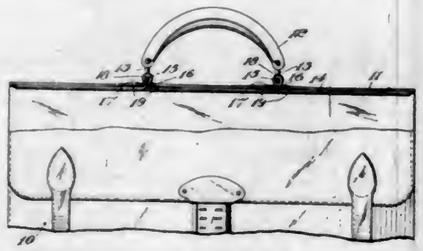
1. The method of producing a gear which consists in rotating a tool, having annularly arranged cutting portions, in engagement with a gear blank to finish cut one side face of a tooth of the blank, then shifting the tool relative to the blank, in a direction at an angle to the tool axis, to finish cut the adjacent tooth face of the blank, then indexing the blank, and repeating these operations until all the teeth have been cut on the blank.

10. The method of producing a non-generated gear which consists in feeding a rotating tool, provided with a plurality of annularly arranged cutting portions, and a gear blank relatively to each other until proper tooth depth has been reached, then shifting the tool and blank relatively to each other along a straight line in one direction to finish cut one side tooth face of the blank, again shifting the tool and blank relatively to each other along the same straight line but in an opposite direction to finish cut an adjacent tooth face of the blank, withdrawing the tool and blank relatively to each other to index and repeating these operations until all the teeth have been cut.



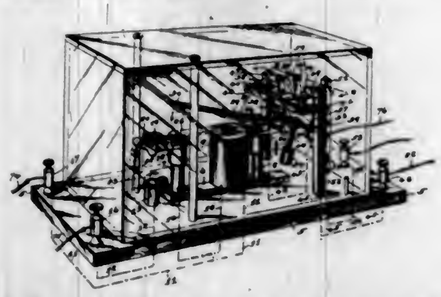
1,622,015. INTERNAL-COMBUSTION ENGINE. JOHN M. WILLIAMS, Jr., Montclair, N. J. Filed Mar. 29, 1921. Serial No. 456,559. 14 Claims. (Cl. 123—171.)

1. In an internal combustion engine, the combination with an engine cylinder having the forward and side por-



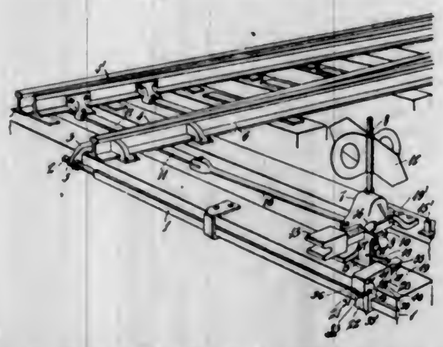
tions thereof exposed to the cooling action of air flowing relatively to the engine, of passage forming means applied to the rear portion of said cylinder and coacting with the rear portion of the cylinder wall to form a passage extending along the rear portion of the cylinder having an air inlet and a discharge outlet to atmosphere, and means driven by the engine for producing a current of air through said passage and in contact with the rear portion of the cylinder wall.

1,622,016. APPARATUS FOR CONTROLLING THE FLOW OF FLUID TO A VALVE. WYLIE G. WILSON, Jersey City, N. J., assignor to Loose Seat Valve Company, a Corporation of Delaware. Filed June 20, 1923. Serial No. 646,698. 5 Claims. (Cl. 137—144.)



1. In an apparatus wherein fluid under pressure is confined and permitted to flow within a conduit, such flow being controlled by an interposed slide valve, in combination with a constrictor interposed in said conduit in the path of the flow of the fluid to said valve, such constrictor comprising a port having an annular face and a movable element adapted to move in a plane parallel with said face and adjacent thereto, means to operate said slide valve and said movable element simultaneously, the relation between the slide valve and the movable element being such that the slide valve is partially open before the movable element has been moved from its normal position as a constrictor of the port partially closed thereby, into a position where it permits the unrestricted flow of fluid through the conduit, and means to operate said valve and constrictor.

1,622,017. STIFFENER FOR BRIEF CASES AND THE LIKE. CHARLES WINKLER, Newark, and WILLIAM H. BITTNER, Glen Ridge, N. J.; said Bittner assignor to said Winkler. Filed Oct. 7, 1924. Serial No. 742,131. 2 Claims. (Cl. 150—1.6.)



1. In a carrier with a flexible top having spaced slits, a stiffener bar extending to approximately the ends of the top and having substantially closed integral spaced loops formed thereon and extending through the slits in the top whereby the pressure of the sides of the slits against the outside lower faces of the loops holds the bar against the underside of the top, the loops forming means for securing the ends of a handle.

1,622,018. ELECTROMAGNETICALLY-OPERATED CIRCUIT CLOSER. CHARLES ADLER, Jr., Baltimore, Md. Filed June 2, 1923. Serial No. 642,960. 4 Claims. (Cl. 200—90.)

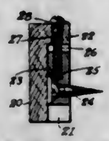
1. The combination with an electro-magnet, of an armature pivoted between its ends, and projecting over the magnet, a pivoted circuit-breaker in the path of one end of the armature to be mechanically struck by the armature-end and thereby be actuated so as to intermittently energize and deenergize said magnet, two stationary contacts, an oscillating circuit-breaker between said two stationary contacts and means carried by the other end of the said armature for mechanically operating the oscillating circuit-breaker to swing the latter from one stationary contact to the other.

1,622,019. SWITCH-INTERLOCKING DEVICE. FRANK C. ANDERSON, Cincinnati, Ohio, assignor to The American Valve and Meter Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 29, 1926. Serial No. 112,597. 14 Claims. (Cl. 246—147.)

1. A switch-interlocking device comprising an interlocking bar and a plunger retentively engaging said bar at one side of the switch head block, locking means on said plunger below the top of the head block, and a lever connected to said plunger and extending along the track from said plunger, across the head block, and latch-engaging means on said lever near the opposite side of the head block.

1,622,020. ADVERTISING NOVELTY. SVEN V. ANDERSON, Philadelphia, Pa. Filed Feb. 16, 1926. Serial No. 88,654. 3 Claims. (Cl. 40—149.)

1. In an advertising device, a blank having a body portion, and a lateral offset portion, coacting fastening devices on the lower outer ends of said body and offset portions, a vertical weakened line, intermediate said body portion and offset portion, said offset portion being composed of upper and lower horizontally extending members,

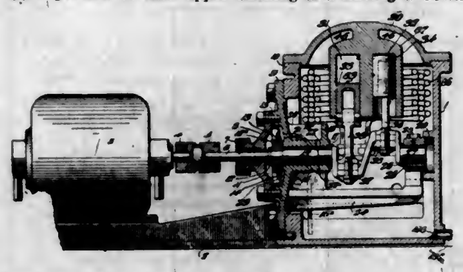


a horizontal weakened line intermediate said upper and lower members, the latter being adapted to have inverted printed matter thereon, and an upper tab, adapted to be bent with respect to said upper member.

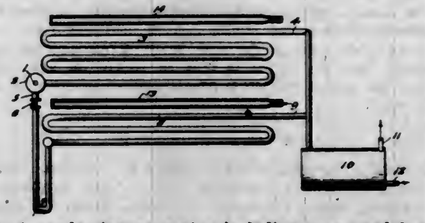
1,622,021. MANUFACTURE OF LACE. CHARLES WILFRED BIRKIN, Lamcote, Radcliffe-on-Trent, and HARRY LAWRENCE BIRKIN and ALBERT COXON, Nottingham, England, assignors to Birkin and Company, Nottingham, England. Filed July 5, 1922, Serial No. 572,877, and in Great Britain Mar. 3, 1922. 3 Claims. (Cl. 96—24.)

1. Machine made filet net lace in which each pillar consists of one thread only.

1,622,022. ADJUSTABLE WINDOW-FRAME STILE. CHARLES HENRY BRENNEN, Lansdowne, Pa. Filed May 5, 1926. Serial No. 106,803. 3 Claims. (Cl. 20—12.)



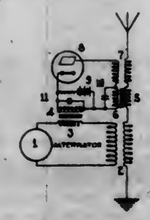
1. In a window frame, the combination of a sash having fixed vertical guides at its outer sides, of transverse blocks fixed adjacent the sash opposed to said guides, said blocks having divergent angular upper and lower surfaces, guide strips engaged on said blocks, and means to adjust said strips on the blocks.



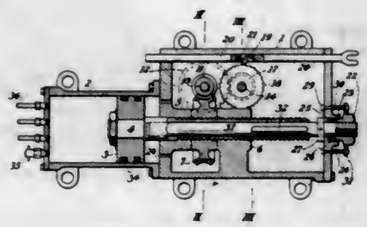
1,622,023. COMPRESSOR FOR REFRIGERATING SYSTEMS. WILLIAM BURLINGHAM, Tenafly, and RALPH L. LOVELL, Cranford, N. J., assignors to Adams, Lovell, Burlingham, Inc., Jersey City, N. J., a Corporation of New York. Filed Dec. 31, 1924. Serial No. 759,064. 16 Claims. (Cl. 230—6.)

1. In a refrigerating system, a compressor housing, a cap therefor, pendant cylinders open at their lower ends and integral with said cap, a crank shaft, a housing closure having an inward extension integral therewith and carrying the bearings for said crank shaft, pistons in said cylinders, and connecting rods for said pistons.

10. In a refrigerating system, a compressor housing, a cap therefor carrying valve chambers, removable upper and lower bushings therein having juxtaposed seats, a delivery valve having an upwardly extending stem located in the upper bushing, an apertured guide in the upper portion of said upper bushing and having a downward extension for guiding said delivery valve stem, a suction valve in said lower bushing and having a pendant stem and a lower apertured guide in said lower bushing and having an upward extension for guiding said suction valve stem.

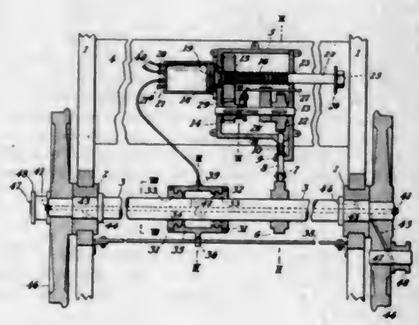


1,622,024. APPARATUS FOR COOLING AND CONDENSATION. VERNON C. CANTER, Charleston, W. Va., assignor to Gasoline Recovery Corporation, a Corporation of Delaware. Filed May 2, 1924. Serial No. 710,667. 3 Claims. (Cl. 257—85.)



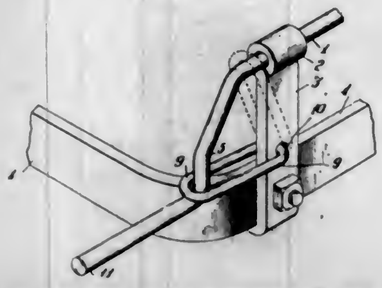
1. A condensing apparatus including upper and lower cooling coils, an inlet header connected to the lower part of the upper coil, receiving means, an outlet pipe extending from the upper part of the upper coil, conveying means connecting said pipe to the receiving means, said receiving means being located relatively lower than either coil, an inlet pipe extending from the header to the bottom of the lower coil and having a liquid trap section extending considerably lower than the bottom of the lower coil, an outlet pipe extending from the top of the lower coil into the conveying means, means for causing a liquid cooling agent to be sprayed over the upper coil, and other means for causing a liquid cooling agent to be sprayed over the lower coil.

1,622,025. SYSTEM OF RADIOTELEGRAPHY. HENRI CHIREIX, Paris, France. Filed July 20, 1923, Serial No. 652,804, and in France Sept. 13, 1922. 14 Claims. (Cl. 250—19.)



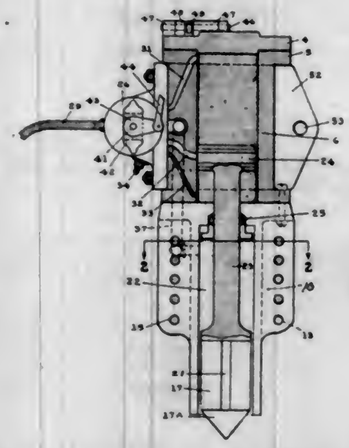
1. The method of transmitting Morse signals which consists in radiating a larger mean power for dots than for dashes.

1,622,026. LUBRICATOR. ARCHIE COUCHMAN and WALTER L. PHILLIPS, Detroit, Mich., assignors of one-third to Louis F. Drinkhahn, Detroit, Mich. Filed Mar. 12, 1926. Serial No. 94,107. 3 Claims. (Cl. 184—37.)



1. In a lubricator, the combination of a container having filler and discharge openings, a casing to which said container is attached, a piston in said container, a hollow externally threaded piston rod extending from said piston into said casing, an internally threaded gear cooperating with said threaded piston rod, means for rotating said gear, a guide extending inwardly from said casing and supporting said piston rod, said guide being permitted limited axial movement through said casing, spring tension means tending to hold said guide back from the piston end of said rod, and a key taking into said guide and said piston rod of such length that the latter is free to rotate on said guide when the piston reaches a predetermined position in said container.

1,622,027. LUBRICATING SYSTEM. ARCHIE COUCHMAN, LOUIS F. DRINKHAHN, and WALTER L. PHILLIPS, Detroit, Mich. Filed Mar. 22, 1926. Serial No. 96,369. 8 Claims. (Cl. 184—7.)

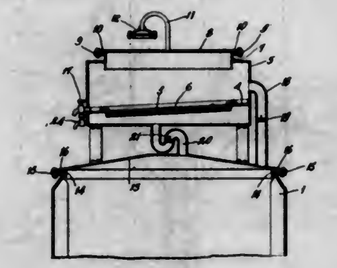


1. In a lubricating system, the combination with a locomotive having the usual frames, axle boxes mounted therein, and a hollow axle journalled in said boxes, of a lubricator mounted on said locomotive, a completely enclosed annular reservoir mounted around said hollow axle the ends of which latter are plugged, means for discharging lubricant from said lubricator as the locomotive travels, a discharge tube connecting said lubricator with said reservoir, said axle having a passage therethrough connecting its bore with the interior of said reservoir, and said axle also having other passages from its bore to the journals of said axle boxes.

1,622,028. CRANK HOLDER. WILBUR J. COULTAS, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed July 6, 1926. Serial No. 120,747. 2 Claims. (Cl. 74—33.)

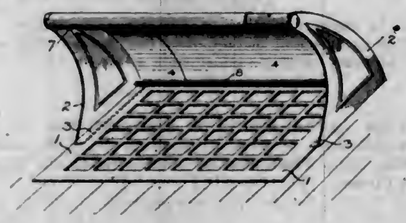
1. In a device of the character described, the combination of a rotatable shaft, a support therefor, a crank operable to rotate the shaft, and a chain link pivotally mounted on the support normally engaging with the crank to hold the latter in a position of disuse.

1,622,029. PIG-BREAKING MACHINE. JAMES P. DOVEL, Birmingham, Ala. Filed Jan. 3, 1921. Serial No. 434,433. 26 Claims. (Cl. 29—66.)



3. A power breaker mechanism, comprising a fluid pressure motor having a piston and piston rod, a breaker head on the piston rod, and guides for the head, the piston, rod and head being integral, and the guides being formed in vertical sections which are bolted to each other and to the cylinder and form the bottom head therefor.

14. A power breaker mechanism, comprising a reciprocable breaking hammer, guides therefor, a motor to reciprocate the hammer, a crane, and spring means to support the mechanism from said crane.

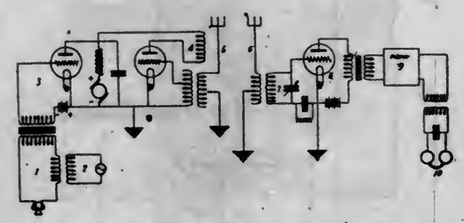


1,622,030. CASING FOR ELECTRICAL APPARATUS. DONALD V. EDWARDS, Troy, N. Y., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Dec. 7, 1922. Serial No. 605,529. 13 Claims. (Cl. 220—85.)

1. The combination with a main tank containing electrical apparatus and oil heated thereby, of an expansion tank communicating with said main tank to receive the overflow therefrom, a diaphragm dividing said expansion tank into two compartments, a filter in said diaphragm between said compartments, a pipe per-

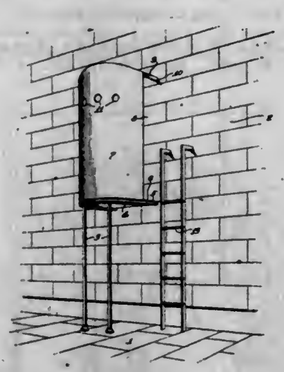
mitting a flow of oil from the main tank to the upper part of the expansion tank, and a pipe permitting the flow of oil from the lower part of the expansion tank to the main tank.

1,622,031. REGISTER HOOD. WILLIAM S. ELTERS, Dayton, Ohio, assignor to The Gem City Sheet Metal Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 29, 1926. Serial No. 98,211. 13 Claims. (Cl. 98—103.)



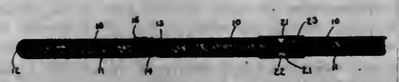
1. In a hood for registers and the like, a structure including end, back and top walls but open at its front comprising two telescopically adjustable sections each including one end wall and a portion of the back and top walls, the latter being arranged in overlapping relation, the end and rear walls being inwardly flanged at their base margins for projection beneath three marginal edges of a register plate, the marginal flange of the rear wall of one section being reversely bent to slidingly enclose the marginal flange of the rear wall of the other section, the forward margins of the top walls of the respective sections being rolled to tubular form with one tubular rolled edge enclosing that of the other section, the telescopic adjustment of the sections enabling the hood to be adjusted to a register plate with the register plate overlying the inturned flanges.

1,622,032. ELECTRICAL CONDUIT. OTTO A. FREDERICKSON, Hartford, Conn., assignor to The American Wiremold Co., Hartford, Conn., a Corporation of Connecticut. Filed Aug. 20, 1925. Serial No. 51,394. 2 Claims. (Cl. 247—27.)



2. A conduit for electric wires formed of a single strip of metal folded to provide an enclosed raceway, with an edge of the strip folded upon itself to provide two spaced plies along one side which stiffen the conduit and permit its connection to the tongue of a fitting without obstructing the raceway.

1,622,033. RADIOTELEPHONY. ALFRED N. GOLDSMITH and JULIUS WEINBERGER, New York, N. Y., assignors to Radio Corporation of America, a Corporation of Delaware. Filed May 26, 1922. Serial No. 563,836. 13 Claims. (Cl. 250—6.)



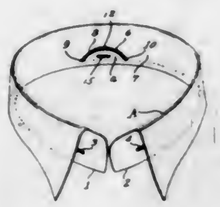
4. In a radio signaling system, the combination of a transmitter, means for generating an interfering tone of a frequency differing from that of a tone of standard musical pitch, and a receiver having filtering means for eliminating said interfering tone.

1,622,034. BANK-GUARD SHIELD. EDWARD A. HAWKS, Detroit, Mich. Filed Apr. 27, 1925. Serial No. 26,116. 1 Claim. (Cl. 89—36.)

The combination with a vertical wall, of horizontally superposed U-shaped frames having the ends thereof mounted in said wall, a bottom plate on the lowermost frame and abutting said wall, and a ported semi-cylindrical shield mounted between said frames, said shield having one vertical edge thereof abutting said wall and the other vertical edge spaced from said wall to form a doorway.

1,622,035. RUG PAD. RICHARD HENDEL, New London, Conn., assignor to E. W. Sutton Carpet Lining Corporation, Brooklyn, N. Y. Filed Nov. 24, 1924. Serial No. 751,913. 4 Claims. (Cl. 154—54.)

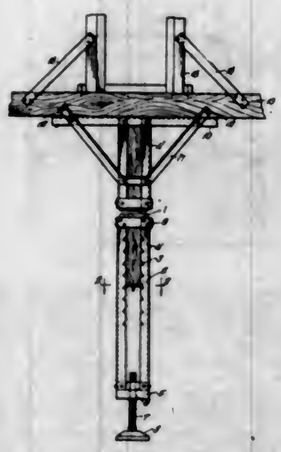
1. A rug pad consisting of a plurality of strips each composed of fibrous material having a covering, and connecting strips upon the opposite faces of the pad strips



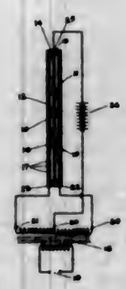
and securing the pad strips to each other with their adjacent edges contiguous, the connecting strips extending longitudinally of the pad strips and completely covering the adjacent edges of the pad strips.

1,622,036. RAIL ANCHOR FOR RAILWAYS. JACOB A. HYLE, Atlantic City, N. J., and NEWTON H. SCOTT, Philadelphia, Pa., assignors to Continental Railway Supply Corporation, a Corporation of Delaware. Filed Nov. 4, 1926. Serial No. 146,108. 9 Claims. (Cl. 238—330.)

1. A single piece rail anchor comprising a jaw portion at one end, a depending resilient portion transversely disposed with relation to said anchor, said resilient portion being in contact with the lower face of the rail in longitudinal alinement with the rail, and an upwardly extended portion at its other end.



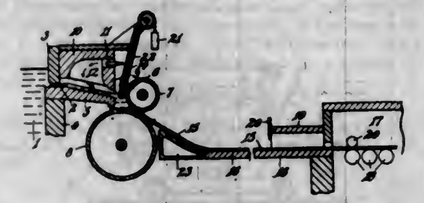
1,622,037. COLLAR. MARCUS KAHN, Brooklyn, N. Y. Filed Nov. 22, 1924. Serial No. 751,523. 1 Claim. (Cl. 2—139.)



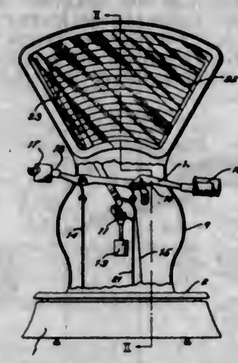
A collar of the stiff launderable variety, having its rear middle portion provided with a symmetrically curved slot, upwardly extending from and to symmetrically positioned terminals near, but materially separated from the bottom edge of the collar, whereby an attaching tab adapted automatically to adjust itself within the natural planes of the collar body, upon ironing, is provided without any tendency for said tab to be torn off or folded over on itself; said tab also being provided with a collar button-hole extending substantially parallel to the bottom edge of said collar, located a material distance above the locality of said terminals of said slot, whereby said tab is freed from the weakening effect of said collar button-hole when said tab, as an entirety, is bent out from the body of the collar.

1,622,038. ADJUSTABLE SHORE. HENRY H. LAMPERT, Chicago, Ill. Filed July 1, 1924. Serial No. 723,544. 1 Claim. (Cl. 248—2.)

In combination in an adjustable shore opposed strut members having inwardly extending flanges and downwardly sloping notches in said flanges, a second strut member slidable between said strut members, and a shelf having angularly inclined edges adapted to be engaged in opposite notches in said flanges to support the slidable member and thereby draw the opposed strut members inwardly to grip said slidable member.



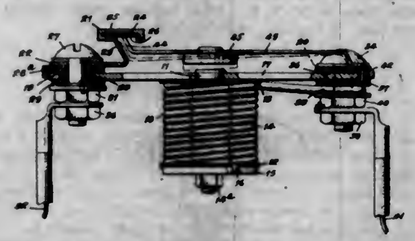
1,622,039. APPARATUS FOR AND METHOD OF REPRODUCING SOUND. FREDERICK W. LEE, Owings Mills, Md. Filed May 2, 1925. Serial No. 27,444. 14 Claims. (Cl. 179—111.)



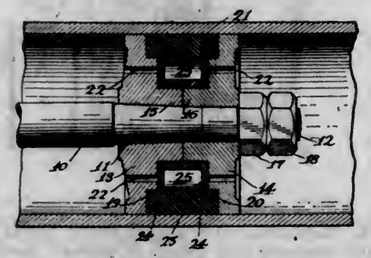
11. The method for propagating sound substantially free from distortion which consists in the establishment of an electrostatic field of balanced forces between the stationary and vibrating elements of the instrument and then causing an unbalancing of the field forces whereby said vibrating element is caused to move in said field as it seeks to reestablish the balance of said forces and thereby produce sound.

1,622,040. PROCESS OF AND APPARATUS FOR ROLLING GLASS. ERNEST BRISTOW LE MARE, St. Helens, England, assignor to Pilkington Brothers Limited, St. Helens, Lancaster, England, a British Company. Filed Feb. 23, 1924, Serial No. 694,708, and in Great Britain Mar. 2, 1923. 20 Claims. (Cl. 49—33.)

5. Process for producing a continuous strip of glass in which molten glass is rolled into a strip which issues from the rolling apparatus in a direction inclined to the horizontal and is deflected into an approximately horizontal and flat position by tractive force applied to the strip only after it has "set" the strip being supported before it has "set" in the flat and approximately horizontal position.

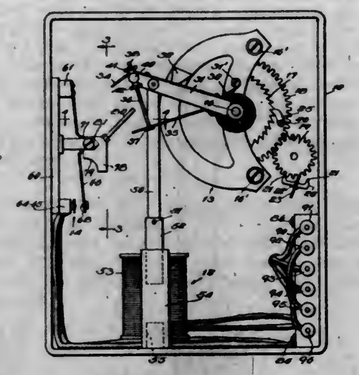


1,622,041. WEIGHING SCALE. CHARLES O. MARSHALL, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Dec. 31, 1923. Serial No. 683,626. 7 Claims. (Cl. 265—36.)



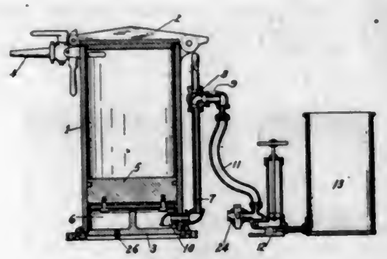
1. In a device of the class described, in combination, a platform lever, a platform supported thereby, a beam lever, a beam carried by said beam lever located above said platform lever and platform, and links connecting said platform lever and platform directly to said beam lever whereby the platform is maintained level throughout weighing movements.

1,622,042. RELAY FOR ELECTRIC SYSTEMS. FREDERICK J. MILES and DONALD C. THOMPSON, Newark, N. J., assignors to Automotive Devices, Inc., Newark, N. J., a Corporation of New Jersey. Filed May 20, 1924. Serial No. 714,595. 8 Claims. (Cl. 200—87.)



1. In an electrical relay, an electromagnet provided with a core, a conductive armature support carried by one end of the core, an armature of resilient metal having one end secured to said support and an intermediate portion spaced from the core, a substantially Z-shaped contact member secured to the other end of said support but insulated therefrom, said armature and contact member having bent end portions adapted to make wiping contact when the armature is attracted to the core of the electromagnet and a non-conductive stop member for said armature carried by the bent portion of said contact member.

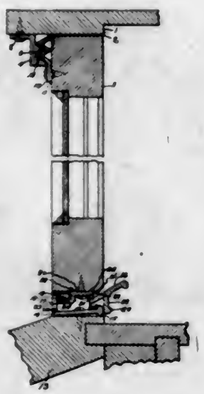
1,622,043. EXPANSIBLE PACKER FOR PLUNGERS. ERWIN E. MILLER, Fullerton, Calif. Filed June 12, 1925. Serial No. 36,672. 5 Claims. (Cl. 74—109.)



1. A pump plunger comprising a plunger rod, means providing heads upon the rod, an expansible packing arranged between the heads, means providing passages through which fluid may be admitted between the heads to expand the packing, and a separate ring detached from the packing and spaced therefrom disposed between the heads, said ring having flange portions serving as closures for the passages.

1,622,044. CIRCUIT CONTROLLER. JOHN T. MILLER and MICHAEL HANLEY, Chicago, Ill. Filed Sept. 28, 1925. Serial No. 58,958. 8 Claims. (Cl. 200—97.)

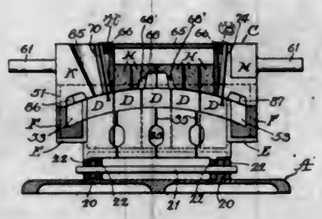
1. In combination, an electric switch comprising a plurality of electric terminals, a resilient element for connecting the said terminals normally urged away from the said terminals, means including a cam for overcoming the urging tendency of the said resilient element to move it into contact with the said terminals, a pull lever, means for pulling the lever from an upper position to a lower position, an element carried by the said lever for operating the said cam of the switch during the downward movement of the pull lever to cause the said switch to be closed substantially instantaneously, means including a spring, a gear train, and an escapement mechanism for slowly returning the pull lever to its uppermost position, and a second element associated with the lever adapted upon the return movement of the lever to operate the cam of the switch after a predetermined period of time has elapsed to cause the said switch to be opened with a quick break.



1,622,045. METHOD AND MEANS FOR CLEANING MEAT STUFFERS. GEORGE R. NAPIER, Cleveland, Ohio. Filed May 13, 1926. Serial No. 108,734. 16 Claims. (Cl. 17—39.)

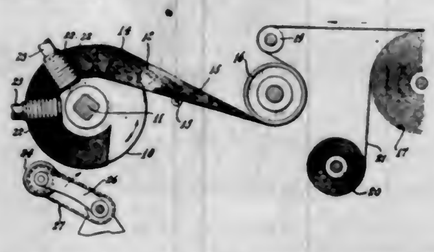
1. The combination with a meat stuffer having a reciprocable meat-expelling piston, of pressure means for introducing cleaning liquid into the stuffer behind the piston and pressure means for removing the said liquid and foreign material forcibly therefrom.

10. The method of cleaning the space behind the piston of a meat stuffer of the compressed gas type which comprises bringing liquid into contact with meat and other foreign material in such space, agitating the liquid by passing compressed gas therethrough, imposing pressure on the liquid confined in the said space, and expelling the liquid together with the meat and foreign material from the said space.



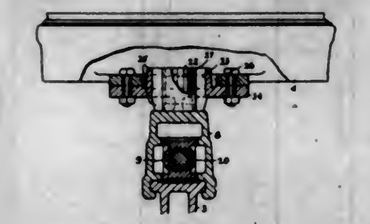
1,622,046. WEATHERPROOFING HARDWARE. CHARLES J. PARSONS, Columbus, Ohio. Filed July 16, 1926. Serial No. 122,875. 4 Claims. (Cl. 20—69.)

1. The combination with a casement, of a frame hingedly associated therewith, the sill of the casement having a plate thereon, a channel member fixed to the lower rail of the frame and having an inclined plate carried thereby forming in conjunction with the channel member a gutter, as and for the purpose set forth.



1,622,047. CASTING MOLD. CLIFTON D. PETTIS, New York, N. Y. Filed Apr. 23, 1923. Serial No. 633,822. 22 Claims. (Cl. 22—126.)

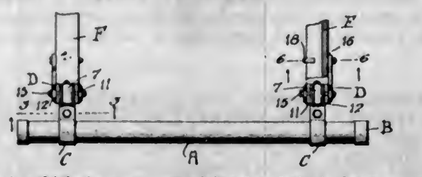
1. A casting mold comprising separable metal flask sections, each carrying a plurality of blocks of refractory material, and one or more chill blocks carried by certain of said sections and coacting with said refractory blocks to form a molding receptacle, said chill block being



readily detachable from the sections when said sections are in open position and rigidly held thereby when said sections are in closed position.

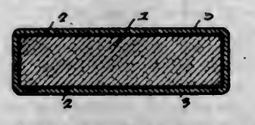
1,622,048. METHOD OF MAKING AN ANNULAR LAMINATED DISKLIKE ELEMENT. ROBERT M. PIERSON, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Oct. 25, 1923. Serial No. 670,778. 4 Claims. (Cl. 154—2.)

4. The method of making a laminated, annular, substantially disk-shaped article which comprises so stretching a bias-cut strip of rubberized fabric onto an annular, non-cylindrical face of a support, by tensioning engagement therewith closely adjacent its point of application to said support, as to effect a localized, laterally graduated, stretching of the strip adjacent said point, whereby a longitudinal zone of said strip is shaped to a non-cylindrical, longitudinally curved condition, and fixing the material of said zone, by vulcanization, in a form such that it is substantially straight in segmental cross-section.



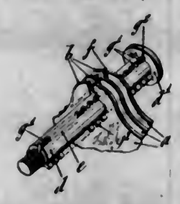
1,622,049. TENTERING MACHINE. CLIFFORD H. RAMSEY, Glen Rock, N. J. Filed Oct. 11, 1926. Serial No. 140,748. 2 Claims. (Cl. 26—57.)

1. A tentering machine including a row of supporting structures, driving means carried by one structure in the row, rails extending longitudinally of the row, movable tentering systems carried by the rails and operatively



connected with and adapted to be driven by said means, and means for adjusting each rail transversely including members connected with the rail and respectively guided by said structures for transverse movement, each rail being confined against shifting transversely of the row with respect to the corresponding set of members but being free to shift longitudinally with respect to members in such set.

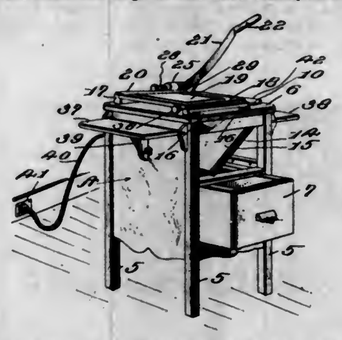
1,622,050. VEHICLE BUMPER. FRANCESCO RENZULLI, Newark, N. J. Filed Nov. 29, 1926. Serial No. 151,358. 6 Claims. (Cl. 293—55.)



2. A vehicle bumper comprising brackets to be mounted upon a vehicle, a horizonal bolt in each of said brackets, a bumper bar, a pair of clamps each loosely slidably and tiltably mounted at one end upon one of said bolts and connected to said bumper bar at its other end, and means for yieldingly resisting both sliding and tilting movement of said clamps.

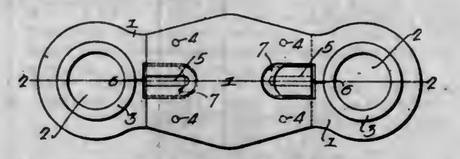
1,622,051. PROCESS OF DRYING TANK BLOCKS. THOMAS H. RHOADS, Philadelphia, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 3, 1924. Serial No. 717,602. 1 Claim. (Cl. 34—24.)

The process herein described of drying tank blocks of clay and like objects, said process consisting in forming a block of clay, or like material, covering the block with burlap, coating the burlap with plaster of Paris to form a jacket therefor, and finally subjecting the block, thus prepared, to heated air in circulation.



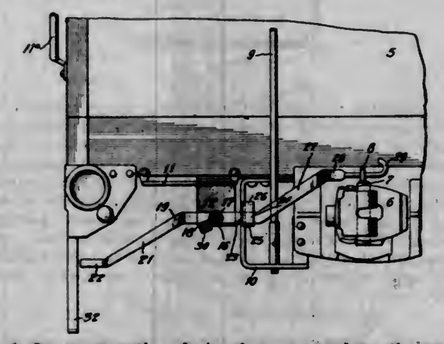
1,622,052. ELECTRICAL CONDENSER. WILLIAM JOHN RICKETS, Crofton Park, England. Filed Sept. 7, 1926. Serial No. 134,007, and in Great Britain Sept. 18, 1925. 8 Claims. (Cl. 175—41.5.)

1. An electrical condenser comprising a plurality of plates, a rotary member extending through said plates at right angles thereto and formed with longitudinal grooves and feather bars each extending into a groove in said rotary member and formed with a row of wards disposed between and spacing said plates apart, said plates, member and wards being secured in fixed relationship to one another.



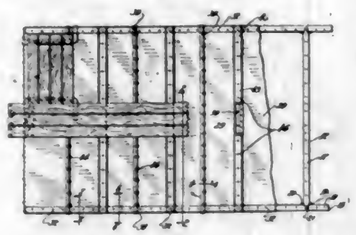
1,622,053. CUTTING OR TRIMMING DEVICE. WASHINGTON GEORGE ROUNDS, Woodstock, Canada. Filed July 20, 1925. Serial No. 44,944. 10 Claims. (Cl. 164—41.)

1. A device for trimming photographic prints or the like, comprising a base having a transparent portion, a cutting mechanism mounted on said base and being positioned adjacent one edge of the base transparent portion,



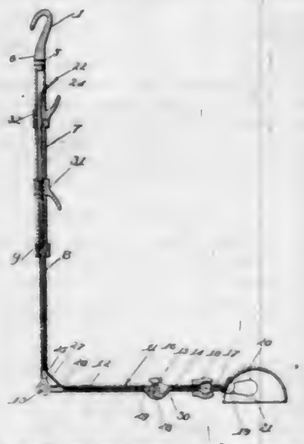
and a source of light beneath said base, whereby the work is framed in light to facilitate the proper positioning of the work to be trimmed.

1,622,054. FUSIBLE LINK. ARTHUR C. ROWLEY, Philadelphia, Pa., assignor to Globe Automatic Sprinkler Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 27, 1922. Serial No. 564,260. 1 Claim. (Cl. 169—42.)



The combination, in a fusible link, of two similar plates each formed with an eyelet having a marginal lip and each having also a projection adapted to enter the said eyelet in the companion plate and seat against said lip to directly transmit tensile stress from one plate to the other, said projection being of such size as substantially to close the said eyelet which it occupies and being substantially U-shaped in transverse section to better retain the solder by means of which the plates are adapted to be secured together.

1,622,055. UNCOUPLING DEVICE FOR COUPLINGS. THOMAS NATHAN RUSSELL, Chicago, Ill., assignor, by mesne assignments, to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 14, 1922. Serial No. 600,834. 6 Claims. (Cl. 213—164.)



1. In an operating device for car couplers, the combination of a lifting lever, an operating lever, a common fulcrum for said levers, and a connection for said levers permitting restricted relative movement therebetween in a substantially vertical plane.

1,622,056. CAR ROOF. THOMAS NATHAN RUSSELL, Chicago, Ill., assignor, by mesne assignments, to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 9, 1924. Serial No. 685,260. 6 Claims. (Cl. 108—5.4.)

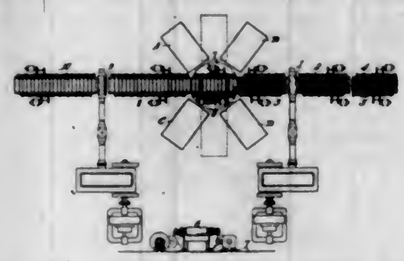
1. A car roof construction comprising, in combination, side plates, carlines of inverted channel form having a top web and depending side flanges, the side flanges being bent laterally at each end and secured to the side plates, and the top web continuing and being also secured to the side plates, and metallic roof sheets extending from eaves to eaves and having eaves flanges, each of said roof sheets having a longitudinally extending raised portion disposed substantially midway of the width of the sheet, and said raised portion fitting over the carline therebeneath and being riveted thereto.

1,622,057. PORTABLE WALL BRACKET. CARL U. SENTER, Los Angeles, Calif. Filed May 19, 1926. Serial No. 110,138. 1 Claim. (Cl. 240—67.)

A portable wall bracket comprising in combination a hook having lateral extensions adapted to engage behind a picture molding, an outer tube rigidly connected to the hook and depending therefrom, an inner tube telescoping in the outer tube, means to secure said tubes in desired relative position, a lamp supporting device at the lower end of the inner tube, an electric light wire passing through the said tubes, there being in addition cleats secured to the outer tube, one of said cleats being adjustable and adapted to allow coiling of the electric light wire thereon.

1,622,058. SUPPORTING DEVICE. FRIEDRICH SOHNLE, Newark, N. J. Filed Mar. 22, 1922. Serial No. 545,669. 2 Claims. (Cl. 248—49.)

1. A device for supporting articles comprising a sheet of metal slit and formed into parallel spring arms for grasping the wall of a receptacle and recessed at the top to form a lower jaw and formed at the top to form



a strip extending laterally and terminating in an upper jaw offset from lower jaw to retain an article resting on the lower jaw in an approximately horizontal position.

1,622,059. HOLDING DEVICE FOR SAWMILL CARRIAGES. RALPH W. STOCKEMER, Dierks, Ark. Filed May 8, 1926. Serial No. 107,735. 4 Claims. (Cl. 104—251.)
